This breed showed up well, thanks to Mr. Davison's kennel, his dog Brave scoring well over Douglas in bone, head, ribs and loin. Two eight-months-old puppies were shown in the bitch class, but their names I could not ascertain, the winner beating in ribs, bone and head. These two also took the puppy prizes.

FOXHOUNDS.

Nothing like the entry of last year. Frank, the only one shown, but for his forelegs, which seem to run every way but the straight one, is a very fair hound; so is Bess in the bitch class, a hound more on the American type than the other, stands true in front but was shown in whelp.

POINTERS.

This breed did not show up so well as last year, Dash being the only entry in dogs; he is not a bad pointer, might be better in forelegs and carries his tail high. Bessie was the only one of her sex; she is a bit wide in front, snipy muzzled and also carries her stern too gayly. The puppy shown is snipy, light in bone and was very shy.

ENGLISH SETTERS.

Better classes in this breed than any other in the show, about ten being entered and nearly all present. An old field trial friend in Reverdy, now owned by Mr. Bossa, had a sharp tussle with a dog called Rockford, that Frank Dole handled, Reverdy beating slightly in head, ribs and loin. Rockford is a more stylish dog and shows lots of quality, very like old Plantagenet in head, neck and back. Canadian Locksley, although a nicely formed one, has some weakness in hind parts; he, however, beats the young Sir Edward, vhc., in head and front considerably, who in turn beats Count Robert in front and condition, the latter being very thin and out of coat. Planet, bc., is a bit lengthy, but head and front fairly good; the others given c. had faults in head and forelegs principally. Bitches had the winner in Belle, who, though a little short in head, has a nicely formed body and good, straight forelegs, of course more matured than Dr. Haire's promising puppy Nancy, who beats her kennel mate, Lady Likely, in head, bone, rib and loin. Both show a good deal of quality, and are of the type of the well-known Albert's Nellie, who was bred by the same kennel. In puppies the Wild Crow Kennels showed two neat youngsters in Clip and Sterling, the former being a better mover and better in front and body. In bitch puppies this kennel showed a beautiful headed pup in Lorne Lock, and which is also nicely formed otherwise. I could not separate her from Nancy, and I gave them equal first, Lady Likely coming next.

IRISH SETTERS.

Entries small in numbers, but of good quality, Contoit's Shammore being alone in dogs. He is well known from being on the spring circuit. In bitches that nicely formed one, Bessie Glencho, from the same kennel, in good shape, won easily over Sport in color, head, body and general quality. A promising litter of very young puppies was shown in the puppy class.

GORDON SETTERS.

Not a bad lot for a small show like this. Dickmont, a son

of Beaumont, won easily over Nip, who loses in head, markings, bone and coat. Dan, vhc., is too curly-coated. In bitches a pretty little short-headed, but nicely formed bitch in Montine won easily over Feathers, who showed very little tan.

COLLIES.

These classes showed a great falling off from last year's entry. No doubt the entry fee of \$1 instead of free admission had something to do with it. In the dog class only two were brought out, and these were poor ones, one especially so, was pig-jawed and inclined to be prick-eared; and I mortally offended some one by not giving it first, because, forsooth, it had a pedigree "as long as your arm." Old George Helliwell's celebrated reply occurred to me at once—"Next time you enter the dog bring the pedigree and leave the dog at home." The winner was nothing to go into ecstasies over either, as he had a habit of scratching the back of his head with his tail, besides standing wide in front, and with ears that would do credit to an Airedale. Then another weedy looking black and tan one turned up in the bitch class, so first was withheld and a second given. Puppy entries were absent.

SPANIELS.

In the field division two fairish specimens came into the ring. It was a close thing between the Sussex Fidele and the black one, Jet, the former just getting it by a straighter front and better ribs and carriage of stern. In cockers Sanford's Prince Obo is quite a nice red, good height from the ground, straight in front and good type of head; he simply smothered the other two leggy, weedy-looking specimens, one shown with his tail in all its undocked glory. Sambo, a black and white, took second. Some nice little black pups were shown.

BEAGLES.

In the dog class Mr. Scufate's dog, name not given, was awarded the prize; it is a coarse dog, but well shaped, looking a workman all over. Mrs. Knox's Minnie Ginks, a typical looking little backwoods rabbit dog, is too lightly built and sulpy to deserve more than a second, if that, and first was withheld. Minnie's accomplishments, however, lead her to take a backward view of life, for she is an adept double somersault performer.

BULLDOGS.

With the well known champion Harper on hand there may be said to have been plenty of quality in the dog class, he being the only entry. The old dog is improving with age and is even better at elbows than he used to be; he was in nice shape, too. A new one of Frank Dole's, Countess of Norfolk, a bit flat-faced, but well out in front, was the only representative in the bitch class.

BULL-TERRIERS.

The quality class of the show, comparatively speaking. In dogs Topsparkle beats Placid Jim in eye, body and tail; Davison's dog, vhc., is short and chunky in head, but beats either of the other two in front, both being a bit out there. Mr. Dole again claimed all the money in the next class with the well-known Starlight, looking as fat as a mole, and White Matchless, whom the former had no difficulty in disposing of. A fairish pup in Edgewood Princess brought up the rear of the bull-terrier classes.

FOX-TERRIERS.

Not as good a show as last year. Woodale Rifler won hands down, and was the only terrier with pretensions to form in the class. Beauty, winning second, is little if anything better than Rabbi, vhc., both too coarse, cloddy, wide in skull and front. In bitches, Fussie, a little heavy, but not a bad terrier by any means, bit short of coat and coarse in shoulders and head, was the only recipient of honors, taking first, other prize withheld. In puppies two poor ones were shown, and in looking them over afterward, positions I found might well have been reversed, for the winner, Randy Stanley, is very much out in front and bad in ears, though Flirt is short in head and too coarse throughout, but truer on its pins.

BLACK AND TAN TERRIERS.

A consignment from the Rochelle Kennels lived things up a little in the terriers. The average Connecticut fancier of this breed has a very old-fashioned idea of what constitutes a black and tan, and consequently the above kennel had everything its own way. In dogs, Rochelle Salts—quite the doctor's dog—was the only one in it, and he is nothing to enthuse over, though not matured yet, just in the hobbled-hoy state; second prize was withheld from a dog showing no tan, whose owner said it was wrongly entered, "should have been in the black terrier class." The well-known Broomfield Madge, light in tan and spoilt in cropping, took the prize in the ladies' division; second withheld, and he given to Nan, more of a big toy than anything else. Rochelle Otero was practically alone in puppies, beating Daisy in head, tan and type. Dot and Tot are two promising little apple-headed toys.

The remaining classes having only one entry in each, it is no use allotting separate space to them in this report. In Yorkshire terriers Gip was not bad in color, but leggy, big head, short of coat. Irish terriers were represented by Biddy Mahone, one of those shown last year, a well made terrier but plain-faced. Dachshunde were well represented by Windrush Rieter, fresh from Canadiana victories. He seems now to be losing that suspicion of weakness in hind-legs. Friday, Frank Dole's "South African" poodle, was alone in his class—he needs a shave badly. Dandie Dinmonts were well represented by King o' the Heather, the noted English winner. He looks ragged in coat and needs attention there. King Charles entries were absent; but one Blenheim, Pearl, was on hand; it was of that breed and that is the best I can say of it, too long-faced, short in ear and out of coat. Dalmatians, Doyle's Cate is not a bad shaped dog, but spots run in too much; they should be distinct. Princess, entered as a Scotch terrier, was changed to the Skye division, possesses a good coat and length, fair head and drop ears. Second was given to a so-called retriever, Jack, too open in coat and bushy in tail; first withheld. Pug prizes were withheld, as the only specimen would make a good small mastiff pup. Some fair little six weeks old puppies were entered and money prizes distributed among them. In toy terriers first was withheld, for with all the scope this class gives to the judge, he could do no better than second for the black Dixie. Mr. Mead showed a nice little Chihuahua, or what looked like one, and another of Mr. Mead's, Leo, supposed to be an Irish water spaniel, but looked more like a liver and white setter, brought up the rear guard of the show in the miscellaneous class, except a Siberian terrier that could not be found.

LIST OF AWARDS.

MASTIFFS.—Dogs: 1st, G. B. Hefton's Scipie; 2d, Jos. Atchinson's Grover. Very high com., George E. Sears's Kaiser William. Bitches: 1st, Miss L. Lyne's Ethel; 2d, G. B. Hefton's Medusa. Puppies: Prizes withheld.

ST. BERNARDS.—Dogs: 1st, W. B. Houseman's Le Roi; others absent. Bitches: 1st withheld; equal 2d, Arthur Ritter's Ravenswood Juro and Margareta.

GREYHOUNDS.—Dogs: 1st, Mrs. Adam Forepaugh's Clyto; 2d, E. Atkins's Fido. Bitches: 1st, L. C. Whitton's Spinaway; 2d, Jos. E. Ellis's Topsey. Puppies: 1st, Dr. Knox's Nellie.

GREAT DANES.—Dogs: 1st and 2d, High Ground Kennels' Pascha and Nero. Very high com., John Henderson's Tigi. Bitches: 1st and 2d, High Ground Kennels' Flora Florida and Lucy. Very high com., Everett Rice's Queen.

NEWFOUNDLANDS.—Prizes withheld.

DEERHOUNDS.—Dogs: 1st, G. Howard Davison's Brave; 2d, D. L. Billings's Douglas. Bitches: 1st and 2d, Davison's — and —. Puppies: 1st and 2d, Davison's — and —.

FOXHOUNDS.—Dogs: 1st, Mrs. Tolman H. Bradley's Frank. Bitches: 1st, W. H. Colepaugh's Bess.

POINTERS.—Dogs: 1st, G. W. Forsythe's Dash. Bitches: 1st, P. E. Roberts's Bessie Girl. Puppies: 1st, Gilbert Orres's Gilbert Orres.

ENGLISH SETTERS.—Dogs: 1st, V. L. Bos's Reverdy; 2d, Frank F. Dole's (agent) Rockford. Reserve, Wild Crow Kennels' Canadian Locksley. Very high com., C. H. Brech's Tim and Dr. Jas. F. Haire's Sir Edward. High com., Louis Contoit's Count Robert and J. Pierce's Planet. Com., Joe Thomas's Jop and J. Pierce's Sng. Bitches: 1st, J. Pierce's Belle; 2d and very high com., Dr. Jas. E. Haire's Nancy and Lady Likely. PUPPIES.—Dogs: 1st and 2d, Wild Crow Kennels' Clip and Sterling. Bitches: Equal 1st, Dr. Jas. E. Haire's Nancy and Wild Crow Kennels' Lorne Lock; 2d, Dr. Jas. E. Haire's Lady Likely.

IRISH SETTERS.—Dogs: 1st, Louis Contoit's Shammore. Bitches: 1st, Louis Contoit's Bessie Glencho; 2d, G. W. Mead's Sport. Puppies: G. W. Mead's litter, no names.

GORDON SETTERS.—Dogs: 1st, Smith Bros.' Dickmont; 2d, Augusta Hull's Nip. Very high com., Mrs. Tolman H. Bradley's Dan. Bitches: 1st, Smith Bros.' Montine; 2d, B. E. Roberts's Feathers.

COLLIES.—Dogs: 1st, W. H. Perkins's Fordbrook Star; 2d, Mrs. David Hull's Lethian Prince. Others absent. Bitches: 1st, withheld; 2d, M. H. Crandall's Flirt. Puppies: Absent.

FIELD SPANIELS.—1st, Miss Lynes's Fidele; 2d, H. F. Brownlocks's Jet.

COCKER SPANIELS.—Dogs: 1st, L. C. Sanford's Prince Obo; 2d, G. W. Mead's Sambo. Bitches: 1st, L. A. Lory's Fidele. Puppies: 1st, Dr. Brownlee's Dixie; 2d, L. A. Long's Daisie. Very high com., E. R. Rickett's Pippin.

BEAGLES.—Dogs: 1st, Scufate, Jr.'s dog. Bitches: 1st, withheld; 2d, Dr. Knox's Minnie Ginks.

BULLDOGS.—1st, Frank F. Dole's champion Harper. Bitches: 1st, Frank F. Dole's Countess of Norfolk.

BULL-TERRIERS.—Dogs: 1st and 2d, Frank F. Dole's Topsparkle and Placid Jim. Very high com., Howard Davis's Bendigo dog. Bitches: 1st and 2d, Frank F. Dole's champion Starlight and White Matchless. Puppies: 1st, Frank F. Dole's Edgewood Princess. Others absent.

FOX-TERRIERS.—1st, A. L. Spencer's Woodale Rifler; 2d, W. Storme's Beauty. Very high com., W. H. Hayward's Rabbi. Bitches: 1st, W. H. Hayward's Fussie; 2d withheld. Puppies: 1st, Mrs. E. M. Baldwin's Randy Stanley; 2d, W. Mead's Flirt. Others absent.

BLACK AND TAN TERRIERS.—Dogs: 1st, Rochelle Kennels' Rochelle Salts; 2d, withheld. Bitches: 1st, Rochelle Kennels' Broomfield Madge; 2d, withheld. High com., S. W. Bradley's Nan. Puppies: 1st, Rochelle Kennels' Rochelle Otero; 2d, Jos. Charter's Daisy. Com., S. W. Bradley's Dot and Tot.

YORKSHIRE TERRIERS.—1st, T. V. Jones's Gip.

IRISH TERRIERS.—1st, F. F. Dole's Biddy Mahone.

DACHSHUNDE.—1st, Mr. Manice's Windrush Rieter.

POODLES.—1st, F. F. Dole's Friday.

DANDIE DINMONT TERRIERS.—1st, E. C. Brooks's King o' the Heather.

KING CHARLES SPANIELS.—Entries absent.

BLENHEIM SPANIELS.—1st, C. E. Knott's Pearl.

DALMATIANS.—1st, John Doyle's Cate.

SKYE TERRIERS.—1st, John Norris's Prince.

ENGLISH RETRIEVERS.—1st, withheld; 2d, E. G. Thompson's Jack.

PUGS.—Dogs: Prizes withheld. Puppies: Prizes awarded to three in a litter.

TOY TERRIERS.—1st, withheld; 2d, L. Poschsher's Dixie.

OTHER THAN BLACK AND TAN.—1st, W. W. Mead's Nellie.

MISCELLANEOUS.—1st, S. S. Mead's Leo (water spaniel?).

THE NATIONAL BEAGLE CLUB TRIALS.

Editor Forest and Stream:

As the time is now near at hand for the second annual field trials of the National Beagle Club, I will, with your kind permission, endeavor to make clear to your many readers just what this live club has already accomplished and what it proposes to do in the future. I will then leave it to the intelligent breeders and owners of beagles in America whether or not it deserves their influence and support at the trials this November.

To begin with, on April 1, 1890, there was no National Beagle Club and I might, with equal accuracy, say no beagle club at all, for although there was an organization called the American Beagle Club, on the roll of the A. K. C. it was, in all intents and purposes, an inactive member and had been for some time. The causes that had led to its decadence, it is not necessary for me to enumerate here, suffice it to say that one of the principal causes was the apparent lethargy of the beagle men themselves and perhaps also the fact that owing to the nature of its constitution and by-laws it was impossible to hold meetings (which by the way, are the life of any club) and discuss the best methods of procedure.

But to resume. Several prominent owners and breeders of beagles, after vainly trying to infuse some "go" into the American Club, met, respondent to a call from one of their number, at the time of the New England Kennel Club Show in April 1890, at Mechanics Hall, Boston, Mass., and then formed the nucleus of what is now the National Beagle Club. The new club grew very rapidly and prospered notwithstanding the doleful prophecies of the wiseacres who would have it that the N. B. C. was merely a bubble that would soon burst and bring its members into disrepute.

In April, 1891, just a year from its formation, its membership was far greater than that of many clubs who had predicted its fall, and had distributed among its members in the shape of special prizes, numerous silver urns, pitchers, cups and trophies to the value of several hundred dollars, to say nothing of contributing liberal cash specials at many of the leading shows. It did this solely to encourage the breeding of fine show dogs, but not content to have already done more in one year for the breed than had been done before in a period covering many years, it: aped the climax by holding a public field trial for beagles—the first successful event of the kind ever recorded; and this, too, in the face of such opposition and discouragement as would have daunted men of less determination of purpose. But the trials were held, nevertheless, and conclusively proved to the world that beagle trials were as feasible as those of setters or pointers.

This fact proven, the general public began to assume a different attitude toward the club and think that perhaps the club would amount to something after all; the one thing that seemed in the eyes of many to be against them was the fact of their having been refused admittance to the A. K. C. on the grounds that there already was one beagle club as a member.

Many advised a change in the constitution, viz: striking out the clause "The improvement on the bench" and leaving in the "improvement in the field" only, thus practically making the N. B. C. a field trial club; but to this the club would not hear and I think the president voiced the sentiments of all when he said, "The N. B. C. has nothing to take back. This club was formed for the improvement in the field and on the bench of the beagle hound in America, and will enter the A. K. C. with its constitution unchanged if it enters at all."

In February it was suggested by the American Beagle Club that a committee of the two clubs confer at the New York show with a view to amalgamation. The suggestion was favorably received by the N. B. C. and as a result of the conference an amalgamation was effected under the name of the National Beagle Club, the A. B. C. accepting the constitution, by-laws, officers, etc., of the N. B. C., and agreeing to petition the A. K. C. to change the name of the A. B. C. to that of the N. B. C. and accept all officers of the N. B. C. as then elected and holding office.

This was in February last and the events which ha

occurred subsequently are too fresh in the minds of all interested in beagles to need mention now. The N. B. C. stands before you as an example of a successful specialty and field trial club, on the eve of its second annual field trial.

Regarding these trials I will answer as briefly as possible some of the questions which are daily being asked of me, viz: Where are the trials to be held, how shall we get there, etc. The second annual field trials and bench show of the N. B. C. will be held at Nanuet, Rockland county, New York, the week beginning Nov. 23, 1891, and entries close Nov. 1, 1891. The dogs will be run on rabbits and will be judged both on the bench and in the field by Messrs. W. S. Clark, of Linden, Mass., and Pottinger Dorsey, of New Market, Md.

Nanuet is 18 miles distant from New York city, 2 miles from the New Jersey line and 5 miles from Nyack-on-the-Hudson, due west. It can be reached conveniently by four lines of railroad. Station on main line Erie Railroad is Suffern, where a branch runs direct to the place, distance 9 miles; station on West Shore Railroad, West Nyack, which is 2 miles from Nanuet, carriages are in waiting to meet all trains. From the Erie Railroad depot in Jersey City two lines run direct to Nanuet. Trains on Northern Railroad of New Jersey and New Jersey & New York Railroad run almost every hour, fare for round trip \$1.10. Ample hotel accommodations will be found at Nanuet, rates being \$1 to \$1.50 per day.

All dogs entered in the trials will be taken care of gratis by the Rockland Kennels, which is a guarantee of proper treatment, and particular attention will be paid to entries coming by express shipped care "Rockland Kennels" and unaccompanied by owner or attendant. Good, practical handlers will be on the ground for whose services no charge will be made, so that parties desirous of sending their dogs and being unable to accompany them may rest assured that their dogs will have every opportunity given them to win.

Entry blanks, running rules and any additional information may be had by addressing the secretary.

Remember, gentlemen, this will be a gathering of sportsmen from all over the country and that the trials are open to the world. If you have no dog and can spare the time, come yourself and enjoy the fun. All are welcome. In writing address all communications to F. W. CHAPMAN, Sec'y.

MELROSE, Mass.

INTERNATIONAL FIELD TRIAL CLUB ENTRIES.

The entries for the International Field Trials Derby closed with 23 nominations, of which 14 are English setters, 2 Gordons and 6 pointers. Entries for the All-Aged Stake close Oct. 15. The trials will be held on the grounds at Louisville. Birds are said to be very plentiful, and the trials show every promise of being a success. The Derby commences Nov. 3. The special Mr. Heywood-Lonsdale sent over, of \$25, will in all probability be added to the All-Aged Stake.

ENGLISH SETTERS.

RHULAS (T. G. Davey's), blue belton dog, 15mos., by Down—Scenaiah.
LOU DIDO (Jas. Kime's), black, white and tan bitch, 17mos., by Mingo—Lou Moll.
DICK (S. Holmes's), black, white and tan dog, 16mos., by Tramp—Lulu.
VICK (S. Holmes's), black, white and tan bitch, 16mos., by Tramp—Lulu.
DUKE (W. B. Wells's), black, white and tan dog, 17mos., by Toledo Blade—Cambriana.
ROMNEY (W. B. Wells's), black, white and tan dog, 17mos., by Toledo Blade—Cambriana.
TICKY TACK (W. B. Wells's), black, white and tan dog, 17mos., by Toledo Blade—Cambriana.
DAPHNE (W. B. Wells's), black, white and tan bitch, 17mos., by Toledo Blade—Cambriana.
TOLEDO BELLE (Jas. McGregor's), black, white and tan bitch, 15mos., by Toledo Blade—Baffett B.
SANCHO (G. P. Taylor's), liver and white dog, 17mos., by Toledo Blade—Cambriana.
MANITOBA PET (Thos. Johnson's), blue belton bitch, by Dick Bondhu—Manitoba Belle.
MANITOBA PATTO (Thos. Johnson's), blue belton bitch, by Duke of Gloster—Flora.
MAY (E. H. Gillman's), bitch.
AMY (F. W. Eddy's), bitch.

GORDON SETTERS.

PENDENNIS (J. L. Campbell's), black and tan dog, 12mos. by champion Beaumont—Cherry Ripe.
CHERRY RIFE II. (J. L. Campbell's), black and tan bitch, 12mos., by champion Beaumont—Cherry Ripe.

POINTERS.

R. K. (W. H. Tighe's), black and white dog, by Sport—Dido.
LUKY DEAL (T. G. Davey's), black bitch, by Luck of the Goat—Midgee.
SAM II. (W. J. Bennett's), black and white dog, 15mos., by Sport—Dido.
ROGER (Herbert M. Kipp's), liver and white dog, 21mos., by Bang F.—Nellie.
CENTRAL BANG (F. W. Shaw's) liver and white dog, 9mos., by Trinket's Cash—Bang.
CARRIE (D. Williamson's) bitch, by Darcy—Sparks.

THE BENCHING AT MONTREAL.—New York City, Oct. 8.—*Editor Forest and Stream:* In your last issue I notice a letter from the superintendent of the Montreal dog show in reference to certain delay which took place in the erection of Spratts Patent benching at that show. I am in a position to confirm what the superintendent says in reference to the delay in the despatch of the car from Hamilton. Our representative was put to a great deal of inconvenience, extra trouble and expense on account of this delay. The car was loaded on Sept. 12 and promised by the railroad authorities to be despatched on the 14th, and, as the Montreal show did not open till the 22d, there was plenty of time to send the car from Hamilton to Montreal two or three times over. I beg to inclose copy of letter from the superintendent of the Grand Trunk R.R., which you will see places the cause of delay at the door of the Custom House authorities. At the same time our representative informs me that all our benching was up by noon on Monday, the 21st; there was a little extra benching of a special character which had to be improvised on the spot to suit the requirements of the rather awkward building in which the show was held, which was not completed till Monday afternoon at 4 o'clock. We intended having all ready on Monday morning but the technicalities of the Custom House delayed us. As, however, our work was all completed at 4 P.M. on the day preceding the opening of the show we think it is scarcely just to lay blame to our door.—G. G. CLEATHER, Vice-Pres. Spratts Patent (America) Limited. [Copy.] "MONTREAL, Sept. 29.—W. C. Ehrmann, Esq., Spratts Patent: Dear Sir—The delay to the material about which you enquired at my office was owing to the fact that it was in bond. The necessary permit from the Customs, authorizing our agent to manifest the material, was not received by him until the 15th, and then through misunderstanding on the part of Customs authorities the manifest on Montreal could not be prepared until the instructions were corrected. This was done on the 16th, car was forwarded from Hamilton at 7:45 A.M. on the 17th and, as you are aware, arrived at Montreal on the night of the 19th.—J. LAWRENSON, Superintendent.

OUR DOGMEN IN ENGLAND.

Editor Forest and Stream:

I have already told some of the readers in sporting papers of my first experience at an English dog show. Now, the second Kennel Club show I was at was held in the Royal Engineers' hall and grounds in Leeds, and it was certainly a grand place for a show, there being plenty of room to exercise the dogs. Under the general management of Mr. T. Ashton, who was a fit man for the position, as he kept moving around among the dogs all the time, the benching was all kept clean. I noticed they kept the attendants continually watering the dogs, and that is something I did not see in any of the other shows in England. Another great help to the show was in having the assistance of the "Hon." Sydney Smith, for he is a hard worker and did all he could to make the show a success; and this was the best managed show I saw. They had nearly 600 entries, and the dogs showed lots of quality. We next visited the Bristol show, held under Kennel Club rules, at Colston Hall, June 23 to 25. The dogs were benched on the second floor, and one had to climb a couple of flights of stairs to get there. They were benched in two separate rooms, and this was one of the old-fashioned shows. Their benching was badly arranged, and being so close together and the light so bad it gave the spectators a poor chance to see what the dogs looked like. They had 648 dogs there, and the quality in some of the classes was very poor. A bad feature of this show was that they did not get out their catalogue until about 12 o'clock on the second day of the show. This made it bad for the reporters, as none of them could do anything until they got the catalogue. I heard a number of them say they were going to leave that night. Now, when they commenced looking over the dogs, I thought I would just see if they could examine 648 dogs in that short time and get up a good report. I went round the hall watching them, and it hurried me to keep up, for it did not matter which end of the dog was toward them, they never thought of taking hold of the chain to get a good look at it. That is something they don't do in England, that is, to get a dog out of the kennel and place him on the ground so you can have a chance to examine him properly. I asked some of the reporters why they did not do this, and they claim they can see all they want to while the dogs are in the ring during judging. I don't see how they can do that, there being from four to five rings in a show, and these rings in different parts of the building. I think there are a number of dogs in a show that the reporters never get a look at, and that kind of work would not suit the boys on this side.

There is one thing I must say, however, Geo. Raper and L. C. P. Astley know nearly every dog in England on the bench and can describe without going to look at them. The above named gentlemen are far ahead of any one I saw in regard to judging dogs. I would rather show dogs under those two than any others I know of on English soil. I think if ever they wanted to get any judges here for all-round judging and at the same time make a change, either one of the above gentlemen would fill the bill. Another good old judge I showed dogs under is George Hellewell. He is better on sporting dogs. The old man is getting on in years, but still has an eye for a good dog. I will now speak about the classes for setters for the Bristol show. The English, Irish and Gordon setters were all in the same class. Pointers are also shown in the same way, light and heavyweights all together. It is no wonder they don't get better classes of setters and pointers in England, and they never will unless they divide up the classes. I have seen more pointers and setters in one of our big shows here than I saw in three on the other side. Next time I write I will let you know about some of the one-day shows I saw.

JOS. LEWIS.

DOG CHAT.

A LEARNED and well-known dog lover in England writes to a friend of ours on several interesting topics. "No doubt," he writes, "they (skunks) can go rabid like all of their genus. Of course it is quite possible for a man to be, in some way, susceptible to a specific poison which a dog may not be affected by, but that poison is not rabies. It is very curious—this immunity business. A mouse is susceptible to tetanus, a rat is not. A house mouse takes septicaemia, a field mouse is quite exempt.... The most humane way to dispose of dogs is (except the lethal chamber as used at the Dog's Home) the hypodermic injection of prussic acid (one drachm, Scheele's acid). It causes almost instant death, and is a far better plan than giving it by the mouth. It is a curious thing that young puppies seem to be able to take more prussic acid and to be longer in dying than grown dogs. I don't know whether others have noted this, but it is my experience."

At the meeting of the National Beagle Club, held Oct. 2, in the absence of Mr. Brooking, Vice-President Power occupied the chair. On motion it was voted to go into executive session. Little business was done beyond voting that the matter of advertising be laid on the table till the next meeting. It was then voted that a special meeting be called for Oct. 17, at 266 Washington street, Boston, at 7 P. M. All members are requested to attend to settle important business connected with the coming field trials.

Mr. Hacke's Barzois, recently imported, were, as our readers are aware, in pretty bad condition when they landed, and they were sent to Spratts Co.'s Kennel to be renovated a little. In our Lexington show report we spoke of the excellent condition of Abreck and Ondaff, two of the consignment, and if Sup't. Brett does as well with the others in his charge he certainly deserves great credit, for he did wonders with these two in the short time at his disposal.

"Get out of this, you nasty tramp, or I'll set the dog on you." "Set away, ma'am. He'll never hatch nothin'. I'm a bad egg."—*New York Sun.*

In the office of the Mayor's Marshal the clerks are over-run with the work of issuing new dog licenses. This is all on account of the dog census that has been taken during the past three weeks by the police of New York city. We are afraid the sight of a dog to a policeman detailed to take this census, three in each district, will be like a red cloth to a bull, for they have had a memorable time of it. Most people in the crowded tenement districts looked upon the affair as a joke and gave all sorts of evasive answers to the puffing policeman who had toiled up many flights of rickety stairs. Half the extra license fees will go to the Police Pension Fund, and as over 2,000 new licenses have been issued, the fund is some \$2,000 the richer, as each license costs \$2. But the men who took the census would rather retire without a pension than go through another such experience. The returns, which are now all in, show that there are 3,387 licensed dogs in this city and 33,116 whose owners have not complied with the law, making in all 36,503 dogs. The owners of unlicensed dogs will receive a notice to step up to the desk and settle. Last year the revenue from dog licenses was \$10,160, but up to this month in the present year \$13,800 has been taken in. New York city differs from other municipalities in that the owner is granted the license instead of the dog, and should the dog die the license does not lapse, but can be transferred to another pet until the year is up. A peculiarity in the census is that within an hour on Oct. 6 Sarah Large, John Small and Peter Short applied for licenses.

At the annual meeting of the New England Kennel Club

the following officers were elected: President, F. Blackwood Fay; Vice-President, F. M. Curtis; Secretary, E. H. Moore; Treasurer, G. A. Fletcher. Board of Governors: F. Blackwood Fay, F. M. Curtis, E. H. Moore, G. A. Fletcher, C. S. Hanks, Col. John E. Thayer, H. A. Harris, Jean Grosvenor, J. N. Newman. Delegate to the American Kennel Club, F. Blackwood Fay. Bench Show Committee: F. Blackwood Fay, F. M. Curtis, H. A. Harris, C. S. Hanks and E. H. Moore. A balance of \$1,100 was reported in favor of the club.

The Columbus Fancier's Club will give a local bench show in December, and hope to recuperate their treasury fund sufficiently to enable them to give a regular show in 1892. There are quite a number of fine dogs owned by members of the club, and they expect, with a little outside assistance, to make a creditable showing.

We hear that the New England Kennel Club will lodge a protest with the A.K.C. against the New York and New England Poultry and Kennel Club, of Albany, N. Y., for adopting a designation that conflicts with theirs.

There seems to be quite an enthusiastic feeling among New England sportsmen in regard to the coming field trials of the recently organized New England Field Trial Club. Through the efforts of several well-known sportsmen in Massachusetts and Connecticut the club was formed and officers elected. At the meeting held last Friday, at which there was a large attendance of members, it was decided to hold the trials at Wareham, Mass., game prospects having been reported favorable by Mr. D. A. Goodwin. They will commence Nov. 3. The judges selected for the inaugural trials are Messrs. N. Wallace, Farmington, Conn., and C. Fred Crawford, Pawtucket, R. I. Mr. Geo. W. Lovell resigned his position of secretary, and Mr. Geo. E. Stickney, the Irish setter man of Newburyport, Mass., was elected in his place. Another meeting will be held Oct. 21, at 2 P. M.

It seems to us, from what we have heard, that a lack of game and the short time allowed for preparation will handicap the club somewhat in the initial effort. However, if suitable grounds can be secured and protected like those in the South, there is no reason why trials held in New England should not be a success. There are two stakes offered, a Derby and an All-Aged. Entry fees in each stake are \$5 to nominate and \$10 additional to fill. The prizes will be a percentage of the entrance fees divided as follows: 40 per cent. to first, 30 per cent. to second and 20 per cent. to third. Until Nov. 15 the initiation fee to the club is \$10, which exempts members from further payments till January, 1893.

We understand that it is the wish of several sportsmen in western Michigan to organize a kennel club for the purpose of encouraging the breeding of good dogs for sporting purposes. The idea is, as the members would necessarily be widely scattered, to have those who feel an interest in the undertaking, to send their names and addresses to the American Fish and Game Warden, Kalamazoo, Mich., so that printed matter relating to the formation of the club can be sent to them. The organizers hope to be able to hold dog shows at Grand Rapids and Kalamazoo. Everyone who feels at all interested in dogs should join these pioneer clubs in their locality, for this is the best means whereby the breeds of dogs can be improved in these new districts. The best plan is to hold shows in connection with the agricultural fairs, the expense is lessened, and a larger number of people are likely to see the dogs.

The dog show connected with the Humane Society's fair, at Carthage, Ohio, to be held Oct. 14, promises to be quite an interesting affair. Mr. Eberhart says every one is sure of a "square deal" at this show. We suppose this means there will be no blanks, and the kicker is to be conspicuous by his absence. The entries closed on the 7th, and the catalogues were ready on the 10th, quite a feather in friend Eberhart's cap. Entries number 168, composed as follows: Mastiffs 11, St. Bernards 23, great Danes 8, deerhounds 4, greyhounds 9, pointers 4, English setters 9, Irish setters 5, Irish water spaniels 5, cocker and field spaniels 1, beagles 5, collies 9, bulldogs 3, bull-terriers 5, fox-terriers 7, Yorkshire terriers 2, pugs 20, Italian greyhounds 12, and this is about the largest entry of this breed at any show we remember. "This ain't bad," writes our informant, "considering it is not A. K. C. and no money prizes," and we quite agree with him. Next year the society expects to come into the A.K.C. fold and hold a big show. Mr. F. C. Wheeler will judge all classes.

Stock-Keeper (Eng.) takes up "Highland's" article on Mr. Hacke's recent importation of Barzois very fully, and says, of the remark of this reporter, that it was a great pity that those dogs reached the kennels in such an emaciated condition, "We take leave to say that it is much more than a great pity, it is no less than a cruel, inhuman scandal, and had it happened in this country, if the parties responsible for it had not been prosecuted by the Society for the Prevention of Cruelty to Animals, we should unhesitatingly have denounced the Society to the public as an ineffectual sham. * * * It is a sickening tale of animal misery and human indifference, carelessness and vanity." Now, after this outburst *Stock-Keeper* should have some consideration for our remarks about Prince Regent and Scottish Prince. About black markings in these dogs this journal says "Highland" errs in saying that no single authority is opposed to black. "One of the best known Russian breeders, whose name we quoted at the time we published the Russian standard, gives it as a disqualifying point. We are not aware either that any Englishman has yet condemned black in the ring; on the other hand, we know that Mr. Krehl has given a prize to a black and tan Barzoi, though whether he was justified in doing so or not we are unable to state." They have, however, asked a Russian authority to clear up this question of color. *Stock-Keeper* also wants "Highland's" authority for saying that the Barzoi unquestionably sprang from the Persian greyhound, as they have collected every bit of information on the subject and have nowhere come across this.

Mr. Edward Booth called on us on Monday while on his way to Poughkeepsie, where he takes charge of Col. Ruppert, Jr.'s kennel of St. Bernards. He left the Cloverdale Farm of his own accord, and, judging from the credentials Mr. Moore gave him, Mr. Booth should never find any difficulty in getting a berth with any kennel.

Mr. Rowland P. Keasbey, the secretary of the Spaniel Club, has purchased from Mr. J. F. Kirk, of Toronto, Ont., the noted field spaniel bitch Rosedale Ruby. The sale was consummated after the Toronto show. On the day she arrived at her new quarters she was bred to Mr. Keasbey's spaniel Beverley Negus. We are glad to see Mr. Keasbey take his bad luck by the horns, for he received a facer when he lost by death three of his best bitches within a few days of each other.

We have so many inquiries for something that will promote the growth of hair on dogs, also rid them of fleas, that the following mixture strikes us as a dressing that will do the business: Take one tablespoonful of powdered sulphur and one pint of kerosene oil, diluted with a gill of warm water. Apply freely, and keep the dog away from draughts. This will also be found a good mange cure, and is very cleansing in its action.

Frank F. Dole, of New Haven, Conn., has purchased all Mr. Sackett's kennel of bulldogs. When we say that this lot includes champion Harper and The Graven Image, Mr. Dole will be found to be equally strong in this breed as in bull-terriers.

Coursing in California seems to take firm hold in popular favor, for we see that over 2,000 people attended a meeting at Ocean View, near San Francisco, two Sundays ago. The attraction was a sixty-four dog stake. The stake was only half run through, and was to be completed last Sunday. Several dogs that ran at Merced last year are competing.

The Birmingham, Eng., dog show will have 228 classes this year. The prizes have not increased in value. The sporting division, always a feature at this show, has classes provided for pointers and setters that have competed in field trials. Judging will be public and commence Nov. 28. Twenty-one judges will pass on the merits of the different breeds, and the list comprises some of the best known names in English dogdom.

Another successful run of the Pennbrook harriers took place from the Wissahickon Inn, at Germantown, Pa., last Saturday. The drag led them over a course of five miles in full view of numerous society people present. The master, Mr. Mitchell Harrison, took part in the run.

It is strange that in a city so large as New York there is no infirmary for the free treatment of horses and dogs. The nearest approach to a public infirmary is the dispensary of the American Veterinary College in West Fifty-fourth street. Clinics are held there twice a week, Wednesday and Saturday afternoons, when horses, dogs and other domestic animals are examined, treated and operated on free of charge. For the year ending February, 1891, 363 dogs were treated. The expenses are borne entirely by the medical staff. Dr. Liautaud being the chief surgeon. The house surgeons are chosen from graduates by yearly competitive examinations. These budding "vets" serve without pay. Aided by subscriptions this department of the college might be made of great benefit to our four-footed friends whose owners are too poor to pay for regular surgical treatment. In the hospital proper the rate of charges for dogs is 50 cents to \$1 per day.

Coursing has come with a rush these October days, the sport being in full swing in England now, and with the opening of the Great Bend meeting next week coursing men in this country will have a good deal to occupy themselves with till snow flies, the great meeting at Merced taking place Nov. 10. It is unfortunate that Mr. Watson's call for the party to go out to Great Bend received such little encouragement, and the project has been given up. Our greyhound men should show a little more interest in the sport; and if Great Bend is too far, cannot we have a meeting nearer home? The dogs should certainly be given a chance this fall.

Mr. Lawrence, of Cambridge, England, has suffered a severe loss in the death of his noted bloodhound bitch Chesterton Duchess II. after whelping ten puppies. She died from blood poisoning.

From *Fanciers' Gazette* we learn that Lord Hawke, the captain of the English cricketing team that is now measuring bats with American players, has entered into a partnership with a Mr. Tom Cadell in establishing a kennel of fox-terriers. The kennel will be known as "Montrose."

The New York *Evening Sun*, in an article on St. Bernard says of Lord Bute: "As a prize dog his record is exceptionally good. He was beaten at Sheffield by Sir Bedivere. The judges at the time declared that in lines and formation Lord Bute was the equal, and in some respects outpointed Sir Bedivere, but lacked color." * * * He was the best dog of his kind in England last year." Why do people write such stuff? Lord Bute's most enthusiastic admirers do not claim he is a good show dog. His ability to begot winners will bring him more lasting renown than any number of prize cards. The same paper gravely states that he stands 36in. high and weighs 247lbs!

It is rumored that Rochester intends giving a show next spring. We heard something about it when up in Rochester the other day, but were also told that it was hardly fair to expect one or two moneyed men in the club to shoulder all the debt incurred by the last show, and until this was paid off another show would not be held.

We see a statement in one of the daily papers to the effect that the Philadelphia Club, at their meeting on the 13th, would discuss the advisability of withdrawing from the A. K. C. We are afraid to say more on this subject, as when speaking jocularly on the subject of the Philadelphia Kennel Club some months since, friend "Hunky Dory" displayed a lamentable lack of knowledge in current kennel affairs and a disposition to look erroneously on the dreary side of life.

Barzois! Barzois! it is all Barzois nowadays. News comes now that the Duchess of Newcastle has just received at Clumber from Russia a consignment of six of this handsome breed.

The well-known bulldog Holy Friar has been sold by Mr. Jack Ellis and finds his new home in Belgium.

Mr. Kennard Milling, of Chicago, Ill., has purchased from Mr. Creep, Lee, Kent, Eng., the great Dane bitch Hecla. She was shipped by Spratts Co. per S. S. Spain, Sept. 27.

When Mr. Reick sailed for Europe he told us not to be surprised if he purchased the crack St. Bernard of England. This he has done. Just as we go to press we received his cablegram, which reads: "Bought Princess Florence, Young Keeper." Mr. Reick must be congratulated for his luck and enterprise, for we know that the former's price was held at something like \$3,000. Both dogs are so well known they need no further introduction this week.

At Merced Coursing Meeting the stakes will have prizes of \$500 to first, \$200 to second, and \$100 to third. Dogs winning two courses save their stakes, and those winning three receive \$25. Surely a very liberal programme.

We hear that a new kennel is to be established within twenty miles of New York city; and the proprietors are now looking for a reliable and experienced kennelman to take charge of it.

A gentleman who advertised some beagle pups recently in *FOREST AND STREAM*, dropped into the office to say that he had over twenty-five answers and sold the whole litter in short order. Among the new kennel advertisements we find this week are the following for sale: Ancient and Modern Spaniel Kennels, several fine cocker spaniels; J. W. Douglas, trained Irish setter bitch; Poston & Burdell, pair Gladstone's Boy pups; A. Haskell, English greyhounds; C. T. Brownell, Gordon setters; G. Hult, pointer pups; Silas Decker, Irish setter dog pups; G. W. Patterson, several St. Bernards; John J. Biggs, fox-terrier pups; J. R. Purcell, pointers; Bryn Mawr Kennels, trained pointers and setters, and C. E. Bunn, several fine litters of mastiffs. In the stud:

H. V. Jamieson's beagle Valentine. Wants: E. T. Ridgway, a trained English setter, also R. D. Gould.

We have received a code of coursing rules drawn up by the National Greyhound Club. It is handsomely gotten up and should be in the hands of every lover of the leash.

Last Thursday morning the president of the A. K. C., Mr. August Belmont, suffered considerable loss in the burning to the ground of the mansion on Fifth avenue, which he had leased for the season from the Cutting estate. Numerous articles of vertu and valuable paintings were destroyed, and Mrs. Belmont had a very narrow escape of encountering a horrible death, her clothing and hair catching fire as she made her escape. Mr. Belmont was traveling in the South at the time.

The Chestnut Hill Kennels' sensational collie bitch Roslyn Dolly, since her return from England, has whelped a fine litter to Gladdie, the English dog, noted especially as the sire of the crack Setton Hero and Kinton Diamond.

CENTRAL FIELD TRIALS.—*Editor Forest and Stream:* We are requested by the Pointer Club of America to give notice through your columns to the owners of pointer dogs that the Pointer Club of America offers a special cash prize of \$100 to the best pointer, either sex, competing in the Central Field Trial Club's trials at Lexington, N. C., said trials commencing Nov. 30, 1891, this special prize to be awarded by our regular judges in any way they think best, either from work done in the regular heats or by a special heat. The competition for this prize is to be confined to dogs belonging to members of the Pointer Club.—**CENTRAL FIELD TRIAL CLUB, C. H. Odell, Secretary.**

MOHAWK SHOW.—Gloversville, N. Y.—The Mohawk Valley Poultry and Kennel Club have voted to change their dates and begin and end one day earlier, so the awards can all be made and credited in 1891. The present dates are Dec. 29, 30, 31, 1891, and Jan. 1, 1892. "Uncle Dick" is to superintend the bench show, consequently exhibitors may rest assured they will be well used, and that their dogs will receive good care.—**F. B. ZIMMER, Sec'y.**

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Joe M. B. By J. B. Murphy, New York city, for white, black and ticked setter bitch, whelped July 23, 1891, by Mack III. (Blue Dick—Buckeye Belle) out of Nell IV. (Blue Druid—Molly Rake).

BRED.

Prepared Blanks sent free on application.

Rosebud—Soggarth. J. Keegan's (Brooklyn, N. Y.) St. Bernard bitch Rosebud to his Soggarth, Sept. 20.

Verona Nell—Soggarth. E. Cahill's (Brooklyn, N. Y.) St. Bernard bitch Verona Nell to J. Keegan's Soggarth, Sept. 25.

Florida Spinster—Pitcher. V. Weik's (Brooklyn, N. Y.) St. Bernard bitch Florida Roland to J. Keegan's Pastor, Oct. 8.

Hillside Spinster—Pitcher. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Spinster to their Pitcher, July 18.

Richmond Olive—Pitcher. Hillside Kennels' fox-terrier bitch Richmond Olive to their Pitcher, July 19.

Russley Joker. Mr. Rathbone's fox-terrier bitch — to Hillside Kennels' Pitcher, July 22.

Heatherbelle—Bran. Hillside Kennels' deerhound bitch Heatherbelle to their champion Bran, July 22.

Warren Lilly—Pitcher. W. Rutherford's fox-terrier bitch Warren Lilly to Hillside Kennels' Pitcher, July 22.

Raby Mixer. Cloverdell Stock Farm's fox-terrier bitch — to Hillside Kennels' champion Raby Mixer, July 24.

Berga—Hillside Kennels' deerhound bitch Berga to their champion Clansman, Aug. 1.

Nora—Robber Chieftain. B. S. Dering's deerhound bitch Nora to Hillside Kennels' champion Robber Chieftain, Aug. 7.

Rebecca—Pitcher. W. Cushman's fox-terrier bitch Rebecca to Hillside Kennels' Pitcher, Aug. 8.

Suffolk Skipshod—Pitcher. W. Rutherford's fox-terrier bitch Suffolk Skipshod to Hillside Kennels' Pitcher, Aug. 14.

Hillside Jaunty—Russley Joker. E. Conan's fox-terrier bitch Hillside Jaunty to Hillside Kennels' Russley Joker, Aug. 14.

Warren Sequel—Pitcher. W. Rutherford's fox-terrier bitch Warren Sequel to Hillside Kennels' Pitcher, Aug. 20.

Donna—Russley Joker. Hillside Kennels' fox-terrier bitch Donna to their Russley Joker, Aug. 21.

Warren Selish—Pitcher. W. Rutherford's fox-terrier bitch Warren Selish to Hillside Kennels' Pitcher, Sept. 5.

Hillside Leda—Pitcher. Hillside Kennels' fox-terrier bitch Hillside Leda to their Pitcher, Sept. 7.

Verdict—Pitcher. J. A. Logan's fox-terrier bitch Verdict to Hillside Kennels' Pitcher, Sept. 16.

Hillside Sapphite—Russley Joker. Hillside Kennels' fox-terrier bitch Hillside Sapphite to their Russley Joker, Sept. 18.

Hillside Bounty—Raby Mixer. Hillside Kennels' fox-terrier bitch Hillside Bounty to their champion Raby Mixer, Sept. 20.

Hillside Ruth—Pitcher. Hillside Kennels' fox-terrier bitch Hillside Ruth to their Pitcher, Sept. 20.

Freya—Russley Joker. Hillside Kennels' fox-terrier bitch Freya to their Russley Joker, Sept. 21.

Warren Comely—Raby Mixer. W. Rutherford's fox-terrier bitch Warren Comely to Hillside Kennels' champion Raby Mixer, Sept. 23.

Pluck—Pitcher. Hillside Kennels' fox-terrier bitch Pluck to their Pitcher, Sept. 23.

Hillside Syren—Russley Joker. Hillside Kennels' fox-terrier bitch Hillside Syren to their Russley Joker, Sept. 23.

Rosa—Pitcher. Hillside Kennels' fox-terrier bitch Rosa Campa to their Pitcher, Sept. 23.

Suffolk Riot—Raby Mixer. A. D. Stewart's fox-terrier bitch Suffolk Riot to Hillside Kennels' Raby Mixer, Sept. 28.

Brookhurst Belle—Raby Mixer. J. J. Patterson's fox-terrier bitch Brookhurst Belle to Hillside Kennels' Raby Mixer, Oct. 1.

WHELPES.

Darkness. Park Kennels' (Providence, R. I.) schipperke bitch Darkness, Sept. 9, five (three dogs), by their Midnight.

Ballyrush. Park Kennels' (Providence, R. I.) Irish terrier bitch Ballyrush, Sept. 17, seven (four dogs), by their Killaloe (Benedict—Breda Florence).

Sunol. L. Gardner's (Mount Vernon, N. Y.) English setter bitch Sunol (Gladstone's Boy—Flame M.), Sept. 15, twelve (nine dogs), by his King of the Nobles—Queen Meg.

Phyllis. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Phyllis, Aug. 23, ten (five dogs), by their champion Robber Chieftain.

Brazen. Hillside Kennels' deerhound bitch Brazen, Sept. 6, two (one dog), by their Clansman.

Princess. Hillside Kennels' fox-terrier bitch Princess, Sept. 7, six (four dogs), by their Pitcher.

Hillside Heather. Hillside Kennels' deerhound bitch Hillside Heather, Sept. 12, three (two dogs), by their Chieftain.

Hillside Spinster. Hillside Kennels' fox-terrier bitch Hillside Spinster, Sept. 13, five (three dogs), by their Pitcher.

ONE MOMENT, PLEASE.—Do you contemplate visiting Dubuque, St. Paul, Minneapolis, Marshalltown, Des Moines, St. Joseph, Leavenworth, Kansas City, or any point in the Northwest, the Puget Sound region or the balmy South or Southwest? The Chicago, St. Paul and Kansas City Railway will furnish you transportation enabling you to safely, quickly and comfortably reach your destination. Its splendid equipment and excellent management have made it a popular favorite. F. H. LORD, General Passenger and Ticket Agent, Chicago, Ill.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by *FOREST AND STREAM*.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

H. M., New York City.—The term blue belton is given to a setter with the blue or black ticking you mention. The blue belton was the strain of dogs that Mr. Laverack prized so highly. Old Moll and Ponto, the original sires of his noted strain, were of that color. There is also a strain called the lemon belton, with lemon ticks instead of black.

L. L., Grand Rapids, Mich.—I want information about a certain kind of hound that I want to get. It is a cross between an otter and a foxhound. They are used here for coon hunting. I have a bitch that is half Kentucky fox and shaggy hound, and she has pups now. I wish you would tell me if you know of any of that kind. Ans. We only know of the shaggy foxhounds bred and owned by Mr. A. B. Whitlock, Sekiton, O. He may know something of a cross similar to that you describe. Write to him.

C. T. N., Kittanning, Pa.—I please give the pedigree of the white and liver ticked pointer bitch Bridget II, out of the imported dogs Jim and Bridget, owned by a Dr. Paddock, of Pittsfield, Mass. 2. Please write me the best points of a pointer, such as head, body, legs, tail, etc., also field work. Ans. I. We can find no trace of Bridget II. in the stud book. 3. We have not space to print the pointer standard, but if you write to Mr. Geo. W. La Rue, secretary of the Pointer Club, 239 Broadway, New York city, he will send you a copy.

F. L. Sharon, Conn.—My hound dog had a swelling under the left eye twice last summer. It discharged each time and the swelling went down. Last Sunday it began to swell again, and last night it started to break. He looks fine and feels well. The place is very sore but is doing well. I don't know of his being hurt or anything to cause it. Please tell me what to do for it. Ans. Without an examination one cannot tell what causes the swelling. It may be due to a small piece of diseased bone or disease of the lacrimal duct. Foment two or three times a day and apply a little boric ointment. If necessary make an opening in abscess larger. Why not consult a veterinary surgeon.

J. L. A. H., Monument Beach, Mass.—Will you tell me what I can do for one of my hounds whose eyes roll in, that is the under lid rolls into the eye so far that the eyelashes and some of the hair below the eye lie in the eye, and when I take my thumb and draw it out it looks white and has a soaked-out appearance. The eyes are sore and the dog has a lot of matter. The dog is entirely well otherwise, and does his work like a good dog. The worms as well as any other hound. Ans. It is due to an inverted eye lid, and can only be cured by an operation. You can relieve the irritation greatly by pulling out the eyelashes and apply frequently with a small piece of sponge the following lotion: Sulphate of zinc, 1 scruple; tincture of opium, 1 drachm; distilled water, 6 ounces.

G., Boston, Mass.—I have a pug dog 4 1/2 yrs. old, who as soon as flea season opens, begins to bite and scratch himself. His skin becomes inflamed and thick scabs form, which, when they loosen, take the hair with it, leaving the skin underneath almost black. The hair grows coarse and "brash" on these spots, which begin at the root of the tail and spread to its neck, also down the tail. He itches and I have tried the different soaps and Spratts mange cure to no good effect. Is it mange or distemper, or some other disease? And what would you recommend that could be used on a house dog? The same dog has a habit when excited of turning and biting his tail and spinning around like a top, growling and hanging on until he brings blood and is almost exhausted. About a year ago he had three such spells in a week, and in the last one he pulled off the end of his tail with 3/4 in. of the vertebrae. No one that I have asked could give a satisfactory reason for such spells. He will start out of a sound sleep and "whirl." A sudden noise, or the fear that he will be hurt or anything that over-excites him, will set him going, and he will say "vrrrrrr" but that was not the case. How can you explain it? Remedy? He has been quiet and is very intelligent, otherwise he would have "passed on" long ago. Is the first a blood or skin trouble? Ans. Eczema, brought on by the irritation set up by the fleas. Have the following dressing well rubbed all over every other day for a fortnight, then wash and repeat if necessary. Coconut oil, castor oil, cotton seed oil and kerosene of each one equal "vrrrrrr." Also give one of the following powders twice a day mixed with food. Precipitated sulphur, sulphate of magnesia one dram, bi-carbonate of potash, half a dram; mix and make twelve powders. The irritation you mention is due to thread worms which are lodged in the rectum, for which inject into the bowel twice daily one ounce of the following extract: Krameria, one dram; tr. of krameria, one dram; water, add six ounces. Also treat for worms again.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE REVOLVER CHAMPIONSHIP.

THE time is now approaching when it will be necessary to fix times and places for the final contests in the revolver championship for the possession of the Walter Winans trophy indicative of the amateur revolver championship of America. No match of equal importance has ever been drawn under more liberal conditions. The utmost freedom from anything approaching a handicap on the best work has been avoided, and in every point the shooter is left free to follow his own fancy and adopt anything which he may imagine or which he knows from experience will assist his scoring. The limitations are few and easy. The distance has been a standard one on the great English range, while in this country shooting with the small arm runs all the way from 12 to 50 yds. indoor and outdoor practice.

The plan of carrying out the finals is a very simple one and particularly convenient for the shooters. Those who may wish to shoot will now send in their names to the *FOREST AND STREAM*, indicating, if they have any, their preference of gallery for shooting. There are several good shooting ranges in this city, Boston, Philadelphia and Chicago are likely to be other points of contest and in each of those places good gallery accommodation is available. Dates can then be fixed for the several record shoots, of which due notice will be given in *FOREST AND STREAM*. It is the intention to close up the whole series in all the cities, where dates and places may be fixed upon before the holidays; but to do this a prompt start should be made, and to facilitate this contestants should indicate at the earliest date their intention of taking part. The following are the

CONDITIONS.

Open to any citizen or permanent resident of the United States. Any revolver, maximum length of bore, including cylinder, ten inches.

Any trigger pull.

Any sight, both sights to be on the barrel or forward of the grip of the pistol hand.

Any fixed ammunition.

Cleaning allowed only between scores of six shots.

Distance, 30 yds.

Position standing, free from any artificial support, the revolver held in one hand only with the arm free from the body and unsupported in any way. The rear sight shall not be nearer to the eye than twelve inches.

Target—Ready measurement disks, one shot on each disk and the measurement to be taken by mechanical Vernier scale from center of disk to the center of the shot hole.

Scores—Aggregate of best three in five scores, each score to consist of six consecutive rounds. The five scores to be fired consecutively.

Amateur Standing—The standing of a contestant as amateur and professional to be determined in each individual case by *FOREST AND STREAM* rules.

Where not in conflict with conditions herein, the rules of the Massachusetts Rifle Association for revolver competitions to hold. The decision of FOREST AND STREAM to be final on all points.

Any winner of the trophy shall hold it subject to challenge for a term of two years, after which it shall become his personal property. Upon receiving a challenge the holder shall agree with the challenger upon a place and date for their meeting not later than six weeks from the receipt of the challenge, of which meeting at least two weeks' notice shall be given through FOREST AND STREAM, and the shooting at said meeting shall be under the same conditions as the original competitions for the championship trophy. In case of a failure to agree upon a time and place of meeting they shall be fixed by FOREST AND STREAM.

The trophy shall be deposited in the custody of FOREST AND STREAM at least one day prior to any challenge meet, and if required, holders must give bonds to FOREST AND STREAM for its safe return.

The holder shall not be required to accept a challenge pending the determination of a challenge shoot already under date. In case of any dispute about the right of priority in shooting challenges, FOREST AND STREAM shall determine the order of shooting. All expenses of targets and gallery will be borne by FOREST AND STREAM. Contestants will defray all other expenses.

THE SYRACUSE TOURNAMENT.

SYRACUSE, Oct. 7.—The shooting tournament of the Syracuse Rifle Club opened to-day at the club's new range at Maple Bay. The weather was anything but favorable to rifle shooting, yet the attendance was good for the opening day and the contests were interesting. Considering that the shots were made against the wind the records were good. Most of the entries were Syracuse, Baldwinsville and Camillus crack shots. The club house, which was built by W. S. Barnum at a cost of \$1,000, is perfect in its appointments. The club can boast of some improvements which are unique in the country has, notably electric systems of notifying the markers and of counting.

Among the most successful of the 20 contestants yesterday were Dalley, Leighton, W. Morris, Eggleston, Stillman and Seelye. The following scores show the highest records made on the opening day of the tournament:

25-ring target, possible on three targets 225:	
Dalley.....	67 65 67—199
Leighton.....	71 63 61—195
W Morris.....	65 63 63—191
D Eggleston.....	60 63 68—191
Seelye.....	64 64 62—190
Stillman.....	63 63 62—188

Point target, possible on three tickets 45:	
Stillman.....	12 8 8—28
Dalley.....	9 9 8—26

Man target, possible on three tickets 200:	
Stillman.....	83 84 94—261

Rest target, possible on three tickets 180:	
Eggleston.....	46 48 44—138
Kochler.....	47 43 42—132

Oct. 8.—The attendance on the second day of the Syracuse Rifle Club tournament at the Maple Bay range, was larger than that of the opening day. The spectators were numerous and there were plenty of contestants. Among those who participated were crack shots from New York and Rochester. The records made were better than those of the first day. The scores of the day's shooting are as follows:

Twenty-five ring target, possible on 3 tickets, 225:	
Dalley.....	71 67 67—205
Stillman.....	70 63 64—202
Leighton.....	71 65 63—199
Eggleston.....	67 68 69—199
W Morris.....	65 65 69—195
Bovden.....	61 65 68—195

Point or 3 ring target, possible on 3 tickets, 45:	
Stillman.....	12 8 8—28
Dalley.....	10 9 8—28
Eggleston.....	8 8 8—24
Leighton.....	8 8 7—23
W Morris.....	8 8 7—23

Man target, possible on 3 tickets, 200:	
Stillman.....	83 84 94—261
Dalley.....	78 84 61—203

Rest target, possible on 3 tickets, 180:	
Leighton.....	54 52 51—157
Cargill.....	52 50 53—155
Barnum.....	50 51 48—147
Winston.....	49 49 47—147
Bucklin.....	53 46 46—145

The medal shoot of the Onondaga County Sportsmen's Club was also held at Maple Bay this afternoon. There was a good attendance and the shooting was lively. In the first class these records were made out of a possible 50: Chase 45, Lefevre 43, Hookway 42, C. Walters 41, Moshe 37, Ashond Ashton 35. Chase was the winner of the gold medal for the first class. Five times he was successful in the record shooting. One must win five times to own the medal. Charles Becker won the prize in the second class and now belongs to him, as he has been victorious five times. Mr. Becker had uphill work in securing the prize, which is in the form of a diamond charm, valued at \$25. He had won four times in succession, and lost in the last shot. The following, the very best men would be found having been pitted against him. He succeeded to-day in defeating Howell, who came here from Port Byron to wrest the prize from him. These were the records made in the second class out of a possible 50: Becker 43, Howell 42, H. Frazer 41, Mowry 41, Petit 38, Finley 37, Holden 37, Harwood 35 and Phelps 32.

THE THIRD BRIGADE SHOOT.

ALBANY, N. Y., Oct. 2.—The fourteenth annual meet of the Third Brigade Rifle Association on the Henselaerwyck range closed to-day. It was a successful shoot, above the average, with good scores, and with the Binghamton shooters once more ahead of the home team. The several matches and the leading scores in them stood as follows:

Match No. 1, short range continuous military match, open to all comers, except as to the first prize, which can only be won by a member of the Third Brigade; 200yds., 5 shots, re-entries unlimited, the aggregate of the best two scores to count; standing and off-hand, any military rifle:

D H Ogden.....	55545—24
M Congdon.....	45545—24
W Meyer.....	45545—24
C Bodensteln.....	44555—23
Col W E Fitch.....	44555—23
W C Gompf.....	44545—23
Capt A. Donner.....	44545—22
Lieut C H Hitchcock.....	44545—22
A H Rennie.....	44445—22
F W Harris.....	44445—22
E S Hoag.....	44445—22
W W Stowe.....	44545—22
Capt Olmsted.....	44445—21
J Murphy.....	44445—21
Capt E V Dennison.....	44445—21
W B O'Connell.....	44445—21
P W Worthington.....	44445—21
Lieut G P Hilton.....	44445—21

Match No. 2, Standard American target, re-entry match (this match was shot from the house and on the 11in. black center), open to all comers, 200yds., 5 shots, standing and off-hand, any rifle, entries and re-entries, 25 cents each, re-entries unlimited, aggregate of the best three scores to count for the first three places, best two scores to count for the last three:

W C Gompf.....	9 10 9 10 10—45
F Mayberry.....	9 10 9 9 45—8
J F Moulton.....	9 10 10 10 47—10
J Bodensteln.....	10 7 8 10 10—45
G Zautner.....	9 9 9 10 10—43
H Parsons.....	10 9 6 8 10—43
H S Cross.....	8 9 9 9 43—4
D E Childs.....	6 10 10 8—42
B T. V. L. r.....	9 10 6 42 9—4
J Newbury.....	9 10 5 10 43—7
A Donnelly.....	7 6 6 7 10—36

Match No. 3, mid-range continuous military match, open to all comers, 500yds., at second-class target, 5 shots, unlimited re-entries allowed, the aggregate of the best 3 scores to count for first 3 places, best 2 scores for all below, position any, any military rifle:

D H Ogden.....	55555—25
C H Gaus.....	55555—25
W W Stowe.....	55555—25
Lieut Hitchcock.....	55555—25
A H Rennie.....	55555—24
S Schreiber.....	55555—24
Gen C F Robbins.....	55555—24
Col W E Fitch.....	55555—24
F W Harris.....	55555—25
G W Harris.....	55555—25
C L Underwood.....	55555—24
E S Hoag.....	55554—21
Capt Olmsted.....	55554—21
J Murphy.....	55445—23

Match No. 4, Carlton match, open to all comers, 500yds., on second-class target, 11-in. carton to count 6, number of shots 15, unlimited re-entries, one score only to count, any position, any rifle:

S Schreiber.....	65565555666665—85
D Geiger.....	66666666655548—85
C H Gaus.....	666555556665—83
F Hein.....	66644444666555—82
F Root.....	66666555555555—81
K L Rowe.....	66656613655550—81
H W Harris.....	66555555666555—80

In the above, Mr. Schreiber leads, although his total score is tied with that of Mr. Geiger, because the latter has one "4" and Mr. Schreiber has not.

Match No. 5, Colt's target revolver match, open to all comers and to revolvers only, distance 30yds., on the Standard American target reduced, 5 shots, unlimited re-entries allowed, aggregate of the best three scores to count, each score to be completed before counting the next shot, off-hand, any position, only allowed, revolver not to exceed 3lbs. in weight, maximum length of barrel (exclusive of chamber) 8in., open sights, ammunition only, cleaning allowed between scores only, revolvers must not be loaded until the competitor has taken his position at the firing point, the muzzle must always be kept in a vertical position or pointed toward the target:

E Mead.....	8 10 7 8 10—44
P J Anderson.....	8 10 7 8 10—44
C H Gaus.....	8 9 7 8 10—42
J E Parsons.....	8 7 10 10 7—42
E L Howe.....	8 5 8 5 10—36
D L Eddy.....	8 7 5 8 3—33

Match No. 6, Third Brigade team match, open to teams of 8 commissioned officers or regularly enlisted soldiers from an infantry or separate company of infantry in the Third Brigade, R. G. S. N. Y., each team to appear in the uniform of their corps (full dress or fatigue), and to be certified by their commanders to be commissioned officers or regularly enlisted soldiers in good standing of the battalion or separate company they represent, under the restrictions laid down in Par. 372, State regulations; entrance fee \$1 for each man, distance 200 and 500yds., 5 rounds at each distance, position standing at 200yds., any position at target, at 500yds.; weapon, Remington rifle, New York State model:

W E Fitch.....	44544—21
E V Dennison.....	44344—19
G P Hilton.....	44434—19
J Ronch.....	44444—20
A H Rennie.....	44443—19
G Rommel.....	44443—19

Tenth Battalion Team.	
117.....	116 233

Twentieth Separate Company Team.	
Lieutenant C H Hitchcock.....	54544—20
Sergeant H P Worthington.....	54534—19
Sergeant W W Stowe.....	54444—17
John W. Harris.....	54444—17
T M Congdon.....	54544—23
Corporal E S Hoag.....	44444—20

The prizes in all the matches were the same as every year.	
--	--

BOSTON, Oct. 10.—Following are the scores made to-day, distance 200yds., standard American target, all being re-entry matches:

PHILADELPHIA, Oct. 5.—The members of the First Brigade, who are located in Philadelphia, as well as the various shooting clubs, have always found it very hard to procure a place to shoot where they could either practice or enjoy a day's sport without serious danger to any one concerned. This evening at a meeting of the Board of Officers of the First Regiment a scheme was promoted and a committee appointed to look into the advisability of the same, and to communicate with other organizations and solicit their support. The scheme is to raise ten thousand dollars toward buying and fitting up a range where the members of the guard could practice, and also where the various gun clubs could also enjoy a day's shoot. The number of organizations that there is in this town, together with the numerous military companies, would make the expense comparatively small to each one of the parties concerned, provided they would all contribute. It is said that for ten thousand dollars a good substantial range could be erected and ground purchased for the same. There is lots of ground near the city which is easy of access by railroad trains, which could be utilized for this purpose and which would make good safe places to shoot. Lieutenant-Colonel Huntington and Sergeant-Major Harry Mehler, of the First Regiment, have been appointed as the committee, and will be pleased to hear from any military organization or gun club in Philadelphia. A letter addressed to either of them at the Armory, Broad and Callowhill streets, will reach them safely.

MILLER RIFLE CLUB.—Hoboken, N. J., Oct. 7.—The following scores were made by members at the club's weekly shoot, 10 shots, off-hand, American 25-ring target, possible 250:

D Hencken.....	25 25 25 24 23 23 22 21 20—236
Capt Dewey.....	25 25 25 25 24 23 22 22 21 20—232
J H Kruse.....	25 25 24 24 23 22 22 21 20—232
D Miller.....	25 25 25 24 23 22 22 21 21—232
E Fischer.....	25 25 24 24 23 23 22 21 21—232
C Carrol.....	25 24 24 24 23 23 22 21 20—230
F Soh.....	25 24 24 24 23 23 22 22 20—229
F Brandt.....	24 24 23 26 23 23 22 22 21 19—223
D Peters.....	25 24 23 23 22 22 22 20 19—223
H Selteneich.....	25 23 23 23 22 21 21 20 13—209
J J Devitt.....	22 21 21 21 21 21 21 17 17—200
A Stadel.....	23 22 22 22 20 20 18 17—200

Team and medal shooting will be inaugurated next week.

THEY WON WITHOUT HAVING TO SHOOT.—A very amusing incident happened at the late Baisley meeting. A Scotchman who won minor prizes in the revolver competitions was going round trying to get up an international revolver competition. What he suggested was that teams consisting of two men each (representing different nations) should shoot two entries in each of the revolver competition, the highest aggregate made by a team to win a prize. The Scotchman said, "I have got a Canadian and an Irish team, and asked Mr. Walter Winans to try to get another American so as to get up an American team. Only one other U. S. American could be found in camp, and he had never shot a revolver, so Mr. Winans asked if a Canadian would go. This was agreed to, the Scotchman having the second prize winner as his partner and thinking he had a sure thing in the match. The day of the match Mr. Winans handed out a Scotch and an English and an Irish team, and asked and we will be there to shoot," and walked away. Turning back after going a few steps, he said, "Oh, I forgot to mention my man is the revolver champion of Canada." The match never came off, as several of the competitors had "previous engagements."

HUDSON RIFLE CLUB, of Jersey City Heights, N. J., will hold its second annual prize shooting festival at the range, 15 Miles avenue, Oct. 20 and 27, 1891. Target of honor, open to members of the Hudson Rifle Club only. Ring target, open to all comers, distance 75ft., 25-ring targets. Shooting on this target each evening from 7 to 12.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Oct. 15-16.—Orlando (Fla.) Gun Club Tournament. J. H. Mooney, President.

Oct. 20.—North Side Gun Club of Long Island. Tournament at Queens County Driving Park, Maspeth, L. I. Samuel Lyon, Pres.

Oct. 21-23.—Reading's Tournament, Flemington, N. J. Key-stones. Open to all.

Oct. 27-29.—Savannah, Ga., Chatham Gun Club, assisted by the Inter-State Manufacturers' and Dealers' Association.

Nov. 20.—South Side Gun Club Tournament, at South Norwalk, Conn. E. H. Fox.

1892.

June 13-18.—New York State Sportsmen's Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

WASHINGTON ROD AND GUN CLUB.

ON MONDAY, Oct. 5, the newly organized Washington Rod and Gun Club gave their first tournament, and had a general housewarming on their new grounds at the National Capitol. The grounds are on the river bottom and adjoin those of the Capitol City Club. The club house is a neat structure and the grounds are well equipped. The programme was originally intended to be open only to shooters of the District, but as several non-resident shooters put in an appearance the events were thrown open to all. Among the visitors were Messrs. Bond, Hartner and H. M. Heflin ("Capron") and Heflin, Jr., of Baltimore, W. F. Stewart, of Galveston, Tex., Neaf Apgar, representing Squires of New York, and Paul North, of Cleveland. Mr. North's electrical trap pull was highly appreciated and gave great satisfaction. The bluecock self-acting traps were used, and as Apgar, shooting in the regular squad, was handicapped at unknown angles, the perfect working of the angler was fully demonstrated. The only prizes in the events consisted of merchandise, as there was no entrance charged, birds only being paid for. In each event six prizes were given, and the aggregate value of the plunder, all of which was contributed, amounted to over \$300. President Geo. S. Atwater was a busy man during the shooting, and the guests of the club left with more than a kindly feeling toward him. All events shot rapid firing system, bluecocks, from one set of ten traps.

CLEVELAND, O., Oct. 8.—The monthly shoot of the Cleveland Gun Club, which is attended on the place this afternoon at the grounds near Blue Road, "Golfing" was the order of the day. The following were the winners:—
 Hole 25: Upson 20, Randolph 20, W. Tamblin 19, Stirling 16, Albert 14, Elworthy 13, Calhoun 15, Watts 18, McNulty 20, Williams 17, Cogswell 17, Silsby 21, Safford 11, Braimard 15, Wherry 19, Curtis 13. For tie on second badge: Upson 2, Randolph 3, McNulty 3. For tie on third badge: Upson 1, McNulty 1, by Randolph, the third, by W. Tamblin and the fourth, by Watts.

PHILADELPHIA, Pa., Oct. 10.—An interesting match at live sparrows took place between six members of the North End Gun Club on their grounds, at Frankford, to-day. The conditions of the match were to shoot at 25 live sparrows each man, 20yds. rise and 50yds. boundary, from 3 traps. The birds, which had but recently been caught, were an exceptionally fine lot and darted off like arrows as soon as the traps were pulled off them. A large number of people were present to witness the shooting, who attested their appreciation of the skill of the shooters by frequent applause. The match was closely contested all around, resulting in a tie for first and third honors, which, owing to darkness coming on, could not be shot off.

WOODSIDE, N. J.—The Woodside Gun Club will hold an open-to-all tournament on the grounds foot of Riverside avenue. The events will be under the expert-amateur rules, shooting to begin at 9:30 A. M. and continue until dark each day. Lunch and ammunition will be on hand. The events, in order, will be as follows: First day, 10 bluerocks, \$1; 15, \$1.50; 20, \$2; 25, \$2.50; 10, \$1; 15, \$1.50; 20, \$2; 25, \$2.50; 10, \$1; 15, \$1.50. Second day, 10 bluerocks, \$1; 15, \$1.50; 20, \$2; 25, \$2.50; 10, \$1; 15, \$1.50; 20, \$2; team shoot, 10 bluerocks per man, teams of two from any regularly organized club, \$2 per team; 10, \$1. Extra events will be arranged to suit the contestants.

MILLER'S LONG RUN.—While shooting at Knoxville, Tenn., in the Manufacturers' and Dealers' Association tournament, E. D. Miller, of Springfield, N. J., scored 45 straight Keystone targets, shooting under expert rules and using a 12-gauge Parker gun. This is the longest run ever made under the expert handicap.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Canoeing.

Canoeing. Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price \$2.00. Canoe Handling. By C. B. Vaux. Price \$1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneak-box. By N. H. Bishop. Price \$1.50. Canoe and Camp Cookery. By "Seneca." Price \$1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

LARGE AND SMALL SAILS.—There is something amusing in the race of Saturday, in which two men who came several hundred miles, had with them the proper canvas for the weather, while men who were but three miles from home had left their largest rigs at their club houses, and had not sail enough. A number of the men who were left behind by Butler and Goddard had large sails home, but could not get them at half an hour's notice. Both the Vesper rigs were fitted with a practical and smooth-working reefing gear, and so were ready for moderate as well as very light weather. Of course if it had come to reefing the boats with moderate-sized standing rigs would have had an advantage over the Vesper sails reefed to the same area; but where a man is going to a distance from his club house for a single race and cannot well take his whole box of sails with him there are certainly great advantages in a good reefing rig.

LIMIT OF WEIGHT OF CENTERBOARDS.—It is a fact that has escaped general notice that the limit of weight for centerboards, which has been in the A. C. A. rules since 1882, has this year been dropped from the rules, and no limit is now to be found in the book. Of late this clause of the rules has become a dead letter, the prevailing fad since Pecowsic's advent in 1886 being for light centerboards. It does not follow, however, that the limit,

60lbs. for total weight of all centerboards, is no longer necessary; already canoeists have learned that too thin a board is a bad thing, and thicker boards are used now than those of even last year. At the same time canoeists are awakening to the fallacy of the absolute rule laid down by some, that all ballast is bad in any canoe, and it is probable that by next season the use of lead in moderation may be quite general. If ballast is to be carried at all, and there is ample proof that it is necessary to some models and under certain conditions, a fair portion of it can be better stowed in the form of a gun-metal board than any other, and knowing the predilections of canoeists for the greatest extremes, it would not surprise us to see a 75lb board put into a 30in. canoe. Just now the tendency in yachting is to sling a very great weight of ballast low down beneath a comparatively shallow hull, as Mr. Watson has done in the Clyde centerboard boats, and as Mr. Herreshoff is doing in a new keel racer. There are extremes enough in canoeing to-day, and in order to prevent any further ones the old limit of weight should be restored for the general purpose class at least.

A NEW CANOE SAIL.—The peculiar battened spritsail devised by Mr. N. G. Herreshoff and used successfully by him on several cat-yawls, has some features which make it specially adaptable to a canoe. A sail of this pattern has just been rigged on the Torment by Mr. Smythe, of the Brooklyn C. C., and was used in the race of Saturday. A somewhat similar sail, with one sprit and battens, was used a couple of years since by Mr. Baden-Powell, but the details differed from the Herreshoff rig.

"GLORIA AZTEC."—The new canoe Aztec, built by T. McWhirter for Com. William Willard Howard, of the New York C. C., made a very creditable showing on Saturday, coming in ahead of all the local boats, and being third in a fleet of 13 starters. On this occasion she was sailed by Mr. Schuyler Schieffelin, his performance being specially creditable from the fact that he had never sailed her before this race.

A CENTERBOARD-KEEL CANOE.

IN this handsome design, for which we are indebted to Mr. C. W. D. Dyer, a Holyoke, Mass., canoeist, now a student at the Worcester Polytechnic Institute, the attempt has been made to produce a canoe that, while conforming to the A. C. A. rules, shall be faster and more powerful than the usual type, approaching more nearly the modern yacht models. At the time the design was made, last February, there was no limit on the draft of a canoe, while the centerboard was limited to 60lbs. weight and fixed keel ballast to 36lbs. In order to carry the greater weight, the lead shown in the plans would be fitted with a pin and lifting rod, so as to be raised and lowered, though in use it would be kept housed in the keel. Since the design was made, the A. C. A. rules have been changed so as to limit the draft to 10in., while all limit of weight has been taken from the centerboard, so that if desirable even more lead might be carried. In order to comply with the rule the rabbet has been carried very low, leaving only the required 1 1/4 in. of keel exposed.

The keel being so deep should be of some light wood, clear spruce or even white pine, in preference to oak. The construction is clearly shown in the large section, but the keel might well be made a little deeper and hollowed out on top to the exact curve of the timbers. Toward the ends the timbers would be in two parts each, with heels rabbeted into the keel and deadwoods. The details of construction are very clearly shown, additional particulars being given in the following tables. The sail plan is large, being intended for racing, for which use the bucket cockpit and a 4ft. sliding seat would be put in. For ordinary use the draft is much greater than yet carried, but for open and deep waters this would be no serious objection.

MARINE AND FIELD CLUB RACE, OCT. 10.

EVEN Gravesend Bay, one of the few good pieces of water for canoe sailing still left about New York, is not exempt from the whims and vagaries of the wind, and on Saturday last it served the Marine and Field Club rather a poor turn by doing out the breeze very sparingly for the greater part of the afternoon. Although there was wind enough for a race when it finally came, there was a general disappointment over the light weather, as both racers and spectators wished to see the fleet in a whole-sail breeze. Perhaps the most disappointed of all in one way was Mr. Paul Butler, who had brought his new Bee from Lowell, in company with Mr. Goddard with the Vesper, in order to test the new boat in rough water, something that he has not been able to do since she was launched. Gravesend Bay on this occasion was as smooth as it could possibly be, but in the end both canoeists went home tolerably well satisfied, having finished first and second on a fine fleet of thirteen starters, including most of the local flyers. The race was arranged by Mr. Vaux, Whitlock for the Marine and Field Club in order to bring together the leading racing boats at the time when they were in the best possible form—better in most cases than at the meet. Two handsome prizes were offered, the race being open to all canoeists. The starters were as follows:

Wasp.....	Paul Butler.....	Vesper.....
Aztec.....	D. S. Goddard.....	Nesper.....
Eurylda.....	Schuyler Schieffelin.....	New York.....
Bonnie.....	W. S. Elliott.....	Marine and Field.....
Eclipse.....	C. B. Vaux.....	Brooklyn.....
Torment.....	F. L. Dunneil.....	Brooklyn.....
Seabright.....	H. C. Ward.....	Brooklyn.....
Bubble.....	W. T. Winttingham.....	Brooklyn.....
Kismet.....	W. Whitlock.....	New York.....
Guenn.....	C. J. Stevens.....	New York.....
Rival.....	H. L. Quick.....	Yonkers.....
Chingachgook.....	Fred. Fricke.....	Red Bank.....
	Oscar Hesse.....	Red Bank.....

It will be seen that the fleet was a notable one, the principal local boats being present in addition to the two visitors. To make it complete there was needed only Toltec, Tempest, Cricket, Uno, Beta and Lieda. Mr. Schieffelin sailed Aztec in the absence of Com. Howard, Mr. Quick sailed Guenn, Mr. Whitlock his new Bubble, which had just arrived from the builder after some material alterations made since the meet.

Both Butler and Goddard had their large reefing rigs of 140ft.,

but the local men for the most part turned up with small rigs, having left their largest sails at the club houses. The consequence was that nearly all were under-canvased throughout the race.

The course was a triangle of about two miles, the first leg a reach with booms to starboard, then a jibe and a reach to the outer buoy, with a beat home. The tide was running out of the Bay. The wind was light from the north, backing a little on the last round and freeing after the leaders had finished. The course was a very good one, with the exception that the finish line, which was at right angles with the starting line, was laid off to leeward instead of to windward of the home buoy. The consequence was that several boats on the last leg laid up to weather this buoy, as in the first two rounds, when they might have finished a hundred yards to leeward.

At 2 P. M. there was not wind enough to start the race, and the first signal was not given until 3:07:30, the start being given at 3:12:30. Bee was perfectly timed, going over quickly with good headway, while Guenn, Wasp and Seabright followed her closely. The fleet was well strung out from the start, several being far in the rear. The jibe at the first mark was made in the following order: Bee, Guenn, Wasp, Bonnie, Aztec, Eclipse, Chingachgook, Eurylda, Rival, Bubble, Seabright, Torment, Kismet. On the second leg Bee ran so far ahead that she sailed alone. Wasp was pushing Guenn for second place, while Aztec had left the pack well astern. The order at the leeward mark was: Bee 3:25:40, Guenn 3:26:50, Wasp close to Guenn, Aztec, Eurylda, Bonnie, Eclipse, Rival, Chingachgook, Torment, Seabright, Bubble, Kismet.

On the windward work Bee, Wasp and Aztec gained on the rest, the fleet being broken up from this time out into three divisions. Bee, Wasp and Aztec made up the first, some distance astern were Guenn, Eurylda, Eclipse, Bonnie and Torment, while in the rear were Seabright, Bubble, Kismet.

The first round was timed:

Bee	3:38:30	Torment	3:41:58
Wasp	3:39:15	Seabright	3:42:45
Aztec	3:39:55	Bubble	3:43:45
Guenn	3:40:48	Bubble	3:43:47
Eurylda	3:41:10	Kismet	3:46:07
Bonnie	3:41:40	Chingachgook	3:46:12
Eclipse	3:41:53		

The wind was so light that the men were hardly outside the boats, none being fairly on the seal. On the first leg of the second round several managed to wing out, but the leaders sailed with booms both to starboard, as at the start. After completing the first round Rival and Chingachgook withdrew. The order at the first mark on second round was: Bee, Wasp, Aztec, Guenn, Eurylda, Eclipse, Bonnie, Torment, Seabright, Kismet and Bubble. On this round Torment picked up, but the places were otherwise but little changed, the end of the round being thus:

Bee	4:00:40	Eurylda	4:03:15
Wasp	4:01:46	Bonnie	4:08:42
Aztec	4:03:53	Seabright	4:11:50
Torment	4:06:55	Bubble	4:11:51
Guenn	4:07:22	Kismet	4:13:14
Eclipse	4:07:35		

Bubble withdrew, having broken her steering gear. On the next leg the wind was so far aft that most of the boats ran wing and wing. The order was not taken at the intermediate buoys, but was little changed, as the final times show. After Bee had finished the wind came in freer and rather helped the laggards. The finish was timed:

Bee	4:23:35	Eclipse	4:33:33
Wasp	4:27:05	Torment	4:33:05
Aztec	4:30:02	Guenn	4:35:42
Eurylda	4:32:45	Seabright	4:35:20
Bonnie	4:32:55	Kismet	not timed.

This race is the last open event of the year, and marks the ending of the season of 1891. Like the June race of the same club it has proved a success, the two being among the most important events of the year.

"RUNNING THE RAPIDS."—Mr. C. Klackner, of 5 East Seventeenth street, has just published an original etching by the artist Wm. M. Cary (size of plate 30x17in.), entitled "Running the Rapids." It has been dedicated to the "Canoeists of America" and is full of spirit and action. The scene is laid in the Adirondacks, in a rapid of the chain of lakes. Two canoes are seen from the city being on a hunting and fishing trip evidently know how to really enjoy his vacation. The old and trusted guide is kneeling in the forepart of the boat and paddling with all his energy to keep off the rocks as they dash down the rapids. The packs and camp kits being stowed amidships help to serve as ballast to the frail birchen canoe, the guns lying flat on the bottom to prevent accident. They have evidently left an advanced camp, for the morning mists are not cleared away from the mountains, but roll up and take fantastic shapes as they rise and disappear before the heat of old Sol as he climbs the heavens. A flock of mallard ducks have just risen from the edge of the stream, seeming to enjoy and appreciate the fact of their being safe, although in easy range of the occupants of the canoe, who would like to take a shot at them, but dare not while running the rapids. Mr. Cary has had considerable experience in canoeing in the Wild West, at one time making a trip down the Missouri through the Mauvais Terre or bad lands, from Fort Benton down to Bismarck, a distance of 1,800 miles, in a Mackinaw. We would recommend this picture to lovers of sport as well as of etchings, the subject being entirely new and original, nothing similar having ever been placed before the public.

WINNING YACHTS.

OWNERS of winning yachts will confer a favor by sending to us as soon as possible the records of their yachts for the past season, giving number of starts and prizes, as well as places in each race, and also amounts won.

THE DRIFT OF DESIGNING.—The present tendencies of yacht designing, especially in the smaller classes, are too plain to be overlooked. While beam, and where the rules allow, length also are used liberally, displacement is being cut down, while stability is secured both by beam and low ballast. Depth of body is being decreased, giving a higher center of buoyancy, while the center of gravity is lowered by means of very light construction, giving a higher percentage of ballast to displacement, and by the very low position of the ballast. The smaller keel boats are rapidly approaching the extreme wine-glass section, or the saucer with a deep metal fin, and a still greater extreme is possible in the direction of the new Herreshoff Dilemma, a wide, shoal racing machine, with all ballast suspended deep below the real keel. The same extreme is practicable in the case of centerboard boats, the board being heavily weighted. As yet no harm has been done in the larger classes, the machines being confined to the smaller racing boats, but the general tendency is toward the production of an undesirable type in many classes.

"CITY OF THE STRAITS."—This craft, which was defeated last week by Pappoose, is not a lake steamer or ferryboat, as might be supposed from her name, but a 55ft. cutter of modern type, a compromise model, with lead keel and centerboard. "The City," as she is commonly called, was designed by E. B. Wendell, of Detroit, a very clever young amateur. She would have been much faster had the sail plan and construction of the designer been adhered to, but she was built with the scantling of an old 70-footer, and much overspurred at first.

A NEW 40-FOOTER.—All doubt has been removed as to the fact of a successor to Gloriana being under way. Mr. Herreshoff will build a 40-footer during the winter on much the same lines as Gloriana. The name of the owner is still a secret, but it is stated that he is a New York yachtsman, and not Mr. Morgan.

A SHARPIE CRUISE IN FLORIDA.

THE Kingfisher's cargo is stowed at last, the skipper is making sail, and Ed and Charley are disposing of themselves as comfortably as they can for the day. Be it known that the Kingfisher is a tight little sharpie yawl, built by the skipper, and christened in honor of that writer, whose "Camps of the Kingfishers" have made glad so many readers of the FOREST AND STREAM. The little craft is handy, fast and able; has good cabin accommodation for two, and has been tested so well and so often that the skipper has unbounded confidence in her ability to go anywhere or to do anything.

Ed and Charley are two friends from the Hub, who were here some years ago and had such a good time that they have always longed to try it over again. When they wrote to the skipper last February and asked "Can you go?" it did not take long to settle the matter. And the skipper; well, the less said about him the better.

They were off at last, the wind is light but fair, and as speed is no object, we are just as happy as we would be if going faster. Close behind us comes the Commodore in his wonder-said wonder being a Boston-built craft, and of such a peculiar model that some unregenerate scamp (not having the fear of Com. P. before his eyes) has dubbed her the Boston Bean Pot. She is 18ft. long by 9ft. beam, or 9ft. long by 16ft. beam, I have forgotten which, and carries a sharpie.

When just clear of the buoy the wind falls a little and finally jumps out right ahead. It is flood tide, and with a sigh the skipper lets everything go by the run, and picking up the long cypress pole proceeds to drive the yawl against the wind and tide. The operation is not speedy or easy, but it is dreadfully sure, and in due time we arrive at the mouth of the river, where we will be on an easy-going start at a quarter of eight.

It is one of our best days, when everything and everybody seem to have accepted the fact that life is worth living. The boys are busy looking over the guns, overhauling cartridges, tackle and all the thousand and one things which sportsmen take to the woods and waters. At sunset we reach Clearwater, Ed. and Charley going up to see their old friend "Mao Dak," and the skipper and I go up to take a little smoke and, like a good sensible cruiser, turn in early.

An owly morning, but after many pros and cons we start. About 3 miles away is Little Pass, where we are to try the Gulf; before we reach the Pass, however, the wind jumps out of the southwest, and with such a determined and vicious objection that we decide to beat up the bay a while. This course was arrived at after due consideration of Charley's liability to be seasick at the slightest provocation. The wind increased rapidly, first a double-reefed mainsail, then down came mainsail altogether and the little yawl under jib and dandy climbed up to windward in a way to do a sailor's heart good. But Charley's stomach gets unruly, and after some seven or eight miles thrashing we tie up at an old orange wharf and make up our minds to go fishing until better weather.

The wharf where we made our halt is at what is known as the "Powledge Grove," one of the oldest groves on this coast, and still in prime condition. Near here is where the United States military store house stood during the Seminole war. It was a large log structure, two stories high, built against the bluff, which at that point was the high end of a funnel of the great lake in 1848 the old house was stowed full of fish barrels. The grove and sea completely demolished the building and some of the fish barrels were afterward found several miles inland.

After getting everything snug on the yacht, we organized for dinner, and then came a ramble through the grove, and as the wind was still high, with a heavy sea, the fishing gear was got out and the boys had heaps of fun catching many snappers.

The next morning opened bright and clear, with a rising tide and fair wind. After a little discussion, it was voted to try the pass through the Narrows—a passage between the key and the main land, some five or six miles long, and from a few yards to a half-mile in width. It is a noted place for birds, but owing to the very shoal water the navigation is not very good. However, we struck it right on, went through without accident, the boys getting a few birds on the way. Below the Narrows comes Boca Ceiga Bay, which we run through with flowing steel.

At noon we are just inside Pass-a-guille. Here we have a choice of two evils; to cross Tampa Bay at the mouth, where the distance is short, or to go straight to dodge the big swells, but making our time between land longer. We decide on the latter course. Bearing to the east, the wind is light, and the water is calm, passing through a shoal channel which leads us along the edge of flats and by sandbars until we strike Tampa Bay at about two miles from its mouth and at its widest part. As we open out the ship channel past Egmont we make a discovery: the white squadron are maneuvering around Egmont. We are too far to the east to get much of an idea what the evolutions are, but we can hear the roar of the guns, and see some of the smoke.

Tampa Bay is on its good behavior, but when nearly across the wind howls just enough to bring us close-hauled to the buoy off Manatee River, where we meet a sharp tide rip, which makes poor Charley wish he had not eaten so much dinner. He takes it philosophically, however, merely suggesting that we hunt smooth water as quickly as possible.

We are soon in quiet Bay and in quieter waters. We are now below the effects of the freeze of 1889, and the bright green mangroves are more cheering to the eye than the tangle of dead branches that line the shores north of Tampa Bay.

We soon come to Long Boat Lulet, the home of the mullet fishermen. Here we see multitudes of small skiffs, all rigged alike; mast well, and a spruce mainsail, and jib set to stem head. (By the way, that the original cutter rig is still in vogue on the little sea boats, and go anywhere and at any time. It is growing late, and as we clear the middle ground of Long Boat the minds of the party turn on camp and supper. Charley has recovered from his seasickness and wants to stop where there are birds. Cow Key is a good place, so we crawl into a lee, down goes the anchor, and Charley and Ed make our way in the dinghy.)

The skipper snugs up a little and turns in to supper. Meanwhile the wind, which has been veering about from S.W. to N.W. all day, has got well to the northward and now begins to pipe in earnest. "Whew! how cold it is. Can this be Florida?" Supper is ready. Charley and Ed are back with a dozen birds, and an appetite, and the skipper—well the skipper always has an appetite.

Working again, off and away. Twelve miles south is Sarasota, where we stop for dinner and for the boys to call on their old friend "Homosassa Jones;" everybody who comes to the west coast knows Capt. Jones, and "Mother Jones" is as well known through Florida. We find that Capt. Jones has gone to Key West, but Mother Jones is at home, and besides we meet other familiar faces which makes our short stay more than pleasant. While eating dinner the skipper notices the tide rising fast, and consulting a native, finds it is higher than usual and still coming. Whereupon the party conclude to try a run through the "mangroves;" said "mangroves" being a collection of narrow tortuous channels through cown oyster bars, mud flats, etc.

With a good breeze and a free sheet we skim along for some two miles, and then the skipper says "Hard up!" "Keep off!" "Hard up!" and the boys are fairly into the mangrove labyrinth of bushes, snags, deep holes, flats and bars. Here the skipper shows some of the fine touches of Florida navigation; down mainsail and jib, overboard, and with one hand on the nose of the Kingfisher, away he goes. Sometimes picking his way over an oyster bar, sometimes knee deep in the mud and then up to his hips in deep water, and on one occasion he sees open water and says "But what are the boys doing?" Ed is diving his time between the cob pipe and helping the skipper with a pole and Charley, with the Kodak, is in the dinghy picking up the views which he thinks he may want to look at again, and that will please his friends when he once more returns to civilization.

We are soon at Seminoles Point, where the skipper and the cook had a notable fight with the "man who was a rat," where a cracker came aboard and tried to drive out the "man who was a rat" (it didn't work). We make sail here and soon run down to "Webb's." Capt. Webb has been here some twenty-five years and is chock full of stories of the good old times. A pleasant camp on the point, a cheerful camp-fire, with interesting yarns from Capt. Webb, a flash light photo with the Kodak, and we all turn in.

With the sun in the morning comes a sharpie from Carey's Pass; the crew tells us the pass is closed, so we flatten in sheets for Little Sarasota. On the way Ed gets in a fat shot at a flock of ducks; we pick up a round dozen and go on, getting to the pass about noon. Here we decide to make camp, fish and rest. We fill up the afternoon with all it will hold and at 9 P.M. the boys crawl into their nests in the cabin of the Kingfisher, while the skipper rolls in his bed on the camp-fire.

The fire burns low, the skipper gets up, punches the coals together, lays on another log or so and is soon in the land of dreams, but always wakeful and easily roused, he soon opens his eyes and, without moving, scans the circle lit up by the camp-fire's blaze. A soft footfall is heard, another, and out of the darkness steps a man; slowly the man advances to the fire, and when within a few feet the skipper says "Well! that is it!" The man steps nearer and says, "I have walked from Stump Pass (26 miles) and I was never so tired in my life. I ran my schooner ashore above here in the blow last Thursday and I have been to Stump Pass to get

help to get her afloat again. I want to borrow a lantern to go aboard and get some coffee." "All right," says the skipper, "here's your lantern, bring it down early in the morning." Away he goes and the skipper is soon asleep again.

In the morning, after an early breakfast of smothered duck, we are just making sail when down comes the stranger with the lantern. We are soon out of the Pass, and with a very light wind heading south. To-day is a black day for Ed. He was the possessor of a Winchester, a rifle that had been tried and proved, an old friend that he had cheerfully carried on many a long tramp, a companion endeared to him by a hundred recollections. Many a fat deer had he brought down by its aid and many a plump turkey had fallen to its deadly lead. We were running along close-hauled, breeze light, with occasionally a strong puff. Ed was busy trolling for kingfish, when below Carey's Pass we fell in with a school of porpoises; they raced alongside, darted across our bows and out up their monkey shins all around us. Ed makes fast his trolling line, and with the remark, "I'll make you hump," he pulls out the favorite rifle. Taking it from its case he pats it lovingly, wipes off an imaginary speck of dust, slips in some shells and stands at a ready; but now the porpoises seem to be gone—not one in sight—so after a few moments' watch-keeping he has flung the companion slide and turns to his kingfish line. As he becomes busy with his line there comes a long sharp puff, the Kingfisher heels to leeward, some one yells, "Look out for that gun!" Ed turns just in time to catch one fleeting glimpse of the muzzle of his old favorite bound for the bottom of the Gulf. There are sorrows too deep for words; this was one of them. A sad, wistful look came over his face, but no words. Charley and I, knowing they could not help the matter wisely remained silent.

The breeze freshens and we are soon in sight of Stump Pass. Working in just around the point we make camp and prepare for a day's stay. We notice thousands of little fish like sardines, and Charley is soon busy with net and bucket. He quickly has a bucket full, and, selecting his rod, is at work casting in an eddy. The boys have floundered the bait does, and so we point out a strike. Ed is still mourning for the gun, but as he sees Charley struggling with a big sea trout he forgets his sorrow, and, reaching for his rod, is soon in the same fix. Two fine fish are selected for supper, and then the boys catch and unhook until they tire of the sport. There is a camp of mullet fishermen on the opposite side of the pass. The boys take the dinghy and pull over to interview them. They soon return for guns, "ducks," says Charley, and soon the skipper hears them banging away. At supper time they put in an appearance, each with a bunch of ducks and a big smile. And so it goes, we eat, sleep, smoke and fish, and on the third day spread our wings for another flight.

Working inside through the Mangrove Islands, we open out Kettle Harbor, a splendid bay, with a splendid breeze, ducks by the thousand, blue herons, a flock of ibis, schools of mullet. Over yonder is Grove City, but we "don't want no city, ain't lost any." We're looking for fun and fresh air. In and out among the keys, now creeping along through a narrow channel, now over a mud flat, then along some sandy beach, but always happy, contented, peaceful, and always on the lookout for fun.

In the middle of the afternoon we reach Big Gasparilla. The boys want to see the fish ranch here, and so we point out to the harbor. As we near the little wharf we see a small dog. He appears to be dancing a jig; as we get nearer the little fellow runs down on the wharf. He frolics and capers, yells and howls and does all he can to bid us welcome. An old Sicilian sailor who is in charge of the ranch, comes down and apologizes for the dog. "He's glad to see you," says the old man, "I'll know what to do." We tie up at the wharf, and as the boys start to get their guns, there is a fresh water lake near by, and the ducks are in force. In an hour's time the boys return, each with his bunch of ducks, and feeling as proud as if they had never seen a bird before.

After supper we haul out in the bay and get ready for sleep. The skipper takes the top of the cabin, but the boys go for their beds below. They make complaint in the morning of being annoyed with mosquitoes, but the skipper says he didn't feel any.

To-day the wind is ahead and very light, and we only make Captiva Island, before reaching which we cross Boca Grande. In the Pass are some large vessels waiting for their load of phosphate. We pass close to an immense four-masted schooner. As we cross the Pass we see a small schooner, the mast of which the little Kingfisher is small in comparison. South of Boca Grande is Costa, one of the finest islands on the coast. Here is located a Spanish fish ranch. Vessels come here from Havana and load with fish for that market. It looks queer to any one who knows how jealous the Spaniards are of foreigners coming to the coast, to see their vessels come here year after year, without hindrance or restriction, except the usual regulations of the exclusion of native born Americans, filling their holds with the finest fish, while an American fisherman or sponger is caught within three miles of the Cuban coast he is taken, forfeits his vessel and cargo, and is lucky if he gets away alive. But that's a political matter, and I detest politics.

At Captiva we run into one of the prettiest of pretty little harbors. Here is another Spanish ranch owned by Key West parties; but they are very good fellows, and we enjoy the evening snugly in the dinghy up and away for St. James, that Mecca of the tarpon crank.

On our way to St. James we have an amusing incident. It happened in this way, there was a strong breeze, well aft, but as the distance was short we decided to tow the dinghy. About half way the sea got so lively that something had to be done. Ed, who is always up to emergencies, says, "I'll fix it." So he lowers the dandy and the boys and the skipper's painter fasten him above deck on the dandy mast. All right for awhile, but the Kingfisher pitches over one of the short, deep seas, the dinghy hanging nearly up and down, and the following sea rolled right into her. We had a bag of grape fruit and oranges in the boat, with a number of other tricks which had been put there to give us more room aboard. They were one by one sent flying over the side, and the boys were effectively that we never found them afterwards. Whoever has tried to pick up a small boat in a heavy sea can understand the job we had, but we did it, and in a short time we were going along with the Kingfisher, Jr., on the house.

We soon reach St. James, to find but few guests here, and they preparing to leave. It has been a bad winter for fishing, and everyone was disappointed with his luck.

At St. James our party received news that compelled them to change their plans somewhat. We had planned to visit the Thousand Islands, but the female contingent at home had planned a little raid of their own and notified their lords to meet them on a certain date in Washington. Ah, well! Man proposes, but woman decrees. The thing was settled, we had just a week longer, and we thought we could do no better than take a run through Eastern Bay.

Next evening in a furious norther we made sail and filled away for an eight mile run across to Estero, and made the run all right, although Charley got rather white on the last half of the way. We ran into the bay some two miles and came to for the night. Next morning away again south, reaching Hotokey Pass in the evening, and the boys were one by one sent flying over the side. Toward night the weather looked owley, we ran in for a mile or so for a better harbor, found a nice little shell beach, where we landed; and as it was quite cool soon had a rousing camp-fire. After supper and a pleasant day all hands turned in for the night, the boys in the cabin, the skipper on shore.

It proved to be a night of horrors. It was a strong breeze at sunset, and the temperature was in the sixties and cold—talk about Arctic weather, I have been on the Northwest coast of Alaska and in Siberia and I believe I never suffered from the cold as I did that night in Florida. Somewhere in the morning hours the skipper waked and found the fire nearly out. Very reluctantly he crawled out from his blankets, very carefully put on his shoes, also tied up and went for the fire. The wood we used was dead mangrove. It takes the hottest kind of a fire and just the very hottest kind of coals. The skipper tugged along some logs and then commenced to punch up the big bed of coals to provoke a blaze. He was successful, for a good, nice lively coal about the size of a walnut flopped into his shoe and wedged there fast. Great Cesar! what a time! That shoestring wouldn't break and the shoe wouldn't come off without. The skipper climbed out, and I never learned to dance, but he took some steps that time. Finally he sat down, untied his shoe and found a place about the size of a dollar that was literally cooked.

Daylight at last, breakfast is ready, and the boys creep out of the cabin and stand shivering around the fire. Charley gets out his toilet paraphernalia, but it is too cold to use, and after a lick and a promise, we all settle down to coffee. As the day advanced the cool breeze never left us, but the boys and I were as comfortable. The boys take the dinghy and go to the Pass, but find no birds. We visit some settlers on the island, and then finally comes night and we all turn in early to make up for last night's unrest.

Morning, and almost a calm. What wind there is proves fair for the run back, and we take advantage of it and are off. Toward noon a breeze catches us and we work out of the Pass and up for Punta Rasa, reaching the latter place about 4 P.M. We are on the wharf, alongside a little yawl-rigged naphtha launch, the Eteetera, of Hartford, Conn. The boys spent so much time ashore that we lay at the wharf all night.

In the morning, away for the Caloosahatchee. There we find plenty of ducks, but they are so wild that we only get two. We run up the river a few miles and come to mooring again, the boys are getting tired, the mosquitoes plagued them last night. They rig up, however, and start for birds, get back at noon with a few mallards and enormous appetites. After dinner we push for Sword Point—a famous place for sharks, and that evening we tried to coax some of them out of the wet. But they either knew what we were at, or they were not hungry, for not a bite did we get.

That night we have a grand camp-fire on the Point. We try to be jolly, but it is the last night in camp, and the fun is rather forced. We finally roll into our blankets and watch the stars until the sweet, peaceful sleep falls on us, that never comes as it does in camp under the stars; and we know no more until the skipper shouts "Coffee!"

We are soon up and away, first to Punta Rasa for telegrams, then haul our wind for St. James. We find the place deserted, the hotel closed, and everything and everybody with a forsaken look. The mail boat leaves to-morrow, and Ed and Charley are to go to Punta Gorda to take the trunks here for Washington.

The odds and ends are all picked up, the trunks have been hauled to the steamboat office, the "good-bys" have been said, and the skipper makes sail with a heavy heart, for he has not said good-bye to his boys, and the thought will come that it may be for the last time. But life is made up of meetings and partings; there is no time to waste in regrets.

Right here is a good place to say good-bye to the reader. I might tell you of my run up the coast, of the row with the devil-fish, of the squall and the waistropes in Boca Ciega Bay, but the yarn is overlong already. So we will bid adieu, and with a goodnight to all the skipper will go below.

TARPOON.

NEW YORK YACHT RACING ASSOCIATION.

A MEETING of the New York Yacht Racing Association, called for the purpose of listening to the report of the regatta committee for the third annual regatta, held on Labor Day, and for the transaction of such business as would come before it, was held at O'Neill's on Friday evening last.

The meeting was called to order by the president, A. J. Prime. Delegates from the following clubs were present: Brooklyn, Canarsie, Columbia, Harlem, Hudson River, Indian Harbor, Jersey City, Newark, New Jersey, North Shrewsbury, Pavonia, Sing Sing, Williamsburgh and Yonkers Corinthian, 14 clubs.

The report of the regatta committee was then submitted by Geo. E. Gartland, its chairman. Its most salient points follow: After touching upon the number of entries, 150, which was unprecedented in the history of yachting, and calling attention to the fact of the incessant rain that fell for nearly a week before the contest, the gloomy outlook of the morning of the race and the nor-wester that was blowing, preventing a great many starters, the regatta committee are confident that had there been but a whorl breeze there would have been at least 125 starters, the large number of 75 started notwithstanding the inclement weather.

But for several mishaps before the race, such as capsize and breakdowns in the strong wind, there would not have been less than 90 starters. The regatta committee also call attention to the matter of numbers; they have been to considerable expense and need trouble in procuring for their proper distribution to the contestants, and notwithstanding the fact that they took up their position at the starting line over 50 had not procured their numbers and the committee had to delay starting the race until most, if not all, were provided with them. They suggest that the numbers be sent to the various secretaries of the respective clubs for distribution among the contestants several days before the race.

The following are named as the prize winners in their respective classes. Class A—B and C, correct time. Class D—Notus, Com. W. M. H. Rowe, Columbia Y. C., beats Gertrude H. B. Pearson, Jersey City Y. C., 2m. 15s. corrected time. Class E—Carrie Van Voorhees, J. H. Thorne, Yonkers Cor. Y. C., beats Nautilus, Pringle & Haskins, Columbia Y. C., 5m. 55s. corrected time.

Class F—Yawl Bessie, Garret Van Horne, Jersey City Y. C., beats Forsythe, Alex. F. Poe, Jersey City Y. C., 18m. 44s. corrected time.

Class G—Christine, Smith & Chester, Pavonia Y. C., beats Bertha, A. C. Skinner, Yonkers Cor. Y. C., 14m. 52s. corrected time.

Class I—No starters, Charm, E. S. Ketcham, New Jersey Y. C., breaking her boom on her way to the starting line.

Class J—Henry Daurer, Theo. H. Rogers, New Jersey Y. C., beats Henry Daurer, Dougherty & McCabe, Hudson River Y. C., 21m. 5s. corrected time.

Class K—Pauline B. Charles S. Raymond, Sag Sing Y. C., beats Lizzie B., Geo. A. Bowker, Bayswater Y. C., 3m. 17s. corrected time.

Class L—Ges So, Capt. Joe Elsworth, Jersey City Y. C., beats Torment, W. Honquont, Kill von Kull Y. C., 8m. 37s. corrected time.

Class M—Gracie, J. H. Stevenson, Kill von Kull Y. C., beats Harry C. W. T. Porter, Harlem Y. C., 9m. 55s. corrected time.

The committee called attention to an anonymous protest against the yawl Bessie, claiming that she had been improperly classified by the committee with cabin sloops, and should have been classified as a cabin cat. The committee of course could not consider this was a singular proposition to classify a boat carrying a jib, mainsail and boom as a cabin cat. It after the fact, inspired by the rules was allowed but one sail only. If after the fact, inspired by the protest emanated from Mr. A. F. Roe of the Forsythe, belonging to the same club as the yawl Bessie. Mr. Roe was present at the meeting, and spoke at considerable length in support of his position, and asked that it be referred to the executive committee of the association. The regatta committee then asked leave to be excused, and the executive committee, and so referred it. A recess was taken, the executive committee meeting and upholding the report of the regatta committee.

Mr. Roe then gave notice of an amendment to Rule I. of the racing rules of the association relating to classification, inserting between class G and class I, class II, all yawls. This is a good move, and the association would do well to adopt it, creating a special class for yawls. We cannot recall any club where they have a special class for yawls, they having to sail against sloops, and are generally rated when so doing at seven-eighths of their measurement.

The committee in their report also call attention to a protest by the Henry Daurer against the Only Daughter, sailing in Class 7, in which the former claimed that "going down before the wind I, mainsail and boom, and one of the crew of the Only Daughter caught my main sheet and held it, at the same time trying to put me on the Can Buoy."

It would seem from the evidence that the Only Daughter started over three minutes after the Daurer and passed to leeward of the latter outside the Narrows, and seemed to have got well clear of the latter when the Daurer came up and covered the Daughter, putting her boom across the latter. The alleged foul, it is claimed, occurred just above Buoy No. 9, near the Hospital Island.

The committee notified the respective parties for the protest to appear before them, and on their appearance examined them concerning the alleged foul. Their report concerning the foul is as follows:

Your committee carefully considered the testimony as submitted and concluded to ask for affidavits from the respective owners bearing directly on the point.

In accordance with a resolution of the committee, the respective owners were requested to furnish affidavits to Mr. Gartland, chairman of the committee, at his office, on or before Sept. 24, 1891.

Before the expiration of the time fixed your committee received affidavits from the members of the crew of the Henry Daurer, in which they swore that one of the crew of the Only Daughter took hold of the mainsheet of their boat at or near Can Buoy No. 9, and thereby almost forced their boat to foul said buoy. On the other hand, the crew of the Only Daughter presented affidavits, and each member positively swears that he did not touch any part of the Henry Daurer, nor did he see any one on board the Only Daughter touch any part of the Henry Daurer, nor in any way interfere with or foul her.

Your committee further report that after full and thorough consideration of all the evidence in the case, they have determined to and have dismissed the protest of the Henry Daurer and awarded the race and prize in Class 7 to the Only Daughter, she having beaten the Henry Daurer 22m. 59s. corrected time, over the course.

The committee also attach a statement of their receipts and disbursements and conclude by saying that they trust that at the next regatta instead of 150 entries there will be that number of starters.

The entertainment committee having charge of the steamer Cygnus also submitted their report, showing a net balance to be paid to the credit of the association of \$50.77.

A motion to give a special pennant to a yacht winning in her class three consecutive times, that had been laid on the table at a previous meeting, was taken from the table, and on being voted on was lost.

There seems to be a sentiment that the association is growing too large and old for champion pennants and a great many seem to think they should be done away with altogether, and that prizes are all that are necessary.

After an appropriation of \$300 was made to buy prizes the meeting adjourned.

The regatta committee will procure the prizes at once and present them to the winners at a subsequent meeting of the association to be called for that purpose.

BEVERLY Y. C. 183D REGATTA.

THE 183d race of the Beverly Y. C., a sail-off for champion pennant, was sailed on Oct. 3, the contest being closed and the winner of the race was the boat named Violet, but as the latter had been sold out of the club it was a walk-over for Violet, and she took things easily, starting after second class in order to keep out of the way. A fresh southwester was blowing. Defiance and Hanley's Torment, just round from Boston, were on hand to sail over course, though not in race. Mist started under single reef, Violet with three, all the others with two.

Anonima, a new boat, came out of the club on Friday and was crossing the line on the port tack at least a minute at the start by windward and took first place, Surprise being second, while Torment was beating Defiance. Mist was doing well, but not well enough. Off the point the wind lightened and Surprise shook out reefs. Anonima did so later, but made a mess of it, getting in.

Surprise is right on the line in the class, and was found to be 14in. into first; she took out ballast that night in order to get back. After the race Anonima protested her length, and she protested Anonima's (who has very recently been twice measured on protests, with same result).

Course No. 1, distance 10¼ miles, wind S.W. strong, but growing lighter.

FIRST CLASS. Length. Elapsed. Corrected.
Violet, G. H. Richards..... 27.06 2 24 32 2 14 48

SECOND CLASS. Length. Elapsed. Corrected.
Surprise, Jas. M. Codman..... 27.04 2 09 15 1 59 31
Anonima, F. L. Dabney..... 27.01 2 09 38 1 59 38
Mist, G. H. Richards..... 26.08 2 09 58 1 59 33

Winners of championship pennants, Violet and Surprise. Judge, W. L. Jeffries.

CENTERBOARDS.

THE council of the Y. R. A. has undertaken to consider whether or not it is best to place any restrictions on the weight of centerplates or weighted centerboards. This will no doubt be a very difficult matter to handle, if a determination to limit the weight is arrived at; but for our part we think that either centerplates must be allowed without restrictions, or their use must be forbidden altogether. So far as the weight is concerned, we can only see that an advantage can be gained in one way, and that advantage can, we think, be placed in raising and lowering a portion of the board weight cannot be an advantage, except in an indirect manner. We can suppose that a 10-rat like Dora has a centerplate of 1 ton 10cwt., and that when the plate is lowered the center of gravity is also lowered, say, as much as 0.75ft., and this would then be her condition of greatest stiffness; or, in other words, she would be able to carry her canvas more effectively with the plate down than she would with it up. We cannot imagine any point of sailing a yacht where this would not be an advantage so far as the means of propulsion are concerned. If the centerplate would be inconsiderable when before the wind, and if it meant a greater advantage, so far as speed is implicated, to reduce the immersed surface by lifting the plate. At any rate it would be a very small matter one way or the other, and it can safely be claimed that, so far as speed is concerned, there is no advantage in being able to lift a centerplate.

There is, however, any more than it would be an advantage to lift a portion of a yacht's ballast—say take it from round the heel of the mast and place it round the mast on deck. If the centerplate, fitted with a fixed keel shaped like the centerplate, and otherwise in every other respect like the yacht with the movable centerplate, would be on equal terms, provided the question of draught of water is not introduced. This latter question is really at the bottom of the centerplate.

No doubt some courses would not be practicable for yachts with fixed keels if the draught of water were made to equal that of a yacht with her centerplate lowered to its most effective depth. Looking at the matter from this point of view, if really serious, the difficulty would correct itself if courses were so laid out that yachts of any extreme draught of water could sail round them. No doubt there are a great many objections to increased draught of water and irregular keel bearings for taking the ground or docking; but these would not be so formidable as at first sight they appear to be, nor, indeed, need the fixed keel boat be the exact equal in draught of water and in contour to the centerplate yacht to be her equal in stiffness and speed on any point of sailing. We, therefore, are inclined to think that the practical objections to a centerplate—the increased difficulty of construction and the bother of working it—will always decide the question in favor of the fixed keel yacht for choice, as it can be shown she may be made the equal of the centerplate yacht on all points of sailing.

There is another aspect of the case we have not looked at yet. Supposing it can be proved that there are very considerable advantages to be derived from the use of a heavy centerplate, it is a question in any known way to be given to the fixed-keel yacht, is it a right principle to bar the heavy centerplate? This is a matter we have very grave doubts about, and it raises a question which cannot be got rid of on hand. The main excitement of yacht racing, or the sport, are those of speed and maneuvering, and convert sailing into a sporting point of view, no checks should be interposed which will prevent these qualities being enjoyed in their grandest state of perfection. We should also look at this question from a still broader view. We for many years strived to get the restriction on centerboards removed, but the subject would not for a moment be entertained at last when the contests for the America Cup seemed to be becoming annual events, and when the public saw our fixed-keel yachts beaten year after year by the centerboarders, it gradually dawned upon the British yachtsman that the centerboard might have something to do with our successive defeats. It was then declared that we could never hope to regain possession of the America Cup until we were allowed by our rules to sail centerboard yachts. But even with all this before our eyes, the proposal to remove the restriction on centerboards aroused a very angry opposition of the personal kind similar to that which was common when the restriction was spoken of disrespectfully. However, the restriction was at length removed. It cannot be claimed that the attempts to take advantage of the removal of the restriction have been very great. But it would seem that we are really at last finding out how a centerplate can be used to advantage. Whether this discovery is being made or not we do not make it already pointed out, to say decisively. But what we do think is most extraordinary is the fact that it is being proved that any advantage can be got out of the centerplate, a proposal should be made to forbid the employment of the means by which the advantage has been gained. This, from an international point of view, is very blind policy, just as it is from a sporting point of view.—Field, Oct. 3.

THE ROBERTS' BOILER.—The Roberts Safety Watertube Boiler Co. reports a very prosperous season, the boiler having found favor wherever it has been tried. The sales to date reach a total of 368 boilers.

SARACEN.—Messrs. Stewart & Binney have sold the second Saracen to H. S. McPherson, and at the same time have sold the original Saracen, once the Jack and later Lorelei, for Mr. Morse to A. P. Loring.

LLOYDS REGISTER.—The supplement to "Lloyds Yacht Register," containing a number of alterations since the large book was issued, has just been sent out.

OLYMPIC Y. C.—The first regatta of the new Olympic Y. C., of South Brooklyn, was sailed on Oct. 11, the courses being 20, 14 and 9 miles, on New York Bay. The wind was very fresh, Nellie W., Irene and Mizpah losing their topmasts. The times were:

FIRST CLASS, SLOOPS 26 to 32ft.
Start. Finish. Corrected.
Nellie W., E. W. Woodman..... 12 14 15 2 37 20 2 21 25
Mizpah, C. Sieghammer..... 12 13 50 2 39 40 2 21 50
Vesta, H. Rendell..... 12 15 50 2 45 00 2 29 10
Crickett, R. Rendell..... 12 15 20 2 48 15 2 26 55
Eddie, D. E. Demont..... 12 15 25 2 48 30 2 26 55
Deer, Oscar Reed..... 12 12 50 2 49 30 2 24 15
Albatross, J. Hobart..... 12 14 40 Did not finish.
Swallow, C. Kline..... 12 13 30 Did not finish.

SECOND CLASS, CABIN CATBOATS 20 to 25ft.
Start. Finish. Corrected.
Village Belle, Capt. G. Minett..... 12 18 10 2 59 05 2 59 05
Irene L., George Hanks..... 12 18 40 Did not finish.

THIRD CLASS, OPEN CATHOS OVER 16ft.
Start. Finish. Corrected.
By By, Commodore Dugan..... 12 27 15 2 04 30 1 45 40
Arrow, George Simpkin..... 12 27 15 2 04 30 1 45 40
Maggie, P. Conklin..... 12 19 35 1 52 21 1 52 21
Harry, C. Olm..... 12 29 35 2 03 20 2 03 20

FOURTH CLASS, OPEN ROUND-BOTTOM BOATS.
Start. Finish. Corrected.
Lillie H., Stephen Howard..... 12 20 00 1 41 05 1 15 05
Frolie, F. Boland..... 12 20 30 Did not finish.

AMERICAN MODEL Y. C. FISHER CUP.—On Oct. 3 and 10 two more races of the series were sailed for the Fisher Cup, the times being:

THIRD CLASS—THIRD LEG.
Start. Finish. Elapsed. Corrected.
Electra, J. Pfeiffer..... 3 55 12 4 21 31 0 26 19 0 26 17½
Marjorie, H. Fisher..... 3 55 50 4 22 43 0 27 13 0 27 11½
Anna, J. C. Meyer..... 3 57 00 4 31 30 0 34 30 0 34 30
Jennetta, G. W. Townley..... 3 58 00 Rar. aground.
Jennetta, G. W. Townley..... 3 58 32 Withdrew.

THIRD CLASS—FOURTH LEG.
Start. Finish. Elapsed. Corrected.
Electra, J. Pfeiffer..... 4 14 55 4 30 40 0 15 45 0 15 39½
Marjorie, H. Fisher..... 4 14 45 4 31 45 0 17 00 0 16 55½
Jennetta, G. W. Lyon..... 4 15 10 4 33 08 0 17 58 0 17 56
Anna, J. C. Meyer..... 4 15 30 Withdrew.
Star, G. W. Townley..... 4 15 30 Withdrew.

Electra was disqualified for sailing stake on last turn, giving the race to Marjorie, who won from Jennetta by 2½s. Wind N.W. The next leg for the Fisher cup will be sailed on Oct. 21. On Oct. 17 several yachts of the Philadelphia M. Y. C. will be at Prospect Park for informal races with the home craft. On Election Day the second and third classes will race.

LARCHMONT Y. C. FALL RACING.—Although the season has nominally closed at Larchmont the sailormen are reluctant about giving up the racing, and on Oct. 3 two races were sailed, one by the 25ft. class, for the Wetmore cup, the other a private match, without allowance, between the centerboard and schooner Viator. The courses were around Hempstead mark and Center Island Buoy, 22 miles; and around Hempstead mark and Matinecock Buoy, 13 miles. The wind was very light from N.E. to N.W., the start being made at noon. Clara gained on the Viator from the start, but the wind fell so that neither could finish. The probability of a race for the Wetmore cup, for the third and last race were Nameless, Needle and Alma, the last a new-comer in the class, owned by Mr. Chas. Olmstead, Atlantic Y. C., Nameless won very easily, Alma giving up when 20m. astern at the outer mark. The times were:

NAMELESS. Start. Finish. Elapsed.
Nameless..... 12 11 43 3 54 11 4 42 38
Needle..... 12 11 30 3 59 29 4 48 03
Alma..... 12 12 27 Withdrew.

Nameless has been sailed in most of her races this season by Com. Oswald Sanderson, of the Corinthian Mosquito Fleet, who has made an excellent record for her. She has scored 10 prizes, including the Wetmore cup, to 14 starts.

STEAM YACHT RACING.—The damaged Norwood will not be ready for a race for three weeks, but in the meantime Mr. Hearst has left for California, while his yacht Vamoose will be shipped by steamer for San Francisco in a short time, so that there is no probability of a race. Her engines and wheel will be removed and the hull cradled on the deck of a vessel. On Saturday Vamoose was at the station of the American Y. C., where she made several exhibition runs. A course of one mile was measured off by the wire used for the Norwood's trial on the Merrimack River last year, and Vamoose covered this distance four times, the result being:

First mile (against tide)..... 2 50 Third mile (against tide)..... 2 30
Second mile (with tide)..... 2 30 Fourth mile (with tide)..... 2 35

She would have made her fourth mile in 2:20 or 2:15, but was partly over the course her stuffing box of the steam steering gear blew out. She was immediately stopped and a tiller and tackles fitted, after which a second trial was made, the time being 2:35. On her return to Brooklyn she was steered by the tiller and tackled, narrowly escaping a collision with a ferryboat in the East River.

Later—Vamoose will remain in New York until spring, and will be ready to race Norwood at any time.

PAPPOOSE AND CITY OF THE STRAITS.—On Oct. 8 a private match, 10 miles to windward and return, was sailed on Lake St. Clair between the keel cutter Pappoose, formerly of Boston and now owned by Davenport Galbraith, of Erie, Pa., and the compromise City of the Straits, of Detroit, the stakes being \$500 per side. The wind was strong from N.E. at the start, both yachts carrying lower sails only, with one reef in mainsails. "The City" fell by 1m. 8s. over the line. Some time after the start by an accident to her halliards. At the outer mark Pappoose had a lead of 5m. The run in was made under spinakers, "The City" carrying a clubtopsail and Pappoose a jibheader. The official times were:

PAPPOOSE. Start. Finish. Elapsed.
Pappoose..... 11 32 25 3 39 47 3 39 47
City of the Straits..... 11 31 20 3 06 04 3 06 04

Pappoose received about 38s. allowance, winning by 5m. 35s. She has thus met and defeated two of the crack yachts of the Lakes, Merle and City of the Straits, leaving the final question of the championship between her and Yama.

A NEW RACING MACHINE.—On Oct. 9 a new and curious craft was launched from the Herreshoff shops at Bristol, a 25-foot, 10-ton, 10-hp. Herreshoff and named Dilemma. The hull is 3ft. over all, 25ft. long and 4ft. 10in. deep, with a bow similar to Glorians. The depth of hull is moderate, but the main keel is hung a steel plate, nearly rectangular in shape, to the bottom of which is bolted a cigar-shaped mass of lead. The steel plate weighs 883lbs. and the lead about 2 tons. The rig is a simple mainsail and jib, with no bowsprit. Of course the yacht has no cabin, merely a large cockpit.

CONQUEROR.—The Conqueror case is still before the courts, where it promises to remain for a long time, but a new turn was given to affairs by the fact that last week, when an armed force of United States Marshals boarded the yacht at Erie Beach, and drove the Customs Inspector on to the dock. The marshals now hold the yacht, representing Mr. Vanderbilt, and he can retain the use of her by giving bonds while the case is being tried.

AWA—EMMY C.—Mr. Chas. E. Cameron, of the Newark Y. C., has sold his sloop Emmy C. to another member of the club, and has bought the centerboard cutter Awa, designed by Burgess. The sloop, 17½ft. beam, and 6ft. draft. The Newark Y. C. is one of the 64 sailboats and the new purchase will make an important addition to the fleet.

ST. GEORGE.—The steam yacht St. George, Mr. E. J. Wythes, arrived at San Francisco on Oct. 10 from Philadelphia and Vancouver, B. C., on a cruise around the world. She is a very handsome auxiliary, with steel frame and inner plating completely sheathed with teak. Her length is 200ft., beam 32ft.

KILL VON KULL SWEEPSTAKES.—The race of Oct. 3 between Bon Ton, Ges So, Torment and Shore House was declared off on account of a mistake in the course, and was resailed on Oct. 10. Ges So winning, with Shore House second.

A NEW YACHT CLUB.—A yacht club has been organized at Stevens Institute, Hoboken, with the following officers: Com., J. W. Gilmore, '94; vice-com., A. A. Dal Molin, '94; rear-com., A. G. Kolstede, '94; fleet captain, H. E. Hall, '94; treasurer, W. W. Ward, '95; meas., A. Church, '94. The club has adopted as its pennant a blue-pointed burgee with a Stevens pin.

CORONET, schooner, has been sold by Mr. Bateman to J. D. Wing, of New York.

ANSWERS TO CORRESPONDENTS.

W. R. L. D. writes to know of a good bear country in Pennsylvania, Wisconsin, Michigan or Georgia.

W. S. Danville, Pa.—Please let me know if you ever heard of black woodcock? A party out gunning said "he's saw some and shot at them, but they were not black." They have records of white woodcock, but not of black ones. Their occurrence would not be impossible, as melanism is found among most species.

BLUEFISH, WEAKFISH and STRIPED BASS

Can be caught in any of the waters around New York City. Big bluefish are in large numbers along the coast. We can supply the tackle. You can do the rest.

Call and examine our stock, or send us 10 cts. to cover postage, and we will mail you our 136 folio page illustrated catalogue.

ABBEY & IMBRIE,

Manufacturers of All Grades of Fishing Tackle,
18 Vesey Street, New York.

A ONE-WAY RULE

Customers have sometimes asked us how it was that we insisted upon their trusting us with their money, but would not trust them?

WE

Are on a mountain top, at the foot of which is a vast concourse of people. We are in plain sight of all; anyone can tell you whether we are all right or not, if you don't choose to see for yourself.

YOU

Are one of the many; we cannot see you or find out much about you. This is one of the reasons why we transact a strictly cash business; another is that we are enabled to sell goods cheaper.

Do you want anything in Sporting Goods? Write

Montgomery Ward & Co.

WILD INDIAN LIFE.**PAWNEE****HERO STORIES AND FOLK-TALES.**

With Notes on the Origin, Customs and Character of the Pawnee People.

By **GEORGE BIRD GRINNELL ("YO.")**

Cloth, 417 pages.

Illustrated.

Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

A magnificently illustrated volume descriptive of fly-fishing for trout and salmon. By Edward A. Samuels. Cloth. Price, \$5.00.

CHARLES DALY HAMMERLESS SHOTGUN

WITH OR WITHOUT
AUTOMATIC SHELL EJECTORS.

Important Notice!

Instead of giving the dealer larger discounts we have decided to give the sportsmen the benefit of a reduction, and have concluded to make extraordinary low **Net Prices** on the **Charles Daly Guns**.

While making this reduction we might mention that the high standard of workmanship for which the Daly gun has always been renowned shall be retained. We have expert testimony that these guns are equal in workmanship to the celebrated Purdey guns, and far superior to all other SO-CALLED London makes, such as Greener, Scott and Westley Richards. An examination will soon convince the unprejudiced customer. They are more conscientiously made, more beautifully finished, handsomer in appearance, with shooting qualities unsurpassed, in fact far ahead of guns costing \$100 more.

Should you live in or near New York, we would invite you to call and examine our stock and be convinced.

If you live anywhere else in the United States and your dealer has none in stock, insist upon his ordering one, or order one direct from us. **Send for Catalogue.**

Scientific Education of Dogs FOR THE GUN.

A new work by an English writer,
"H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as to the old hand. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

Price \$2.50, postpaid, by the

ARE KENNEL INTERESTS ADVANCING?
RELAXATION from business cares leads many men to take up some hobby which, in nine cases out of ten, has in it some element of sport. A love for the gun naturally leads to the ownership of a dog, and the possession of one often paves the way for another, until a kennel is formed. Then the breeding that necessarily follows entails either the selling or giving away of the produce, their training for the field, and so on. All this is continually increasing from year to year; new kennels devoted to the breeding of high-class field dogs are cropping up in every direction, till the capital invested in field dogs must be treble that of a few years ago.
A glance through the list of the entries of the Eastern Field Trials stakes, in our kennel department, will show that some of our brightest business men and shining lights in the social world are devoted to field sport.
The English setter has long held the first position in the minds of many sportsmen, but the signs of the times show that the pointer is also receiving that care and attention at their hands which their fine qualities entitle them to. The success of the pointer in the trials last year was very marked.
Specialty clubs have been formed within the past few years devoted to the improvement of the several breeds they are interested in. The Irish and Gordon setter clubs are working hard to bring their favorites prominently to the notice of sportsmen and to induce them to lay out money for their proper education for the field.
The present year has seen the largest and most successful dog shows ever held in this country. With few exceptions and contrary to past experience the show committees have been able to show a balance on the right side. This is due to a great extent to the increased interest taken by the public in dogs. The daily papers

have devoted columns of space to chronicle the merits of the exhibition in their towns and have educated the general public to a desire to see what a good dog looks like. In former years the shows would generally have been passed over with a brief paragraph.
We Americans have always been renowned for our go-aheadness, and in the matter of dog breeding this trait is very apparent, for the prices that Americans have paid for dogs of the best field and show qualities have astonished the world. A few years since \$1,500 for a St. Bernard was looked upon as the acme of extravagance. Now, however, it is a very ordinary sum to pay, when we find that Sir Bedivere cost \$6,500, Scottish Prince \$5,500, Prince Regent \$3,000, Lord Bute \$4,000, Watch \$4,000, Hepsey \$3,500, and only this last week Princess Florence was purchased at about \$4,000. No argument that we can advance can better prove the growing interest in kennel affairs in this country than this very tangible one of dollars and cents.

YACHTING STATISTICS.
THE tables and figures which we print this week on another page are, we believe, a novelty and, although far from complete, serve to bring out clearly a particular phase of yacht racing, one that is quite important, though perhaps hardly interesting. While one would hardly expect to derive from dull columns of figures the amusement and excitement afforded by a lively discussion of the question of measurement or type, or the inspection of a new design, there is at the same time much to be learned from such a compact digest of yacht racing as our figures present.
Had it been practicable to have carried our researches still further, to have included the many smaller clubs which are on the whole just as important as the few larger ones, and to have summed up the smaller classes as we have the larger, there would have been much more ample data for our conclusions; but such a summary would have involved almost endless labor. The figures as they stand show that the season, though by no means a brilliant one in popular estimation, and marked by no special features such as yachtsmen have become accustomed to through the America Cup races, has nevertheless afforded a very fair amount of sport in the larger classes, more by far than in the two preceding years.

Outside of the 46ft. class there have been no yachts whose performances have been specially notable. Even the presence of Constellation and Volunteer among the larger schooners has failed to spur either class to any remarkable displays, and the latter class has certainly retrograded, so far as sharp, keen racing is concerned, since the days when Grayling, Sachem and Sea Fox were out under racing flags. At the same time, the general racing among the schooners shows a great improvement on 1889 and '90; on the New York Y. C. cruise, and in the races in the East, a very fair turnout of schooners has been seen, and some very good races have been sailed. In the singlestick classes, also, although there has hardly been a race of note outside the 46ft. class, there has been a very promising amount of general racing. In the 46ft. class the racing has been something phenomenal; over fifty separate events have been open to the class, though some have not filled and some have been decided on the results of other races; at the same time our list includes thirty-seven days of racing.

A peculiar feature of yacht racing is the sympathy which exists between widely different branches of the sport, an international race between a few large yachts leads directly to an increase of general racing in all classes; and similarly a season of general racing in the classes included in the tables is accompanied or followed by renewed activity among the smaller boats that make up the great total of local racing.
This season has been a specially active and prosperous one among the yacht clubs in all parts of the country. Not only has the local racing been close and keenly contested, but very material evidences of general prosperity are visible in the shape of new club houses and basins, and of new yachts. The two years, 1886 and 1887, when the victories of Mayflower and Volunteer followed that of Puritan, were notable ones in yachting, as the interest and enthusiasm awakened by the success of American yachts found vent in the establishment of new clubs and the strengthening of old ones.
The cessation of international racing was seriously felt in 1888 and 1889, and its disastrous effect is still evident;

but the condition of yachting in those years has brought in a new factor. The clubs, both large and small, have awakened to the necessity of helping themselves, of exerting all the influence they possess for the encouragement of racing, and this season has witnessed a general effort in this direction. While many specific attempts can now be pointed out as failures, there still remains a large balance on the side of racing in 1891 as compared with 1890, and even more if the figures were given for 1888 and 1889. This balance may be credited largely if not entirely to the active work of the clubs through their regatta committees, and whether the good results are due solely to the special measures adopted, or as is more probably the case, in a great part to the general agitation of the subject which preceded these measures, there is every reason for satisfaction at the favorable showing, and every inducement to continue the same line, especially as the indications of renewed business prosperity give strong hopes of more building and racing next year.

The great influence on yachting of the financial condition of the country which is popularly summed up in the term "Wall street," is generally recognized, but at the same time yachtsmen do not consider how differently this factor acts in its upward and downward movement. A panic or business depression in Wall street is instantly and disastrously felt in yachting circles, but it is not always the case that prosperity in the "street" will be immediately apparent in yachting. Men cannot race yachts unless they have money, but a great many can and do have money without the idea occurring to them to expend it largely in yacht racing rather than in other directions. In order that yachting shall reap the full benefit of good times when they do occur it is necessary that the sport should be kept prominently before the public by some such means as international racing.
While as yet there are no brilliant promises of new and large boats for next year, everything points to a prosperous season in yachting at large, if not in the few large classes, and a continuation of the present work by the clubs will in all probability bring about still more satisfactory results. What is most needed, however, at this time, is the resumption of international racing for the America Cup, if the holders are willing to throw it open to the world on such fair terms as those originally indicated by its donors; if not, for some other trophy which shall bring American and British yachts together in friendly contest.

SNAP SHOTS.
COL. WALTER L. STEELE, whose pen name of "Wells" was familiar to readers of this journal, died at the Johns Hopkins Hospital in Baltimore last Friday, aged sixty-nine years. Col. Steele was President of the Pee Dee Manufacturing Company of Rockingham, N. C. He was a member of Congress from North Carolina a few years ago, and was one of the most influential men in the State. He was a graduate from the University of North Carolina, and recently had the degree of LL. D. conferred upon him. Col. Steele was a type of that large class of busy men, who in later life take up again the field sports of their youth to find in them relaxation from workaday life; and he possessed in an unusual degree, perhaps, the happy faculty of extracting genuine enjoyment from field experiences which really had in them little of "moving accidents, by flood and field." His pleasantly written letters to the FOREST AND STREAM contained no exciting accounts of "hairbreadth's escapes"; rather were they the relations of uneventful and even commonplace happenings; and being such they reflected the experiences of nine-tenths of us, and as frequent comment gave assurance, were for this reason well received.
Readers of the October Atlantic have a treat in the story "Gran'ther Hill's Pa'tridge," told by Mr. Rowland E. Robinson, and if the Atlantic reader be also a FOREST AND STREAM reader of Mr. Robinson's "Uncle Lisha's Shop" sketches, he will find an added pleasure in the story because of familiarity with the characters.

Another national park has been provided by the President's proclamation setting apart 1,250,000 acres of land in the White River Plateau in Colorado.
ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

THE ADIRONDACKS IN 1853.

A STORY TOLD BY PAUL SMITH.

THERE was a period of Adirondack life and adventure which might be called its prehistoric era, meaning a time before Mr. Murray, or Mr. anybody else, had written historical romance about it and it had become fashionable. In those Acadian days hunters, amateur and professional alike, lived in the woods in primitive style, and shared the same fatigues and the same humble fare. The whole kit was carried in a canvas bag, waterproof coverings either not having been then invented, or not being, as now, in common use.

The outfit for an expedition, or tramp, comprised the following articles: A frying-pan, a kettle, a ladle for melting lead for bullets, tin mugs (forks and spoons were a luxury), hard-bred, coffee, flour and sugar, and the indispensable salt pork, with pepper and salt in a bit of newspaper. All these and some rope went in the canvas bag. One of the party carried an ax. The hunter had his large-bore rifle on his shoulder, and in one of his numerous pockets caps, and in another bullets of his own molding, some lead and a mold. In his belt was a large sailor knife, used for skinning deer, dressing trout, and for purposes of the kitchen and table; also a hatchet and a tin mug. Slung at his back was a blanket or rug, and his dress was a flannel shirt with numerous pockets, corduroy trousers, large heavy boots, and a slouch hat. A powder flask and haversack completed his equipment. The haversack contained fishing lines, book of flies, a flask, matches, slippers, an extra shirt, and a few toilet articles. In a special pocket was a compass and a whistle. There were no dogs in the party. Dogs were introduced later. In those days Poll Smith's way of putting it expressed the whole matter: "I tell ye, boys, a feller must be able to endewer grief that goes on these ere excursion parties."

In that golden age, deer could be seen and sometimes shot from the porch of old Martin's tavern at Saranac Falls. Martin was Poll Smith's father-in-law. This came after. But who was "Poll" Smith? No one can ask who has once "interviewed" the sleek landlord of the fine hotel on the lower St. Regis. "Poll" went into the woods one winter, many years ago, and "got out" the timber of which that hotel is built, with his own hands. At least so "Poll" says. But in the palmy days of which I am speaking Poll kept a little place on Loon Lake, where the humble table was laid in the kitchen, and the venison and trout, of which there was always plenty, were transferred direct from the spider, or rather from the frying-pan, to the plate of the guest by the hands of Poll's excellent mother. The hostelry itself was a shabby 10ft. tenement, of two rooms and the kitchen in the L part, unpainted, and full of cracks, and the prospect from the front porch was of a field of charred stumps planted with potatoes and a root fence, for the foreground, and some ghostly bleached and blasted pines in the near distance. Within sight were no lakes, no mountains, no romantic glens, nor savage forest; in short there was no inducement, outside or in, to make you stay another day at that inn, or to come again, however modest the price of entertainment. Yes, there was one, and that was Poll Smith.

And in those days Poll, I mean Mr. Apollos Smith, "went a-huntin'" for a living. He was glad of a chance to go as guide, and to provide boats and food, charging each man one dollar a day. For this moderate pay he would follow a blaze line through the forest, or row or carry across, or sit watching for deer until the black flies ate him up; at evening he would put up the shanty and cover it with bark, haul and cut wood, strip the hemlock boughs and fry the flap-jacks; and then perhaps paddle half the night with a jack-light of smoking fat-wood that his "folks," i. e., the party he was then conducting, might see the ghost of a deer and hear him stamp and whistle. I say Mr. Smith would do all these things for that small price, but truth compels me to add, not unless he could get no one else to do the hard work. For Poll (I beg his pardon, Mr. Smith) was to be most firmly believed when he said he "always was a lazy man," and he was at his best when, stretched at full length with his feet to the fire and smoking his pipe, he saw somebody doing the work, while he talked. Tall and strong and handsome, with a slouch or lazy-streak in his gait, a fine face and the hands of a gentleman, he was every inch a Yankee, but of the best type. The charm was in the merry twinkle of his blue eyes and his fine white forehead. His forehead has since extended its domain quite over his head, and has gravely compromised the occiput. His yellow hair thinning upon the cranium fell upon his cheeks and chin into a long soft beard, which he pulled and stroked as he talked. His laugh was rare but hearty, and his musical voice had a tone of gravity and seriousness which reprieved any untimely mirth.

One night is well remembered, when a heavy rain had drenched the canvas bag and spoiled its contents. There were no flapjacks, the flour was a soggy lump of dough. Blank were the looks at supper time. The air was sultry and heavy. Midges were in great force, and the hateful smudge had been lighted in order to keep them off. Now, the midge, or punky, has made a vivid and lasting impression upon my memory. He is a most pertinacious and voracious blood-sucking fly, stealing upon you unperceived in foggy, misty clouds of millions, and of a size so minute that the meshes of the finest broadcloth open to his entrance as wide as a barn door.* The only means known to prevent his insidious and irritating attacks is the smudge—i. e., a fire of green wood smothered with turf—which, filling eyes and lungs with its pungent smoke, blinds or suffocates midges and men alike. The undergraduate of Harvard was in misery by reason of his wet cowhide boots, which, his feet being swollen, refused to come off, and must be worn to bed. "Say, Poll," in a tone of despair, "did you ever know any one who had a decent home who was fool enough to come up here twice?"

"I tell ye, boys, it would astonish yo' to see the folks

that come up into these yere woods every summer a-huntin'." I don't believe there's the half on 'em knows what they come for anyway. Now, there was a Mr. Sulloway come up here last summer to my place from Philadelphia. Some of my friends sent him up to me; told him to be sure and git me to go with him if he could. Wall, I never knowed just who the man was that sent him, but that man had better not come up to my place and let me find him out. I should go for him, boys, bald-headed. It would jest ha' made ye laugh to hear that Mr. Sulloway talk to me when I used to call him Mr. Sillyways. "Oh, pray, Mr. Smith, don't pronounce my name in that way. I once had a very serious quarrel," says he, "with a member of the club I belonged to because he addressed me familiarly as 'Silly,' but it was finally healed up between us by his voluntary admission in the presence of several prominent members and mutual friends that the expression was in very bad taste."

"Wall, it takes all sorts to make a world and after all there's jest sich. But Mr. Sulloway, I'll allow he beat any circus I ever went to. He was the tastiest man about himself you ever see. He had a little knife with scissors into it to pare his finger nails and little tweezers to pull out his eye winkers, and he had tooth pickers and a comb and brush for his mustache, and another comb with a point on it to part his hair, and no end of such knick-knacks; and all them things had to be toted round with him wherever he went to. Why, boys, he come up here to go into this 'ere wilderness with one of these yere Saratoga trunks, such as women carries, as big as a covered wagon, and I had to back that there trunk through these woods and over the carries and away up the St. Regis River and across the St. Regis ponds and down the Raquette and home agin. And you wouldn't never guess the things that he had into that there trunk. Why, it was amazin'. The first day out, when we was crossing Rainbow Lake, he stopped and hauled up the little canoe we'd fetched along a purpose to carry the trunk, and he opened her and took out a little pink umbrella with a top on it about as big as my hat. He saw me lookin' at him out of the corner of my eye and says he, 'It's very light and easy to carry, Mr. Smith, and this sun is extremely dazzling to the eyes.' He had a great long bag made out of flannel that he used to creep into at night with a string to pull up at the mouth of it. He said that was to keep the insects out. Why, he used to dress himself up in the mornin' to go a huntin' in these yere woods jest the same as if he was a goin' to a ball. There was a looking-glass set into the inside top of the trunk and he'd put the cover up and fix a little cross-legged stool in front and then he'd open a case with a gold top to it, and some gold bottles, and take out his razors, and he'd shave his chin and slick his mustache and whiskers with pomade and part his hair in the middle and rub perfumery into it, and put on a clean biled shirt and a stand-up collar and wristbands, and then he pulled on to his legs a pair of long leather cases with little buckles on the outside edge, and a purple necktie for his neck with a breastpin into it, and a red velvet waistcoat with pearl buttons. And then his coat! You ought to see that velvet coat. He had two of 'em with big metal buttons with dog's heads and deer's horns, and guns and powder flasks stamped on to 'em, and as many as forty pockets. There was so many of them pockets he could never find nothing when he wanted it. It used to take him more than an hour to get inside of all them clothes mornin's, and then he'd put over his shoulders a powder horn on one side and a telescope on the other; and he had the master great knife that ever you see that he used to buckle around his waist. The blade was as much as 2ft. long, and covered all over with engravings, and the scabbard to it was all crusted on with gold and sich like. He never drewed it but once, for use. I'll tell ye how that was. Ye see he had a most beautiful shootin' iron, but Lord! he couldn't hit nothin'. He used to say it was because the boat wasn't steady. That umbrella of his'n would scare any four-footed beast on airth, and when he did get a shot and I rowed him on to as many as ever I see to one man) he took the buck aguey and shook so as he couldn't draw a bead on one of 'em. One day I see a young fahn that had strayed away from its dam and I rowed him close up and he fired and wounded him somehow so that he sot right down on his hindquarters. 'Now,' says I, 'Mr. Sulloways, there's a chance to blood that there big knife o' yours. Do put that poor little critter out of his misery. It's too bad. I'll put ye ashore.' 'Dear me! What is to be done, Mr. Smith?' 'Catch him by the ears,' says I, 'an cut his throat as quick as ye can.' So he drewed out that there scymetar and stepped ashore just like Columbus discoverin' Ameriky, and he went at the critter to try to catch ahold of his ears, and the fahn he kep' a dodging his head away, and there he stood in front of the little beast with that big cleaver in his hands till I couldn't help laughing. And when he'd got ahold of his ears and was just listen up the battle axe, the little critter opened his mouth and baad right out at him. 'Oh! Mr. Smith. Did you ever hear such a piteous sound? I can't do it, Mr. Smith.' 'Wal,' says I, 'Mr. Sillyways, you and me'd better go home, your feelin's is too tender to go a-huntin'.'

"He was the moderatest softest-spoken man that ever you encountered. Mild as a May mornin'. But he was the master sot critter that ever I took a-huntin'. Things had to be jest so or he couldn't go nowhere nor do nothin'. At last it got to be nip and tuck between me and that there trunk. It was death or life. The fust crisis come when we tried to run the rapids of the Raquette. The canoe got away from us—wall, somehow—and the last we see of it that ere canvas-roofed trunk was a-rushing down among the rocks and whirlin' round and round in the eddies like a caravan of raging tigers. Bimeby we passed it stranded on a rock right in the middle of the stream. Waal, we had to hev a reg'lar Boston town meetin' about it. I argueyed that it warn't no use tryin' to save it. But he took on so about it that next day I waded out and brought the cargo ashore. We discussed the question pretty well that time, but there was a division of the house and the ayes had it.

"After that Mr. Sulloways and me was done. I was the sickest of him I ever was of any man I ever took into the woods. One day I see my chance. I showed him a deer standin' in a medder. He was dressed out, Mr. Sulloways was, in full tog that mornin'. He had his sword on and the telescope on his side, and a fresh biled shirt and diamond studs and the umbrella and everything. There was a place where the water was all covered over with

this floating morss and grass and stuff and looked just like land, so I rowed right up to it. 'Now,' says I, 'Mr. Sulloways, is your chance. You can't hit nothin' from this little shaky boat. I'll put ye on terry firmy.' He had his eyes on the deer, and as soon as we touched the bog he stepped right out. 'Look out! Look out where you're a goin' to!' I sung out. But it warn't no use and down he went. There was a mountainous splash and a scream. More'n four acres of the stuff shook and swashed around, and the black mud bubbled up out of the hole just like ink. The deer, he blowed his whistle and h'isted his flag and departed. For as much as a minute there was an awful silence, and I thought the mylennium had come, and then I see his head all trailing with slush a comin' up. I caught hold on to him by the collar and hauled him into the boat. He was the blackest looking cuss that ever you p'inted at. 'Oh! oh! Mr. Smith!' says he as soon as he could catch his breath, 'this is tremedose, this is perfectly awful. I beg you to take me home at once.'

"Wall, boys, that was the last of Mr. Sulloways' huntin'." Poll knocked the ashes out of his pipe, pressed it down with his finger and pulled at it until it smoked. "Some nice men has been up here sence, that he knowed and recommended, and I hear that he always gives me a first-class certificate of character; so it's all right."

"Do you suppose he'll ever come up here again?" inquired the Harvard student.

"Wall, no, boys, I guess Mr. Sulloways had about all he could endewer."

ZAB. BOYLSTON ADAMS.

THE SAC AND FOX OPENING.

SATURDAY, Sept. 19, at 3 P. M., I got my daily paper saying that the Sac and Fox Reservation was to be opened for settlement on the 22d at noon. It took me an hour to fix my business so that I thought it was reasonably safe; and at midnight I went east on the train heading for Guthrie in light marching order—two blankets, a change of underclothing, an extra flannel shirt and a .45 Colts six-shooter. Changed cars at Newton, and at 2 A. M. Monday morning in a train of twenty passenger cars rolled into Guthrie. The town was boiling full of people, so Bruff (my companion) and I hunted a bed and finally had to pay 50 cents to sleep on a table in my blankets.

We were up at 7 Monday morning, and I managed to get a team at \$7.50 a day. Bruff engaged a driver and guide, who said he knew every foot of the surrounding country for 100 miles, but got lost after we came to the second fork out of Guthrie. I got a third man to go with us and bear a third of the expense. Bought grub till Bruff declared that he was not going to set up a grocery store out there. The guide had a fry-pan and coffee-pot; and away we went eastward at noon.

At 10 A. M. Tuesday we were on Deep Fork, a stream dividing the Kickapoo Reserve from the Sac and Fox. It was only four miles west of the Government town site (Chandler). About 5,000 people in wagons, on horses and afoot were assembled, strung along the creek for miles. The creek was a deep ditch with a little water at the bottom of it. One could cross anywhere on foot; and the people cut down the bank and made half a dozen crossings. Many more would have been made, but no one dared cross and make the going out place for to cross the water made you into a "Sooner," or to be plain, you would be in the Sac and Fox before it was thrown open by the Government, and that debarred you from taking land or lots.

I found the crowd of men that I had been hunting. They had a good crossing made, and though there were 1,000 wagons in line I was squeezed in as fourth from the ford, much to the disgust of a pompous old land agent with mutton chop whiskers and a high-priced and high-colored whisky nose. The colonel swore and yowled, but his team was shoved up and I was shoved in. At 11 a land agent man blew a horn and lectured to about 1,000 about a town that he and his directors were going to start on a certain school section. It was to enrich us all. So we hollered hurrah! and all forgot him and his town. I believe he got a negro and a prohibitionist to follow—on the ground that colored and cranky people would have a fair show.

At 11:50 A. M. 300 horsemen were at my ford on the west edge of the water. All the horses crazy. Men ditto. I put my driver in the carriage and told him to drive across and never mind me, for there was such an excitement that I was afraid of a jam in the narrow cut. I expected to see people killed right there, so I stood at the ford by a jack oak, ready to climb if the crowd got too thick.

At 12 "boom," went a distant cannon, a bugle sounded, and as the cannon sounded "Meddler" Bill Tilghman's sorrel race horse sunk his hindfeet in the bank and landed at one grand spring 20ft. into the promised land. He was gone like a sorrel flash for a race for the banner claim; and the horsemen were across and gone too in two seconds. Then came a noise of crashing trees, of horses' hoofs, of guns going off, shouts. Then a roar, as thousands of wagons commenced to cross. At our crossing the first wagon (a road cart) got jammed crosswise by the second going up the further bank, and it was literally pulled to fragments in two seconds. The driver knotted up his traces, jumped on his horse and disappeared like a flash, without a word of protest. My carriage crossed. I ran through the water and piled in as it ascended the bank, and off we went through the jack-oaks. I grabbed the reins, and the first thing I saw was niggers and white men on foot, men on horses, men on mules, men in road carts, men in buggies, men in and on everything, streaming east like maniacs, through the woods. A white man and a nigger took the first claim at the crossing. They were disputing as I passed them about who was there first. I know the white man was there first, for I saw him drive his stake, but it's not my funeral. His name is Henry Garris. Then I passed a broken buggy, then four or five. Then a horse with a broken or dislocated leg, saddle on, rider gone on to seek his fortune. I drove slowly, four in a top carriage and a camp outfit make a big load. Hundreds passed me, but at 1 o'clock I was camped in a nice open oak grove 200 yds. south of the Government town site. It was a tract of 320 acres, surrounded by soldiers and U. S. marshals, and was being laid off into lots by a large force of surveyors. Men were still running around like mad cats hunting claims. As Bruff and I didn't want any we got dinner and ate it.

I will now, that I have got my breath after the first

*To excitable and impressionable natures the midge is to man what the tsetse of Central Africa is to dumb beasts; but in the pages of some veracious historians of the Adirondacks—who write, it would appear, chiefly in the interest of hotel keepers and guides—no larger space is given to him than might be reasonably claimed for a creature so minute as to be nearly imperceptible to the naked eye.

run, describe the land. It is a gently rolling country, well watered, 10 per cent. jack oak ridges and sandy, poor soil, 40 per cent. open, park-like timber—big trees 10 to 20 in. in diameter, post oak, hickory, black walnut, sycamore and many other kinds; no pine or cedar; trees full of acorns and hickory nuts and black walnuts; grape vines full of fruit; tangles of raspberry vines; plum thickets occasionally. Then there is 50 per cent. of bottoms along the creeks, meadows with grass 4 ft. high, and good water anywhere, all over the town site included, notwithstanding the newspaper lies. And now comes the best—lots of whitetail deer, lots of turkeys in every creek bottom, quail everywhere, squirrels, oh, my! Fish plenty, sunfish, bass and channel cat, in all the creeks that have deep holes. You can catch them with anything for bait. I fished with a piece of quail, squirrel and beef liver, and they bit all the same. Wednesday afternoon I borrowed a shotgun and killed twelve quail. I could have killed many more, but my cartridges gave out. Thursday I bought half a deer for \$1.25—about 40 lbs. Thursday afternoon I saw a man with a buggyload of young turkeys, 75 cents; squirrels, 10 cents; teal ducks, 10 cents. They sold readily.

The hickory and black walnut trees are loaded with nuts. Woods are full of acorns and Indian hogs eating them. The country has a pleasant, homelike look. It seems queer to see no houses in it. I am told it is bad for fever and ague in the summer. It ought to be, for such a paradise ought to have some drawbacks to it. I saw an Indian cornfield that will yield 60 bushels to the acre. It had not been well tended.

The town site was to be opened Monday noon, Sept. 28, and meantime about 5,000 of us camped around it, mostly on the south side of it, three-quarters of us without tents; and I had a real good time. Sunshine, nice grass under trees to camp on, lots of dry deadwood and something new to look at everywhere. I have lived in the West so long that I knew a great many of the people and could get a saddle horse whenever I wanted one, so I rode around for miles away from camp. I took no land. Am going to wait for the opening of the Cherokee Strip and then try for a piece that I want. One can find a quarter with less timber and more open farm land there.

Monday noon came at last and then we made another rush for lots in Chandler. With a roar like a mighty tempest 5,000 people ran in on horseback and on foot to grab for 2,400 lots; and, of course, some got left. I got a lot, not one of the best, but good enough for me; I am a very common sort of man. I filed on it Wednesday. The town has a good location, all reports to the contrary notwithstanding. Water is good and plenty on the town site. It is on a slight elevation, but reasonably flat on top, and is sure to be more healthy than if it were on a level creek bottom. It is sure to be a good town and may be more than that.

There was no one seriously injured in either of the two rushes except one woman, Daisy —, whose horse fell, and she got run over accidentally—she is going to get well I heard. I saw a few list fights, but they resulted in nothing more than a black eye. No murder, no stealing, except a few horses. I think that the order can be attributed to the good sense and executive ability of Judge Allison and his corps of twenty-three U. S. deputy marshals. Allison had to act as dictator for a few days; and I can say, as an impartial observer, that he did as well as a man could do. He gave a few snap judgments; may have hit it wrong in one or two instances, but he had a lot to do and was kept very busy. The Governor (Mr. Steele) and the other officials deserve great praise for the smoothness with which this thing went off.

I left for Guthrie Thursday and came home Saturday. I saw many good business openings in Chandler, and they are there yet. I am a Kansas man and would hate to leave here and go even to the Garden of Eden, so I came home to my big windy plains where we raise wheat and county seat fights; and was as glad to get home as I had been to go away. If you want further information in regard to the Sac and Fox I will give it, but you had better go to Guthrie and go to Chandler and see for yourselves. W. J. DIXON.

CIMARRON, Kan.

Natural History.

HOW TO COLLECT BIRDS.

(Concluded from page 228)

HOW TO STUFF A BIRD SKIN.—There is far more art in stuffing a bird skin properly than in getting the skin off the bird, a skillful taxidermist being able to make a good specimen out of a skin which has been badly torn or otherwise abused, while an inexperienced operator will naturally make a poor specimen out of one that has been properly prepared for him. The most essential of all things, in the way of material, is a good quality of raw cotton, that with a long staple or fiber being necessary.

The orbits (holes from which the eyeballs were removed) should first be filled, a smoothly rounded, elastic wad being inserted in each, with the smoothest and roundest side outward. This is best done while the skin is reversed and the first thing after the preservative is applied. A moderately compact, elastic roll of cotton, free from irregularities and about the thickness of the natural neck, is then inserted through the neck and pushed forward until the end of it can be grasped by the fingers or a pair of forceps within the mouth, where it should be firmly held until the forceps are withdrawn, when the anterior end within the mouth should be carefully pushed back so that when the bill is closed no part of it is exposed.² While a pair of long forceps is usually used for inserting the cotton through the neck, a far handier tool for the purpose is an ordinary knitting needle, around which the cotton may be deftly twisted and shaped, while the smooth needle can be much more easily withdrawn than can a pair of forceps. This same needle may also be used for shaping the eyelids, by pushing from the inside the wad of cotton which fills the orbit, and is convenient for other purposes.

The next step is to take a wad of cotton and manipulate it into an oval, loose or fluffy ball, as near as possible the size and shape of the original body. Insert one end of this into the opening of the skin beneath the end of the neck roll, which should be carefully raised and held while the body stuffing is worked beneath it; then taking hold of the edge of the incision, first on one side

and then on the other, push the cotton into place, or else by holding the cotton gently pull the skin over it. A single stitch about the middle of the incision is sufficient to close the opening, but even this is not necessary.

Should the bird be of medium or large size, the leg bones should be wrapped with cotton (or whatever material has been used for stuffing), so as to give the thigh its proper shape.

All birds with long necks or tender skins should be stiffened by wrapping the neck stuffing as well as that of the body around a wire or stick. If a wire, it should be sharpened at both ends, the anterior end being forced through the anterior portion of the head and the opposite end through the root of the tail. If a stick is used, the anterior end may be blunt and fitted into the cavity of the skull, or it may be sharpened and forced into the bones of the palate or anterior portion of the head. All water birds (especially ducks and small waders), as well as doves, trogons, *Caprimulgidae*, and other tender skinned birds should be thus strengthened.

Now comes one of the most important, and in some respects the most difficult, parts of the whole operation—the shaping or “making up” of the specimen. No matter how faultlessly the bird has been skinned, or even stuffed, if badly “made up” it will be a bad specimen, while on the other hand many defects of either skinning or stuffing may be hidden by careful manipulation at this important stage of the process. To do this properly proceed as follows:

Take a thin sheet of long-stapled raw cotton (the thinner the better, if it only holds together and will stand the least strain) of sufficient size to entirely inclose the bird when wrapped around it. Lay this on the table in front of you, with the fibers running toward and from you; lay the bird carefully on this, on its back, with head to your left.³ Fluff up the long, loose feathers on each side until the thumb and forefinger can be placed beneath them and then gently press the sides beneath the wings together, just as you would squeeze a wounded bird to kill it, only the pressure need not be so strong. Then bring the wings up against the sides in a natural position, allowing the feathers of the sides to fall or lay over them, and adjust the wing-tips beneath the base of the tail. Lay the feet in a natural position, spread the tail as much as may be desired, and touch up the plumage wherever there is any disarrangement of the feathers. When the specimen has been thus properly shaped and smoothed take up one edge of the cotton and lift or wrap gently over that side of the bird and hold until the opposite edge is brought up and lapped over it, drawing less where the circumference is greater and more where it is smaller—the main object being to have the cotton envelope fit as exactly as possible the contour previously given to the specimen. Care should be taken to see that the feathers of the abdomen overlap and cover the incision and that they are held thus by the cotton envelope. The cotton about the head may be twisted around the point of the bill, so as to keep it closed, but it is better to first close the bill by passing a slender needle and thread through the nostrils and tying beneath the lower mandible.⁴ This had best be done immediately after the neck filling has been inserted.

Different collectors, however, have almost as many methods of wrapping skins. One of the best, and perhaps easier to follow, as well as more satisfactory in its results, is the following, practiced by Mr. C. W. Richmond, of Washington, whose specimens are particularly admired for their fine shape and smoothness.

After the incision on the abdomen has been stitched together,⁵ the feathers arranged and the legs crossed, the skin is ready to be wrapped. For wrapping, physicians' absorbent cotton is the best. Take a strip of this about three times as wide as the diameter of the bird's body, and, finally arranging and smoothing the feathers on the under parts, lay the sheet of cotton over the bird, which should be held, on its back, in one hand, between the thumb and forefinger to prevent the wings getting out of place. One end of the cotton should be brought over the head, and the bird then placed on the table or skinning board, belly downward, resting on the cotton. Any excess of that portion of the cotton which has been brought over the head may be removed, the plumage of the back arranged, and the corners of the cotton sheet brought up over each wing, taking care that they bind somewhat firmly at the shoulders, so that the wings will be kept in the proper position after the opposite edges of the cotton have been lapped and blended together. The two posterior corners of the cotton sheet should then be brought together over the rump, to hold the tips of the wings in place. Care should be taken to have the sheet of cotton of uniform thickness, otherwise the skin will present, after drying, irregularities of contour, corresponding to the varying thickness of different parts of the wrapping. It is very important to avoid drawing the cotton too tight and thus squeezing the skin too much, a very common and very serious fault with many collectors, an undersized skin being far more objectionable than one which is overstuffed, for the reason that the defect is practically irremediable.

After the bird has been wrapped the wings may be properly adjusted, care being taken to have the tips even with one another and not crossed or overlapped. In fact, at this stage the skin may be so manipulated that any desired degree of smoothness and regularity of shape may be given it, practice being of course required before the beginner can become really proficient. The finishing touches should then be given, and the skin laid aside to dry, the last thing being to see that the feet and tail are properly adjusted.

The proper wrapping of a specimen, as described above, simple as it may seem, is one of the most difficult of all things connected with the preparation of a bird skin, and requires some patience as well as considerable practice. Some experienced collectors and taxidermists, though

² Many taxidermists, instead of passing the cotton along the throat to the mouth, push the end of it into the cavity of the skull, and fill the throat with bits of loose cotton passed through the mouth. This is a very good method, especially if the head is bent so that its axis exposes at more or less of an angle with that of the body, specimens thus prepared being far easier to mount than those which have been made with the axis of the head continuous with that of the body.

³ If the operator is left-handed the position should of course be reversed.

⁴ Thick, short bills (such as those of grosbeaks) cannot thus be kept closed, but this may be done by sticking a pin (not too large) through the extreme anterior angle of the chin into the under surface of the upper mandible.

⁵ As mentioned before, it is not absolutely necessary to sew the edges of the incision together—in fact, many good collectors dispense with this entirely.

able to make first-class specimens in their own way, never become expert in it, and consequently do not adopt this method. If the beginner can learn, however, to make up his skins in this way he should do so, since there can be no question as to its advantages, the most important of which are that specimens dry much quicker than when put away in a paper cylinder, hold their shape better, and when dried are all ready for packing. The only serious defect is the danger of wrapping the skin too tightly, thus making it “undersized,” alluded to above as a very common fault with those who have adopted this method. This may be avoided by first taking the circumference of the bird before it is skinned by means of a paper band or hoop just wide enough to hold the wings up against the sides (as recommended previously), and then putting this hoop around the stuffed bird before the cotton is wrapped around it.

Very large birds should never be stuffed to their full size, which would involve unnecessary waste of space—a very serious thing when traveling. Just enough cotton, tow or excelsior, or whatever is used for stuffing to keep the opposite sides of the skin from coming in contact with each other is sufficient, the neck, however, and the thighs being stuffed to nearly, if not quite, the natural size.

Large birds with very long necks or legs should also have these members folded or doubled over to economize space in packing.

If the tail has peculiar markings which cannot be satisfactorily seen unless it is spread, they can be easily displayed by the following very simple process: The base of the tail having been properly cleaned by cutting out the wedge-shaped piece which projects into the middle portion, removing the oil-gland, etc. (as described before), pass a needle and thread from one side of the base to the other, across the intervening angle, and then tie the thread after it has been drawn sufficiently tight—the tighter it is drawn of course the more the feathers will be spread apart at the end.

The primaries can be spread for a similar purpose by passing a sufficiently small sharpened wire through their stems, near the base, and separating the individual quills to the desired distance from one another.

Birds with crests should have the head turned so that while the bird lies upon its back one side of the head lies upward, the feathers of the crest being erected and kept in that position until the skin is dry.

Determining the sex of specimens.—The sex of a specimen should never be guessed from the character of the plumage, as is unfortunately very often done, but always by dissection. Sometimes the generative organs have been so injured by shot that this is impossible. Should this be the case, the sex mark⁶ should be wholly ignored or else queried, as circumstances most justify. If the organs have not been injured, the sex of the specimen may be ascertained after skinning by making an incision in the side near the vertebra and exposing the inside surface of the “small of the back.” The generative organs will be found tightly bound to this region (nearly opposite to the last rib) and separating it from the intestines. The testicles of the male will be observed as two spheroidal or ellipsoidal whitish bodies, varying with the season and species from the size of a pin's head to that of a hazelnut. The ovaries of the female, consisting of a flattened mass of spheres, variable in size with the season, will be found in the same region.

A good magnifying glass is of great assistance in determining the sex of small birds, particularly the young, in which the organs are but slightly developed.

Labeling specimens.—The labeling of a specimen is a very important matter; in fact the label is part of the specimen, whose value is in direct ratio to the conciseness of the data inscribed on its label.

While tags have been recommended for temporary use, a permanent label, attached to the specimen as soon as it is prepared, is far better, and should, if practicable, be used in preference. Tie your labels on securely, and do not tie with a string longer than is necessary. Essential data are precise locality, date, sex, and name of the collector, but other items of information may be added if the collector sees fit.

To tie the label to both legs (where they cross one another), is possibly an advantage as making it less easy to tear the label off; but this doubtful advantage is much more than counterbalanced by several disadvantages, which are unpleasantly realized when a measurement of the tarsus has to be made or when one is describing or making a drawing of the specimen. It is recommended, therefore, that the label be always tied to one leg only, preferably the right.

Drying skins.—Skins should be dried before they are packed for shipment, otherwise they may mold. This may be done by exposing to the sun for a short time (a longer time is of course required for larger specimens), or keeping in a warm dry room for the necessary length of time. They should not be dried too quickly, however, as this will cause them to become brittle, and, above all, never attempt to dry them by baking.

Protection against insects.—No matter how well poisoned with arsenic, skins are apt to be attacked by insects, which destroy or disfigure parts not protected by the poison, as the bill, feet, shafts of the quill and tail-feathers, etc. In order to prevent this, the parts liable to such injury should be painted with an alcoholic solution of oil of bitter almonds, oil of red cedar, or some equally pungent substance, and the box in which the specimens are packed should be tight as possible, and tobacco leaves, naphthalene, or camphor placed in with the specimens. An alcoholic solution of corrosive sublimate is very effective, but is also dangerous to the health, and its use is not to be recommended unless other equally efficacious substances cannot be obtained. An excellent way to protect specimens from destructive insects is to wrap each one in a piece of paper and gum together all the openings so that insects cannot enter—a drop of oil of red cedar or oil of bitter almonds, a few crystals of naphthalene, or something of the kind being inclosed with the skin.

PACKING SPECIMENS FOR SHIPMENT.

If specimens are not properly packed they cannot be expected to reach their destination in good condition, but it is very easy to pack them in the right way if the following rules are observed:

(1) Never pack bird skins in the same box with geological specimens, stone implements, deer heads, or other hard or heavy objects.

⁶ The signs used to denote the sex are ♂ for male, ♀ for female.

(2) Place the largest birds at the bottom of the box, the smallest on top.

(3) Fill spaces between the specimens with "excelsior" packing or some other dry elastic vegetable substance (not cotton, which is too light, except for small birds alone).

(4) Pack the box quite full.

(5) Line the box, if practicable, with thick paper before the birds are put in.

RECORDS.

The field notes of a collector may be nearly as valuable as his specimens. They should include observations on the habits, notes, etc., of the various species met with, the kinds of localities they frequent, their food, and all matters which concern their life history. These notes may be written either in a book or on separate scraps of paper (preferably the former), but should never be written on both sides of the paper, unless the supply runs short, in which case it will be necessary to have one page of each leaf copied before the notes can be properly utilized.

In addition to these field notes, the collector should catalogue his specimens as they are obtained, beginning with No. 1, and he should have a single set of numbers. The catalogue number of each specimen should be given both in this catalogue and on the label of the specimen itself, and the full data also duplicated in the same manner.

SOME NEW VARIETIES OF BIRD SONG.

LAST summer (1890) was, to me, especially rich in sparrow song; but one of them is in the foreground of my memory, and will always remain there, it was so unique, so sweet in tone and so remarkably distinct in enunciation—and the words were these, *teet, teet, te-dee-dee, sweet*. Not much of a song, you will say; and it was not as elaborate as other sparrow songs; but there was something inexpressibly winning in the tone, the distinctness of utterance and the individuality of this bird's song. I felt as though the bird was a particular friend; I felt as though it was directing its song to me personally.

The first time that I heard it, on the 6th of April, I was awakened by it in the morning, and was struck by the singularity and power of the notes, the middle part of the strain was so different from that of other song sparrows. Usually one cannot distinguish notes in that part; it is simply a rapid trill. In this it seemed to me that the word *sweet* was uttered as distinctly as a human being could do. I heard these strains frequently during the day—*teet, teet, te-dee-dee, sweet*; sometimes after a pause, a second *sweet*, lower, like an echo. As it went further off, I heard repeatedly *te-dee-dee, sweet*; and sometimes I heard, by the same voice, a low, sweet call, *twoe, twoe, sweet*, with rising notes. At night I thought I might never hear it again—it might be a passing thing; but the next day I heard it again and again.

I wanted to see the sweet singer to see if it looked different from other song sparrows; and after some days, while I was at work in my flower garden, he alighted on a trellis near me and sang before me. It was an ordinary looking song sparrow. Two or three times after this I witnessed his singing. I continued to hear it every day for three months.

One day I found a dead sparrow near the house, and feared it was *Te-dee-dee-sweet*, as I called him; but soon after was gladdened by the sound of his voice. Many a time when I heard him I involuntarily exclaimed, "You little darling!" I loved that bird as though it were a pete bird, and enjoyed his song in his natural environment far more than I could if it were encompassed by four walls.

One day I spent several hours at the pine ridge, half a mile from home, and while there was surprised to hear *Te-dee-dee-sweet*. As the summer advanced, he omitted the first two words. Early in July I left home to visit the birds among the hills of New Hampshire. As I sat on my trunk at the door, just before starting, *Te-dee-dee-sweet* sat on the fence before me and sang; and a few hours after my return, a month later, he welcomed me back with the same old song; and right glad I was to find that he was still here. During August we had continuous hot weather, and I did not hear him. I presume he went northward. On Sept. 24 I heard him once again; but he only said *sweet, sweet*.

On July 1, a few days before I went away four young song sparrows appeared in the east garden, and I have no doubt it was the family of *Te-dee-dee-sweet*, for I had often heard him singing in that direction, and I had known that there was a nest in the buckthorn hedge near by. The mother bird had anxiously objected to my trimming the hedge. The young birds came to the edge of the garden within a few feet of the open window where I was sitting. Young sparrows are prettier than the older ones, for though the color and markings are the same, they are much fresher looking, the dark is darker, and the light is lighter, the eyes are bright and the expression youthful. They are not sun-faded and careworn. When I returned, a month later, I saw them in the same place, as fresh-looking as ever. As I sat at the window they appeared on the scene, noiselessly coming out from under the current bushes. They always kept near each other, and seemed fearless, not looking about constantly as older birds do, and when the wind rattled my paper in the window they were not frightened away.

They were almost as playful as kittens, and would, I presume, have been fully so if they had been physically capable of it. They picked up pieces of dry grass, and threw them about, then suddenly whirled around and around, cuddled and fluttered in the dry earth, scattering it over each other's heads, and hopping up frequently climbed the sticks of the peavines and jumped down, then went to picking insects from under them. When I saw them the month before I noticed that they had not the dark spot on the breast. They now had the two smaller spots on the throat, but not the one on the breast. One of them sang *tit, tit, ta-ree* in a weak unmelodious tone. A few days later I saw them on the other side of the house under the grapevines taking shelter from the rain. One of them came up on to the plank walk near the house and looked up at the window. A slight brown spot then appeared on the breast.

Another new sparrow song that I frequently heard was *teet teedle, te-dee*. This was very sweet, but not as powerful and attractive as the other. I once met the bird near the river hedge. It hopped about near me; sometimes looking at me, at I stood still until it flew away. I liked to believe that this was the mate of *Te-dee-dee-sweet*, as it seemed a fitting one.

One moonlight night, happening to be passing an open

window at 2:30 A. M. I heard *Teet-teedle-tee-dee* singing on the hillside, across the river. Then a catbird, at my wharf, sang the most beautiful song that I ever heard from one of its kind, and some of its notes were in imitation of this sparrow. I did not hear this singer after my return. Three times during the first week in October, I saw and heard a song sparrow uttering a long-continued warble like a canary or purple finch. At first I could scarcely believe my eyes and ears; it seemed as though it must be a canary.

Some say that the song sparrow has seven different songs, but I have heard more than that from it. On several successive May mornings, I was awakened by an oriole in the branches of the apple tree close to my chamber window, meditatively uttering his interrupted notes, while diligently searching the blossoms for his breakfast of "species," old or new, it matters not to him, the practical entomologist. I could see him for some time as I lay in bed, and every time that he disappeared from view he said distinctly, *Good morning*.

As I was passing a great buttonwood tree one day I heard a beautiful and unusual song issuing from among its branches, the voice similar to that of a robin but not as loud. I thought it might be a variation of a robin or a red thrush, until finally Lord Baltimore showed his colors. It was the only real song that I ever heard from the *Icterus baltimore*, though I have heard rich and beautiful notes among the varied vocalism of its kind.

I was once listening to the clear, strong warbling call of a rosy finch, when I heard an oriole near by imitating it precisely. The rosy finch straightens itself up when warbling, but I could not see whether the oriole imitated it in this respect. The catbird has a "mounting song," as well as the mockingbird. I have seen it mounting from branch to branch, between its strains, until it reached nearly the top of the tree. Its song was then unusually harmonious.

The note of the bluebird is tender and sweet,

As he flits through the apple tree branches above,

Right early in springtime, your ears it will greet,

Yet he warbles no song but the call to his love.

This is the rule, but last spring there was one exception; while in the orchard I heard a bluebird caroling so rapidly and continuously that for a moment I thought it a purple finch.

Probably most of the song sparrows do come to us in Massachusetts about April first, as reported; but I have seen and heard them on my grounds in the first week in February. The voice was harsh and feeble in the first attempt at singing, but two or three days after it was not so; and on Feb. 27, when there was a perfect concert of bird voices in the river hedge, I heard the full, continued and gleeful warbling of a song sparrow.

Burroughs says that the meadow lark often passes the winter as far north as Pennsylvania, but I hear them in Massachusetts in mid-winter and at all times in the year.

Their usual plaintive strain is *see-ee meee* when hidden in the meadow grass, or *can't see mee* when perched on the ridgepole of the barn, but one cold morning, after the promise of warm weather, I heard one saying in a disappointed tone, *too cold for mee*. I saw one the other day standing on my orchard fence stretching its long legs, flapping its wings and saying *don't you see mee?* Another in the field answered *see? ou?* ("yes" in French, pronounced *we*).

One warm, still morning in the middle of March, I sat at an open window listening to the bird voices in the river hedge. Woodpeckers were hopping in the road, redwings were walking about near them reiterating *ohalee*, English sparrows were calling like distressed chickens, and song sparrows, hunting on the snow in the garden, looked up at the sky and sang; and a full concert was going on in the hedge. Then there was a pause, and I heard a new voice, which at first I thought was a robin, but was soon aware that it was not such a strong, clarion voice. It was clear, flute-like, easy and beautiful; then the notes changed and fell on the air in slow, measured cadences—solemn, sweet, exalted. It was the most moving strain of bird music that I ever heard, yet not plaintive. It reminded me of Burroughs's impression of the fox sparrow's song, which he expresses so beautifully. He says, "I have heard the fox sparrow in April, when his song haunted my heart like some bright, sad, delicious memory of youth—the richest and most moving of all sparrow songs."

I thought my bird must be a thrush of some kind, but did not think the brown thrasher, or red thru-h, could put so much soul into a song, though he is a brilliant executor; but soon after I heard unmistakable thrasher strains and concluded that it must be the same bird, though he must have been in a more gentle and sublime mood than the thrasher usually is. His strain was like this, in words, *tu-lee, tu-till-lee*.

During two or three days last April I sometimes heard a robin, as I thought, in a neighboring field singing in such an unusual manner that I, at first, thought it a red thrush; it said *tudle-ee, tudle-ee*, with rising inflection like a question. I called it a robin, as it sounded much like one, but with a difference. The tone was similar, though more mellow, the manner was more leisurely and the words different. I thought it a robin, but if any other reporter of birds should tell me it was a grosbeak I am open to conviction, as I did not see the bird, and I had seen a rosy glow on a bird of that size, which flew over the river the day before; but that was the only time that I have ever seen anything that I could suspect was a grosbeak. Zangille says it is local, fond of swampy woods.

March 17, 1891.—*Te-dee-dee-sweet* has returned—one blustering March morning lawoke hearing a sparrow voice, yet not distinctly. I thought to myself, wouldn't it be singular if *Te-dee-dee-sweet* should be here again next summer—the next moment I heard distinctly, *te-dee-dee, sweet*.

May 24.—I hear the full song daily—*teet, teet, te-dee-dee, sweet*. The distinctness with which that bird pronounces the word *sweet* is remarkable, so also is the power and sweetness of its voice.

Aug. 17.—*Te-dee-dee-sweet* is still here; I see him frequently, but have not heard him sing for a week or two. I know him when I see him because he has lost his tail feathers, and I saw him singing after he lost them.

Teet-teedle-tee-dee has been here all summer. When he returned in the spring I noticed that his voice was sweeter and richer than it was last summer. There is a beautiful turn or roll in the third syllable of the song which reminds

me of the hermit thrush. The oriole who imitated the rosy finch was here again this summer. He evidently admired the song of his rosy neighbor, learned the part well, and remembered it.

MASSACHUSETTS.

JULIA M. HOOPER.

A NESTING WOODCOCK.—Mr. Chas. Hallock sends us this interesting note, extracted from a letter from a Minneapolis correspondent: "I found a woodcock on her nest there last summer in some hazel brush at the edge of a swamp. I frightened her off her nest by nearly stepping on her, and thus discovered her home. After that I visited her frequently, but never could locate her exactly without a great deal of looking. I have stood within three feet of her, and although I knew within an inch of where she was, she had gathered leaves and grass about her so similar in color to herself that it always took time to get just her lines. I could have done this more easily, but she would always hide her eye behind the stem of a bush, so that I could not see its glitter. One time I actually put my hand on her and stroked her, and then withdrew without her leaving her nest. Think of it, and a woodcock, too!—H. E. P."

AMERICAN ORNITHOLOGISTS' UNION.—The ninth congress of the American Ornithologists' Union will convene in New York city, on Tuesday, Nov. 17, 1891, at 11 o'clock A. M. The meetings will be held at the American Museum of Natural History, Central Park (Seventy-seventh street and Eighth avenue). The presentation of ornithological papers will form a prominent feature of the meetings, and members are earnestly requested to contribute, and to notify the secretary in advance as to the titles of their communications, so that a programme for each day may be prepared.—JOHN H. SAGE, Sec'y (Portland, Conn., Oct. 6).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchase.—1 Chaco baboon (*Cynocephalus porcaricus*), 15 Rheus monkeys (*Macaca leonina*), 1 sacred monkey (*Simulipithecus entellus*), 2 white-throated cebus (*Cebus hypoleucus*), 1 brown cebus (*Cebus fatiellus*), 2 capromys (*Capromys pilorides*), 1 black-tailed tree porcupine (*Syntherisma melanurus*), 1 Azara's opossum (*Didelphis azarae*), 1 roe deer (*Capreolus caprea*), 4 golden pheasants (*Phasianus pictus*), 2 Reeves's pheasants (*Phasianus versicolor*), 2 ring-necked pheasants (*Phasianus torquatus*), 2 Amherst's pheasants (*Thaumatococcus amherstii*), 1 Peruvian parakeet (*Platygyrrus pennanti*), 1 rose-bell parakeet (*Platygyrrus carolinus*), 4 passerine parakeets (*Psittacula passerina*), 1 black-throated trogon (*Icterus gularis*), 2 Cuban iguanas (*Cyclura nubiola*), 1 puff adder (*Viper arietans*), 2 tree boas (*Xiphosoma hirtellum*), 1 tree boa (*Xiphosoma sp.*), 3 fer de lance (*Bothrops lanceolatus*), 1 deadly snake (*Bothrops atrox*), 1 snake (*Bothrops sp.*), 1 spoo-barked tree snake (*Leptophis inornatus*), 2 rat snakes (*Spilotes corais*), 1 carinated tree snake (*Herpetodryas carinatus*), 1 trunk-necked tree boa (*Epicratis enchiridion*), 1 dusky rat snake (*Spilotes pullatus*), 1 copperhead snake (*Anistrodon contortrix*), 1 diamond snake (*Spilotes erbeninus*), 1 Sackens's garter snake (*Eutania sackeni*), 1 black hog-nosed snake (*Heterodon platyrhynchus atmodens*), 1 pine snake (*Pituophis melanoleucus*), 5 common hog-nosed snakes (*Heterodon platyrhynchus*), 2 alligator snakes (*Ophiosaurus ventralis*), 5 coachwhip snakes (*Basiliscus flagelliforme*) and 4 common black snakes (*Basiliscus constrictor*). Presented.—1 brown cebus (*Cebus fatiellus*), 1 black snake (*Pithecia adansonis*), 1 gray squirrel (*Sciurus carolinensis*), 1 great-horned owl (*Bubo virginianus*), 1 screech owl (*Scops asio*), 2 golden-crowned kinglets (*Corvus aureus*), 1 night heron (*Nycticorax nycticorax*), 1 rock-meadow bird (*Turdus polyolus*), 1 gray-headed love bird (*Agapornis canina*), 2 albacore (*Albigora mississippiensis*), 1 Agassiz's tortoise (*Xerobates agassizii*), 1 land tortoise (*C. chelonia*), 1 diamond-backed terrapin (*Malaclemys palustris*), 1 striped terrapin (*Chelonia insculpta*), 1 horned lizard (*Phrynosoma cornuta*), 1 green lizard (*Anolis principatus*) and 1 hellbender (*Amphibia alephensensis*). Born.—1 axis deer (*Cervus axis*), 1 Virginia deer (*Capreolus virginianus*) and 20 water snakes (*Tropidonotus sipedon*).

Game Bag and Gun.

Antelope and Deer of America. By J. D. Catton. Price \$2.50. **Wing and Glass Bull Shooting with the Rifle.** By W. C. Bliss. Price 50 cents. **Rifle, Rod and Gun in California.** By T. S. Van Dyke. Price \$1.50. **Shore Birds.** Price 15 cents. **Woodcraft.** By "Nessmuk." Price \$1. **Trajectories of Hunting Rifles.** Price 50 cents. **Wild Fowl Shooting;** see advertisement.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A SORA HUNT ON THE JAMES RIVER.

HOW shall I tell about it? What shall I say to my brother sportsmen and to the readers of the FOREST AND STREAM? How can I tell them of the fun we had, and of the sport we had down on the James River for ten days in September?

Our party consisted of three—G., M. and Bob. Then, of course, we were taken care of by our genial friend Capt. Proctor, of City Point (long may he live, for there never was a keener sportsman, a warmer friend or a more hospitable man than Capt. J. D. Proctor).

Having shipped our shells by express and our other ammunition, we found ourselves on the morning of Sept. 16, bright and early, fresh and eager, on board the steamer Ariel, at Richmond, Va., bound for City Point, on the James River, the far-famed river of Dutch Gap, Malvern Hill and Drury's Bluff, all familiar to our memories and associated with war times. Arrived at City Point about 10 A. M., we found our hospitable host waiting for us on the dock.

Ho! Oh, my! but it was and no mistake. We were expecting an equinoctial storm in a day or two to cool the air, but nary a storm, and for seven eventful days the sun poured its rays upon land and water and baked and boiled. But we were not to be deterred by Old Sol's rays, and as Capt. Proctor was ready for us with three boats and three pushers, in about two hours' time we started forth to inspect the marshes. Those in the vicinity of City Point are located on both sides of the Appomattox River, commencing about a mile above its mouth, also just above Bermuda Hundred, at which place there is a very fine marsh.

In about an hour's time we found ourselves in the grass and the pushers shoving us through at a fair speed. We had not proceeded far, when the birds began to appear. My man John was an adept, and knew his business thoroughly. Not only is it necessary for a pusher to know the best places in which to find birds, but he must be skillful in marking them down or a great many birds are sure to be lost in the grass.

All of our men were proficient at this, and we scarcely

lost a bird. Well, here we go! I have improvised a seat out of a cracker box, which I find very comfortable. Push, push, push, and we move along. Suddenly the pusher cries, "There goes one!" and up goes the gun and down goes the bird; "there goes another!" and down he goes; "there go two more!" Missed them clean. Then we stop and gather in the dead birds.

In the meantime Captain Proctor's gun is banging away at a lively rate about half a mile away, and the other two guns bang away too. It is fun and no mistake, especially when the tide is high and birds are plentiful.

The rail bird (or sora) is a queer little creature, and all sorts of stories are told about him. It is said that it is not known where he nests or where he comes from. In fact the superstitious negroes insist that they are nothing more than frogs, and point to the fact that before the birds arrive the marshes are alive with frogs, which disappear as soon as the sora arrives. We scarcely saw a frog in the whole seven days' shooting; and we certainly succeeded in clearing out the sora, and there did not seem to be any new arrivals from day to day. Captain Proctor disputes this belief, and says that as soon as they get a good storm there will be new arrivals.

Well, after having our luncheon, we pushed on up the marsh, till the receding waters warned us it was time to "get out," and turned our faces homeward. Upon count-

a bushel or so in case he needed them to keep ahead of us. He seemed to have a favorite place to find the birds, and that was in the woods on the edge of the swamp. We would see him, way off in the distance, standing up in his boat, with a great cloud of smoke in the air, banging away into the bushes, and we found sometimes that he would bag 15 or 20 birds right out of the bushes in the woods. As near as we could find out, when the shooting began the birds began to fly to the woods, and, of course, being rather green hands at sora shooting, it did not occur to us to look for them anywhere excepting on the marshes.

We shot over the Bermuda Marsh three different tides, and at the end of our seven days' hunt found we had bagged a little under 1,200 birds. This is not considered extra sport down in that section.

There is a marsh located about two miles from the mouth of the Appomattox River which cannot be shot over excepting on an equinoctial tide. It is covered with quite a growth of an aquatic plant which bears a yellow flower. It is not a grass, but a regular flowering plant, and at ordinary tides stands too high above the water to push a boat over it. The sora bird lives under this thick growth, and only the highest tides suffice to drive them out of it. We succeeded in having our pushers get us a short distance into this marsh, but no birds were to be seen or flushed. The pusher would take his pushing pole

doubled up with rheumatism, who walks or crawls about with the assistance of two canes, and is known as Uncle Joe. One day the old fellow was slowly making his way through the village street, when along came a white man, a very well-known character in that town, "half-seas over." He was pretty nearly "as full as a goat," and he happened to have his rifle with him, and a crack shot he is, whether drunk or sober. As soon as he saw Uncle Joe seated on the stump he sung out, "I say, Uncle Joe, let me put a potato on top of your head and shoot it off. I will give you 50 cents if I bust the potato or a dollar if I kill ye."

The old negro looked up and replied, "Do you say, boss, you will give me 50 cents if you bust the potato or a dollar if yer kill me?"

"Yes," was the reply.

"Well, den, go ahead, boss," said the old man.

The potato was placed on the top of the old negro's head, and the white man staggered off about thirty paces and drew a bead. The smoke and fire shot from the rifle and the potato spun high in the air.

"Well, I'll be shoved!" said Jim, "I did do it, or I'm a sojer!"

He staggered up to Uncle Joe, fumbled around in two or three of his pockets, fished out a half dollar and handed it to him.

The old man seemed very much surprised. It was a

AMONG THE WILDFOWL.—VII.

RAFTING FOWL—A FREQUENT AND TANTALIZING EXPERIENCE.

ing up, we found we had bagged altogether 208 birds.

The next day we tried it again, but were not so successful, until we struck a new piece of the marsh and there the birds seemed unusually plentiful. In fact, we shot until our guns were too hot to handle, and when we came home we had about 260 head to the four guns. The next day we concluded it would be a good thing to try the Bermuda marsh, if the tide was high enough to permit us to push over to the marsh. G. and M. tried their luck. Capt. Proctor and Bob said it was too hot and they were too lazy, so they stayed at home.

In the evening, upon the return of G. and M., they reported the birds plentiful and had each bagged about 50 head.

As the tide served at 5 o'clock the next morning, Capt. Proctor routed us out of bed at 3 A. M., and we started up the river in a thick fog and not a breath of air. We had nothing to shape our course by excepting the moon, which shone brightly.

After pulling for about an hour, a dark object appeared before us, which proved to be a lot of lily pads which were on the edge of the Bermuda marsh, and we then found ourselves just where we wanted to be. As soon as it was daylight, it seemed as if the marsh was alive with birds; they were coming up singly and in twos and threes from every direction, and it certainly was the keenest kind of sport. Captain Proctor is an old hand at sora shooting and he seemed to understand the art of getting where the birds were, and thus beat his Northern friends' score completely. It really did us good to see how much he enjoyed "beating the score of those fellows and their \$250 guns with his old plug of a \$10 shooter," as he expressed it.

He seemed to laugh and enjoy it so much that we really did not want to overstep his score, and we therefore let birds go by for fear we would beat him. He killed so many birds that we asserted that he had undoubtedly stored away in a safe place in the swamp half

and bang it into the marsh, and you could hear dozens of birds squawking from every direction. When the equinoctial tides occur the sport on this marsh is superb. Last year Capt. Proctor bagged 176 at one tide, and could have killed twice as many had not his ammunition given out.

All of these marshes are posted and protected and it was only through the kindness of our good friend Captain Proctor that permission was secured to enable us to shoot over them. We were informed that there were quite a number of gunners from Petersburg who had recently poached there and that four of them had been arrested.

At the end of the seventh day, there having been no equinoctial storm and no tides good for anything, the terrible heat still continuing, we decided to break camp and start for home. Bob took with him a box containing 138 sora, packed in ice, which by repacking en route he succeeded in getting home in good condition. We all voted that our hunt was a success and that we would try it again providing we could succeed in getting permission to shoot on the marshes.

There is very good duck shooting on the James River during the winter months, canvasback and broadbills in the winter and mallard and teal in early autumn. The laws of Virginia are so very strict against non-residents that unless one has friends who own the marshes, there is pretty sure to be trouble if one attempts to hunt on the James River. Pot-hunters are especially abhorred by all of the gentlemen owning plantations along the river, and they are very summarily dealt with if they attempt to hunt the ducks.

Before I end this yarn I think I will tell a story. We always used to tell stories, and sometimes a good many of them, every night after we got home from our day's shooting. There is a negro man at City Point so old that nobody knows how old he is—one of those old knock-kneed negroes about 100 years old, all twisted up and

long time since he had seen so much money. He looked at it lovingly, bit it, turned it over, looked up to Jim, and said, "Well, boss, I se sorry I did not git de dollar."

ROBT. C. LOWRY.

ST. LOUIS NOTES.—The Sunday exodus of hoodlum hunters from this city into St. Louis county has become such a nuisance to the farmers that the latter have organized, and with the assistance of the sheriff and his deputies, propose to put a stop to the disgraceful acts of these so-called sportsmen. Seventy-five special deputies have been appointed who have been ordered to arrest all persons found shooting on Sundays. Last Sunday, at the stations on the Missouri Pacific and Frisco roads, the shooters were met by the officers and warned not to shoot nor commit any trespass. These hoodlum hunters have been in the habit of shooting everything they came across even to the poultry of the farmers. Cattle, horses and hogs have been shot by these Sunday hunters, but now they will have to stop. In showing the need of a later date for the opening of the quail season it is only necessary to visit Union Market and see the large number of baby quail exposed for sale. Commission men have had to send out notices warning shippers not to send in these small birds, as they could not be profitably handled. The extremely low water in the Mississippi River has left thousands of game fish to die in the dried up pools and sloughs where the fish went when the water was higher.—ABERDEEN.

GOING TO CALIFORNIA.—A person can take a seat in a palace car at Dearborn Station, any afternoon and go over the Atchison, Topeka and Santa Fé Railroad to San Francisco, Los Angeles or San Diego without changing cars. The fast express on this line makes at least twenty-four hours quicker time to Los Angeles than any other line, and in fact the Santa Fé is the only thoroughly comfortable route to take. The office is at No. 212 Clark street, Chicago.—Adv.

FIRE-LIGHTING.

FIRE-LIGHTING is practiced to a greater or less extent by a few market-gunners exclusively for gain in the shallow bays adjacent to the Atlantic seaboard. There is a strong general, as well as local, sentiment against the pursuit of water fowl in this manner, and the laws are generally pronounced against it. For this reason it is a rather difficult matter to obtain much reliable information regarding it from those engaged in this calling.

We consequently have but limited knowledge as to the *modus operandi* of pursuing water fowl in this way or its effects. My desire to know something about fire-lighting has been strengthened from time to time, while on my shooting trips, by seeing usually just after dark, certain lights creeping slowly out on the bay, or moving silently along the shores, and which, as I watched them, would often change from dawning brightness to total darkness. It was some years before I had an opportunity to investigate these lights, but it finally came through an experienced bayman whom I had previously employed, and who, at times, went after water fowl in this manner.

The great desideratum in this kind of shooting is the lantern, as on its construction much depends, and I describe it from memory in detail in order that a better idea may be formed of the effect its use is likely to produce on birds. A large light is necessary. A locomotive headlight would serve admirably, for it throws a broad and strong light. A small lantern would be of comparatively little use, for the more powerful and far reaching the rays of light, the better the chance of successfully approaching the water fowl. As not many of the baymen can afford a locomotive headlight the result is a variety of lanterns are used, varying according to the means and ingenuity of the owner. The one my boatman used might come under the head of first class lights. It was about 14 in. wide and 18 in. high, and was made of tin with plain glass on three sides, the back being tin, bright inside and supporting two large reflectors, in front of which were placed two kerosene lamps with large burners.

Tin doors lined with looking-glass were attached to the plain glass sides, thus leaving only the front uncovered. There were funnels at the top to carry off the heat and smoke from the lamps. When ready for use the lantern is securely fastened at the bow of a small boat. The lamps are then lighted and turned low. The boatman rows toward the birds he is in quest of and which may be a quarter of a mile away, resting on some sandbar or feeding along the shore. Canada geese are the birds usually pursued. When sufficiently near for his purpose (it now being quite dark), he turns up the lamps, and the looking-glass doors are opened and kept in place by a wire rod at such an angle as to focus the rays of light in conjunction with the reflectors at the back. Thus there is cast ahead of the boat a broad and far-reaching stream of light. Dark evenings are most suitable, and the water should be smooth. It is desirable that the boat have smooth sides instead of lapstreaks, as the water makes a noise when striking against the latter. The boatman stands or sits at the stern with his gun in readiness and sculls or poles the boat according to the depth of water.

Great care must be exercised in approaching birds, as a careless knock of the oar against the boat may alarm them. After the birds have come within the rays of light, they must be kept covered by it until shot at, for a change from light to darkness will cause them to fly. A thorough knowledge of the surroundings, and judgment in guiding the boat by the direction of the wind, is necessary to prevent getting turned around, or going to the windward, when the birds may scent your approach. Before starting out, it is important to know the whereabouts of one or more flocks of birds. I remember one afternoon, there being every indication of a favorable evening, when 25 Canada geese sat on a sand bar about a mile from where we were. My boatman said, "We will go after them with the lantern to-night." While on our way to them I sit behind the lantern perfectly still with cocked gun, while the boatman, standing upright in the stern with his gun beside him, sculls silently along, the stream of light from our lantern, with its well-defined limits, lighting up for quite a distance the path in front of the boat. Presently he asked in a whisper if I saw the geese; I replied "No, and he pointed out some indistinct specks ahead of us. As the wind was blowing across the boat there was no danger of our being scented. As we approached I did not take my eyes from the geese. They did not appear afraid or suspicious, but acted in the most natural manner possible. One preened its feathers, another rubbed the side of its head on its back, another dipped its bill in the water, of which there was a depth of about 3 or 4 in. on the bar on which they were standing. The rays of the lantern covered the flock, while outside of its limits all was inky darkness. Not the slightest curiosity or uneasiness was evinced by them on the approach of the light. The boat meanwhile approached too near, being within 15 yds. of them, and although they were not standing close together, we were now obliged to fire. Confusion followed the reports; but it was soon still. Those that could do so flew away, leaving seven dead. That we could have gone into their very midst seems probable.

Leaving this locality we headed out from shore in search of a large flock of brant which we had heard when on our way to the geese. We had no difficulty in finding them, but could not get near enough to see them, although we chased them for a long distance by their call, being quite near them at times. These birds swim faster than the boat can be propelled, and I am told are as a rule difficult to approach. Having decided to return, we were silently moving along the edge of the marsh, sweeping the water adjacent to the shore with our light, when a pair of black ducks were observed feeding and piddling in the rays of the lantern. They were perfectly unconcerned, and although the boatman was standing up, they could neither see nor hear anything. They would turn around and lower their heads to the water. I saw no signs of fear or curiosity, and they showed no particular interest in the light. I finally perceived a slight uneasiness, and as we approached nearer they commenced to swim away with their heads up, apparently with a suspicion that all was not as it should be. I think they may have heard us whispering, still they made no attempt to fly until we fired at them from a distance of not over a dozen or fifteen yards.

Several years after I tried an experiment to see how near I could walk up to a flock of common terns (*Sterna hirundo*) with an ordinary hand lantern. They were roosting on the beach. I found I could approach to within about three or four yards of some of them, when they would fly a little way and alight again. This was the result after several trials.

I think the reason I could not approach nearer was that the lantern distributed an equal amount of light in all directions, thus making me visible; had the lantern been so arranged as to cast the rays only ahead, I think I could have walked among them, or at least close to the outside edge of the flock. The above instances seem to show that the only effect was the dazzling of the birds by the brilliant rays of light cast on them from the lantern. This with the absence of any scent or sound sufficient to make the birds suspicious caused them to act in the manner most natural to them. It seems reasonable to infer, that when such a concentration of light is artificially directed at a person, animal, or bird, the same effect is produced as when looking steadily at the sun; in other words, the light is so dazzling to the eyes as to render them incapable of seeing any object for the time being. This seems to me to be an explanation of the effect of the light thrown on the birds from the lantern. Had a noise been made when we were near them, they would have flown away quickly enough, lantern or no lantern.

It seems to me that the principal objection to the use of a light in pursuing wildfowl after dark lies in the fact that such night shooting harasses the birds on their roosting and feeding grounds, which, as any one who has had any experience knows, causes them to forsake such places and seek others where they will be unmolested. Fire-lighting is generally not remunerative, and the men who follow it have much to contend with, both in regard to weather, birds and the law. It is likely to be engaged in by only a few of the bymen, as most of their friends who shoot, being day gunners, are opposed to it, knowing well its evil effect on wildfowl. While I regret that my experience has been so limited, I can still congratulate myself that it has been no greater. I present these notes as a slight contribution to the knowledge of a subject on which little has been written.—George H. Mackay in the Auk.

MAINE WARDENS.

GAME WARDEN "Jock" Darling writes to the *Philips Phonograph* under date of Sept. 26: "In reply to some of the readers of the *Phonograph*, who wish to know what change of heart I have had that induced me to accept an appointment as game warden, I will say there has not been any change in heart, but some change in business, which has been brought about for several reasons. In the first place, I have always believed in protecting our fish and game when it should be, and all the talk that has been made in newspapers and otherwise about my being an outlaw, a notorious poacher, etc., was because I advocated the use of dogs for deer only, and during the open season merely. Some of the reasons for my taking the office of warden I will give: First, I own and run sporting camps for fishermen and hunters, and all the way I have had any business was to allow sportsmen to have guides with dogs to hunt deer, which gave the guides employment at big wages. The use of dogs was against the law, and I had to stand in the gap and do all the fighting. I went to our Legislature several times the past six years and done what I could to have the game law amended, and I have been working hard on a poor man's purse; not a hunter or guide helped me to a cent, but on the other hand they have in several ways worked against me. I found that I was not going to get any help from them and was not able to fight the State of Maine, etc., alone. When the Game and Fish Commissioners with some of their friends came to my camps and talked the matter over I could see no other way to do than what I did. I did not accept the office of warden for the purpose of any unfair way of getting money, as some have insinuated, but to see if I could not prevent some of the wasteful game slaughter that is going on. As soon as my business will allow I shall move in that direction, and I believe that I have already done some good. Not long ago I received a letter from a well known guide at Moosehead Lake; he had seen the appointment of my being a warden and he wanted to know if it was a fact; if so, if I meant business, for, says he, 'we know that with the knowledge you have of the woods, country and hunters, that if you mean business you will make warm work for some of them.' My first move will be to try and induce them not to kill game when it should not be, and if they do I shall get them if possible. One disadvantage most wardens have worked under, they were not posted in woodcraft and had to follow the main traveled roads. Many times the news that they were coming passed along ahead of them, and this may be the case with me, but the chances are that I shall come out ahead part of the time."

A. J. Darling, the veteran hunter and game warden of Enfield, writes to the *Bangor News*: "As many articles have been in print for and against the game laws and the one great interest that we all have, or should have, for our big game interests, as well as fish of all kinds, I will say that I have been a warden for many years and have always tried to use moral suasion on the people. A man that has it in his mind to hunt and fish whenever he chooses, one might as well try to stop the north wind from blowing, as to spend any time talking to him. Never yet in my time have I taken any hush money; but I cannot say that I have not had chances to receive such. I have been in our forests this season and find that the deer are quite plenty all along the line, particularly in the eastern portion of the State; and good, reliable men, who have been in the lumber regions tell me that deer and caribou are plenty all the way from the Passadumkeag stream to the head of the Mattawamkeag and up through Aroostook county, and with fair hunting will surely be plentiful in years to come. I have assisted this season in subduing forest fires that were not set by sportsmen but by inhabitants of Maine. I wish no hunter any harm, but our laws are not severe enough for the man that will kill game when he well knows that it is to be left to spoil where it is killed. I believe it is my duty to look after the best interests of our fish and game whenever I can, whether I am a warden or not; but it is impossible to follow every fisherman and hunter wherever he may travel."

WEAPONS FOR GAME.

DURING the present year a highly interesting book has been published in England, called "Wild Beasts and Their Ways," by Sir Samuel Baker. It contains an account of the large game of which that celebrated traveler and sportsman has had personal experience; and in the opening chapter he gives his opinion as to the best weapons for killing the various classes of animals. Upon the latter subject many first-rate hunters will differ from him, but his ideas are well worth careful consideration, because it is doubtful if any man has killed a greater quantity and variety of large game, and during an unusually long sporting career he has always had ample pecuniary means for trying experiments with weapons of all sizes and patterns. Notwithstanding these facts, Sir Samuel Baker is by no means dogmatic. He says: "It would be impossible to offer advice that would suit all persons. I can therefore only give a personal opinion according to my experience."

"For all animals above the size of a fallow deer and below that of a buffalo, I prefer the .577 express—648 grs. solid bullet, 6 drs. of powder, not $\frac{1}{2}$, as the charge of 6 drs. produces greater accuracy at long ranges. The weight of this rifle should be 11½ lbs. or not exceeding 12 lbs."

"For smaller game, from fallow deer downward, I prefer the .400 express, with from 85 grs. to 4 lbs. of powder—solid bullet, excepting in the case of black buck, when on account of numerous villages on the plains it is necessary that the bullet should not pass through the body. The important question of weight is much in favor of the .400—as great power and velocity are obtained by a weapon of only 8½ lbs."

"The Paradox gun, invented by Col. Fosberry and manufactured by Messrs. Holland & Holland, of Bond street, is a most useful weapon, as it combines the shotgun with a rifle that is wonderfully accurate within a range of 100 yds. The No. 12 Paradox weighs 8½ lbs. and carries a bullet of 1½ oz., with $\frac{1}{4}$ drs. of powder. Although the powder charge is not sufficient to produce a high express velocity, the penetration and shock are most formidable. * * * It also shoots No. 6 shot with equal pattern to the best cylinder-bored gun."

Referring to the pachydermata the main opinion expressed is as follows:

"I do not think that any larger bore is actually necessary than a No. 8 with a charge of 12 or 14 drs. of powder. Such a rifle should weigh 15 lbs. and the projectile would weigh 3 oz. of hardened metal. * * * Such a rifle will break the bones of any animal from an elephant downward, and would take a buffalo from end to end, a matter of great importance when the beast is charging. There are many persons who prefer a .500 or .450 express to the .577 or .400. I have nothing to say against them, but I prefer those I have named, as the .577 is the most fatal weapon that I have ever used. * * * There can be little doubt but that a man should not be over-weighted, but that every person should be armed in proportion to his physical strength."

The following extract from the book may perhaps be of use to those who are in search of the much-talked-about "all round rifle":

"The purchaser should strongly resist the delusion that any one particular description will be perfect as a so-called general rifle. You may as well expect one kind of horse or one pattern of ship to combine all the requirements of locomotion, as to suppose that one peculiar rifle will suit every variety of game or every combination of locality."

There is probably no point upon which so many hunters will differ from Baker as in that of his preference for solid bullets of pure lead in express rifles. He says: "I differ from many persons of great authority in the quality of projectiles. * * * I contend that the smashing up of the bullet is a mistake, except in certain cases when the animal is small and harmless, and when the bullet would be exceedingly dangerous should it pass through and ricochet into some unlucky village. * * * I have frequently heard persons of great experience dilate with satisfaction upon the good shots made with their little hollow .450 express exactly behind the shoulder of a tiger or some other animal. I have also heard of failures which were to themselves sometimes incomprehensible. A solid .577 never fails if the direction is toward a vital part. The position of the animal does not signify * * * as the solid bullet will crash through muscle, bone and every opposing obstacle. * * * If the metal is pure lead, the bullet .577, with an initial velocity of 1,650 ft., a second, will assuredly assume the form of a button mushroom immediately upon impact, and it will increase in diameter as it meets with resistance upon its course, until, when expended beneath the elastic hide upon the opposite side, it will have become fully spread like a mature mushroom. * * *

"I have seen very many instances when the .500 hollow express, with 5 drs. of powder, has struck an animal well behind the shoulder, or sometimes through the shoulder, and, notwithstanding the fatal wound, the beast has galloped off as though untouched for at least 100 yds. before it fell suddenly and died. This is clumsy shooting. The solid bullet of pure lead would have killed upon the spot."

Attention is also drawn to another advantage of the solid bullet: "A hollow bullet from an express rifle will fly into fragments should it strike a twig the size of the little finger. In thick jungle a solid bullet may deflect slightly but it will generally deliver its message direct, unless the opposing objects are more formidable than ordinary small branches." In the above-mentioned .577 rifle the charge of powder is only one-fourth the weight of the bullet, and when loaded in that proportion it is quite possible to obtain regular accuracy with pure lead; but with the loads used in ordinary .45 or .50 express rifles the shooting is irregular unless the bullet be hardened with about one-tenth part of tin. Probably even then it would mushroom in the manner advocated by Sir S. Baker, on account of the much larger proportion of powder. If it fail to do this the bullet might be cast with a very small hollow, as recommended by Mr. Van Dyke.

J. J. MEYRICK.

[TO BE CONTINUED.]

VERMONT FISH AND GAME LEAGUE.—The annual meeting will be held in the parlors of the Van Ness House, Burlington, Vt., Nov. 4, 1891, at 6:30 P. M. Every member is urged to attend.—HENRY R. DORR, Pres., JOHN W. TITCOMB, Sec'y (Rutland, Vt., Oct. 10).

FUR BREEDING.

A NEW CHANCE FOR SMALL CAPITAL.

I KNOW its as old as the hills, and I say so to get ahead of the critics, but all the same it's new.

I want to know why it is not taken up by some of your numerous correspondents who write to you every little while to know if there is any money in frog raising or gander farming.

These inquirers are nearly always persons with a strong taste for natural history pursuits, residents of the country, and have a little land and spare capital; and to these I would say, why not try fur breeding. Good furs are always saleable, always fashionable and always beautiful, and I think that a person with suitable surroundings and experience could make a fair percentage on a small capital, especially if he added skillful tanning to his operations.

It seems quite essential that the animal experimented with should have a valuable fur, should be prolific, easily managed in confinement and quick to mature.

The most valuable furs then, would naturally claim first attention; but the best of these—black fox, beaver, otter, fisher, etc.—are from animals that are non-breeders in confinement, or are very unprolific or otherwise unmanageable.

Of a lower grade of value are marten, skunk and mink. Marten is always valuable, and is said to be fairly prolific in a wild state; but as a semi-domestic animal I know nothing of it. Skunks are quite manageable in large inclosures, while mink are, as is well known, as easily managed as rabbits and are fairly prolific; so that when the fur is valuable there is good money in it.

In the third grade of furs we may place the common cat and rabbit. Although both are staples in the fur trade, I never heard of any attempts being made to improve them by breeding for fur; that is, by careful selection and management with a view to fur only. In this connection it might be well to note the following facts:

1. The fur is more readily changed by breeding than any other part of the animal.

2. Furs vary in value immensely, according to individual quality. Thus a fine dark mink may be worth a dozen poor light ones.

3. Furs are greatly improved by exposing the animal to cold weather and supplying with abundance of proper food.

4. The size always and the quality often, of furs is greatly improved by castrating the males, which should, of course, be set aside for the market.

If I were to experiment myself I should make some very large cages and try the marten, mink, skunk and common cat, aiming to produce a large, very dark or all black animal in the first three, and in the last named a glossy gray, a richly spotted black and yellow or an imitation of lynx; with cats, however, the color possibilities are unlimited, so that one can in time have anything that may be fancied.

All these animals, unfortunately, are carnivorous, which is an objection, unless the breeder has a fish pond and abundant opportunity of getting and keeping offal.

A herbivore would be much more easily fed, and this consideration brings up the names of the chinchilla of South America and perhaps the little bettongia or mountain kangaroo. Both are said to be very prolific and both are apparently easy to manage in a cage. Experiments have been made with crosses between coyotes and dogs, also, as is well known, between buffalos and common cattle, but with what degree of financial success I cannot say.

This is more a letter of queries than it appears to be. At the same time I must say that in view of the rapid disappearance of our wild animals I believe that the question of fur breeding will in the near future become a very practical one.

ERNEST E. THOMPSON.

OHIO DEER HUNTERS.

CAMP STEDMAN, Alger County, Mich., Oct. 18.—We have had a good Sunday dinner in our cabin on the little lake—pheasant potpie, baked pike and stewed venison—and now, while enjoying our pipe, will tell FOREST AND STREAM readers about the hunting and fishing. Our party of four—Byron Stedman, Archie Mays, Charles W. Sander and Louis R. Groneweg—are from Dayton, O., and we come to these glorious pine regions every fall for a month's deer hunt. The first afternoon in the woods we jumped a three-prong buck, and Stedman shot him dead, and to date we have killed ten deer.

The Powell Brothers, of Powell's Point, Mich., well known market-hunters, are in camp near us, and have killed forty-one deer. They ship the saddles to Detroit, and leave the forequarters hanging in the woods. What a pity to waste so much good meat! This is the result of the new game law, making the open season for deer so early. Half the venison that is killed thus early is spoiled by warm weather.

A party of hunters from Troy, O., in camp near us here, killed a number of deer. They also killed a gray timber wolf and took the scalp to Au Train and received \$18 bounty from the county officials. The county pays that bounty for every wolf killed. The "loafers," as these wolves are called here, are getting scarce, and it's a good thing, for these wolves have heretofore killed more deer each winter than the hunters.

We have a canvas boat, and yesterday we took it to a small lake that has never been fished. We caught a boat-load of fine grass pike, many of them over two feet long, and we now have a live-box full in the lake at camp, and can have a fish fry whenever we want, and plenty to supply our neighbor camps. The woods are full of pheasant. We intend to hunt deer until the law is out, October 25, then turn our attention to the pheasant.

PINE SQUIRREL.

DAYTON, O., Oct. 19.—A second party of deer hunters will leave here next week to camp a month in the pine lands of Wisconsin, south of Ashland. The party will consist of Charles Wheeler, Ed. Schwind, Joseph Manter, Gustav Sander, Philip Kern and Michael Schwind, and their colored cook. They have three big tents and all other necessary camp equipage, and will take with them provisions and ammunition to remain until the last of November.

Bird shooters in vicinity of this city are patiently waiting for the quail season to open, although every day now some are in the marshes for woodcock and snipe. Snipe

are coming in, and the woodcock are reasonably plenty, fat, and fine shooting. There are but few wild ducks along the rivers. Teal did put in an appearance in September, but mild weather sent them back to the lakes again.

Quail have been abundant for the past three years, and are more abundant now than ever. The coveys are very large, and the birds all full grown and not wild. Reports come in of coveys feeding through the villages, and one or two coveys have scattered through the center of this city of 65,000 inhabitants. A novelty is hearing quail whistling from the tops of four-story houses in Dayton. Pheasant shooting has been fine sport to a few of the hunters who took the field in Darke and Mercer counties. Cold, frosty weather will be welcomed by the hunters and dogs.

BROWN.

ADIRONDACK DEER.

NUMBER FOUR, OCT. 10.—*Editor Forest and Stream:* The slaughter of deer the present open season for bounding bids fair to rival that of any preceding year. Since the opening day the woods have been full of pot-hunters. Every stream, lake and pond has its watchers. Bucks, does and fawns are butchered in the water indiscriminately. The towns on the borders of the woods are kept supplied with venison. A number of deer are taken to town, each accompanied by a hunter who claims to own one deer, and when the load of putrid venison is disposed of they return to the woods, kill and take out another load, and will continue to do so to the close of the season. No attention is paid to the law limiting the killing to three.

A hotel proprietor in the town where the game constable resides told me the other day that he had just returned from Long Pond, and says that over seventy deer have been killed in that pond since the open season for bounding. And that one man himself had killed over twenty deer. Five deer have been butchered in the water here to-day. And still the slaughter will go on so long as the bound can find a deer to drive into the water. They will not stop Oct. 20, at least last fall bounding was practiced for a week after the close season. No method of hunting could be conceived more potent for the destruction of deer than by bounding them into the water. The legalization of killing on the deep crusted snows of winter would be protection in comparison. The cruel jaws of the steel trap would be less revolting and more sportsmanlike than this water butchery. With the present game laws on our statute book the only chance for the continuance of deer in the Adirondacks lies in the hope that it may pass into the hands of private individuals or clubs who will regulate the killing to the increase. It is to be regretted that the late purchase of Dr. Webb, of the central portion of the Adirondack wilderness, does not comprise a larger area, as he seems to understand the first principle of deer protection. No bounding of deer will be permitted, and dogs that will follow a deer are rigorously excluded from the grounds. I am glad that Dr. Webb has made his premises an asylum for the much persecuted deer.

MUSSET.

TOPEKA NOTES.

TOPEKA, Kan., Oct. 16.—I see descriptions of the magnificent wildfowl preserves of Eastern gun clubs and of the work that is being done to preserve the wild game, but I fail to see anything that would indicate that there is any man west of the Mississippi River who knows a jack snipe from a mallard or could, except in self defense, kill a bird of any description. More than this, we know of at least two men who can distinguish a teal from a sandhill crane. So to inform the general public that we are alive I am going to give one or two items of what may be news to some.

The West Side Gun Club, of Topeka, has just leased a small lake, known as Lake View, about 30 miles east of here and will put up a club house and make other improvements. The lake is a stopping place for every flight of ducks that goes over eastern Kansas, and great numbers of teal and woodduck breed there. Jack snipe are thick in the marshes surrounding one end of the lake. Black bass abound and, as the lake is on the line of the Santa Fe and there is a station there, I see no reason why the lease should not prove one of the best in the country.

Five of the Topeka boys went down to McPherson county a few days ago duck hunting. Yesterday they wired, "Come down and bring a club. Gun unnecessary."

There is a rumor that the Kansas City people who got beaten in the struggle for Lake View have leased a marsh near St. Mary's, 25 miles west of here on the Union Pacific. It is to be hoped that the rumor is true, as the place is a good one for duck and snipe and is located in a good quail country. If they will keep pot-hunters off the place will be a good breeding ground in a few years.

F. E.

NOTES FROM THE GAME FIELDS.

Editor Forest and Stream:

The fall flight of woodcock is making its appearance in this vicinity. Hall Waring and myself bagged twelve fine birds on Saturday. Partridge are only fairly abundant and are unusually wild. We believe, however, that one will experience better luck a little later when the leaves are off. Quail are unusually abundant, and will afford excellent shooting when the season opens.

Charley Roberts created something of a sensation in town this morning by bringing in a wildcat, weighing 30lb., which he killed in the mountains back of Boston Corners on Friday night while on a coon hunt.

MILLERTON, N. J., Oct. 19.

J. T. WARING, JR.

We are having a magnificent fall, and our sporting friends are in high glee over the prospects of game, which is in great quantities this year.

G. VAN F.

QUEBEC, Canada.

DUCK SHOOTING FROM STEAM LAUNCHES.—*Editor Forest and Stream:* Is it permissible under the game laws of New York to shoot ducks from steam launches in the waters of the Hudson near Sing Sing? Would-be sportsmen are now engaged in this work, using therefor cannon in the shape of 4-bore guns. Surely the birds will be driven from that part of the river if such practices continue. As it is, they are wild beyond the reach of the

ordinary gunner using recognized methods for this kind of game. It seems to me that there is about as much genuine sport in pursuing ducks with steam launches and 4-bore guns as there would be in shooting cows in a meadow. If duck butchery like this is legal, its legalization was got by "pulls" in politics. Westchester's representatives in the State Legislature ought to take steps as soon as they meet their fellows in session to stop this steam launch shooting. They should be asked by name in the public prints to do so, as indeed I venture to say they will be.—W. H. MEAD. [The law as amended in 1887 permits the pursuit in boats on the Hudson below Iona Island. The guns prescribed are such "as are habitually raised at arm's length and fired from the shoulder,"]

GETTING LOST.—Patten, Me.—I have often laughed to see how quick one will change from sense to nonsense—from a bright man to a pitiful demented object the moment when he first realizes that is really lost. A kind of frightened foolish feeling comes over him at once. The right way then is to consult the heavens. The sun is our best guide stars next, and clouds and the wind will do. The tops of mountains, the course of brooks and lumber roads will do, but to see the sun right in the north at noon looks funny and makes one feel funny. I have looked right at a mountain, long before I was able to recognize it, though quite familiar with it. I once came out of the woods to a neighborhood in a lost condition. There stood two of my neighbors whom I knew; there was the road five rods away; there were the buildings ten rods away. I gazed around without recognizing a single thing except the men. I stepped up into the road, and like a flash the scene was quite familiar.—D.

A HOUSE BOAT HUNT FOR VARMINTS.—W. H. Peterson, cashier of the Middlesex County Bank of Perth Amboy, N. J., and two of the Valentines, of Woodbridge (Bob and Ross), started last Saturday for Baxter Springs, Ark., where they are to join the Perkins brothers, formerly of Rahway. The party will embark aboard a houseboat, 9x30ft., and float down the Neosho and the Arkansas rivers as far as Fort Gibson, Indian Territory, trying up here and there along the route and trying their luck with the various kinds of game which is said to abound in that region. The expect to be back by the 15th of November, and calculate that \$300 apiece will see them through, counting everything.—J. L. K.

SPORTSMEN'S TROPHIES are mounted with decided skill and taste by Thomas Rowland, of this city, whose advertisement appears in this issue.

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price \$2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price \$1.50. American Angler's Book. By Thad. Norris. Price \$5.50.

SHARKS AND THEIR WAYS.

WHEN Mr. Nye, of New Bedford, attempted to feed a shark with his fingers and in consequence nearly lost them he was acting upon a wrong theory.

Where the story originated that a shark was obliged to turn on its side or back to take its food is hard to say. Like many other popular errors it has been copied by one writer from another, most of whom probably never saw a shark, its origin being lost in the mists of antiquity. Many such legends are current; that of the hoopsnake; the belief that if a person is bitten by a dog and that if the dog afterward runs mad, the person bitten, though it be years before, goes mad also; that the alligator can raise its upper jaw; that the white-headed eagle is a bald-headed bird.

Truth, it is said, lies at the bottom of a well, being too modest, perhaps, to appear among men. But we know that error has no such samples.

As to sharks, the writer has taken many of them, both with hand-line and rod and reel. The dusky shark, the shovel-nose, the hammer head and the nurse shark; often in clear and shallow water, where the movements of the fish could be seen, and he never has seen one of either of these species turn over in taking the bait, but it was taken as other fishes take it. He has also seen large sharks, man-eaters perhaps, taken at sea with hook and line, but they turned no summersaults till they got on deck.

There is much resemblance between the shark and the wolf. Both are voracious, ferocious and cowardly, and seldom attacking any animal capable of resistance, except when very hungry or when emboldened by numbers. Then they both become dangerous. In fishing for channel bass on the east coast of Florida, where sharks are numerous, I have sometimes had them take my bass away while I was playing it; biting off a large fish with as clean a cut as an ax would make. They would sometimes come round the boat in numbers so boldly that we thought best to move away, but I have never been attacked.

An old fisherman on the coast of Florida, who had been in the habit of taking sharks for their oil, and had killed hundreds of them, told me that he thought a shark less dangerous than an alligator, by which animal he had been attacked more than once, but by a shark, never. We had, however, found half of a good-sized alligator in the stomach of a large shark, which shows the enormous power of the jaws of that fish. I asked him whether a shark was obliged to turn over to seize its prey; he said he had never seen it do so, and as the shark lived mostly on fish, he could not catch it in that way, but would starve to death if he had to turn over.

S. C. C.

NEW YORK GAME AND FISH LAWS.—A meeting of the codification committee will be held at the Fifth Avenue Hotel, in this city, to-day, at 11 o'clock A. M., for a conference with Commissioners of other States and the Canadian Provinces respecting the fish laws. The meeting will be a public one.

A LARGE BLUEFISH was taken in the latter part of September at Provincetown, Mass. Its weight was 18lbs. and its length a little more than one yard.

PREPARATION FOR TARPON FISHING.

Editor Forest and Stream:

It has been suggested to me that a condensed statement of what is needed for the pursuit of tarpon, published in *FOREST AND STREAM*, would be appreciated by fishermen intending to attempt the capture of that king of fish. For the tarpon, so lately unknown, his name even being found in no encyclopedia, and in no lexicon except the latest edition of Webster, as an object of sport is now a fixture, and all the fresh-water anglers in the world cannot drive away his votaries. There have been now and then lately bitter attacks upon his pre-eminence, only one worthy of notice, and that from a genial but opinionated old gentleman who shows an enuchlike and petulant envy, which is a tribute to the vigor of his pursuers.

I do not claim any special qualification to supply what I am told is a want beyond successful pursuit of fish for five consecutive seasons and willingness to give the results of my experience. No one has given positive directions or advice except Mr. W. H. Wood and Col. Pickney (Ben Bent), whose charming little book was compiled from what he learned from the former, his personal experience being very brief and not successful.

I assume the fisherman wishes to give four weeks to tarpon.

THE PLACE TO GO.

St. James City, San Carlos Hotel, at the southern end of Charlotte Harbor. This is central. Accommodations are very good. If the fish are biting in salt water, go to Estero Lagoon, south of the harbor. A sailboat can be hired with conveniences for camping. If (as last spring) they are in brackish water, take the steamboat which runs daily, and move all luggage to Fort Meyers, up the Caloosahatchie, and stay there. A return of a day or two for rest can be made to St. James at any time. From Estero Lagoon excursions can be made into Estero, Mulox, Spring and Surveyor's creeks—narrow, deep streams, great favorites of the tarpon and abounding in great jewfish.

COST.

To go and return from and to Philadelphia costs about \$100. At St. James sailboats cost per diem \$5, rowboats \$3, bait about 60 cents. The best plan is to hire a sailboat. The guides should catch the bait, but they cannot be relied on. A small tent is desirable. Two fishermen can be accommodated and share the expense.

I always calculate that my trip of six weeks will cost me, from and back to my home, less than \$400. Expense of fishing is halved with a companion. Board at St. James is from \$2.50 to \$4 per diem. "Camping" (on the boat) costs very little. There is a fair general store at St. James, where supplies can be purchased.

In the matter of tackle, I can only give my experience, which has, however, been satisfactory. I don't want to puff any tackle maker, for there may be many of them just as competent as the one I buy from, Edward vom Hofe. I have but one caution to give, do not experiment with his new ideas, or rather, do not rely on them. Tell him what you want and insist on it that you don't want any changes, and he will give you tackle that you can depend on.

THE REEL.

His Star reel—costing about \$50—is unnecessarily large I think. The reel he sells for \$26 (without case) is large enough and much more convenient. You want a leather guard on it, but you should have a shoemaker put one on of stout sole leather, and have it project over the next reel-bar and not have the dealer give you his short, pulpy "improvement." Be careful not to have the leather so wide as to bind on the sides of the reel. Stout thumb stalls, crocheted at home of heavy cotton cord, are very desirable as an adjunct. A single fish will wear through the kind purchased of the dealers. It required twelve fish (half of them brought to gaff) last March to wear through a thumb stall made for me by a courteous Englishman last year while we were becalmed on the way to Sanibel.

THE LINE.

Hall's bass and tarpon line, 200yds, long, No. 18 (that is 21 thread). If the reel will not take it all, save the excess for splicing. Two balls are needed, and they will make three lines. Twice a week is often enough to dry the line. Soaking in fresh water is not necessary. When a line shows signs of wear change ends.

THE SNEEL.

I must be dogmatic about snells, for every one has his favorite. The one I have at last settled upon as the *ne plus ultra*, and which has produced that repose of mind which comes to him who is satisfied that he has that which cannot be bettered, is this: Have your dealer—Vom Hofe makes them under protest—make two dozen 18-inch lengths of piano wire, divided in links of 6in. each. There must be a ring or swivel (former preferred) at each end of the wire snell. Lash your hook to 6 or 8in. of stout cord—a piece of the soft, heavy cotton snell ordinarily in use is to be preferred, for you might save a tarpon hooked in the mouth—and fasten the cord to the ring on one end of the wire and attach your line to the other end. The object of this contrivance is to lose your shark and save your tarpon. The shark will bite your cord snell close to the hook and escape, and your tackle will be saved, with but a few minutes, at most, expended. On the other hand, the tarpon must swallow the hook, and get it well down in his gullet, to make his capture probable. Then his "shears" play upon the piano wire harmlessly. I had six sharks in succession cut my cord snell inside of half an hour, and saved the wire; and I took three tarpon with one snell, and my companion, who fished after I returned home, tells me he took three more on the same snell, and finally lost it by the line breaking.

THE HOOK.

O'Shaughnessy Nos. 9-0, 10-0 or 11-0—the last preferred.

THE GAFF.

Buy it at "the store" at St. James, unless your boatman has one, as will be likely.

Among the minor matters which will add to the comfort of the fisherman I will mention these: Take with you a half dozen pairs of thin thread gloves as a protection against sunburn. Cut off the fingers, the back of the hand only needs protection. The air at Charlotte Harbor is delightful, and makes one forget that the sun

is very powerful. I have known a case of blood poisoning from sores made by sunburn. Spectacles or eyeglasses of colored glass are useful at times. A rubber air cushion adds greatly to comfort. Vom Hofe has invented a weighing machine, about as large as the hand, which will weigh fish up to 300lbs. with tolerable accuracy. Get 50 to 100 grape fruit from Fort Meyers and stow them under the forward deck of the boat—you will think this the best hint given you. After a week you will not regard an orange when a grape fruit is to be had.

And lastly:

THE ROD.

Here should be economy. The rod should be in a single piece; no joints, with double reel seats and guides. Edward vom Hofe makes one at the moderate price of \$5. The fisherman should buy two and not take the trouble to take them home when he goes North. A rubber butt, such as is used on chairs on smooth floors, should be attached.

Bait and the manner of attaching it to the hook is to be considered where used.

The best time for fishing is in May and extends backward with a diminuendo. Tarpon spawn late in May and throughout June. From the middle of March to the middle of April will suit the Northerner, and he will have good results and be sure of fish.

HOW TO REACH ST. JAMES CITY.

The best train to take is No. 27 of the Atlantic Coast Line, which runs direct from Boston to Jacksonville without change of cars. That is to say, the "Boston sleeper" goes all the way through. Other sleeping cars are taken on at Washington. This train is called the West India Mail, and is more likely to run on time than any other.

Berths in the Boston sleeper should be bespoken at least two weeks in advance. The train reaches Jacksonville at noon, and cars are then changed for Train 27, running from Jacksonville to Tampa. This latter place is reached about 9 o'clock in the evening.

Mr. Plant, the great railroad magnate of Florida, runs a steamer twice a week from Tampa to the lower end of Charlotte Harbor; and my recollection is that the traveler leaving Philadelphia at 7:20 A. M. Friday by the West India Mail, would reach St. James by this steamer Sunday morning at 10 o'clock. This is the preferable way to go and the most expeditious. Those who fear sickness can take the route inland via Lakeland, Bartow and Punta Gorda. Information as to this can probably be obtained at the offices of the Atlantic Coast Line in the large cities.

F. S. J. C.

Florida has few more attractive fishing resorts than Tampa, and beauty of color is mingled here with extraordinary size and grotesqueness of form. In the clear waters surrounding the numerous mangrove islands schools of snappers, grunts, groupers, yellow-tails, squirrel fish, jewfish, porgies, sheepshead, silver perch, channel bass, spots, croakers, kingfish, sailor's choice and hosts of other species not included among anglers' fishes are to be seen at almost any time. The mullet, the cero, the Spanish mackerel and the barracuda are within easy reach, and the tarpon flourishes in all his silvery beauty. If the tarpon fishing should fail to satisfy the thirst for excitement the fisherman need only turn his attention to the great devilfish, a gigantic ray whose disk reaches a width of 20ft. and whose strength is sufficient to tow a whaleboat, or even a vessel of several tons. Elliott has vividly described the dangers and excitement attending this kind of fishing in his "Carolina Sports," and the following graphic account has recently been published by the *Galveston News*:

TAMPA, Fla., Sept. 21.—A party of fishermen that came in yesterday attracted great attention on account of the variety and size of fish brought in by them. All day long a steady stream of sightseers visited the boat and asked the men questions regarding their adventures.

The fishermen brought with them the skins of three magnificent tarpons, weighing when caught from 125 to 200lbs. The greatest curiosity was a fine devilfish. It had a large flat body, with two long flippers extending like the points of a star from its sides. The breadth of the fish from tip to tip of these flippers was just 11ft. 7in. A man could be taken in its huge mouth, as it was 20in. in breadth. From eye to eye the head was 30in. across, the eye protruding on the outside of two big feelers, which are used by the fish in eating, and project in front of the head about 10in. From the point of these feelers to the end of the tail was 11ft. 8½in. The fish was estimated to weigh fully 1,200lbs., but there was no way of getting the weight accurately when the fish was first caught.

The fishermen had an exciting time catching the monster, and it towed their three-ton schooner over an hour when harpooned. It was first seen at about 5 P. M., playing in the shallow water near Egmont Key. Running up, they harpooned it with a lily iron. It at once leaped high in the air, flung itself, and then started with a rush for deep water. The schooner turned with a whirl and was towed along rapidly. The big fish plunged frantically and leaped in the air in its efforts to shake out the iron. It would run straight for half a mile, and then suddenly swing under the vessel, whirling the schooner like a toy.

Fire was opened on the monster with Winchesters every time it appeared above water, but they seemed to make him only more furious. At the fifth volley it turned suddenly and rushed for the vessel. The men were crowded at the side, and the fish struck the schooner just below them, throwing them down on the deck and breaking the collar bone of one of the sailors. The fish seemed to be somewhat stunned by the blow, and floated. Two more harpoons were put into it, and musket balls were fired into its big body. Ropes were then thrown around it, and it was drawn aboard, it taking the united strength of all seven men to get it up.

The eyes are lateral and not at the ends of the so-called "feelers," as intimated in the narrative. The "feelers" are the ear-like prolongations of the front part of the pectoral fins. The devilfish, sea devil or *manta* is among the largest of the fishes, and a good stuffed skin is one of the greatest desiderata in museums. The name *manta* means blanket, and is used at the pearl fisheries off the west coast of Mexico "to designate an enormous fish much dreaded by the divers, whom it is said to devour after enveloping them in its vast wings."

From "Tarpon's" account of his cruise, presented last week in our yachting columns, we have extracted this tribute to the harrytoitiveness of the tarpon fishermen: "On the way we pass several tarpon fishermen patiently waiting for that big fish that they do not get. By the way, it takes a very peculiar man to make a good tarpon

crank. He must be lazy to begin with, and have an unlimited stock of patience, while his bump of hopefulness must be large. I met one man who told me he had been tarpon fishing for five successive seasons, and had not caught one yet, but he thought he should next time. Poor fellow, I wonder if he ever figured out the fun he had lost by not fishing for fish he could catch."

AROUND LAKE MICHIGAN.

It is claimed by the fishermen along the north shore of Lake Michigan that fishing is greatly injured by the bark that is ground very fine by the constant chafing and rubbing of the logs as they are boomed and towed through the lake, becomes water soaked and sinks, covering the food of the whitefish, destroying their spawning grounds and driving the fish away. Tons of this bark can be seen along the north shore of Lake Michigan. At one place I measured, near Epoufette, Mackinac county, an average depth at edge of water of 2½ft., extending back 23ft. and 250ft. in length. Every few miles similar banks can be seen, especially in small coves where the surf is not high enough to wash it away. All along the shore the bottom can be seen covered with this bark. About 17,000,000ft. of lumber passed through the Mackinaw Straits last spring, and this has done great damage. For the past three years logs have been towed through in the shape of slack booms, made by chaining a number of large logs together by their ends and forming an immense circle around the raft of loose logs. In this shape they do more damage to the fishing grounds than the rafts did when the logs were all chained together, and of course could not chafe and rub as the new method will allow them to. In 1889 the fishing along the north shore was better than it has been for a number of years. The fishermen claim that few logs were brought out of the woods on account of the very mild winter, consequently the fishing was much improved.

A great deal of complaint is made about the sawdust that is also driving the whitefish further out in the lake and destroying their spawning grounds. It can be seen washed up on shore for a distance of forty miles from the nearest mills. Whitefish will not remain in waters polluted by sawdust. Occasionally they are found dead floating on the surface of the lake, and in most every instance sawdust is found in their intestines, which, it is claimed, caused their death.

The large fisheries that are carried on in the Great Lakes where tugs are used as the means of driving away the whitefish and causing some parts of the fishing ground to become deserted. When they go out to their nets, which are from five to thirty five miles off shore, and which they do whenever the weather permits, and take aboard their catch which amounts to from 1,200 to 3,000lbs. per day, to save time and trouble the fish are cleaned on the way in, and the offal is thrown overboard, causing the fish to leave immediately. This custom is strictly contrary to law, which requires them to bring all offal ashore and deposit it eight rods from high-water mark. They do save the offal occasionally and bring it ashore in order to avoid suspicion. By depositing one barrel of offal in the water it has a bad effect from 400 to 500yds. in circumference by driving the fish away. The cinders and clinkers that are thrown overboard from the steamers passing through the straits also prove very destructive to whitefish.

Whitefish make their appearance in a body and are very seldom caught in water less than five fathoms, and from that to 90 and 100 fathoms.

Whitefish and lake herring prove the best bait for hook and line fishing. It is cut up in pieces about 1in. square. When this kind of bait is not to be had trout is used with very good effect. A great many sportsmen during the summer and fall months visit the North Shore of Lake Michigan and also the inland lakes for the fishing.

The best months for whitefish are June, July, October and November. They run best in the fall. Trout fishing is generally the best in September, October and November, April and May. They leave the feeding grounds close in shore in the summer and go out to deeper waters where it is cooler. Trout spawn in September and October, whitefish in October and November.

Very little benefit is derived from the fish hatcheries in this vicinity, as the large fisheries from this and other States locate here with their small mesh-nets, as small as 2in., and destroy millions of small whitefish. The law requires 3½in. mesh for pound-nets and 4½in. mesh for gill-nets. I have the names and addresses of two gentlemen who claim they can prove that a large fishery came here from the coast and destroyed tons of small whitefish, that were thrown ashore to rot; as many as fifty could be put in a cigar box at once. The hatcheries would do excellent work if the law were enforced so that these small fish would not be caught. The small fisheries claim that they are not allowed to use a net smaller than is required by law, as they are watched all the time, but very little, if any, attention is paid to the large fisheries, consequently they catch most of the large fish and most of all the small fish, forcing a number of small fisheries to abandon fishing altogether. The spawn has to be shoveled out of the boat very often while returning and unloading their catch. Men claim that they have waded in spawn up to their ankles.

The "pot-gut" or deep water trout are caught in goodly numbers on the banks off Marquette (Lake Superior). They are caught in water from 75 to 80 fathoms. The average length of the fish is 10in.; the average weight is 2½lbs. They are caught every month in the year.

The lake bottom of Whitefish Bay is composed of gravel, sand and rock, mostly sand. The food for whitefish commonly called the whitefish worm is found more abundantly on muddy bottom. The snail or small clam is another important article of food for the whitefish. Millions of them can be seen along the lake shore. They grow to the size of a thumb nail—those eaten by the whitefish are from the size of a small pea down to the size of a pin's head.

From the town of St. Ignace and six miles out is the beautiful Mackinac Island, whose shores are in some places low and in other parts perpendicular from the water's edge. A fine hotel and a number of beautiful cottages are found here. A great many sportsmen spend the summer months on the island fishing and strolling about its shores. Trolling seems to be the principal and most successful mode of fishing, lake trout and mascalone being mostly sought after.

The eel-pout, or what is called around the Soo the losh

is very destructive to whitefish, as are also pickerel and trout. Ten years ago a great number of pickerel were caught in the Soo River and a very few whitefish. Most all the pickerel are now caught, there being very few left, and the whitefish have returned in good numbers.

A great many fish, especially bass, are caught in Mud Lake and Soo River in the summer season by visitors. They troll, using minnows, crawfish, worms, grasshoppers, etc. The principal food for trout in the Soo River is small fish; for whitefish, the snail and whitefish worm. The bottom of the Soo is mud, sand and gravel, flat rock, etc. Sturgeon are caught, and a great many trout eggs are found in their intestines during the spawning season. On the Canadian side they do not allow any kind of fishing from Nov. 1 until Dec. 1, during the spawning season. On the American side fishing is carried on at all times, there being no restrictions. The fishing in the Soo has been decreasing for several years past.

Lake Winnebago, Wis., is a beautiful sheet of water about 36 by 12 miles, with an average depth of from 30 to 40 ft.; bottom rocky and gravelly, also a good deal of mud. Along the Fox River, which is an outlet of the lake into Green Bay, there are about 12 dams, a great number of small fish going over the dams, but none are able to return, as there are no fishways. All fishermen and sportsmen claim that fishways would be a great benefit, as the fish would then be on the increase instead of decreasing as the case is now, and has been for years. The lake is fed by Fox and Wolf rivers and numerous small streams and lakes.

John Roberts and Otte Jorgensen, of Neenah and Menasha, have beautiful places bordering on the lake; they also have a complete outfit of fishing tackle of all descriptions, together with fifteen or twenty boats. They employ guides who are expert oarsmen and fishermen to accompany sportsmen who visit them every season from all parts of the country. A great many small-mouth black bass are taken by the anglers, also wall eyed pike, silver bass, mooneye, or fresh-water shad or herring, which is caught with the fly. For black bass the common shiner or a spoon is used. The largest black bass that has been caught in the lake weighed 5 lbs. 2 oz. The different clubs have offered a reward of \$100 to any one catching a 6 lbs. bass.

The mooneyes are never taken before June; they are caught for six weeks and then disappear. The largest pickerel ever caught in the lake weighed 16 lbs. The pickerel are very destructive to young fish, one having been caught in Fox River with thirty-five small speckled perch and shiners in him. The loach is another great destroyer of young fish. Pounds, gill-nets, fyke-nets and trammel-nets are used in the lake, very few of the latter are used. It is claimed that a great deal of net-fishing is carried on out of season, which is proved by the number of arrests that were and are being made by Mr. C. E. Lucas, fish warden, Fond du Lac, and the great number of nets destroyed.

WASHINGTON, D. C.

TAPEWORM IN TROUT.

DURING the course of his explorations in the Yellowstone National Park, Dr. Jordan collected a lot of intestinal parasites from the trout of Yellowstone River and suckers of Witch Creek. The trout parasites appeared first in cysts among the caeca at the hind end of the stomach, later in the liver and viscera, and finally in the flesh of the belly, where they reach a length of five inches. In lakes partly fed by geyser water all the trout contained worms. About one-quarter of the suckers which abound in waters as warm as 80° or more are wormy, and the parasites often exceed one foot in length in the abdominal cavity.

These parasites were sent by Commissioner McDonald to Prof. Edwin Linton for study, and the report upon them was recently published in the Bulletin of the Commission. The subject was of so great interest that in the summer of 1890 the Commissioner requested Prof. Linton to join with Prof. S. A. Forbes of Illinois in the investigation of the life of the Park, the work of Prof. Linton to have especial reference to the cause of parasitism in Yellowstone Lake trout. The report upon the latter subject has appeared in the Bulletin. The trout worms were first mentioned in Hayden's Report on Montana and Adjacent Territory for 1871, and were again discussed in reports by Bradley (1872) and Capt. Jones (1873). Dr. Leidy described the species as *Dibothrium cordiceps*. Prof. Linton found the larvæ "either in cysts among or on the viscera of its host, the trout (*Salmo mykiss*); free, on or among the viscera; beneath the peritoneal lining of the abdominal cavity; or burrowing in the muscular tissue of the body-wall." "This parasite occurs, so far as known, only in the Rocky Mountain trout. I have found it in the trout of Yellowstone Lake, Yellowstone River above the lower falls, and in Heart Lake. I did not succeed in getting any fish from below the lower falls for examination. I am told, however, that wormy trout are never found in the river below the falls. It is very probable, however, if careful search were made for them, that an occasional trout in the river and its tributaries below the lower falls would be found with cysts of this parasite. At the Grand Cañon Hotel I examined some trout which were said to have been caught below the upper falls, and found one with cysts in the abdominal cavity and a large larva among the abdominal muscles. In Heart Lake I found the trout not infrequently infested with this parasite, occurring in cysts and free on and among the viscera, but not among the muscles. Dr. Jordan reports that the trout of Riddle Lake, which drains through Solution Creek into Yellowstone Lake, are apparently free from parasites. It may be that this conclusion would have to be abandoned if an examination were made of several of the large trout of that lake."

Prof. Linton found a number of parasites of other kinds in the trout. Spent females were usually found to be most seriously affected. The source of the infection is believed to continue during several months. Prof. Linton believes that the worms are not injurious to man, except as their presence makes the fish distasteful to the palate. Parasites are extremely common in fishes, but as a rule they do not live in man, and their vitality is destroyed by cooking.

The adult stage of the trout tapeworm was found in the white pelican (*Pelecanus erythrorhynchos*). In this host the life history of the parasite is completed, and the probable cause of the wormy trout is found by Prof. Linton

in the wormy pelican. In the case of similar worms infesting European fresh-water fishes the migrations have been made out as follows: "The eggs develop in the water, where they give rise to ciliated embryos, which bear a close resemblance to ciliate infusoria. These pass into fishes, * * * where they become established in the peritoneal cavity. The round of life is completed in the intestines of aquatic birds, where the eggs are rapidly formed."

One of the remedies proposed for this parasitism of the trout is the extermination of the pelican—a measure which Prof. Linton considers unnecessary and inadvisable. He believes that the increase of visitors will lead to a reduction of the number of deceased trout, particularly if the dead fish are not left on the shore or thrown into the water. The introduction into Yellowstone Lake of the chub of Heart Lake he thinks would be advantageous, since the parasite does not develop in the chub, and this fish would furnish healthy food both for the trout and the pelican, "and with fewer parasites in the pelican would go a diminution in the number of ova disseminated in the water, and consequently a lessening of parasitism in the trout."

FISH OF THE MACKENZIE BASIN.

THROUGH the courtesy of Dr. G. Brown Goode we are able to present some extracts from the answers of Robert MacFarlane, Chief Factor of the Hudson's Bay Company at Fort St. James, B. C., to Senatorial queries concerning the resources of the Great Mackenzie Basin. The important statement as to the absence of salmon in Mackenzie River will cause surprise, since Pacific salmon are known to occur in Arctic rivers west of the Mackenzie, and have been reported also to the eastward. We expected to hear that the inconnu occurs in the Mackenzie, as it abounds in large Alaskan rivers and is not anadromous. Coming from an authority like MacFarlane these facts will be extremely valuable to ichthyologists.

Fish of Lake Athabasca.—Trout, pike, pickerel, methy and whitefish abound throughout the lake; but I have heard it stated that since the steamer Grahame began to ply in the vicinity of the fisheries of the post and missions near Fort Chipewyan, as well as on Quatre Fourches River, the annual catch of fish has perceptibly diminished.

Fish of Great Slave Lake.—The trout and whitefish are somewhat larger and of rather better quality than those of Lake Athabasca. The inconnu (*Stenodus mackenzii*) abounds in this lake, and also in the Mackenzie and in the Slave River to the foot of the "Rapids of the Drowned," one mile above Fort Smith. Its flesh is much inferior to that of the true salmon; but when taken on the lower Mackenzie and Anderson rivers it is firm and rich, but still less palatable than good whitefish.

Fish of Great Bear Lake.—I have never been to Great Bear Lake, but I know that excellent trout, whitefish and other northern fish are to be had in plenty in its waters. The fresh-water herring (*Coregonus lucidus*) also abounds, it is similar to that of the Mackenzie and equally fine. While a resident of Fort Simpson, Mackenzie River district, we received in March, 1867, a large and splendid trout, weighing, I think, 70 lbs., which had shortly before been caught in Bear Lake, east of old Fort Franklin. The lake is very deep and clear, and ice is said to be seldom wholly absent thereon for much more than two months out of the twelve.

Various Lakes of the Mackenzie Basin.—A thorough exploration of the Mackenzie Basin would probably determine the existence of more than one sheet of water, whose area would fully equal that of Lesser Slave Lake. The Simpson, Petitot and Colville lying to the north of Great Bear Lake; the Pio-Nono and Taché on the west side thereof, and Lake La Martre to the northwest of Great Slave Lake and many of a lesser size, besides those laid down on maps, all contain trout, whitefish, jack and other fish. During winter and also other periods of the season numbers of Indians find subsistence in these waters, as well as on many of the rivers and streams which, among other fish, also contain lots of *poisson bleu* (Back's grayling) of various sizes, and on a few of the former the Hudson's Bay Company sometimes establish fisheries to supplement the food requirements of their northern trade posts. Scarcely any of those lakes, however, are accessible by steam, owing to the obstructions in the rivers, which connect several of them with the great lines of communication with southern Canada.

The best and most generally diffused fish throughout the numerous lakes and rivers of the Mackenzie Basin is the whitefish, and it is quite plentiful, especially in the Athabasca, Great Slave and Great Bear lakes. In weight in these waters it ranges between 2 and 4 lbs., but on some of the lesser, and indeed in several of the smallest fish lakes of the far North, a few are met with which attain to 5, 6 and 7 lbs. and upward, and the flesh is excellent. Trout of a large size (7 to 50 lbs.) abound in the greater, but they are of lesser weight (5 to 25 lbs.) on the smaller lakes. Several speckled trout have been caught on the lower Anderson River. Jackfish of various sizes are plentiful on most of the lakes, and on Clear Lake, which with Lac Manurawee are but a continuation of the western end of Lake Athabasca, they often weigh as much as 20, 25 and 30 lbs. Carp, doré, loche and suckers are present on all the larger lakes, as well as in most of the smaller sheets of water. The fresh-water herring is abundant in Great Bear Lake and also in the lower Mackenzie River, and some were obtained by us on the Anderson River. This is also a fish of fine quality and weighs about 2 lbs. The Loucheux and Hare Indians catch in nets and dry a large quantity in summer for winter use. Some are also thus secured at Fort Norman, while a few are caught up as high as Fort Simpson; the best are, however, taken on the lower Mackenzie. Back's grayling, or *poisson bleu*, abounds in many of the streams falling into the Anderson and Mackenzie, as well as in many others throughout these regions, where it is frequently met with in various stages of growth, from 2 oz. to maturity at 2 lbs. The inconnu, as already mentioned, is numerous in the Mackenzie, in Great Slave Lake and in the Slave River to Fort Smith. It is also plentiful in the Anderson, which is known to the Indians as the river of the toothless (inconnu) fish. The largest specimen of this fish I ever saw was taken on the Anderson River within forty miles of its outlet in Liverpool Bay; I should say it would have weighed about 50 or 60 lbs.; its flesh was white, firm and oily. There are no true salmon in the Anderson or Mackenzie rivers, and yet in most of the

Arctic streams to the westward of the latter and to the eastward of the former they are said to be very abundant.

The Esquimaux who used to frequent Fort Anderson succeeded most seasons in killing one, but seldom as many as two, large-sized whales, which proved of immense value to them as an article of food. They band together and hunt it in the number described by Dr. Richardson in his Boat Expedition. Seals, walrus and water fowl are also taken by the Esquimaux in the way mentioned in the volume. On my first visit to Franklin Bay, on June 25, 1863, and again about the end of the same month, in 1854, we distinctly heard one or two large whales spouting in a lane of open water which appeared amid the ice-covered sea. We found Langton Harbor almost entirely free of ice on each of our summer visits. The daily tides and gales of wind materially help to break up the ice of Langton Harbor and Franklin Bay. The former is more deeply indented to the eastward than a passing boat or vessel would be able to notice. Quite a number of seals and walrus were seen basking in the sun on floating as well on stationary fields of ice.

[The carp above mentioned is probably one of the large members of the cyprinoid family, of which several genera are known in the Puget Sound region and northward; it would be interesting to know what fish is meant. The loche is our burbot (*Lota maculosa*). The doré is pike-perch. The occurrence of pike is known, but we have not heard of pickerel in the region except as another name for the doré.]

THE COMMODORE CLUB.

AT the outing of the Commodore Club, at its beautiful club house on Harmony Lake, Maine, there were some twenty-two members and invited guests present. Among these gentlemen were Mr. John G. Wright, of the Boston wool trade; A. A. Adams, of Boston; G. M. Hamlin, of Bangor, Me.; W. Bullevant, of the Boston leather trade; Judge W. V. Kellen, Dr. Rowe, Superintendent of the Boston City Hospital; Robert Morville, W. F. Lawrence, J. W. Ricker, H. M. Stephenson, W. K. Browne, R. Brown, of Peabody; W. Shaw, of Peabody; Mr. Clark, of Peabody; R. B. Howland, of Amesbury; W. Buffington, of Boston; Thomas Walker, of Warren, Me.; H. C. Fuller, of Hartland, Me.; Mr. Coffin, of Stoddard, Lowering & Co., Boston; W. H. Souther, of Boston; Mr. Nelson, of Milford; Charles Hall, of Boston; Charles Gallagher, of the Boston School Committee, and Mr. Jacobs, of Peabody. The well supplied table of the club house was amply supplied with guests, but as for fresh game and fish from the waters of the lake there was a lack of supply. The weather was so warm, and had been so warm all the season, though it was then in the early October days, that the black ducks had not begun to come into the pond, and as for grouse, only a few could be found by the closest hunting.

Some of the party that was at the club house before the first of October, tried diligently for trout and landlocked salmon in the lake, but the weather was too warm, and but few trout were obtained. But the members of the club are charmed with the location, and they propose to try and help the fishing. They will restock with all the landlocked salmon and trout that they can get. They are strongly in favor of keeping the little fish till old enough to take care of themselves, instead of turning them out the first year, or about as soon as hatched, as has been the case heretofore in many of the waters in Maine. I understand the Maine Fish Commissioners are also in favor of the same policy in the matter of restocking hereafter. It is feared that the fry, turned out as soon as free from the sack, can only fall a prey to other fish, while if they are retained till they are a year old, they will have attained sufficient strength and caution to be able to escape from their enemies.

Mr. John G. Wright, a prominent member of the Commodore Club, has fished during the past year in the famous Loch Leven, in Scotland, and he is a thorough believer in restocking of our lakes and streams with trout and salmon. He says that Loch Leven is only about the size of Harmony Lake, Me., and that each year some 28,000 trout are taken out of its waters. The trout taken are all carefully weighed and recorded, and such is the result. Small trout are immediately returned, since nothing but fly-fishing is tolerated, and the fish are not liable to great injury in being hooked. Restocking is what keeps up the fishing in that celebrated lake, and Mr. Wright believes that the same might be done in Maine waters. Commissioner Henry O. Stanley is of the same opinion.

SPECIAL.

BASS IN THE ADIRONDACKS.

Editor Forest and Stream:

Your editorial in this week's issue, "Shall the Adirondacks be Stocked with Bass?" is timely; and I shall watch for the answer it is sure to bring forth, as it is a question I am much interested in. With some twenty others I have cottages on the shores of East Canada Lake, fifteen miles north from here, but fully in the Adirondacks. The main lake is some two and a half miles long by half a mile wide and is 165 ft. deep for considerable distance; it was a famous salmon lake until ten years ago, when fishing through the ice and rapidly increasing pickerel finished them. Several attempts have been made to stock the lakes with black bass, but with little success. A few have been seen, and two weighing over 3 lbs. each were caught this past year. There are any number of yellow perch, but they are a nuisance. Three years ago I wrote to Commissioner R. U. Sherman, giving him the particulars; and he advised trying lake trout again, which, with the protection we now give the lake, and its being a deep water fish, he thought would soon stock the lake. Therefore we put 50,000 in June, 1890, and this past spring the same number. But your editorial casting doubt on trout being ever successfully planted in pickerel waters makes me anxious to learn what the experience of your readers is.

I have just filled out application for 50,000 lake fry and frost fish for food fish, but shall not send it on to the secretary of the Commission until I see what answers your article brings forth. There is no use of our going to further trouble and expense if the experience of those who have tried proves that trout will not live in waters where pickerel have once got a foothold.

JOHNSTOWN, N. Y., Oct. 16.

M. S. NORTHRUP.

CHICAGO AND THE WEST.

CHICAGO, Ill., Oct. 14.—When Warden Buck started in on the work of getting the fishways put in along the Kankakee River, he was promised a new fishing outfit by the fishway committee, provided he had all the fishways in before fall. When Warden Buck left this field of activity for another, he served notice that there was a fishing outfit due him, as all the ladders were in except the one at Mokence, on which, he said, work was commenced. Later he wrote to President Cole, from Marseilles, and said that the fishway there was all in but the cover, and would be the finest on the river. At the time Mr. Buck left the warden business, he told me that he had not been paid his April salary, and also that he did not like the way the Fox River Association had acted about getting another and cheaper warden for the winter work in the Fox Lake district, toward which work he had helped raise funds. Mr. Cole saw these latter statements in print, and said they were not accurate.

"Buck expressly agreed to work in April as he did," said Mr. Cole. "I told him that we had not any funds for that time, and explained that there would be some work later for which we could pay. It would not, I think, be just for the association to pay that as back salary. As to the winter warden's work, neither Buck nor any one else has been chosen for that, and so far as I can learn he only raised \$2 toward that fund."

To let these former statements go uncorrected would hardly be just to the Fox River Association or to Mr. Cole, who has had the handling of the wardens of this part of the State in charge. We will now see about the actual condition of the Kankakee fishways, as shown to Mr. Cole and myself, both of the fishway committee, in the trip which we took last week for the express purpose of inspecting all the Kankakee River dams. I regret to say in advance that the facts were not so flattering as we had thought, though evidently the work had been well laid out, and in some places well finished. In plain English, and with a rude regard for fact, the actual case is that instead of there being seven working fishways finished on the Kankakee River, there is only one finished, and it needs some improvement. This is what President Cole and I found, as will be set forth at more length.

We started in on Wednesday morning, Oct. 7, at Mokence. Work had not been started on the fishway here at all, though we were told the contract had been let. Mr. Fred. Duryee, that kindly-souled sportsman whom everyone who goes to Mokence knows, told us that he would look up the delay and try to get the work started. Later he wrote Mr. Cole and said that the delay was over that old injunction of the railway against the dam owners. As the railway and the dam owners had both signed a stipulation allowing the way to go in, the wherefore of this is not plain. Mr. Cole will try to learn from Mr. Wooster, agent for the owners, what the trouble is. Mr. Duryee thought the way would be in this fall. In the name of all conscience, why was it not in long ago? Do the dam owners and their agent know that this delay is illegal, and that they are subject to fine for it? The association has been quiet and courteous all along, but an unexplained and abrupt stoppage of all work such as this delay is, impresses one as being wrong treatment of those who have been always courteous and fair. Let high water come, and the work must be over a full year, and the spring run balked again. We found the water lower than it has been for years, and the contractor on the fishway could put it in with perfect ease. When everything is so favorable, why this delay? Another trip to Mokence seems necessary. But let it be set down here that that fishway goes in.

At Mokence there is a choice little shooting club of Chicago men, only ten in all, whose box is about a mile and a half above the town. There are some nice woodcock covers near by. The club killed 78 woodcock this summer. Mr. Metcalf, Mr. Geo. Marshall, Mr. Bird and other familiar names are members of this club. Its keeper is Chas. Heimbaugh, mentioned favorably earlier as a candidate for association warden. With Mr. Heimbaugh we were well impressed, and since our return have sent on a petition for his appointment as a State fish warden, which we hope all Mokence will back. We wished also to have him appointed a game warden, and here we struck one of the incongruities of our gilt-edged law. The Illinois fish laws are good. The Illinois game laws are vile as any well could be. A fish warden can act all over the State, and he can arrest without warrant. Moreover, the governor can appoint as many fish wardens as he likes. Under the law there can, on the other hand, be only three game wardens, one for each of the three largest cities. Our attorneys tell us that these wardens can not, under the statute, deputize their powers. Only a game warden can see or seize illegal game, and before he can search he must swear out a warrant. This amounts to barring the whole country district of Illinois of all game wardens. I know that State Game Warden Pipino, of Quincy, has taken steps to appoint Mr. Harlan, of La Salle, a deputy game warden, but I should doubt the powers of the latter. Under these circumstances we advised Heimbaugh to consult with his county sheriff, and to circulate a petition, which we sent to him, for his appointment as a deputy sheriff, with the special duty of following game law cases. In this way a game warden can be created who, with proper warrant, can act within the limits of his county. As fish warden, he can go anywhere and arrest without a warrant. Will the next sportsmen's legislative committee reflect on the wisdom of this innocent little clause in the fish law?

We hired a boat at Mokence for a week, and at noon on Wednesday left the owner lamenting on the bank in fear that he would never see his boat again. Heimbaugh went a few miles down the river with us, for some word about a seining party of which he had heard. He took his dog along with him, and in the afternoon we were fortunate enough to find a corner of the river where there were plain signs of woodcock on a little wild rice flat adjacent to a thicket. We sketched around here for a few moments and got five beautiful woodcock, two of which Mr. Cole and I had for breakfast next morning.

The row down the river was delightful. The Kankakee here is a wide and lovely stream. We did not fish any beyond a few casts just after dinner, but passed water which had the day before yielded a fine lot of bass to a local fisher. It was a half-hour after dark, however, when we pulled into Aroma, or Waldron, only nine miles below Mokence, after leaving Heimbaugh half way to walk back, he having learned nothing of the seiners at Chris, Cal. where we ate lunch.

We struck a good country hotel, Miller's, at Aroma, and passed a glorious night in sleep. In the morning we went to the dam, meeting there Mr. Beardley, agent for the mill owners. We found the fishway here of no earthly use. Mr. Beardley promised to extend it 8 or 10 ft. at the bottom, and to dig out a good pool at its foot, and to set the chute at the top down flush with the top of the dam, and to cover all the upper part of the fishway, so that spearing could not be done quite so easily. It seems that Warden Buck had told them to set this chute down into the dam, but they had not done it. He had supposed it was all right. Really, it was all wrong. Aroma fishway, as we saw it, was about as good as a piece of tin pipe bent over the dam, not touching water at either end, and perfectly dry inside. High water, of course, will help this way, and if Mr. Cole's directions are not slighted, it will do. A trip will be made to see that they are not slighted.

From Aroma to Kankakee is five miles pull, all in back water, but down a stream wide and noble, edged with banks a continual shifting scene of beauty. The Iroquois River joins the Kankakee just below Aroma. As we looked on the clean, well-timbered banks of the stream, so similar to those of the Illinois River, we could not help wondering at the separation in name of a stream one in character. The actual facts of history will show this wonder well grounded. The Kankakee and the Illinois would have one name to-day had there been one discoverer instead of two. Père Marquette ascended the St. Jo River in Michigan to the Portage Prairie, near South Bend, Ind., where he carried over, three miles, into the Kankakee. He gave this stream the name by which the Indians called it. He probably also named the Iroquois River. He left the Kankakee River somewhere near Aroma, and did not descend to the junction of the Kankakee and Des Plaines rivers, which the maps show as forming the Illinois. Meantime, 'Sieur de La Salle, descending the Des Plaines River, far out of character and inferior to the Kankakee, came to the greater stream and called it Illinois, after the Illinois or Illini tribe of Indians, the one explorer not knowing of the other's discovery. The Illinois and the Kankakee are one stream, a long, varied, beautiful and noble one. From Mokence to the mouth of the Des Plaines, and even further down, the bed of this stream is nearly solid rock, and the banks are bluff and well wooded for the most part. The marshy character which follows through Indiana has here altogether disappeared.

We reached Kankakee town at 10 A. M. The fishway here is a poor affair, though the mill owner said it was located by Commissioner Bartlett. It should be out by the side of the mill, where the fish would naturally run, and not concealed behind the mill and under the bridge which covers the raceway. A fishway should show good light through the top, as a fish will not run up into a dark hole. Some light comes into this way, but it is located altogether wrong. Buck's idea, of a wing of masonry run out into the stream, has helped matters here. The mill owner said that in the spring he would show Mr. Cole fish going up this way. Little more could be done than to pray that this might be so. We urged that the way be kept clean, and passed on.

The river being so very low, we hired a team here to take our boat below the shallows, which we were told ran down for ten miles. On our way we met a farmer and transferred to his wagon, he putting us down at 4 P. M. twelve miles below Kankakee. Even here the stream was shallow, though brawling and rapid as a trout river in places. By dint of occasional wading we got down into the backwater of the big Wilmington dam, and soon the water grew so deep that the push-paddle could not be used. A head wind detained us, and it was an hour after dusk when, tired and hungry, we got into the little river hamlet of Custer Park and put up for the night at a sort of fishing resort hotel run by H. D. Little.

Before leaving this day's record I should add that we found three more fishing clubs at the little village of Aroma. The chief of these is the Lafayette Fishing Club, of Lafayette, Ind., once a body of 14, but in these days of depleted waters much fallen off. In the cosy little club house we found Messrs. J. J. Cumberston, J. S. Ewry, J. P. Wagner, John F. Bruff and W. D. Hiller, all good men and true, who are hoping that the fish ways will help them next year. The Waldron Fishing Club is made up now of a half dozen railway conductors who come to their box here for some sport when they can. The Star Club, of Cincinnati, O., once a strong body of men, has now much disintegrated. We will hear of them further down the river. Their neat club house shows in the timber across the river from the village. Mr. S. D. Phillips, of Lafayette, has, I understand, put up the new building on the raceway which we heard was to be used as a club. Thus we may see the whilom glory of the Kankakee as a fishing stream even in other lands. Another thing about Aroma, and this for Heimbaugh and for Warden Kamper of Danville. The chief of the men who are doing the seining near Aroma is Jack Stansbury. Catch him and you stop the seining.

Custer Park is about 6 miles above upper Wilmington dam. The river here is fairly straight, very wide and deep, a veritable inland sea, yet with bold high banks. We got a good start and made the upper dam early in the morning, though delayed in getting a team to take our boat around the dam.

We found the upper dam an immense affair, 17 ft. high. But here, thank fortune, is the best fishway, and indeed the only one now complete on the river. This way had just been finished by the carpenters, after the model left by Buck, and the work had been done in an honest and workmanlike manner. At the top of the way the earth had been left uncut on the comb of the dam, so that only a small hole was left, apt to be clogged.

Sending the team on ahead with the boat, we walked on down, a half-mile or so, along the ruins of the old canal which the State of Illinois built for the grain-carrying trade in the anti-railway days. We found the canal between us and the fishway when we got down to the lower dam, but in spite of a gang of surly workmen who were repairing this dam, we fished a boat out of the ruined old lock, paddled over with a board, and found an abbreviated washboard intended as a fishway. This way was wide enough and well made for strength, but it was quite a short at the lower end. The steps had no cups at the ends, this not essential, but desirable.

At Wilmington village Mr. Cole found the agents in charge, and they promised to clear away the top of the

upper fishway and to build out the lower end of the way in the lower dam. They seemed very pleasant about this, and we think this will be done. At any rate, the worst difficulty on the river is overcome. Upper Wilmington dam is an absolute barrier. No fish can ascend it at any stage of the water. It is a comfort to think that there is a good fishway there. Through its 6 ft. of width must pass every fish that goes up the river from this region. These two dams have no mills on them, and are kept up now for speculative purposes. Speed the day when they are taken out!

A mile below Wilmington we put in our boat and made good time for a while, till we ran hard and fast upon the "riff" above what is called the "old State dam above Kelly's." Over this we dragged and got to a ruined dam and a lockway now fallen into dilapidation and decay. Here we studied for a while, hardly caring to risk shooting through the race, as the low water made the rocks conspicuous. At length we unlashed our boat on the comb of the dam, threw her bodily over into the river below, tossed the stuff in again after we had regained possession of the craft, and so fared on again, joyful. It was now only a half-mile to Kelly's, and Kelly's is—well, it's Kelly's, you know.

M. L. Kelly is a State fish warden, one of the best and most interested in the State. Besides running his farm, he keeps a little fishing place, which latter is known to many in Chicago and elsewhere. The fishing at Kelly's is the best below Mokence. The river there is very wide and rocky. For fly-fishing this is the best point on the stream.

There is a State dam at Kelly's, a low affair, often well covered in the spring. The fishway in this dam is a howling farce, and how it came to be called a fishway is a mystery. It is a straight cut through the rock, below the top of the dam, it is true, but without a single defined step or resting place for a fish. The water through this cut would be a plunging torrent instead of a broken descent. Capt. Leighton, engineer in charge, will be notified by Mr. Cole, and as he has expressed a willingness to put in any way desired, this will probably be corrected soon. But I must defer the rest to next week. E. HOUGH.

THE TAIL FLY.

THE trout season was nearly over, and I had not wet a line. The thoughts of running water, whispering leaves and bright sunshine, made the noise, smoke and heat of the great city too much to bear with patience; so I got out the rod, overhauled the fly-book and dreamed that night of catching the big fellow beneath the bank where the stream bends and runs under the roots of the crooked birch.

Twenty-four hours after I got out of my berth in the sleeper of the Chicago & Northern at half-past four; and a moment later two young chaps followed, rubbing the sleepy seeds out of their eyes. Breakfast over, we mounted the wagon and started for Johnson's ranch, twenty-seven miles away. The joints of our spines squeaked before we reached it late that evening, and a sleep more like a trance than anything else followed supper, which was dispatched in short order.

The next day was awfully hot, and I spent most of my time watching the shadows on the lake in front of our cabin, eating, and as the dorky said, "jus' restin'." Johnson's ranch consists of two log cabins, one of which is occupied by the family and contains the dining-room; the other is used by the fishermen for living and sleeping. In front is the beautiful lake Wabie Leibeniss or White Eagle. The big pines cast long shadows on the smooth grass in front, and a little to the left stand the frames of the abandoned Indian home, and three curious graves near by tell the oft-repeated story of the vanishing shadow of the red man. Camp life in the woods with the sting of uncomfortableness drawn—the first and only time I ever saw it done.

The second day the two young men started out for bass, and as they were to pass near a tent left standing near some good trout fishing I joined them. When we reached the tent we discovered that some ginseng root diggers had jumped the tent, but they had another and there was room enough, so the old guide and I took the trail for the stream, where he had a dugout hid away. The day passed pleasantly. There was trout enough to satisfy any reasonable person, although none were large; but on the other hand there were no fingerlings. The old man dressed the fish instantly, and put them away in the shade on some moss. Those fish kept better than any other I ever saw, and I vote it as well worth the extra bother. The old guide growled at the time required to land a fish, and once remarked, "He know'd where a trout lived that ud fix that dum switchey thing so it ud be no fuder bother."

That day did me good. I saw my old friends the jay-bird, the woodcock, swallow and hawk. Laughed myself sore at the porcupine the old man ran the dugout over; his awkward attempts to reach the shore, his head covered with green shiny moss, was a comic show all by itself. Then as the shadows grew long we walked back to camp, and wound up the day as all pleasant ones end, with the supper, the big fire, the pipe, and the stories which latter were quite good told by the "shang" diggers with their soft Kentucky accent.

The next morning after breakfast I asked the guide where the rod-smasher lived. He laughed, and Yankee-like answered by asking if I could bear disappointment well. I said I could do so, but liked success better. "Well," said the old man, "right below us is a dam, and there is a little good fishing in the back-water; and at the upper end is the big one. He won't always bite; in fact not often; but you will see him anyway; and go home with something broken if you hitch on to him." "Come on," I said, "that will be good fun anyway." So we walked a short distance to where he had a flat-bottomed skiff. Fishing toward the head of the back-water I caught some nice ones. After a while the old man came alongside some small dead alders. He caught one and let the boat swing about with the slight current. I knew in an instant this was the place, but cast out my line the same as usual. There was no time lost. He was at home and hungry; and that white swirl and the solid dead tug at the line set me wild. And I yelled out, "Get away from the brush, hurry up! Get out into the middle, keep away from that bunch of grass; keep away! Confound it! There, now, see what he has done!" He had run quite around that one bunch of grass, and my line would hardly run out at all, while he yanked his head savagely from side to side. Zeep went the reel. He was away on a rush. The grass

had pulled up and was floating on top. That was his game. Either the dead alders or the grass; and the last time he tried it he started the grass and it pulled up. The guide sent the boat into deep water, and five minutes later slipped the net under him, and it lay on the bottom with not a kick left in him. His mouth backed up the old guide's story of his many fights, and I was more pleased to get him than I would have been any other fish in the stream. He was the handsomest fish I ever saw, both in color and shape, and that is saying a good deal. His weight I do not know, but he measured 7 in. around the thickest part.

The "shang" diggers had the head of a pickerel on a post near their camp which, when a whole fish, weighed 16 lbs., and the young men who came in with me caught as many as they could carry out from one of the lakes. Every person I saw at Johnson's caught trout a plenty, and some who came early caught enormous strings. All the waters about are clear and particularly cold. Here there is a good place to go for good fishing, good food, good beds and good water, good fellows and a good time. Go with a party of four; reach Ellis Junction Tuesday. Wagon runs that day and no other. PINK EDGE.

MAY BE YOU'VE NOTICED.

I CAUGHT A string of beauties
Up on the North Fork to-day
The finest trout that were ever pulled out—
But the Biggest One Got Away!

And down in the mill-pool meadow,
The boys that were making hay,
With forks and rakes killed 3,000 snakes—
But the Biggest One Got Away!

And so I have heard of liars
Since Ananias's day;
There are just a few that receive their due—
But the Biggest One Gets Away!

C. F. Lummis, in Puck.

Fishculture.

THE TENCH IN MISSOURI.

THE tench is a European fish, and one of the best of the carp family, to which it belongs. To the angler it is well and favorably known, being possessed of game qualities and firm flesh of excellent flavor. In Europe it becomes torpid in winter and ceases to feed. The species is very prolific, a female containing 297,000 eggs being recorded. The eggs are small and of a greenish color. In 1877 the Fish Commission imported several varieties of tench from Europe—the king or Hungarian, the common and the gold tench. These were kept in Druid Hill Park, Baltimore. In the spring of 1888 a few tench were brought to the Carp Ponds in Washington. The growth of the fish has never been satisfactory, and no impression was made upon the waters to which they were introduced. Late in December, 1889, Commissioner McDonald sent twenty-three tench ranging from 3 to 10 in. in length to the recently established Neosho Station in Missouri. Here they were placed in a pond and were not seen again until the middle of the following April, although the water was clear nearly all the time. On May 2, 1890, a female spawned, but the eggs were not discovered and the young fish were not seen until long after hatching. In the winter of 1890-91 the brood stock continued active, and at spawning time in the spring of 1891 they were very healthy. At the present time Superintendent Page has 25,000 fingerling tench awaiting the fall distribution—the first unqualified success with the fish since its importation. The warm, clear waters of southwestern Missouri have furnished the conditions eminently suitable for the tench, and the region will profit by the introduction of a valuable and extremely hardy food fish.

CALIFORNIA SALMON HATCHING.—At the Baird station the fishing and egg-collecting from the first run of fish continued until Sept. 20, and nearly 3,000,000 eggs were secured. The run was several days shorter than usual. The eggs were remarkably large and healthy, and the loss in handling was much smaller than heretofore. The first lot was shipped to the California State hatchery at Sisson, Sept. 29. The State cooperates with the United States Commission in developing eggs and distributing the fry in its own waters.

FIXTURES.

DOG SHOWS.

Dec. 4 to 8.—Sixth Annual Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill.
Dec. 10 to 14.—Inaugural Dog Show of the Freeport Poultry and Pet Stock Association, at Freeport, Ill. T. E. Taylor, Sec'y.
Dec. 30 to Jan. 2.—Fourth Annual Dog Show of the Mohawk Valley Poultry and Kennel Club, at Gloversville, N. Y. F. B. Zimmer, Sec'y.
1892.
Jan. 5 to 8.—The New York and New England Poultry and Kennel Club's Dog Show, at Albany, N. Y. W. C. House, Fort Plain, N. Y., Sec'y.
Jan. 5 to 9.—Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Sec'y.
Jan. 13 to 16.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.
Feb. 9 to 12.—Fourth Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Sec'y.
Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.
March 1 to 4.—Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. F. S. Brown, Sec'y.
March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.
April 7 to 10.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.
April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.
May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.
Nov. 10.—Second Annual Trials of the International Field Trial Club, at Chatham, Ont. W. B. Wells, Sec'y.

Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Sec'y.

Nov. 22.—Irish Setter Club's Field Trials, at High Point, N. C. G. G. Davis, Secretary, Philadelphia, Pa.

Nov. 23.—Gordon Setter Club's Field Trials, at High Point, N. C. L. A. Van Zandt, Secretary, Yonkers, N. Y.

Nov. 23.—Seventh Annual Trials of the National Beagle Club, at Nanuet, Rockland county, N. Y. F. W. Chapman, Sec'y.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

1892.

Jan. 10.—Second Annual Trials of the Bexar Field Trial Club, at San Antonio, Texas. G. A. Chobot, Sec'y. Amateurs only.
Jan. 18.—Trials of the Pacific Field Trial Club, at Bakersfield, Cal. J. M. Kilgariff, Sec'y.

—Fourth Annual Field Trials of the Southern Field Trials Club, at New Albany, Miss. T. M. Brumby, Sec'y.

COURSING.

Nov. 10.—International Coursing Club's Meeting, at Merced, Cal.

EASTERN FIELD TRIALS CLUB ENTRIES.

ENGLISH SETTERS.

COUNT GLADSTONE (Adolph Dill's), black, white and tan dog, Oct. 29, 1889 (Count Noble—Ruby's Girl).
CORSAIR (E. O. Damon's), black, white and tan dog, 4 yrs. (Dan Gladstone—Haldee).

COUNT W. (N. Wallace's), black and white dog, July 7, 1889 (Count Noble—Jennie III.).
MAUD (N. Wallace's), black, white and tan bitch, April 21, 1890 (Rowdy Rod—Pearl Noble).

HARRY C. (Greenfield Hill Kennels'), black, white and tan dog, 3 yrs. (Roderigo—Countess House).

EVE (Herbert Merriam's), black and white bitch, June 28, 1889 (Gus Bondhu—Royal Spot).

DAISY HUNTER (Joseph H. and John A. Hunter's), orange and white bitch, April 9, 1887 (Gath's Hope—Daisy F.).

FLIGHT (Wm. McKenman, Jr.'s), black, white and tan bitch, April 26, 1889 (Paul Gladstone—Belle Ward).

EDGE MARK (Francis S. Brown's), black, white and tan dog, 3 yrs. (Skidmore—Flo Maclin).

PEG WOFFINGTON (Francis S. Brown's), black, white and tan bitch, 2½ yrs. (Ben Hill—Nora).

COUNT ERIC (Edward Gray's), black, white and tan dog, Aug. 30, 1887 (Count Noble—Fannie W.).

JOY (Geo. J. Harley's), black and white dog, June, 1889 (Paul Gladstone—Gypsy).

SAM R. (Geo. P. Jones's), black and white dog, February, 1889 (Dash Bryson—Daisy's Hope).

DOVONAV (F. J. O'Connell's), black, white and tan dog, 3 yrs. (Bob Gates—Fannie Gladstone).

DICK BONDHU (W. W. Tirus'), black and white dog, April, 1886 (Dashing Bondhu—Duchess Primrose).

CIGARETTE (J. I. Case, Jr.'s), black, white and tan bitch, 3 yrs. (Royal Rod—Clara).

ALBERT'S DUCHESS (Dr. John Hartman's), black, white and tan bitch (Warwick Albert—Princess Belton).

NAEMKE PHILIP (E. W. Durkee's) orange and white dog, Jan. 6, 1889 (Roy Mouch—S-dlebags).

LOU NOBLE (B. Ridgeway's) black, white and tan bitch, 2 yrs. (Count Noble—Alphonse).

TORY LIEUTENANT (F. R. Hitchcock's), black and white dog, Jan., 1889 (Jean Val Jean—Princess Helen).

TORY PETRONELLA (F. R. Hitchcock's), black, white and tan bitch, March 13, 1889 (Roderigo—Belle of Bridgeport).

TORY MAY (F. R. Hitchcock's), black, white and tan bitch, April, 1889 (Roderigo—Bo Peep).

GUENN (Blue Ridge Kennels'), black, white and tan bitch, 2½ yrs. (Paul Gladstone—Belle Ward).

COUNTESS RUSH (Blue Ridge Kennels'), black, white and tan bitch, 3½ yrs. (Count Noble—Belle Ward).

GOSSIP (Blue Ridge Kennels'), black, white and tan bitch, April, 1888 (Roderigo—Belle of Piedmont).

DAD WILSON, JR. (J. Shelly Hudson's), black, white and tan dog, April 14, 1888 (Dad Wilson—Litt).

DOLLY HEILL (J. Shelly Hudson's), black and white bitch, April 27, 1889 (Ben Hill—Dolly S.).

BLADE (Pierre Lorillard, Jr.'s), black, white and tan dog, May 24, 1889 (Toledo Blade—Lula C.).

ANTEVOLO (Pierre Lorillard, Jr.'s), liver and white bitch, Sept. 11, 1889 (Count Noble—Trinket II.).

NATALIE II. (Bert. Crane's), black, white and tan bitch, Aug. 13, 1887 (King Noble—Natalie).

WAGTAIL (O. W. Donner's), black, white and tan dog, 1890 (Roi d'Or—Belle of Piedmont).

ATLANTA (L. W. Smith's), black, white and tan bitch, 2½ yrs. (Jean Val Jean—Sheena Van).

JOE LEWIS (J. O. H. and F. H. Denny's), black, white and tan dog, 19 mos. (Count Noble—Fannie).

FINGAL (Edm. H. Osthaus's), black, white and tan dog, March 21, 1889 (Toledo Blade—Lady G.).

TOP MARK (B. M. Stephenson's), black, white and tan dog, 3 yrs. (Gath's Mark—Burd Helen).

PANSY BLOSSOM (W. H. Wallace's), blue belton bitch, 3 yrs. (Rockingham—Pansy).

RUPERT (J. M. Avent and Bayard Thayer's), black, white and tan dog, April 3, 1889 (Roderigo—Bo Peep).

ORLANDO (J. M. Avent and Bayard Thayer's), black, white and tan dog, April 30, 1889 (Roderigo—Bo Peep).

FOLLY (J. M. Avent and Bayard Thayer's), black, white and tan bitch, March 13, 1889 (Roderigo—Countess House).

U. S. DAN (J. M. Avent and Bayard Thayer's), black, white and tan dog, January, 1888 (Roderigo—Juno A.).

ANDY (J. M. Avent and Bayard Thayer's), black, white and tan dog, March 15, 1889 (Jean Val Jean—Sheena Van).

ROBESPIERRE (J. M. Avent and Royal P. Carroll's), black, white and tan dog, 1890 (Roderigo—Ollie S.).

BETTY S. (Highland Kennels'), black, white and tan bitch, 5 yrs. (Roderigo—Bo Peep).

LEMONES (J. E. Dager's), lemon and white dog, March 21, 1889 (Toledo Blade—Lady G.).

POINTERS.

BOUNCE (G. W. Amory's), dog, February, 1887 (Bob—Sal).

GROUSE (C. C. M. Hunt's), liver and white dog, 2½ yrs. (Mainspring—Swain's F'y).

WILD DAMON (Charlottesville Field Trial Kennels'), liver and white dog, 1½ yrs. (Damon—Flora).

MONTY (Charlottesville Field Trial Kennels'), liver and white bitch, 2 yrs. (Tory White—Lapford Pearl).

CROXIE WISE (Charlottesville Field Trial Kennels'), lemon and white bitch, 3½ yrs. (Croxeth—Young Beulah).

MAID OF KENT (Charlottesville Field Trial Kennels'), liver and white bitch, 2 yrs. (King of Kent—Hops).

MARQUIS (Ed. H. Osthaus's), liver and white dog, Aug. 26, 1889.

DON-FIS HEL (W. R. Fishel's), black dog, July 26, 1888 (Devonshire Sam—Nellie Bang).

DUKE OF HESSEN (Hempstead Farm Kennels'), liver and white dog, 6 yrs. (Luck of Hesse—Blarney).

GRAPHIC VI. (Wm. Manone, Jr.'s), liver and white dog, 3 yrs. (Graphic—Daisy II.).

DASH (Watkins Moorman's), orange and white dog, 4 yrs. (Marks—Sappho).

FRANK (A. L. Sanford's), liver and white dog, Sept. 13, 1888 (Duke of Vernon—Royal Cute).

PEPPO III. (Jas. L. Anthony's), liver and white dog, May 26, 1884 (Priam—Meally).

FLAKE OF FLOCKFINDER JR. (J. R. Purcell's), lemon and white bitch, 3 yrs. (Flockfinder—Ion).

NICODEMUS OF ION (J. R. Purcell's), liver and white dog, 2 yrs. (Jack Swivel—Ion).

JUPITER (J. R. Purcell's), liver and white dog, 2 yrs. (Tom Bowline—Belle C.).

RAZZLE (G. Lee Knapp's) dog (Dexter—Seldom).

CHAMPION STAKE—SETTERS.

CHANCE (J. M. Avent and Bayard Thayer's), black, white and tan dog, 1885 (Roderigo—Bo Peep).

ANTONIO (J. M. Avent and Norvin T. Harris's), black, white and tan dog (Roderigo—Bo Peep).

DAISY HOPE (W. W. Tirus's), orange and white bitch, 4 yrs. (Gath's Hope—Daisy F.).

TOLEDO BLADE (J. E. Dager's), black, white and tan dog, May 20, 1888 (Roderigo—Lillian).

SUNLIT (California Kennels'), orange belton bitch, 5 yrs. (Sportsman—Sweetheart).

POINTERS.

RIP RAP (Charlottesville Field Trials Kennels'), black and white ticked dog, 3 yrs. (King of Kent—Hops).

TRIBULATION (B. M. Stephenson's), liver and white dog, 3½ yrs. (Beppo III.—Lass of Bow).

IRISH SETTER TRIALS ALL-AGED STAKE.

Editor Forest and Stream:

The following are the nineteen entries for the All-Aged Stake in the Irish setter trials:

DUKE ELCHO (Dr. Wm. Jarvis's), Elcho, Jr.—Maid.

EDNA H. (Dr. Wm. Jarvis's), Elcho, Jr.—Romaine.

COLERAINE (E. B. Bishop's), Fingal III.—Aveline.

FINGLAS (E. B. Bishop's), Fingal III.—Aveline.

ONOTA DON (F. L. Cheney's), Chief—Bizreena.

JESSIE JONES (C. P. Hubbard's), Lee Grouse—Magg.

SEDAN (Michael Flynn, Jr.'s), Chester D. Herald—Nancy.

JIM BEATTY (R. E. Lutz's), Lee Grouse—Lew.

CLAREMONT PATSY (F. H. Perry's), Frisco—Nellie IX.

SPINAWAY (G. G. Davis's), Chief—Tyrrill's Nellie.

SILK (G. G. Davis's), Chief—Gypsy Maid.

LIMERICK (C. T. Thompson and W. H. Child's), Glenelcho—Nora.

PICKENS (F. F. Capers's), Tim—Florida.

ROCKWOOD (C. T. Thompson's), Desmond II.—Luray III.

INCHQUIN (J. J. Scanlan's), Chandon II.—Iowa.

BLUE ROCK (G. E. Gray's), Muskerry—Nancy Lee.

HOPE (G. E. Gray's), Brian Boru, Jr.—Biddy.

READY II. (Max Wenzel's), Red Dash—Ready.

IRISH RANGER, JR. (W. T. Irwin's). G. G. DAVIS, Sec'y.

PHILADELPHIA WITHDRAWS.

Editor Forest and Stream:

As the withdrawal of the Philadelphia Kennel Club from the American Kennel Club will no doubt be the subject of discussion by the sporting papers and among dog men generally, it is not inappropriate that I, as president of the club and as the one who prompted this action, should give some of the causes which impelled us to this separation. I have always appreciated the almost unlimited field of usefulness of an institution such as the American Kennel Club *ought* to be, but when I saw, as I have seen, and as every one who has read the sporting press must have seen, that the club was being run not for the interest of the dog but for those of a few men who live in New York city or near thereto, I became satisfied that this society which had been conceived in good for the dog had resulted in the injury of the cause.

The American Kennel Club *should* be governed by the delegates from the several clubs which compose it, and each delegate should in its deliberations have an equal voice with another, and when our delegate informs us that not only once or twice, but time and again that his voice is never heard, and that all of the proceedings of that organization are "cut and dried" before the meetings, I think every man of sense will agree with me that a proper respect for our club and for ourselves justifies us in refusing to send such delegates to such meetings. This "cut and dried" business has been a cause of complaint for a long time, and when the A. K. C., or rather the "clique" that runs it, deliberately laid upon the table, without a reason, a report of a committee favoring the recognition of our field trials, forbearance ceased to be a virtue, and I brought it to the attention of the club with the result mentioned.

I don't complain about the refusal of the A. K. C. to recognize our trials, but to the "manner" in which such refusal was made.

I think that I can truthfully say that the Philadelphia Kennel Club has done as much as any other for the development of the dog, and when a committee of the A. K. C. favorably reported the recognition of our trials it would have been at best scant courtesy for the A. K. C., or rather the "clique," to give the reasons for their action. I know of no law to compel them to give reasons, nor do I know of any which compels self-respecting men to be humiliated by men whose chief and only aim seems to be to fight a few members who have dared to question their methods.

The Peshall business has been simply disgusting, and should have been ended long ago, but with that we have nothing to do, except to suffer with others the humiliation that such a matter inflicts. I mention this as one of the many things that have disgusted our members and have compelled us to take the course we have taken.

What the dog men of this country need is an American kennel club (not a "clique" organization), wherein each club shall have equal voice and in which the only object shall be the development of the dog and not the personal ambitions or passions of the officers. I could give many other reasons for the action of our club, but the gist of them all is that the American Kennel Club has ceased to represent the several kennel clubs of which it is composed, and has outlived its day of usefulness, and we have nothing to gain and all to lose by connection therewith under its present management; and that by its unmanly action toward the report of its committee recognizing our field trials and its continued disregard of our delegate it has forfeited our respect. We have not taken this course with any degree of pleasure, I can assure you. We have been *driven* to it, and I express the sentiments of our members when I say that if the A. K. C. will so conduct itself as to fulfil its mission and will select for its officers men who will do their full duty we will be only too glad to renew our association with them.

PHILADELPHIA, Oct. 15.

FRANCIS S. BROWN.

NATIONAL BEAGLE TRIALS.—Nanuet, N. Y.—*Editor Forest and Stream:* It has been intimated to me that certain members have expressed themselves as believing that my dogs would have an advantage in the coming trials, for the reason that they were being worked over the trial courses. For the benefit and information of such members I will say that their impression is entirely erroneous. Nanuet is completely surrounded with the most excellent hunting grounds for rabbits, in fact so much so, that the folly of believing my dogs would have any advantage will, I think, be very clearly demonstrated on the ground in November, much better than I can do it on paper in October. Notwithstanding this, I have given positive instructions to my trainer to absolutely avoid certain districts which are adjacent and particularly well adapted for the trials. This very point that is now raised was one of the most prominent objections that I realized in suggesting Nanuet as a suitable place for the trials. While I presume the advantages to myself referred to were the most natural inferences with those unfamiliar with the situation, I feel called upon to make this statement in the interest of true sport and good fellowship.—H. L. KREUDER.

AN APPEAL TO LOVERS OF ST. BERNARDS.

THE following letter received from the editor of the English kennel organ, *Stock-Keeper*, speaks for itself:

Editor *Forest and Stream*:

On behalf of the noblest association of the handsomest breed of dogs, I beg you to do the service of printing the inclosed appeal for subscriptions. I feel confident that a nation so distinguished for generosity and sentiment as America, would be hurt at not being asked to help.

EDITOR.

"An Appeal to all St. Bernard Lovers, Breeders, and Exhibitors—Our attention has been drawn by a leader in the *Daily Telegraph* to the sad intelligence that the St. Bernard Hospice is languishing for lack of funds. This institution, from which the dogs take their name, was founded in Switzerland over nine hundred years ago, by Saint Bernard of Menthon, a native of Savoy, 'whose kind heart, being deeply touched by the dangers to which travelers journeying in winter-time over the Mons Jovis were exposed,' led him to establish cells for a dozen monks on the mountain, to which was added a guest-house for belated and invalidated wayfarers, and it is distressing to hear that the unobtrusive and inoffensive fraternity who can claim so splendid an historic record of doing good are impoverished, and need help. The monks of St. Bernard are bound by their vows to give gratuitous shelter and food to all wanderers who seek their hospitality, but in modern times the convent, during the summer, had been a favorite resort for tourists, among whom English and Americans predominate. Notwithstanding all the revolutions brought about by the railways, it is estimated that at least twenty thousand persons, chiefly belonging to the peasant class, find their way every year over the St. Bernard; and the normal expenditure of the hospice is never less than fifty thousand francs, or two thousand pounds sterling per annum. A variety of causes seems to have led to the dwindling away of the annual revenue, and the consequent drifting of the entire institution into financial embarrassment. In England and America descendants of the brave dumb animals which assist the holy brethren in their humane task have become the favorite companions of a vast number of dog lovers. To the hearts of these owners and admirers who take a pride in the well-being of their canine friends we appeal on behalf of their less fortunate relations in their cold home at the monastery. For the sake of the faithful dogs and the monks we beg for contributions which shall help to keep the roof over their heads, and preserve an institution which has rendered such great service to humanity in the past, and is now in danger of being lost to future lost travelers for want of financial assistance. We shall be glad to take charge of contributions from St. Bernard men, and of all dog lovers, rich and poor, in America and Great Britain who will wish to assist in helping so good a cause. Subscriptions may be addressed to the Editor of the *Stock-Keeper*, 169, Fleet street, E. C."

For the convenience of subscribers in America, the *FOREST AND STREAM* will be pleased to acknowledge any contributions to this fund and forward the same to the English *Stock-Keeper*.

DELIBERATE AND HASTY JUDGING.

Editor *Forest and Stream*:

Since in most of the reports of the shows of the last Canadian circuit by the various journals, this one included, expressions were used which seemed to imply that the judging was not done rapidly enough, such as "judging delayed," "judging hanging on," etc., it may be well to examine just what there is in it all.

It will at once be agreed that, if possible, judging should commence at the hour appointed and not be postponed without good cause; while the dogs should be brought before the judge as rapidly as possible. But all this may be done and still the judging will take perhaps two full days at a show with 250 to 350 dogs, unless several judges are employed, even with present methods of judging.

The expense of a single professional judge is considerable, and the employment of several would bankrupt many a show.

Last year the judging was delayed at Toronto owing to lack of promptness on the part of one of the judges, but he improved in more respects than one this year; and the rest of the shows did their judging without more delay than was unavoidable from the circumstances. The dogs were got into the ring and from it fairly rapidly, and the judges all worked steadily, and some of them very long hours. The judging of some of the specials at Toronto was late in beginning, but with this exception I am at a loss to see wherein there was ground for the complaints. By doubling the entry fee one or two more judges might be employed, but exhibitors do not want to pay that price for more expeditions judging. Montreal might with advantage have had one more judge, but that show grew in proportions from its first conception too rapidly to permit of this, and besides being a first venture, the management did not like to risk too much and perhaps kill all future shows by having a big deficit.

But behind these complaints of "judging delayed" there seems to be a belief that less time should be taken in determining the standing of the dogs shown. It is against this feeling we must contend, I am satisfied, if the best interests of good judging are not to suffer. If any judge is led to feel that unless he pushes through his work at a certain pace he will be subjected to criticism, it follows that there will be the temptation to "scamp" his work and place the awards in some fashion, whether after deliberate examination and consideration or not.

What is to be gained by determining the awards a few hours earlier? Exhibitors get their curiosity satisfied and the press gets the reports a little earlier; beyond that there is absolutely no gain and much loss.

The haste to learn how a dog is to stand has no good basis, and the reports to the press are exactly in the same position. As to the loss: The general public like to see the winning dogs, but they like better to witness the process of determining the awards when they have a fair opportunity. The space around every judging ring is crowded. If any management would erect a separate building for judging with an area large enough to permit the dogs to be freely moved, and surrounded by a gallery, a great and popular step in advance would be taken. Toronto could do this, and would make money by doing it, I am convinced, and the same would apply to other shows.

Now, what I have been persistently contending for is more systematic, thorough and therefore more deliberate judging; and while in the case of several of the judges there has been an improvement in this respect on the last Canadian circuit, I hold that all would be the gainers if there was still more thoroughness. It would take more time, but all who saw such judging would be instructed. The reporters, moreover, could then take their notes chiefly while the class were in the ring, see them as the judge himself sees them, and not as they lie tired out on the benches. Reports thus furnished dealing with the dogs as they stand and move would be infinitely more satisfactory. It is rather hard on a judge who has examined a dog in the ring, walked, trotted and galloped him, to have some reporter a day later look at the dog in his stall and there only, and write boldly that the dog should have been placed differently.

Kingston furnished the best place to judge dogs I have ever seen. A long space of fully 20 yds. was available. Seats were placed around this and some of the best society of the city sat watching the judging for hours. In such a place there is a chance to group dogs in similar positions, to exercise them in any fashion, and in a word to make as thorough

an examination as any man can desire. People are interested in this; exhibitors can see differences in the dogs for themselves, and the judge can do his best, which he certainly cannot and does not under the cramped condition of most judging spaces.

Judging, to serve its highest purpose, should be a series of object lessons, a source of clear instruction to those who exhibit and to the general public.

As a matter of fact I do not hesitate to say that the judging at the recent shows, which was most deliberately done, over which most time was spent, was better and gave more satisfaction than when it was pushed more rapidly, even when the same judge officiated at different shows.

By the way, at our fall shows the dogs could in most cases be well judged in a large space adjacent to the show building and surrounded by a high fence.

Not to occupy more of your space, Mr. Editor, I suggest that the best interests of the kennel world will be served by thorough judging by eye and hand, and that the press will assist in this matter by encouraging judges to take plenty of time to do their work, and reporters to come to their conclusions chiefly while the dogs are in the ring.

WESLEY MILLS, M.D.

NOTES AND NOTIONS.

WE occasionally hear of persons burying puppies as a means of disposing of them, and the common impression is that the act is the result of simple brutality. This is not the exact truth, as the practice is one of those singular evolutions of superstition that so often crop up. It is an old superstition that it is "bad luck" to kill cats, either as cats or as kittens, and the ancient idea was that burying alive was not killing! From this original superstition as applied to cats, the idea spread that puppies should be killed the same way. It is somewhat difficult to exactly define the character of such an act, as it is not brutality pure and simple, and in these days of "faith cure" it is not wise to characterize any outbreak of superstitious folly by any strong term. The kennelman who buries puppies alive and the mother who sees her child sink away in the clutches of typhoid or scarlet fever, refusing medical aid, come very near together.

The English correspondence of the *Fanciers' Journal* and the London *Stock-Keeper* mention a proposed rule of the English Kennel Club designed to make the club the court of final appeal, and its embracing some provisions of some "Arbitration Act," neither party giving any particulars as to the provisions of this act. It would appear, however, that the act is substantially the same as provided in many of our States for a voluntary and decisive arbitration between disputants, and apparently, the English Kennel Club proposes to require of all exhibitors that they accept the decisions of the club under this act. If this is correct, the objection to the proposal is very obvious. All such arbitrations are based on the theory that the arbitrators will be entirely un-biased, while a majority of the cases the Kennel Club decides arise on indictments brought by the Club itself for transgressions of its own laws. This directly contravenes the spirit of all law on the matter, English as well as American. Several hundred years since, a King of Scotland was himself excluded from sitting in judgment on one of his barons, in a case wherein the King was interested.

If the Kennel Club confines its authority as a final court to cases arising between other parties, the Club itself in no way being a party to any question involved, the requirement of exhibitors agreeing to their authority, is quite proper, but in such cases only. Criticisms by an American on official acts of Englishmen savor of impertinence, but precedents in England are so apt to be allowed much weight here, that it is well to consider in advance proposals there as well as those made in our own country.

A recent number of the *Fanciers' Gazette*, of London, has an article by Dr. Stables on the vexatious variations his name receives, such as "Dr. Gordon's Stables," etc., quite a humorous flavor being given by the statement that he once received a letter addressed to "The Manager of Gordon Stables," to which he replied that the energy of Mrs. Stables and his own efforts, had managed to keep him in that position himself. However, the point striking me is the final one, wherein Dr. Stables explains his surname by saying that an ancestor took the name of the French family Stables, which easily degenerated into "Stables." A hasty reader will be apt to take this as a very specious explanation, if not a fiction pure and simple, but there is nothing in the least unlikely about it. Historic French names, that came into England with the Huguenots, have undergone most wonderful transformations. "Mullins" is taken for Irish to the root, whereas it is only the English butchering of one of the proudest names of French history, "De Moulins." "Mushet" is a survival of "Montfitchet," "Death" of "D'Athe," etc. Nothing is to be wondered at in the etymological horrors of a people who can turn "Cholmondeley" into "Chumley" or "Belvoir" into "Beever," fairly matched from north of the Tweed by such Scotticisms as Mingis, Sinkler and Stinson, renderings of Menzies, Sinclair and Stevenson.

A very terrible story recently appeared about a child being frightfully bitten by a mastiff bitch and her pups in Wheeling, W. Va., and I am pleased to be able to turn some light of simple fact on the matter. As the result of some inquiries, I find that the child was playing with the puppies, whose play grew rough, the child screamed, kicked or otherwise hurt one or more of the puppies, who howled dismally, when the bitch rushed out and attacked the boy. Altogether the story is very much like that reported from Camden some years since, and is just one of those deplorable accidents that will occur as long as dogs and children run together without constant supervision, which, of course, is the natural order of things. And as long as the "general utility" reporter retains his "pernicious activity," such incidents will be seized on and magnified, every horror painted in rivalry of a conflagration, and every scrap of common sense carefully eliminated. However, extraordinary and unforeseen results from natural conditions do not make a rule of action any more than the reporter affords foundations for accurate history or studies in polite literature.

One characteristic of dogs is constantly forgotten in treatment of them. Every breed, except the decidedly delicate ones, can stand cold itself very well, but only exceptionally tough breeds can stand cold accompanied with wet. Keep your dog dry and zero will not hurt him; let him get wet and kennel him so and weather at a freezing point puts him in great danger. It does not hurt a healthy man to work in the rain all day, but to lie down in wet clothing invites the most serious consequences. Therefore, if your dog becomes wet in cold weather, dry him the natural way, by exercise, but dry him before you kennel him.

THERE IS JUST ONE PAPER IN THIS country that is in the front with its *Dog News*. If you want the news, all the news, when it is news, presented in an interesting way and readable all through, you must have that paper in your mail box. For name and address see our outside front cover.

CINCINNATI DOG SHOW.

THE show held by the Humane Society of Ohio, Oct. 13 to 16 was quite a success, 130 entries being catalogued. Mr. Frank C. Wheeler, of Cincinnati, O., judged all classes satisfactorily. The following is a list of

AWARDS.

MASTIFFS.—Dogs: 1st, F. C. H. Manns's Chapple; 2d, H. Moehli's Master. Bitches: 1st, C. W. Bell's Mademoiselle. Puppies: 1st, C. H. Strauss's Dan; 2d, J. A. Bovis's Queen.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, Major J. C. Guilford's Obeho; 2d, F. S. Anderson's Columbian Knight; 3d and very high com., Cincinnati Zoological Garden's Marvo and Swiss Saul. Very high com. W. Stribley's Hector. Bitches: 1st, E. B. & O. W. Pfau's Narka. Puppies: 1st, A. Urreth's Cincinnati; 2d, G. Fox's Chequasset Lucretia; 3d, J. H. Lucke's Queen City Bell. Very high com. S. Wheatfield's Royal W.

ST. BERNARD.—SMOOTH-COATED—Dogs: 1st and 2d, Cincinnati Zoological Garden Kennels' Zurich Hector and Swiss Saul; 3d, S. Wheatfield's Vinco. Very high com., R. W. McGregor's Chamounix. Bitches: Prizes withheld. Puppies: 2d, E. M. Mayer's Unnamed.

NEWFOUNDLANDS.—Puppies: 2d, W. Seymour's Rover.

GREAT DANES.—Dogs: 1st, J. C. Linerman's Fritz; 2d, J. N. Van Dyke's Hans; 3d, H. Baremyer's King. Very high com., Cincinnati Zoological Garden Kennels' Duke. Bitches: 1st, C. Fleischman's Herta; 2d, Rookwood Kennels' Columbian Nell. Puppies: Dogs: 1st, Dr. S. L. Anderson's Jeff. Bitches: 1st, Rookwood Kennels' Columbian Nell; 2d, F. S. Anderson's Columbian Daphne.

DEERHOUNDS.—Dogs: 1st, C. Fleischman's Jack. Bitches: 1st, C. Fleischman's Lady Bird.

GREYHOUNDS.—CHALLENGE—Dogs: 1st, Rookwood Kennels' Master Rich. Bitches: 1st, Rookwood Kennels' Miss Rare. Puppies: Dogs: 1st and 2d, Rookwood Kennels' Salvatore and Kentucky Blue; 2d, E. P. Roger's Romeo. Very high com., G. R. Vanderburg's Yampa. Bitches: 1st, Rookwood Kennels' Wild Isle. Puppies: Dogs: 1st, Rookwood Kennels' Salvatore; 2d, F. S. Anderson's Columbia Daphne. Bitches: 1st, Rookwood Kennels' Wild Isle.

POINTERS.—Dogs: 1st, Miss F. E. Turner's Dixie; 2d, J. H. Law's Pride of the Kennel; 3d, F. Weinheimer's Jounny. Bitches: 1st, J. H. Law's Mel.

ENGLISH SETTERS.—Dogs: 1st and very high com., Wallingford & Biddle's Ben Hur and Kentucky Dash; 2d and 3d, Joe B. Fenley's Count B. and Dash B. Very high com., F. Weinheimer's Dick Cambridge. Bitches: 1st, Dr. L. A. Querner's Nell Q; 2d, Wallingford & Biddle's Lucille Hill; 3d, J. H. Law's Maggie P. Puppies: 1st, Joe B. Fenley's Beauty B.

IRISH SETTERS.—Dogs: 1st, Henry Pohlman's Major C; 2d, T. Hanna's Peter H. Bitches: 1st, Wm. J. Walsh's Queen; 2d, J. P. Heister's Beauty Belle.

GORDON SETTERS.—Dogs: 1st, Rookwood Kennels' Meadowthorpe Ladd; 2d, E. Reising's Grover.

IRISH WATER SPANIELS.—Dogs: 1st, Hall & Rockwell's Irish Pat. Bitches: 1st, Hall & Rockwell's Biddy. Puppies: 1st, Hall & Rockwell's Hunter.

FIELD SPANIELS.—1st, H. H. McKee's Sir Walter Scott. Bitches: 1st, Ancient and Modern Kennels' What Not. Puppies: Dogs: Ancient and Modern Kennels' Young King. Bitches: 1st, Ancient and Modern Kennels' What Not. OTHER THAN BLACK—1st, Newton Abbott Farmer.

COCKER SPANIELS.—CHALLENGE—Dogs: 1st, Ancient and Modern Kennels' King of Obos. Bitches: 1st, Ancient and Modern Kennels' I Say. Puppies: Dogs: 1st and 2d, Ancient and Modern Kennels' Woodland Pete and Woodland Duck. Bitches: 1st and 2d, Ancient and Modern Kennels' Busy and Lady Obo. Puppies: Dogs: 1st and 2d, Ancient and Modern Kennels' Woodland Dick and Woodland Duck. Bitches: Ancient and Modern Kennels' Bell's Girl.

BEAGLES.—Dogs: 1st, E. L. Fox's Dan; 2d, C. L. Hummler's Levi; 3d, A. J. Fox's King William. Bitches: 1st, E. L. Fox's Jennie. Puppies: 1st, A. J. Fox's King William.

COLLIES.—Dogs: 1st, J. Hawkes's Sir Walter Scott; equal 2d, J. Heekin's Heekin's Bruce and C. A. Christman's Ben; 3d, C. A. Christman's Mack. Very high com., Cincinnati Zoological Garden Kennels' Bob. H. G. Cragg's Sir Kenneth. High com., A. Holz's Shep. Bitches: 1st, C. A. Christman's Lady Bruce. Puppies: 1st, C. A. Christman's Juliet.

BULLDOGS.—Dogs: 2d, A. S. White's Buck.

BULL-TERRIERS.—CHALLENGE—1st, Wm. J. Bryson's Duffin. Puppies: Dogs: 1st, R. Buchanan's Frisco. Bitches: 1st, Geo. Barkau's Lady. Puppies: 1st, H. M. Caldwell's Fay of Bagdad; 2d, Geo. LeBoutillier's Queen.

FOX-TERRIERS.—OPEN—Dogs: 1st, Henry Lackman's General Grant. Bitches: 1st, E. C. Reidinger's Blenton Lucy; 2d, H. Lackman's Lucky Belle; 3d, Wm. Lee's Vic. Puppies: 1st, F. Reting's Stormy.

BLACK AND TAN TERRIERS.—1st, Geo. B. Marshall's Babe. **YORKSHIRE TERRIERS.**—1st, Jas. Farley's Teddy. Puppies: 1st, Jas. Farley's Teddy II.

TOY TERRIERS.—1st, J. A. Roersch's Midget.

PUGS.—CHALLENGE—Dogs: 1st, Eberhart Pug Kennels' Eberhart's Cashier. Puppies: Dogs: 1st, C. L. Connor's Dixie; 2d, Eberhart Pug Kennels' Bradford Ruby; 3d, A. Holz's Dick. Bitches: 1st and equal 2d, Eberhart Pug Kennels' Mabel E. Fannie K. and East Lake Virgie; 3d, Mrs. M. S. Fogg's Lilly Fog. Very high com., H. S. Woke's Floozy. Puppies: Dogs: 1st, G. Hagen's Grif; 2d, Eberhart Pug Kennels' Hustler. Bitches: 1st, Eberhart Pug Kennels' Peggy Pryde; 2d, Miss M. B. Martin's Lady B'jou; 3d, C. L. Connor's Cora Hope.

FRENCH POODLES.—Puppies: 1st, C. F. Widman's Paris; 3d and very high com., Mrs. Steiner's Miss Lucy and Miss Tippy.

ITALIAN GREYHOUNDS.—Dogs: 1st, J. Englehardt's Prince E; 2d, Dr. L. S. Anderson's Don Pedro. Bitches: 1st and very high com., J. S. Rockwell's Lavender and Flora; 2d, 3d and very high com., J. Englehardt's Challis, Victoria and Jewell. Puppies: 1st and 2d, J. Englehardt's Rick and Spot; 3d and very high com., J. S. Rockwell's Petro, Tot and Bob.

MISCELLANEOUS.—1st, A. Metingers Koko (Japanese pug); equal 2d, G. F. Tippenhauer's Hans (Dachshund) and Jake.

Best kennel pug, Eberhart Pug Kennels; greyhounds, Rookwood Kennels; collies, C. A. Christman; English setters, Wallingford & Biddle; cockers, G. Ball; Italian greyhounds, J. Englehardt. [The report arrived too late for insertion this week.]

NATIONAL BEAGLE CLUB MEETING.

Editor *Forest and Stream*:

The meeting of Oct. 17 was called to order at 8 P. M., President Brooking in the chair. Minutes of last meeting accepted. The report of the treasurer, as follows, was read and accepted: Balance on hand, \$30.61; amount due the club, \$42.50; total assets, \$73.11. The following were admitted to membership: W. H. Ashburner, Yeaton P. O., P. A.; and F. F. Ogier, Cleveland, Ohio. Votes were placed advertisements in three special papers. The following nominations were made for the January election: For President, O. W. Brooking, W. A. Power, H. L. Kreuder, W. S. Clark, H. V. Jamison, F. W. Chapman, and B. S. Turpin. For Vice-Presidents (3), B. S. Turpin, H. V. Jamison, W. S. Clark, W. A. Power, H. G. Nichols, A. Parry, O. W. Brooking and H. L. Kreuder. For Secretary and Treasurer, O. W. Brooking, W. S. Clark, H. V. Jamison and F. W. Chapman. For Executive Committee (3), H. V. Jamison, H. G. Nichols, O. W. Brooking, Wm. H. Child, N. Rowe, Geo. Laick, Geo. P. Berry, H. L. Kreuder, F. W. Chapman, W. S. Clark and H. W. Lacy. Meeting adjourned at 11 P. M. F. W. CHAPMAN, Sec'y.

Boston, Mass.

WRONG PEDIGREE.—Bridgeport, Conn.—Editor *Forest and Stream*: In your issue of two weeks ago I see, under the head of Visits, etc., that the Roscroft Kennels had bred their bitch Forest Dora to Mr. Gamble's Grover (Count Howard—champion Daisy Foreman). I don't wish to say who is at fault, Mr. Osborn or Mr. Gamble, but if he will look into the matter I think he will find that Grover is by Warwick Albert out of champion Daisy Foreman, and not Count Howard, as he claims.—JAS. E. HAIR.

DOG CHAT.

THE World's Fair dog show will be held about June 12, 1893, and entries will close about May 20. The show will be held in stock buildings that are 50x300ft. in size, and the dogs will be their first occupants, so that everything will be perfectly clean. There is any amount of room, as there will be about fifty of these sheds or buildings at the manager's disposal. It only remains now to choose a manager and judges in whom exhibitors on both sides of the water can have full confidence.

Mr. E. B. Sears had his grand Wyoming Kennel team of St. Bernards on exhibition at the Worcester County Agricultural Fair. The team was composed of Sir Bedivere, Philimmon, Jr., Hepsy and Lady Wellington.

It is said that some fine collies arrived on the S.S. Umbria last week but diligent inquiry has failed to elicit any information about them beyond the fact that one is called Lady Macdonald and supposed to be worth "a pile."

It is not often that a dog's value increases so rapidly as the one under notice. It seems Mrs. Clara Louise Kellogg-Strakosch, the celebrated singer, was patting a strange dog, when the animal swallowed a \$50 ring which Mrs. Kellogg held in her other hand. The prima donna at once commenced negotiations for the purchase of the dog, which she succeeded in securing for the moderate sum of fifty cents. The dog now has a value which its outward appearance would hardly denote.

The prizes to be given at the New England Kennel Club and Poultry Association's dog show at Albany, N. Y., Jan. 5 to 8, are \$7 and \$3 in the regular classes. Kennel prizes of \$10 will also be given for the more important breeds. The club has a guarantee fund of \$1,000, and held at that time, the show should meet with good support, especially as the popular superintendent of the W. K. C., Mr. Jas. Mortimer, will don the ermine.

The A. K. C. has on the market a breeder's certificate which breeders are asked to purchase. It is intended as a protection to purchasers of dogs, and to accompany every transfer of the animal as a means of identification.

We have received a picture of Dr. Wartenburg's great Dane Tyras, which he advertises in our business columns. Tyras's color is a rich tiger brindle, and from the description which his owner sends us, for the convenience of any intending purchaser, he must be a handsome animal. We shall be pleased to show his letter to any who may feel interested.

Another of the stud books arranged by Mr. Hugh Dalziel and published by Messrs. Upcott, Gill & Co., of London, is that devoted to the St. Bernard. The compiling of such a work entails endless trouble and pains. The book also includes a list of the principal shows where classes for St. Bernards have been provided, and with these are the prize lists, making an invaluable reference record for the breeder.

In another column will be found the entries for the All-Aged and Champion Stakes in the Eastern field trials to be held next month. Compared with last year, there is an equal number of setters, 44, but pointers show this year an entry of 17, as against 11 in 1890, a gain which the success of the pointers in last year's trials fully indicated. Our principal breeders are well represented, and sportsmen will also find new names among those who have entered dogs, showing that, like bench show exhibiting, the field trial element is daily drawing new recruits. The entries are very representative, aspirants for honor being entered from many different States. The Champion Stakes show an entry of seven, the same as last year; the setters as usual predominating. The judges so far selected are Messrs. H. B. Duryea and Arthur Merriman, who officiated last year, the third judge has not yet been chosen.

Mr. W. A. Coster, well known to all sportsmen as the secretary of the Eastern Field Trials Club, has been recently requested to officiate as one of the judges at the Philadelphia Kennel Club's trials, and will accept, in company with Herbert Merriman, of Weston, Mass., another well-known sportsman. These two gentlemen acted in the same capacity last year, and this is the truest proof that their decisions met with approval.

Here is a good suggestion we find in the *English Field*. The writer says that his Irish terriers persistently ran away when walking them out. Recently he bought a little bitch, perfectly broken, and such is the influence of her good example that his dogs when in her company can now be safely trusted either walking out or hunting.

We have received a very neat catalogue issued by Mr. Charles E. Bunn, of Peoria, Ill., describing the merits of his kennel of mastiffs. At the head of the kennel stands Ormonde, whose breeding is of the very best, and the list of matrons in the kennel will at once strike the eye of the mastiff men as showing a variety of blood of the right sort.

It is not often the case that a weekly journal has the opportunity to retail a piece of important news before the great dailies, but *FOREST AND STREAM* led the way in "Dog Chat" last week in reporting the purchase of such a notable dog as the St. Bernard Princess Florence. It was an important purchase, and a much needed one, for it is to the female portion of the breed that we must look for the improvement of the St. Bernard and other breeds as well, in this country. The example Mr. Reick has set in not being daunted by a large price for a St. Bernard bitch, we trust will be extensively followed by others. In a recent article in one of the English kennel papers we read that they, the English breeders, should not bewail the loss of their good St. Bernard dogs when the Americans allowed them still to retain such animals (naming several noted bitches, among them Princess Florence) as still remained. It has been our contention all along, and both privately and publicly have we urged that bitches of known and proved superiority should be imported. We have all the stud dogs that can be profitably used, but until we follow the blood lines more closely and import the producing matrons, we shall gain very little by the outlay of such large sums as have been paid for St. Bernard dogs this year. When urging this argument we are generally met with the reply, "I won't run the risk of giving such prices for a bitch." In view of recent sad events, is it any more risk to import high-priced fruitful bitches than to pay such large sums for stud dogs? In only one case, of late, has a high-priced bitch (Plevna) succumbed to the inevitable before her due course was run.

Princess Florence is well known to St. Bernard breeders, and as Sir Bedivere is the king so may she be termed the queen of the breed. Whelped in 1888 she is now coming into her prime. Before she was nine months old she had earned her right to championship honors, a dignity no other St. Bernard has attained at that age. She has not been extensively shown, and only then at the best shows in England. At that early age she had won the St. Bernard Club cup for the best of her sex, and has given both Philimmon and Sir Bedivere close rubs. In a letter from Mr. Chapman he told us that she weighed over 200lbs., and her bone and height, 32½ in. at shoulder, is far beyond the average for one of her sex. Following out the policy of obtaining all the

Prince Regent blood he can secure, Mr. Reick has selected the very best of this noted sire's get and the one that gave him his early reputation. Young Keeper, as his name denotes, is a son of the grand-headed smooth champion Keeper, and will no doubt prove a valuable addition to the smooth ranks, now that Watch has gone. Princess Florence's departure from England on the 24th of this month per S. S. Aurania, together with Young Keeper, will prove a great loss to the English St. Bernard fraternity. Through the New York St. Bernard Kennel, New York will now be able to hold its own in future competitions for team prizes, and we trust that the owner will show as much judgment and care in suitably mating Princess Florence as he has shown in his purchases.

Mr. Geo. V. Glazier, of Salem, Mass., has been appointed chairman of a committee which seeks to have an obnoxious law repealed relating to the keeping of bloodhounds in Massachusetts. He has forwarded to us an extract of the law, which is as follows:

Massachusetts Acts of 1886, Chapter 340.—An act concerning the keeping of dogs known as bloodhounds: Sec. 1. No person shall keep or have in his care or possession any dog of the species commonly known as bloodhounds, or any dog which is or has been classed by dog fanciers or breeders as Cuban bloodhounds, Sicilian bloodhounds, German mastiffs or great Dane, boarhound or Ulmer dog, he said dog in whole or in part of said species, unless the same be kept for exhibition solely, in which case said dog shall be at all times securely inclosed or chained, and shall not be allowed to be at large, even though in charge of a keeper, unless properly and securely muzzled. Sec. 2. Penalty. Sec. 3. Dogs to be removed or killed.

Mr. Glazier is now collecting evidence with a view to have this law abolished in so far as it affects bloodhounds, a breed he is conspicuously interested in, and asks for information from those who know the breed as to its disposition, nature and qualities. Such a law certainly savors of ancient blue laws and bigotry, and no doubt is begotten of the absurd superstition in relation to these dogs engendered by the more or less sensational tales of old slave-hunting episodes, and not of nineteenth century experience. Outside of the so-called "Uncle Tom's Cabin bloodhounds," which have no earthly title to the name of bloodhound, the true English bloodhound is comparatively scarce in this country, being confined to a few kennels, of which Mr. Winchell's is the principal one. In conversation with that gentleman we have always heard him speak highly of their disposition. The bloodhound proper is a dog that does not make friends with the first one who pats his head, and as such is to be praised, but after acquaintance, from what we can gather, man has no more faithful friend or companion. A savage bloodhound like a savage mastiff or dog of any breed should be closely guarded, or unless very valuable to breeding interests, destroyed; but to enact such a law as this is, we think, an unpardonable discrimination to one of the noblest and on occasions useful breeds of dogs we have. We should like to have the opinion of Mr. Winchell and other breeders or former owners of dogs of this breed on the subject, so that Mr. Glazier may be fully prepared to carry out his intention. Concerning great Danes, also mentioned in the act, the breed is comparatively common, and no greater refutation of their savagery could be advanced than a sight of the ring at one of the New York shows, when the High Ground Kennel turns in a dozen of their dogs to romp together.

One of the latest acquisitions to the St. Bernard fancy is Dr. John W. Dunlop, of Clare, Mich., who has named his kennels the "Clare City Kennels." They are situated on a charming elevation on his farm of sixty acres, watered by a beautiful stream fed by never-failing springs. A spacious mansion is now in process of construction, and beautiful lawns are being laid out and orchards planted, the whole to cost when completed upward of \$50,000. Among the latest additions to the kennel is Bonnie Doon (Ben Lomond-Capitolia), who will probably be bred to Lord Bute and should produce something of merit. He has also purchased of H. F. Littlefield, Lake View, Worcester, Mass., that excellent brood bitch Beulo (16,000), served by the typical young dog Guy. Also two perfectly marked youngsters, Prince Clare and Moxie, which the Doctor says "are making excellent improvement" in the Michigan climate. The Doctor is taking up the breeding of St. Bernards not so much for the profit as the pleasure and recreation to be derived from it, his aim and object being to produce stock that will make its mark. Dr. Dunlop will be a welcome addition to the already large list of St. Bernard breeders.

The New York *Herald* suggests that British dog owners shall participate in the World's Fair dog show in 1893, and their correspondent on the other side has sounded English exhibitors on the subject, and they express themselves as favorable to the idea of having the different specialty clubs select a certain dog and bitch as types of the breeds to be sent to America. These clubs to pay the expenses of the dogs to New York and back, while the Chicago management—i. e., the Mascoutah Kennel Club, for we hardly think the World's Fair people would trouble themselves so far, if they identify themselves with the big show—to pay the expenses of transportation from New York to Chicago and return. The plan is a likely one, in the suggestion, and would no doubt enable our breeders to get a look at the best specimen of many breeds wherein we are lamentably behind the times. As Colonel North is sending his race horses, a draft from his noted greyhound kennel would give a great boost to coursing and greyhound interests; some typical Newfoundland and the different breeds of terriers would also serve to arouse greater interest in these breeds. Our suggestion of International Produce Sweepstakes would also tend to a friendly rivalry that would be bound to serve a good purpose. The matter of judging is the only stumbling block to the English side of the question.

Dropping into the A. K. C. headquarters the other day Secretary Vredenburg said very seriously, "Do you know I've just come across the best St. Bernard stud dog in the country?" We, in our innocence, answered that we knew of one or two good dogs in that line too. "Oh, well," he said, "my dog beats them all. Do you know a dog called Sir John, shown in the novice and puppy classes at Toronto, and entered as registered in the Canadian Kennel Club?" "Yes," "Well, the dog is 15mos. old and entered as by champion Sir Charles. Sir Charles was burned at Columbus, O., show in 1887." We confessed that certainly Sir Charles was a wonder and remarked that it was about time the C. K. C. had a stud book published on proper lines. The secretary of the A. K. C. protested the award and has refused to recognize the award as a record.

A new sanitarium near London, under the direction of Dr. Sewell, the celebrated English canine "vet.," has been established. Here are separate wards for each dog disease, a surgical operation room, dissecting room, bath room, kitchen and separate exercising grounds for each division of the institution. Dr. Sewell last week demonstrated the fact that veterinary science applied to dogs developed points incredible to the general public. A valuable fox-terrier bitch was in danger of death in consequence of her inability to bear pups to a collic. The Doctor succeeded in performing the Cæsarian operation, and the bitch rapidly recovered. It is said to be the first operation of the kind known.

The Menthon Kennels have bought of Mr. J. J. Lynn, Port Huron, the young rough-coated St. Bernard bitch Lady Martin, by Canada's Merchant Prince (8,327) out of Blaz

(9,010). Mr. Croskey has been lucky in picking up this promising young bitch, and she will be bred to Lord Bute.

We hear from Peoria, Ill., that a pug well known a few years ago joined the silent majority some little time since. This was champion Little Toby, half brother to the ill-fated champion Lord Nelson. Both of these dogs were bred in Scotland. At the same time another old-time importation went the way of all flesh, Lady Flossie, dam of Miss Whitney's Thunder, Tiny II., Midget Lord and other winners.

We are asked to correct the statement that the pug Curtis won third at Ottawa. Curtis won first in the open dog class.

The action taken by the Philadelphia Kennel Club is sure to cause considerable comment among members of dogdom. This club is one of our oldest kennel organizations, and includes members who are at all times active as exhibitors or sportsmen in the field. The principal ground on which the resignation is based is the shelving of the recommendation of the committee appointed by the A. K. C. that winners of field trial stakes held by clubs, members of the A. K. C. should be recognized, and two wins in an open to all stake should constitute a right to the title of field trial champion in the eyes of the A. K. C. This would have allowed the winners of the stakes of Philadelphia Kennel Club trials to compete for specials at shows given for dogs with best field trial records, etc. The question just lies in a nutshell: Should the winners of stakes in P. K. C. trials be put on a par with winners of stakes at other trials where the competition is open to all. That is a matter for the A. K. C. to decide. One member of this committee put it to us this way: "Well, the stakes are open to all, for the membership in the P. K. C. is open to all." But that is not the way to look at it. The fiercer charges brought by the president of the P. K. C., that the proceedings at the A. K. C. meetings are "out and dried," should be investigated and the charges sustained or refuted. The moral standing of the A. K. C. demands it, made as it is seriously in print by an important club like the Philadelphia Kennel Club. Interviewing the secretary of the A. K. C. on the subject we were told that Mr. Child, the P. K. C. delegate, said to him after the May meeting that "if those resolutions were not adopted the club would resign," and no answer was made.

Through a mistake in the secretary's book we credited the Wild Crow Kennels with the ownership of the first prize winning English setter puppy, Clip, at the Danbury show. The pup belongs to Dr. Hair, of Bridgeport, Conn.

There is likely to be a rumour about the unauthorized entering of Mr. Little's Clumber Newcastle in the Ottawashow without his knowledge. Of course the circumstances may be subject to explanation on the part of the Ottawa people, but such loose methods should certainly be looked into and Mr. Little in exposing it has done the proper thing at the right time. The question arises was there a reason for it and why was it done?

The secretary of the A. K. C. is now preparing a certificate for the use of breeders who intend to exhibit at the World's Fair show, for which a fee of 50 cents is to be charged. This will be submitted at once to the World's Fair people, and when passed will be for sale. These certificates will be available at once, so as to avoid the rush that will inevitably occur in the A. K. C. office when entries for the show are about closing. It will be seen by this certificate that the rule about a dog winning two prizes at a kennel club show being eligible for registration will not hold good; the dog must be eligible to registration through pedigree alone. This will to a great extent affect the representative character this international event should have.

Mr. W. B. Robinson, who recently bought out the Ashmont Kennels, has had the hardest kind of luck lately. Ben Franklin turned out a brute as regards temper and bit his wife and a stranger so that he had to destroy it. Then his neighbors summoned him on account of the dogs barking—result, a \$10 fine, and as it this was not sufficient, a few days after Ashmont Juno was poisoned. Then last week Ashmont Alice, by Imperial Chancellor, also fell a victim to the poison fiend. The reason that the latter bitch's death is most unfortunate is the fact that she had been served by that wonderful headed dog that created such interest at New York in the spring, Ingleside Maximilian, and as she was a most suitable bitch to breed to him it means a great loss both to Mr. Robinson and the fancy. He is doing all in his power to find the guilty parties, but this is not an easy matter. The analysis showed the poison used to be phosphorus. Mr. Robinson will, we are sure, have the sympathy of his fellow breeders in his troubles.

Among the new advertisements this week we find that the following have dogs for sale: J. H. Miller, well-trained beagles, foxhounds, pointers and setters; James Berry, trained pointers; G. A. McGillivray, St. Bernards and bull-terriers; Geo. H. Stubbs, pointer pups; Handsome Brook Kennels, cocker spaniels; University, Miss. great Dane; F. M. Bennett, trained Gordon setter; M. T. Mason, pointer pups; Mrs. A. Girt, pointers; Rochelle Kennels, black and tan terriers; Strebor Kennels, pointer pups; H. Northwood, fox-terrier pups. In the stud: H. Northwood's fox-terrier Painter. Wants: W. B. Palmer, red cocker spaniels.

Dr. Joseph L. Hancock says in the *American Naturalist* that his attention has recently been called to the work on "Organic Evolution" by Professor Eimer, page 114, to a paragraph in which he seems unable to account for the dogs in Constantinople carrying the tail upright. In speaking of the subject he says: "But the reason why these dogs begin to erect the tail and carry it upright, while the ancestral jackal, like the wolf, carries it hanging down, is not so easy to discover, although the fact could scarcely be explained as a case of adaptation." "I beg to offer a provisional explanation of this phenomenon, and also to take exception to the latter statement—that it cannot be explained as a case of adaptation. While my observations were not made at Constantinople, the dogs accompanying the several tribes of Indians observed in the western United States, [the words dog and wolf are used synonymously in this note] some of which are tamed wolves, or are directly descended from the wild American wolf known as the coyote, offer opportunities of study which brought me to a realization of this subject, which may be summed up in a few epitomized remarks. As the dog becomes domesticated it is prone to use the tail as an organ of expressing mental states, especially those of emotion, for example, the wag of the tail expressive of delight, or sudden dropping of the tail between the legs at some disappointment or fright. The ancestral or wild wolf carries the tail hanging down, because that position (the tail being especially bushy and large in the wild animal) would be less conspicuous and more compatible with life in a free state of nature, or, as it were, to better elude detection. A family of wolves playing together undisturbed occasionally carry their tails curled upwards. By degrees the tail acquires naturally the upright position as a result of coincident evolution of the mind of the wolf incidental to domestication, and moreover thus instancing the slow adaptation of the appendage as an organ of expression. The cessation of natural selection in the domestic dog would give to the tail greater freedom of motion without detriment to life; and artificial selection perfects the caudal appendage into many diverse shapes. Still greater influence is exerted by certain expressions of the mind

by that appendage, tending to keep it up, and by the influence of heredity, transmitting those tendencies. The muscles correlatively become strengthened and developed, and the erect position ultimately passes into an apparently fixed character in some varieties of the dog." This explanation is excellent and satisfactory, but how about the curl of the tail of the pug—not to speak of the pig? Artificial selection perhaps.

Mr. Everett Millais, whose name is familiar to most fanciers in connection with his efforts to down the demon distemper in shows and kennels, met with a most painful accident while working in his kennel. His knee was badly smashed and the internal synovial membrane has been injured. To an active man like Mr. Millais the twelve-month sentence of enforced rest that we are told this will entail must be particularly irksome, and Mr. Millais has our sincere sympathy.

There are several interesting notes of English news that must wait till next week for lack of space.

Through the *Fanciers' Gazette* we learn that Mr. H. Bows, in far-away Salt Lake City, Utah, has purchased the St. Bernard Lady Rose from Mr. H. O. Milnes. She has been shipped by Spratts Co.

We draw the attention of sportsmen interested in beagles to the announcement in our business columns of the National Beagle Club field trials. This enterprising club has struck the right trail and is running on a hot scent, and from all we can hear with few, if any, obstructions in the way. Entries for the trials close Nov. 1, with a fee of \$5 per dog, and as the special prize list is sure to be considerably augmented the next few weeks, owners of beagles will find it quite worth their while to spend a week at Nanuet, N. Y., to say nothing of the pleasure to be derived from the sport they are sure to have. We saw last week two persons from that neighborhood who say that hares are very plentiful, so that there will be none of the tiresome experiences of last year among the fastnesses of Hyannis and the swamps and stone walls of Salem. All men who know Mr. Kreuder can rest assured their welcome to his place will be hearty and we do not think that the most inveterate kicker will for one moment think Mr. Kreuder will seek to gain any advantage to his own kennel, rather would it be the other way. We are sorry to hear that his best entry, Fanny K., having been mated to Racer, Jr., on the late circuit, will be unable to take part in the fun. The following specials have been donated: Mr. H. L. Kreuder offers \$5 each for kennel of four or more making the best average in trials and on bench; \$5 each for the best pair (dog and bitch) making the best average in trials and on bench; \$5 each for the dog and bitch with best voice; only members of N. B. C. to compete. F. W. Chapman offers a suitable piece of silver, value \$5, for the best beagle, sired by champion Bannerman since 1888, in the trials. Open to the world and donor not to compete.

Professional judges in England who are at the same time dealers and breeders, are very properly getting some hard knocks in English kennel papers. We do not see how the two vocations can run well together and keep the confidence of exhibitors be the judge ever so conscientious. We were told some curious instances of this sort of judging by those who have been over there the past summer.

It is rumored that early next year the St. Bernard Club will join forces with the Greyhound Club for the purpose of holding a specialty show. The Pet Dog Club, although they had raised a guarantee fund among themselves, have decided not to hold a show this fall as proposed, the other specialty clubs having shown little interest in the matter.

BARZOI DISCUSSION.

Editor Forest and Stream:
My attention having been called to the London *Stock-Keeper's* "round up" of my article on the Barzois (lately reported) in a Philadelphia contemporary, I would state to those who are interested in the breed that I have endeavored to answer it logically, and have put forth such questions as I think both deserve and will elicit a reply from those who are considered authorities on the subject in question. Considering the Imperial Society had issued the standard for Barzois, it seemed more than strange that any one would arrogate to himself the right to disqualify a dog for color, when no such question was raised or discussed by the society making the standard.

As the subject of color is a question of vital importance, I hope all lovers of the Barzoi will closely follow the discussion in the *Stock-Keeper*, and so be able to determine for themselves the vital point now agitating the admirers of the breed.

HIGHLAND.

COURSING AT GREAT BEND.—*Special to Forest and Stream.*—Great Bend, Kan., Oct. 21.—Dogs here from California, Maine, Colorado and Illinois. Forty-six entries in All-Aged Stakes, twenty-two in Puppy Stakes, being the largest entry yet, and of fine quality. Mr. Grace, of California, is an able judge. Everything smooth, weather pleasant, running now progressing in the All-Aged Stake.—E. HOUGH.

WHEN OLD JACK DIED.

WHEN old Jack died we stayed from school (they said
At home we needn't go that day), and none
Of us ate any breakfast—only one,
And that was papa—and his eyes were red
When he came around where we were, by the shed,
Where Jack was lying half way in the sun
And half way in the shade. When we begun
To cry out loud, pa turned and dropped his head
And went away; and mamma she went back
Into the kitchen. Then for a long while,
All to ourselves, like, we stood there and cried;
We thought so many good things of old Jack,
And funny things—although we didn't smile.
We could only cry when old Jack died.

When old Jack died, it seemed a human friend
Had suddenly gone from us; that some face
That we had loved to fondle and embrace
From babyhood, no more would condescend
To smile on us forever. We might bend
With tearful eyes above him, interlace
Our chubby fingers o'er his mane and trace,
Plead with him, call and coax—aye, we might send
The old balloo up for him, whistle, hie,
(If sobs had let us) or as wildly vain,
Snapped thumbs, called "Speak," and he had not replied;
We might have gone down on our knees and kissed
The tousled ears, and yet they must remain
Deaf, motionless, we knew, when old Jack died.

When old Jack died, it seemed to us, some way,
That all the other dogs in town were pained
With our bereavement, and some that were chained
Even unslipped their collars on that day
To visit Jack in state, as though to pay
A last sad tribute there; while neighbors craned
Their heads above the high board fence and deigned
To sigh "Poor dog!" remembering how they
Had cuffed him when alive, perchance, because
For love of them he leaped to lick their hands—
Now that he could not, were they satisfied?
We children thought that, as we crossed his paws,
And o'er his grave, 'way down in the bottom lands,
Wrote "Our First Love Lies Here," when old Jack died.
James Whitcomb Riley.

RUN THE DOGS ON THEIR MERITS.—New Market, Md.—*Editor Forest and Stream:* I see in your last issue the following announcement made by the Forest Beagle Kennels: "We would respectfully announce to the beagle men of America that Frank Forest will not run in the field trials this year (1891), as, in the interest of the National Beagle Club, we desire that dogs other than the winners of last year should make a record this year." I, as a member of the N. B. C. fail to appreciate the magnanimity exposed in the above announcement. Why should one that carried off the colors in a little skirmish, be recognized as a great hero? Bring him out and let him have a chance to have his colors lowered or elevated, and if you don't care for your dog's record, you need not be so thoughtful of the club's interest.—A CLUB MEMBER.

OTTAWA SHOW.—*Editor Forest and Stream:* Allow me to correct the statement made in your last week's issue, to the effect that our late show was a financial failure, as such is not the case, and next year Ottawa will be found as usual, one of the fall circuit. I would also like to state that the cocker spaniel Cora II. was not hanged as stated in some of the sporting papers, but died from natural causes.—ALFRED GEDDES, Supt.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

BRED.

Prepared Blanks sent free on application.
Prairie Queen II.—Ormonde, T. Huston's (Macomb, Ill.) mastiff bitch *Prairie Queen II.* to C. E. Bunn's Ormonde (Victor Hugo—Cambrian Princess), Sept. 15.
Echo—Ormonde, B. R. Morse's (Ridgely, Ill.) mastiff bitch *Echo* to C. E. Bunn's Ormonde (Victor Hugo—Cambrian Princess), Sept. 17.
Fanny A.—Ormonde, F. S. Osborne's (Chicago, Ill.) mastiff bitch *Fanny A.* to C. E. Bunn's Ormonde (Victor Hugo—Cambrian Princess), Aug. 3.
Lady Colney—Ormonde, C. E. Bunn's (Peoria, Ill.) mastiff bitch *Lady Colney* (Beaufort—Toole) to his Ormonde (Victor Hugo—Cambrian Princess), July 17.
Gertrude F.—Ormonde, W. C. Gunn's (Chicago, Ill.) mastiff bitch *Gertrude F.* (Tarkenton—Druidess) to C. E. Bunn's Ormonde (Victor Hugo—Cambrian Princess), July 9.
Eadgyth—Ormonde, C. E. Bunn's (Peoria, Ill.) mastiff bitch *Eadgyth* (Baldur—Elgiva) to his Ormonde (Victor Hugo—Cambrian Princess), July 6.
Flossie P.—Black Duke, John Pascoe's (Woodstock, Ont.) cocker spaniel bitch *Flossie P.* to Luckwell & Douglas's champion Black Duke (champion Obo II.—Woodland Queen), Aug. 31.
Vick—Black Dufferin, Wm. Forbes's (Silsburg, Ont.) cocker spaniel bitch *Vick* to Luckwell & Douglas's Black Dufferin (champion Brant—Bonita), July 30.
Gracie—Black Dufferin, J. Whilcker's (Windsor, Ont.) cocker spaniel bitch *Gracie* (imported Raven—Keady) to Luckwell & Douglas's Black Dufferin (champion Brant—Bonita), July 19.
Gypsy—Black Duke, Wm. Belcher's (Georgetown, Ont.) cocker spaniel bitch *Gypsy* to Luckwell & Douglas's champion Black Duke (champion Obo II.—Woodland Queen), July 17.
Marquitta—Black Dufferin, J. G. Jorgensen's (Woodstock, Ont.) cocker spaniel bitch *Marquitta* (champion Black Duke—Lady Nell) to Luckwell & Douglas's Black Dufferin (champion Brant—Bonita), July 14.
Jet—Black Duke, J. F. Kirk's (Toronto, Ont.) cocker spaniel bitch *Jet* (champion Obo II.—Shadow) to Luckwell & Douglas's champion Black Duke (champion Obo II.—Woodland Queen), July 13.
Maggie B.—Black Dufferin, W. Rice's (Woodstock, Ont.) cocker spaniel bitch *Maggie B.* (champion Bob, Jr.—Jealousy) to Luckwell & Douglas's Black Dufferin (champion Brant—Bonita), July 12.
Rosedale Bess—Black Dufferin, J. F. Kirk's (Toronto, Ont.) cocker spaniel bitch *Rosedale Bess* (Beau—Shadow) to Luckwell & Douglas's Black Dufferin (champion Brant—Bonita), Sept. 16.
Queen Bendigo—Streatham Monarch, John Moorhead, Jr.'s bull-terrier bitch *Queen Bendigo* to his Streatham Monarch, Oct. 6.

WHELPED.

Prepared Blanks sent free on application.
Hallam Queen. Morey Kennels' (Fairfield, Conn.) fox-terrier bitch *Hallam Queen* (champion Ruby Mixer—Richmond Queen), Oct. 11, five (four dogs), by their Vendetta (New Forest—Ebor Nettle).
SALES.
Prepared Blanks sent free on application.
Liberty II. White, black and tan English setter bitch, whelped December, 1886, by Count Gladstone out of Glen, by Kingston and Bancroft Kennels to G. O. Smith, Wheeling, W. Va.
Loss of Kingston. White, black and tan English setter bitch, whelped July 23, 1891, by Kent's Rex out of Liberty II., by Kingston and Bancroft Kennels to W. H. Warts, Lowell, Mich.
Count Frontenac. White, black and tan English setter dog and bitch, whelped Feb. 4, 1891, by Grouse out of Liberty II., by Kingston and Bancroft Kennels to J. W. Fitzsimmons, New Westminster, B. C.
Gypsy. Black cocker spaniel bitch, whelped 1886, by Kingston and Bancroft Kennels to J. W. Fitzsimmons, New Westminster, B. C.
Wardley Nell. Black, white and ticked English setter bitch, whelped July 15, 1891, by Soapy Sponge out of Sinful Pride, by H. Northwood, Martin's Ferry, O., to Mr. Naylor, Niles, O.
Frank Northwood. Black, white and ticked English setter dog, whelped July 15, 1891, by Soapy Sponge out of Sinful Pride, by H. Northwood, Martin's Ferry, O., to Chas. Howe, East Liverpool, O.
Wardley Dart. Black, white and ticked English setter dog, whelped July 15, 1891, by Soapy Sponge out of Sinful Pride, by H. Northwood, Martin's Ferry, O., to John Watkins, East Liverpool, Ohio.
Wardley Dandy. Black and white fox-terrier dog, whelped Aug. 25, 1891, by Painter out of Barrowby Shitty, by H. Northwood, Martin's Ferry, O., to L. W. Breck, Kingston, Ont.
Grinaded. Fawn mastiff dog, whelped March 10, 1891, by Ormonde out of Eadgyth, by C. E. Bunn, Peoria, Ill., to B. F. Miles, Paxton, Ill.
Ormonde—Edmet whelped. Fawn mastiff dog, whelped Feb. 24, 1891, by C. E. Bunn, Peoria, Ill., to W. F. Dean, Santa Barbara, Cal.
Ormonde—Eadgyth whelps. Fawn mastiffs, whelped March 10, 1891, by C. E. Bunn, Peoria, Ill., to Anna H. Whitney, Lancaster, Mass., and a bitch to E. Taylor, Edward Station, Ill.

ANSWERS TO CORRESPONDENTS.

G. H. K., Burlington, Ia.—Can you furnish me with a score card of bull-terriers and pugs? Ans. According to Vero Shaw's "Book of the Dog" the score of points by which bull-terriers should be judged is as follows: General appearance, 5; color, 10; stern, 2; feet and legs, 3; body and chest, 10; head 15; total, 50. Pugs—General appearance, 5; color and mask, 15; tail, 5; legs, 5; body, 5; eyes, 5; muzzle, 5; skull, 5; total, 50.
H. E. P., Lake George, N. Y.—I write to Mr. C. G. Davis, 1538 Walnut street, Philadelphia, Pa. for a standard of points issued by the Irish Setter Club. 2. White on throat or chest to a small extent does not indicate a lack of true breeding. 3. Owners of stud dogs naturally desire to breed to bitches whose pedigree is authentic. 4. In your case you could not register the pups unless you can show an authentic pedigree for three generations on both sides.
J. M. Kitt.—Is it possible to register a pup by a non-registered dog, grand sire and dam registered? Ans. Yes, if the dam's parents are also registered. We have so many questions of this sort that we reprint the rule of the A. K. C. on this subject: "Registry in the American Kennel Club Stud Book can be made only under the following conditions: 1st. Where sire and dam are already registered, or are directly descended from dogs already registered, in said book; 2d. Where dogs possess an authenticated pedigree extending back three generations; 3d. Where dogs (not eligible under the provisions as above required) having won not less than two first prizes in the regular classes at any show or have been placed at any field trial recognized by the American Kennel Club."

HARPER MANGE CURE.—Roalindale, March 6, 1891.—M. S. P. Williams, D.D. Sir—I used your mange cure according to directions and the dog is getting well rapidly. It is almost magic in its cure. Very truly yours, J. E. MORTON.—Adv.

RANGE AND GALLERY.

THE REVOLVER CHAMPIONSHIP.

In this city the Revolver Club, which holds its meetings at the Schuetzen Range in St. Mark's place each Saturday evening, is taking a lively interest in the championship match, and a whole batch of records will come from that organization. The gallery has been arranged for both rifle shooting at 100ft. and for revolver shooting at 20yds. In laying out the range the requirements of the two sorts of practice have been carefully attended to. In rifle shooting a dark range with the light thrown brightly on the target is the best possible arrangement. In revolver shooting such a plan is calculated to embarrass the shooter very much. With the small arm an open, freely lighted range is the best plan for good scores. The revolver bullet travels best in the open, because the shooter can see just what he is doing. Shooting a rifle is largely like looking through a surveyor's instrument, and if the light is good on the object fired at the best bead can be drawn upon it. Among some of the New York Revolver Club men the feeling is in favor of an afternoon of score making on the Cypress Hills open-air range of the club. This, it would seem, was like putting a handicap on their efforts, since with a date announced in advance all risks of weather would necessarily be taken by the shooter.

The entry list for the match is still open, and for information of all who may be interested the conditions are annexed:

CONDITIONS.

Open to any citizen or permanent resident of the United States. Any revolver, maximum length of bore, including cylinder, ten inches. Any trigger pull. Any sight, both sights to be on the barrel or forward of the grip of the pistol hand. Any fixed ammunition. Cleaning allowed only between scores of six shots. Distance, 20yds. Position standing, free from any artificial support, the revolver held in one hand only with the arm free from the body and unsupported in any way. The rear sight shall not be nearer to the eye than twelve inches. Target—Ready measurement disks, one shot on each disk and the measurement to be taken by mechanical Vernier scale from center of disk to the center of the shot hole. Scores—Aggregate of best three in five scores, each score to consist of six consecutive rounds. The five scores to be fired consecutively.

Amateur Standing.—The standing of a contestant as amateur and professional to be determined in each individual case by FOREST AND STREAM rules.

Where not in conflict with conditions herein, the rules of the Massachusetts Rifle Association for revolver competitions to hold. The decision of FOREST AND STREAM to be final on all points.

Any winner of the trophy shall hold it subject to challenge for a term of two years, after which it shall become his personal property. Upon receiving a challenge the holder shall agree with the challenger upon a place and date for their meeting not later than six weeks from the receipt of the challenge, of which meeting at least two weeks' notice shall be given through FOREST AND STREAM, and the shooting at said meeting shall be under the same conditions as the original competitions for the championship trophy. In case of a failure to agree upon a time and place of meeting they shall be fixed by FOREST AND STREAM.

The trophy shall be deposited in the custody of FOREST AND STREAM at least one day prior to any challenge meet, and if required, holders must give bonds to FOREST AND STREAM for its safe return.

The holder shall not be required to accept a challenge pending the determination of a challenge shoot already under date. In case of any dispute about the right of priority in shooting challenges, FOREST AND STREAM shall determine the order of shooting. All expenses of targets and gallery will be borne by FOREST AND STREAM. Contestants will defray all other expenses.

BOSTON, Oct. 17.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. A perfect autumn day greeted the large gathering of riflemen, and as the shooting conditions were good fine scores were made in most of the matches. Sydney, Francis and Severance took the lead in the cup matches, and Lee, Daniels and Francis in the other matches. Following are the scores made to-day, all being re-entry matches, 200yds., standard American Rest Match.

J. H. KRUSE.

CREEDMOOR, Oct. 17.—The eighth sharpshooters' match of the season was shot at Creedmoor to-day. The weather was fair, with a light wind. The scores, possible 50, 5 shots each, at 200 and 500yds.: Cavalry Match, Troop A: F. C. Coudert 45, E. A. Thompson 42, C. M. Baldwin 43, H. V. O'Donohue 43. Infantry Match, Seventh Regiment: H. V. Warren, Co. K, 44; J. D. Foot, Co. F, 43; C. C. Brown, Co. I, 42; E. C. McEwen, Co. C, 42; J. Wright, Jr., N. S. Spink, Co. E, 42; A. S. Jordan, Co. C, 42; W. M. Hasted, Co. B, 41; A. Bostwick, Jr., Co. B, 41; A. W. Trotter, Co. E, 42; A. Bertrand, Co. C, 42; G. S. Towle, Co. D, 42; B. M. Dunn, Co. G, 45; H. Coburn, Jr., Co. C, 45; D. L. Williams, Co. G, 44; D. C. Meyer, Co. C, 44; J. E. Scully, Co. B, 43; G. J. Weaver, Co. I, 43. Twenty-third Regiment: E. J. Kraft, Co. D, 44; W. H. Stokes, Co. H, 43; J. T. Warren, Co. K, 47; H. M. Field, Co. E, 45; F. A. Wells, Co. B, 47; N. S. Spink, Co. E, 47; C. W. Simmons, Co. A, 47. Thirtieth Regiment: E. W. Lotz, Co. G, 48; W. Donaghy, Jr., Co. H, 46; J. McNevin, N. C. S., 47; G. E. Constable, Co. F, 46; G. W. Cowen,

second Smith 8, third Virden 7.

to accommodate an secretary-treasurer-elect respectively of the American Canoe Association. These officers are making a tour of the Eastern clubs, and the Springfield club, because of its size and prominence in the association, was honored by the first visit. The president, left on the 9:35 train west, and will visit the Rochester club next. Capt. Emil Knappe presided, and short speeches were made by the visitors, while music was furnished by the Springfield Banjo Club, three members of which are also enrolled in the canoe club. F. A. Nickerson also favored the company with a few of his characteristic songs and recitations. Before leaving Com. Winnie announced the appointment of E. H. Barney as a member of the regatta committee for the coming year. There were at the table besides the two guests: Capt. Emil Knappe, Dr. H. E. Klee, E. H. Barney, F. A. Nickerson, E. H. Hall, W. C. Marshall, J. M. P. McGowan, P. M. Gallagher, P. J. Norton, John Leshure, M. Surridge, H. D. Bangs, H. B. Heath, J. C. Sargent, Henry Robinson, J. G. Reed, L. W. White, W. B. Hodgdon, F. C. Sargent, W. H. Parks, C. A. R. Eason, R. C. Cooley, W. C. Gunn, W. F. Parsons, R. F. Warren, J. C. Kemater and E. N. Richards.—*Springfield Republican.*

COOPER'S POINT Y. C.—The open race of the Cooper's Point Y. C. on Sept. 28 resulted as follows: First class cabin sloops, Nance wins, with 7 starters; second class open cats, Bonnie Jean wins, with 4 starters; third class open cats, King wins first prize, Clark second prize, with 6 starters; fourth class tuckups, Louisa wins, with 4 starters; fifth class tuckups, Annie wins, with 4 starters; sixth class open cats, McGinty wins, with 4 starters; the Louisas also wins the Commodore's Cup in the sail-off Oct. 3. Wind light S.W., with a waning ebb tide, and it was agreed by the sailing masters that the regatta committee steamer should anchor as a lower turning mark in case the leading boat could not reach the regular mark. This was done with the above results. Bonnie Jean, Riverton Y. C., made the quickest time over the course, and did some fine sailing. The little double ender McGinty was the feature of the race, being third to turn the lower mark. She is fine-lined and as slippery as an eel. The Nance, Corinthian Navy, the smallest cabin sloop on the Delaware, save the Lark, cutter, Trenton Y. C., did splendidly, her large clubtopsail drawing nicely close-haul d. The Louise did phenomenal sailing. Soon after the start on the sail-off race she was a man overboard by the line parting. He was picked up, and yet she won by 6m. The Annie wins a purse of \$200 and her prize. The King sustains her well earned reputation as a prize winner in the C. P. Y. C. and the Clarke, last year's champion in the same club, did remarkably well, winning second prize. She was handled by fleet captain Tiarks. The regatta committee were Commodore W. Kinsey, W. Cook and Capt. R. W. Wilkins. The Hild, cabin sloop, also had a spirited race, and the Clarke, Eckman and Burton sailed a photo race. Clarke wins. I mention these races to show that, although it blew almost a N.E. gale, the racing season for us is not over, although the Philadelphia boats are nearly all out of commission.—POINTER.

MASSACHUSETTS Y. C.—The new winter quarters of the Massachusetts Y. C. will be at No. 15 Hayward Place, Boston, where a very comfortable club house has been fitted up. The summer stations at Roe's wharf and Dorchester have been closed.

CORINTHIAN Y. C. OF SAN FRANCISCO.—This active club closed its season on Oct. 17 with a reception at the club house, Tiburon. The club has one of the most attractive burgees in the yacht list.

BRUNHILDE, schr., J. J. Phelps, has just been chartered to the Board of Trade of one of the West India Islands. A colored crew came up last week and is now fitting her out at Tebo's wharf.

SULTANA, steam yacht, T. L. Park, was at Southampton at last arrivals, from Antwerp. She was in dock for overhauling.

CANOE-YAWLS AND CANOE-YACHTS.—The canoe-yawl during the past season has been very much to the fore in the Solent races. First, the Spruce, and later the Torpedo, both light displacement craft of what is known as the "Oxford" type of yawls, have raced against the fleet of crack 1/2-rating yachts, and frequently have competed successfully. Many of these yachts are provided with lead keels of about 1/2 ton weight, so that the battle has been one of differing types. It has usually been when sailing on a reaching wind that the canoe-yawls have proved their superiority. Both these boats were built by Mr. Theo. Smith, Medley, Oxford. The latter made her passage by sea from the Thames to the Isle of Wight. Her owner, Mr. Walter Stewart, will probably be known by name to most canoeists, as the designer and sailer of the Churn canoe, which twice won the £500 challenge cup of the R. C. C. The competition between these widely different types is another proof of the suitability of the Y. R. A. rule of measurement, as L. X S. A. rating appears to have classed the boats very fairly together. Thus far it seems quite reasonable to assume that canoes and canoe-yawls might fairly be raced together under the same rule. As before mentioned in these pages, the rating of a canoe of 16ft. with 112-3/4 ft. of S. A.—the R. C. C. limit—is 3, and provided canoe form and the other definitions of a canoe-yawl (R. C. C.) be retained, and this rating not exceeded, we can see no reason why all the R. C. C. races should not be made "open to canoes and canoe-yawls not exceeding 3 rating."—Model Yachtsman and Canoeist.

PAPPOOSE-CITY OF THE STRAITS RACE.—Detroit, Mich., Oct. 19.—Noticing the account of the Pappoose City of the Straits race in your paper of Oct. 15 I thought it no more than fair to the City to say that Pappoose gave the City 1m. 33s., instead of the City giving her 23s., thus beating the City 3m. 24s. instead of 5m. 35s., as stated. The accident to the City occurred when both yachts had gone about 8 miles on the first leg. The middle peak balliard block gave way, leaving her with the gaff dropped for five minutes, all this time the heavy sea driving her to leeward. We believe this mishap cost her the race, as it certainly delayed her more than the length of time she was beaten. She showed her speed going free by gaining on Pappoose 1m. 5s. coming home.—E. B. W.

ATLANTIC, schr., has been sold by E. C. Homans to C. B. Secley and W. H. Marshall, of the Larchmont Y. C., through Hughes' agency. The yacht was put in commission this spring, and partly sold, but, on examination, a part of her quarter was found to be rotten from water which had found its way in from careless laying up. She was dismantled and laid up beside Sachem in Northport harbor, where she has laid all summer.

UTOWANA.—W. W. Durant has cabled from Cowes to J. Beaver Webb, the designer of Utowana, that the yacht went through the recent gale in a most satisfactory manner, though losing her jib boom and damaging the steering gear. She is now at Cowes, after calling at Fayal, Madeira, Gibraltar and Lisbon.

WHIM, schr., Mr. Jennings, has recently been hauled out at Wingham's and her planking stripped off. The oak dead-

woods and the greater portion of her frames of backstake and oak, as well as much of the planking, also oak, are entirely rotten and a general rebuilding is necessary. The yacht was built as late as 1885, and has been in commission for the greater part of the time.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

C. O., New York.—If you will send your address we will answer by mail.

J. B., Missouri.—The bird of which you send us wing is the broad wing hawk (*Buteo latissimus*).

J. K., West Gardner, Me.—The Maine deer season will close Jan. 1. Write to Capt. C. F. Barker, Rangley, Me.

H. W. C., Stockbridge, Mass.—Try the makers of loading tools, whose addresses you will find in our advertising columns.

S. T., Philadelphia.—We know of no recent work on game reports; the FOREST AND STREAM files contain notes on scores of them. 2. Use the larger caliber for large game. 3. The 12-gauge will kill the further. 4. The powders now in market are not recommended for that use.

J. E. B., Oswego Falls, N. Y.—1. Will you kindly inform me through your valuable paper if wild rice lives from the root or does it grow each year from the seed? 2. How old are pointer dogs when they get their nose? Ans. 1. It grows from the original stock, as other grasses. 2. He should point, naturally, when from six to ten weeks old.

F. A. K., St. Anthony's Park, Minn.—On opening the crops of two pintail ducks, I found the small seeds in one and the large pieces in the other. Will you answer in next issue what they are? Ans. Through the courtesy of Dr. Merriam we have the identification of the grass seeds by the botanist of the Agricultural Department as belonging to the tall prairie grass or switch grass (*Panicum virgatum*). The small tubers have not yet been made out, but efforts will be made to determine them. The grass is thus described in Dr. Vasey's report on "Agricultural Grasses and Forage Plants of the U. S.," 1889, page 28, and the plant is figured on plate 16: "A tall perennial grass, 3 to 5 ft. high, growing mostly in clumps in moist or even in dry, sandy soil, very common on the sea coast, and also in the interior to the base of the Rocky Mountains. This is a good and prolific grass if cut when young; when ripe it becomes harsh and unpalatable. It forms a large constituent of the native grasses of the prairies, particularly in moist localities. It is said to be cultivated in some parts of Colorado, and with very satisfactory results."

BLUEFISH, WEAKFISH and STRIPED BASS

Can be caught in any of the waters around New York City. Big bluefish are in large numbers along the coast. We can supply the tackle. You can do the rest.

Call and examine our stock, or send us 10 cts. to cover postage, and we will mail you our 136 folio page illustrated catalogue.

ABBEY & IMBRIE,

Manufacturers of All Grades of Fishing Tackle,

18 Vesey Street, New York.

A SLOW GROWTH

It has taken us nearly a quarter of a century to build up our business. What an unwritten history of failures and successes, of bridges built over swollen rivers, of persistent goaheaditiveness, of planning to make and keep trade, of intelligence in buying in the right markets.

We think we have fairly won the public confidence which we now enjoy. We think we fairly ask for your confidence. Our past record is an open book—read it. The present or the future must of necessity be as free from tarnish.

MONTGOMERY WARD & CO., 111 to 116 Michigan Ave., Chicago.

Notice to Fishermen. Cut Prices for 1891.

Here I am again as usual cutting the prices of Fishing Tackle. Low prices and good quality of goods increases my business. It will pay you to buy your tackle in Brooklyn.

CHARLES DALY HAMMERLESS SHOTGUN

WITH OR WITHOUT
AUTOMATIC SHELL EJECTORS.

Important Notice!

Instead of giving the dealer larger discounts we have decided to give the sportsmen the benefit of a reduction, and have concluded to make extraordinary low **Net Prices** on the **Charles Daly Guns**.

While making this reduction we might mention that the high standard of workmanship for which the Daly gun has always been renowned shall be retained. We have expert testimony that these guns are equal in workmanship to the celebrated Purdey guns, and far superior to all other SO-CALLED London makes, such as Greener, Scott and Westley Richards. An examination will soon convince the unprejudiced customer. They are more conscientiously made, more beautifully finished, handsomer in appearance, with shooting qualities unsurpassed, in fact far ahead of guns costing \$100 more.

Should you live in or near New York, we would invite you to call and examine our stock and be convinced. If you live anywhere else in the United States and your dealer has none in stock, insist upon his ordering one, or order one direct from us. **Send for Catalogue.**

NEW PRICES:

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Killdeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, \$3.00. FOREST AND STREAM PUBLISHING CO., 313 Broadway, New York.

LOG CABINS

AND

HOW TO BUILD THEM.

By WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for \$1.50.

ter Al, fee \$25. Al was bred by the late Mr. Allin and trained on ruffed grouse by his handler. Two puppies by him for sale. Address F. L. NICHOLS, 54 Taylor street, Springfield, Mass. 11

At Stud.—English greyhounds, Gem of the Season, winner of over 50 firsts and specials. Pious Pembroke, winner of over 20 firsts and specials; Dexter, corded coat poodle. Pups from the above for sale. GREYHOUND & POODLE KENNELS, Salem, Mass.

Scientific Education of Dogs FOR THE GUN.

A new work by an English writer,
"H. H."

The instructions here given are the result of the author's amateur practical experience of thirty seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

ANSWERS TO CORRESPONDENTS.

90 per cent. of the seals killed by pelagic hunters sink and are not recovered. It is safe to say, therefore, that in years of successful poaching the actual number of seals killed is fully 500,000. As this practice has been continued for a great many years a very small amount of calculation will serve to show that the number of fur seals inhabiting the Prybilov Islands must have been fully up to the estimates mentioned in Mr. Palmer's address. Pelagic sealing is undoubtedly the most wasteful of all methods of taking the fur seal, and the present legalized method of driving is likewise very destructive to seal life. The remedies proposed by Mr. Palmer and others, to stop the killing in Bering Sea, drive only killable seals, and proclaim a close season, must certainly recommend themselves to every one interested in the future of the fur seal.

BROWN TROUT VS. BROOK TROUT.

THE Caledonia Fishing Club has a singular experience on its hands in its leased waters of Spring Creek. The creek has been liberally supplied for the past two or three years with brook trout fry, and yet the most expert fly-casters have noted a marked decline in the catch of *fontinalis*. The usual enemies of the brook trout were charged with the destruction of the fish; but Mr. Annin has discovered that the brown trout is the real culprit, or at least one of the most active enemies of the brook trout. By setting a large-meshed gill net in the creek he caught a 6lbs. brown trout, whose stomach was filled with brook trout. An 8-pounder, taken later, had captured a brook trout 6 inches long. Mr. F. P. Brownell caught a brown trout last May weighing 11lbs., and Mr. Annin is convinced that examples weighing 15lbs. exist in the lower part of the stream, near the Caledonia hatchery, from which the brown trout was introduced into the neighboring waters. The brown trout grows very large, is a powerful fish and a voracious feeder; it is feared that it will soon exterminate the smaller, but more beautiful, brook trout unless kept rigidly in check, if not, indeed, removed entirely from brook trout waters. The brown trout is a magnificent fish, and a decided acquisition to Eastern waters, which have no native black-spotted trout; but if it should unfortunately clash with the interests of the fly-fishermen, there will be "trouble in the camp" at once. The Caledonia Fishing Club will try to exterminate the brown trout in Spring Creek before they commit any fatal damage. The problem of selection of fish suitable to a given region is a grave one, and well worthy of serious study before introducing a predatory species. We invite free expressions of opinion upon this important subject.

SNAP SHOTS.

WHILE deer hounding on Long Island is limited to the first ten days of October, the still-hunting period extends to Nov. 1, the law in this respect being identical with the general statute. Four baymen who had clubbed a deer to death with their oars in Champlins Creek, Islip, on Oct. 17, were haled before a justice for having killed game out of season; but were quite properly discharged. The Long Island deer area is so limited and the hunters are so multitudinous that prudence dictates a revision of the existing law in the direction of a more restricted season. The codification bill of last winter provided for a five years' close time. Such a clause, we trust, will be contained in the amended law. This failing, those interested in the game might prevail upon the county supervisors to enact special ordinances, as they are empowered to do.

In a suggestive note last week Mr. E. E. Thompson wrote of the breeding of certain wild animals for their fur, and of the possibilities of profit, as well as of pleasure to those whose tastes incline to natural history. It goes without saying that we have not learned to use to best advantage many of our natural resources of this character. On the contrary, the history of man's relation to the brute creation shows in numerous instances that species have been foolishly exterminated, which, with moderate foresight and recognition of their economic value, might profitably have been conserved for the benefit of the human race. It was not until the buffalo was all but extinct in this country that any intelligent effort was directed to determine its adaptability to domestication and to furnishing a substantial contribution to the country's food supply. A writer in the

London *Spectator* has just pointed out that by domestication of some of the species of large animals now wild, a valuable addition might be made to the meat food resources of mankind; and curiously enough he selects as a fit subject for experiment in this direction an African species which now seem doomed to meet the fate of the buffalo in America. This is the eland, one of the largest antelopes, whose flesh no less an authority than Lord Randolph Churchill has pronounced to be "peculiarly excellent, having in addition the valuable property of being tender immediately after the animal is killed, which makes it much appreciated in Central Africa, where the meat is usually as tough as shoe leather and nearly as dry." In size the mature eland is as large as a two-year-old short-horn; it is hardy, can live on scanty fare, and when given good pasturage puts on fat; it is quite tame, is easily domesticated, and can be acclimatized. Specimens have been reared in the Jardin des Plantes, in Paris, and also on English estates. "It seems to be a waste of the resources of nature," says the *Spectator* writer, "to allow these fine creatures to be exterminated, as they soon will be, in our new African empire. Why should we not save the eland, the harmless antelope, the koodoo, and other large African antelopes from extermination—and even try to rear some in England? The experiment may be recommended to some of the noble owners of parks and chases who have already done so much to preserve our own deer and wild cattle from extermination. America has allowed the bison to perish. Shall we not take warning, and preserve for our own use the splendid African antelopes which, within the memory of man, were a thousand times more numerous than they are to-day?"

Among those who visited this city last Thursday to attend the conference of Fish Commissioners and others, relative to international legislation, was Mr. J. U. Gregory, of Quebec, Agent of the Department of Marine and Fisheries, and well-known to scores of visitors to Canada, because of his never-tiring courtesy to anglers and sportsmen. Mr. Gregory was here to represent the Dominion Government and expressed himself as being greatly disappointed that the session should not have been prolonged, so that he might lay before the committee the special measures toward securing which their influence was desired. Mr. Gregory tells us that the deer from Maine are invading Canada in ever-growing numbers without heed of boundary lines and import duties; and are now found in sections where they have not been known for many years.

It is a pleasure to record the work done by the Anglers' Protective Club, of Rangeley, Me., in replenishing the fishing resources of the Androscoggin Lakes and tributary waters in Maine; and we trust that the report given in our angling columns may call out substantial recognition from residents of other States who go fishing in Maine lakes. The work of the association has been intelligently conducted; the Maine Fish Commissioners are in co-operation with the Rangeley people; and sufficient has already been accomplished to warrant public confidence in the movement.

We printed the other day a note from Mr. Verner de Guise, of Mahwah, N. J., reporting his complete success in rearing English pheasants. The publication has brought to Mr. de Guise numerous letters, which show that the subject is one of wide interest; and it is probable that within a year these birds will have been introduced into the game covers of widely separated sections of the country. The Tuxedo Park managers have been successful with their birds this year.

The Hon. "Buffalo" Jones, late of Kansas, now of Camp Cook, Neb., sailed from this port last Tuesday, having in charge ten of his cross-bred buffaloes, which he is conveying to Liverpool there to grace the park of Mr. Chas. Leland. Mr. Jones, it is said, will receive \$1,000 apiece for every one of the animals delivered in good condition at their destination. These buffaloes are a cross between the buffalo and the domestic cow; but it is difficult to distinguish them from the pure buffalo.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

FATE OF THE FUR SEAL.

WE publish in our columns a very important paper by Mr. William Palmer, taxidermist of the National Museum, who went to the Seal Islands last year to obtain a series of skins of walrus, seal, sea lion and other animals of the Prybilov group for the Museum collection. His observations are those of a trained naturalist, and deserve the closest attention on this account, and because of the importance of the subject treated. The address was read by the author before the Biological Society of Washington, and was discussed by Doctors Dall, Gill, Bean and others. It was stated by Dr. Dall that the estimates of the seals on the islands were greatly exaggerated. In his opinion a million of seals never were gathered on the rookeries at one time, and the diminution now apparent to every one is due chiefly to the number of young males legally killed. He recalled the fact that in the early days of the industry fur seal skins were worth only 12½ cents each; but about 1867 the fur became fashionable and the business was more carefully managed. At first the principal market was found in China, and the European demand was very small. The invention by Raymond of a machine for preparing the skins revolutionized the industry. Dr. Dall attributes the present decline chiefly to the excessive killing of young males: there is not now a sufficient number of males on the breeding grounds to maintain the species. He admits that the method of driving referred to by Mr. Palmer is also very destructive. The excessive destruction of males began in 1872, and has continued to the present time.

It is evident that the number of seals on the Islands must have been much larger than Dr. Dall is willing to admit when we consider the enormous number killed within the last few years in Bering Sea. For the last three years the skins sold by poachers averaged fully 50,000 a year. It is generally known that most of these are females containing unborn young. The actual destruction of seals, on the basis of the returns, is 100,000 yearly; but besides this it is well known that from 50 to

The Sportsman Tourist.

A NIGHT OF PERIL.

A REMINISCENCE OF THE NEPIGON.

"There is a day of sunny rest
For every dark and troubled night;
And grief may hide an evening guest,
But joy shall come with early light."

ON my second trip to the Nepigon, the finest trouting waters in the world, an eventful incident occurred which came near sending me to the portals of an unknown world. It happened while I was in camp at the lower end of Pine Portage, and has so impressed itself upon the tablets of my memory that the mere mention of that famous stream reproduces it again in all its startling reality. Hoping it may prove of some interest to the gentle angler, if not to the general reader, I will outline it as briefly as possible.

It was late in the afternoon of a most charming day, when the azure sky was resplendent in fleeces of gold and crimson, the atmosphere deliciously balmy and all nature rejoicing, that with a light and happy heart I started with rod and net in hand to seek some unexplored waters in the rapids below Robinson's Pool. Leisurely I threaded my way along the old worn trail, through tangled forests of sombre pine and hemlock, tamarack and balsam, with sylvan notes of birds in aureate hues and rosy tints greeting me from bush and brake. Ever and anon a butterfly in gossamer wings of violet velvet and spotted silver, a creature to brush the dreaming eyes of a poet, fluttered in the dancing sunbeams; flowers rich and rare, like treasures of silver and gold, nodded in the waving grasses; mosses and ferns so daintily delicate and multiform came into pleasing review at infrequent intervals, while as if to excite idle curiosity, a tiny field mouse, startled by noisy foot-fall, peeped with wide and wondrous eyes from beneath some friendly leaf. So fascinated was I with all these delights of forest and pathway that for the present the capture of radiant trout, with the rhythm of revolving reel, was in abeyance. Soon the sounds of roaring rapids dashing its way through huge masses of broken rocks and massive boulders fell upon the ear in tones of moaning thunder, while the white waters that leaped in one unbroken sheet o'er the ragged falls roared and raved like the terrible winds of a western cyclone.

If the walk through the whispering forests with their waving tops in golden glow, the impish play of dancing shadows, the entrancing melody of beautiful birds and the grand music of torrent stream was rapturously impressive, far more attractive were the magnificent pools, Hamilton's and Robinson's, as I admiringly viewed them from the eminence above, being pictures in dazzling settings of glimmering gold and leafy green, of such rare and bold poetic beauty that nature only could present.

Down in the deep, translucent waters, as I carefully picked my way along the rugged embankments, I could here and there see poised by rocky crevice or granite boulder the quivering *fontinalis* in his shapely outlines, too beautiful indeed to fall a victim to the lure of artificially wrought fur and feather. I cared not then to coax this lovely idol of the icy waters to the feast deceitful, so strolled along in the laughing sunshine and grateful shade, under the pure blue sky, drinking in new life and strength with every step, as I intently looked for the unexplored pool, the Utopi in dream of the gentle angler who seeks the hermit trout in his spangled robes of vermilion dye. In such delightful exploring your years are forgotten, often your maladies, and even your white hairs are no longer in remembrance. It is a happy jaunt, and thrice blessed he who loves the angle, for it brings him in deep communion with the charms and loveliness of nature. "Ah! no copyist of the old masters can render his original upon the canvas as faithfully in every line and hue, or with expression so perfect and speaking, as it pleases God here to translate his own works in the engravings of this marvellous page!"

"Nature paints not
In oils, but frescoes the great dome of heaven
With sunsets, and the lovely forms of clouds
And flying vapors."

My ramble soon brought me to Robinson's Falls, a beautiful sheet of water that tumbles and rages into seething foam, and then my perspiring walk along the tumultuous rapids commenced. It was over immense piles of shattered and terraced rocks, that glittered in the sunlight like blocks of silver; by rude unfashioned tracts along hilly sides; through dense forests of cedar, balsam and spruce that defiantly crowded to the very edge of the roaring waters; all uniting in investing the landscape's continual pagentry with a nameless charm that made me forget my weariness and sporting desire, and

"A wild dedication of yourselves
To unpathed waters, undream'd shores."

At last, after much exertion, I came to a pool hemmed in by immense blocks of stone, so lonely and lovely in fleck of pearl and sapphire as the slanting sunbeams fell athwart it, that you'd declare it the isolated retreat of some naiad queen. Against its walls of adamant the rushing waters, which sparkled like a garle of jewels, were churned into masses of foam that beat and beat in vain, for this ideal pool firmly retained its rippled beauty unmolested, despite the fierce assaults of the tireless and violent current. I was more than charmed with this deep and secluded basin, and as access to its shimmering waters was comparatively easy, at once clambered down to the edge of the roaring river, in which I found an immense rock, as if placed there by Titanic hands, and which appeared to command the complete limits of this picturesque pool. It was 2 or 3 ft. from the shore, and 6 or 7 ft., I thought, from top of the bank, and as it seemed to me an easy jump, undaunted made the leap, alighting upon my feet with a terrible jar that shook my entire system. The distance was much greater than I had carelessly calculated, but as I was unharmed it mattered not. What a lovely little sheet of protected water it now appeared, and so artfully concealed by crescent shore and iron-faced cliff that no angler could wish a more inviting isolation. You could gaze and gaze again into the limpid waters, as if expecting some fair nymph with seraphic eyes and golden locks to arise to the crystalline surface and greet you with an entrancing song of the murmuring surges and the ever tossing foam.

My admiration of this hidden retreat in the golden glow of a declining sun was arrested by the enthusiasm of the angler reasserting itself, and then I soon had my fly dancing on its rippling surface, where it met with such an instantaneous and savage response as to almost throw me off my balance. Fortunately I hung the spotted redcoat, and at once ascertained that I had a foeman worthy of my steel. His strength, activity and strategy gave me a world of pleasure, and after a gallant battle of about five minutes I had his spangled sides pressing the narrow meshes of the net. He seemed to be all of five pounds, and was as magnificent a specimen of the *Salvelinus fontinalis* as ever beautified a dimpling pool. It is needless to detail the enjoyable trouting I had here, as that is not my purpose in this letter, but will simply state that for about an hour I caught trout with my little Chubb rod as fast as I could hang and kill them, for at nearly every cast I had a royal rise, and frequently two would break at the same time for the tempting fly. It was a regular preserve, and I am confident I could have taken fifty that evening if time and inclination had permitted.

After securing eight of the iridescent beauties, I discontinued the sport and prepared to thread my way over the tortuous route to camp. Turning and facing the shore rock from which I had jumped, I was greatly astonished at its height, yet still thought I could reach its top without much trouble. Throwing my trout and landing net to the bank, and inclining my pole, which I had not taken apart, against its surface, so I could easily procure it when on shore, I leaned against the precipitous rock, which gave me an angular position, and then reaching up for the top was amazed, after most strenuous efforts, to find that I could not grasp it by a foot or more. No wonder my jump to the inviting rock had so jarred me, for the distance was fully eighteen inches more than I had reckoned. Here was a situation not at all pleasing, for I was satisfied if I escaped from my unfortunate position, it would be by some means other than climbing the flinty surface of the cliff, as that was just then impossible. I might leap for the edge and manage to reach it with outstretched hands, and probably pull myself up; but if I failed, down into the rapid current I would assuredly go, between the shore line and the huge rock upon which I was standing, there being in the intervening space fully three feet of water, as I have before stated, and deep enough to drown. I keenly knew the danger, and concluded I would not just then attempt it, and only when necessary as a last resort. I looked along the precipitous shore to see if there were any chance near, where a sudden plunge in the icy waters would carry me to some low or shelving rocks that I could scale in safety. The roaring rapids, as they take their sinuous way with a swiftness over and against the sharp-edged blocks of gray granite, gave me no encouragement, as it would be fatal ever to be engulfed in its seething foam. From this dread element I turned painfully away. All this time I was consoled by one thought, that of my comrades in camp, who would surely search for me on my non-appearance.

I finally sat down upon the weather-stained rock, with my legs dangling over its inner side, and while looking at the smooth surface which confronted me, endeavored to evolve some method of escape. Nothing, however, offered. Had there been a crevice in the rock I could have utilized my fishing rod for a peg or two, but sad to relate, it was unfortunately smooth as ice. Even had the rock upon which I stood disclosed a seam on its inner surface that I could also have used to advantage, but it was not only unwrinkled, but as flinty as the Egyptian Sphinx. Turn to which way I would, escape was shut off at every point in view. I was completely trapped, and that only by a few inches of intermediate space. It was not only provoking, but apparently hopeless. I was now fully satisfied that unless my comrades rescued me I was a prisoner for the night. Being in an untrodden and almost inaccessible part of the rapids, a night search, it struck me, would evidently prove futile. The pangs of hunger and the chilly night air I could endure, but they would assuredly rob me of much vitality and probably unfit me for any desperate undertaking with a view to my escape the next day. Nothing, however, was to be gained by despondency, so arising from my position, I turned and faced the raging waters and then watched the shadows as they lengthened on the purple hills, the clouds as they glowed with the sunset red, the gray twilight as it deepened into night. Soon the moon, a pale curl, was observable in the west, while the jeweled sky displayed its twinkling lights, a cool breeze sprang up that awayed the luxuriant forest to a moan. It was night, and the nocturnal rambles were now abroad. The flight of a night hawk, the sweep of a whippoorwill and the quivering wings of a bat gave some animation to the wild scene, while the far-away hoot of an owl fell in dismal notes upon the ear. Turning to the shore, I noticed shrub and bush alive with ephemera, while many insects of grotesque shape, as unlike the creatures of sun as though from the Stygian world, were darting about as of in pleasure or rapine bent. Then came resonant sounds from

"More hideous foes than fancy can devise;
With helmet heads and dragon scales adorned."

Under other circumstances I could have enjoyed this living night world that alone belonged to the moon, to the deer, to the darkness, and reveled in the spangled heavens, or the foaming rapids of the wild and picturesque river, but as a prisoner on that fated rock I was in no mood for the poetry either of the skies or of the earth. During all this time I clung to one hope—my companions, every one of whom I knew would leave no stone unturned to solve the mystery of my absence.

The air gradually grew colder and the wind increased as the night wore along and soon the heavens took on a haze, and the gray spots on the fleecy clouds began to deepen. The twinkling stars, the companions of my vigils, were gradually being blotted out, until finally the Pleiads were alone left, and soon they also, seemingly weary of their loneliness, disappeared from the firmament. A storm was evidently brewing, as "a looming bastion fringed with fire" in the dreary west revealed, and, as if my position were not already sufficiently uncomfortable, was also to make me feel its cruel wrath. Back and forth upon the circumscribed space of that iron rock I stamped and beat my body with active hands to keep myself from the chilly influence of the terrible night air. Oh! how slowly the weary hours dragged along, and with what a solemn refrain the rushing

waters beat as they plunged against the solid blocks of ragged granite in the bed of the roaring river.

The moon had vanished behind the dark mountains, withdrawing her little delicately-curved golden horn as if to blow a trumpet warning of the future. A glance at my watch, by the flash of a match, told the midnight hour. Thankful was I, indeed, that the gray of dawn would soon greet me from the eastern hills. "Would the storm which was fast gathering break ere then and chill me to the marrow, and would my companions find me in this wild spot?" were questions of vital interest just then to me. "Ah! what's that, a shout? Thank God," I cried, "I am saved!" Already they are scouring the woods and stream and will assuredly rescue me from my unfortunate position. I yelled aloud in response, but, much to my surprise, it remained unanswered. Now I could see the flash of their torches gleaming through the dark forest as they carefully wandered along in their eager search. Anon another shout reached me, to which I again replied with stentorian lungs. Still no welcome answer came. How eagerly I watched the bright light of a blazing torch, and with what mathematical accuracy I measured its distance, as it moved. Fortunately it came toward me and again I shout with a frenzy born alone of despair, and still no response. Ever watchful of the moving light along the bald and jagged summits that hemmed me in, I soon discovered that it was now departing from me. Again and again I gave a frenzied shout, but alas! The torch light was fast fading in the distance and my companions, whose hearts I knew were true as steel, were deploying in fruitless fields.

It now dawned upon me that their halloo was from the windward, and therefore easily heard, while mine, on the contrary, could not prevail against the strong breeze which was gradually increasing, and also the terrible roar of the rapid. I must confess I grew somewhat despondent, yet still was cheered by the thought that the early morning would find them again actively on the search.

Everything was now wrapped in deep gloom, with the chaos of commingled phantoms of things of the night. The heavens were like a funeral pall, the forests groaning a dirge-like lament with a long drawn piercing moan, as the winds swept fiercely through them, while the water with its weird roar dashed itself to threads and flakes of foam as it swirled along its sinuous and rocky bed. My brain was keenly alive to every change in the elements, while my feet and arms were beating in union with the stormy cadences of the wild, plunging rapids. A thousand fantasies assailed me in that dismal darkness, with the terrific beat and bend and twist of crashing trees; even dread despair laid his cold hands upon me, and led me to think of the world beyond. Would my attempt at escape by the surging rapids, among those sharp protruding rocks, result in my entering the Halls of Valhalla or was I to find enduring passage with Charon, the grim ferryman of the Styx. "The flat of death is inexorable. There is no appeal for relief from the great law which dooms us to dust. We flourish and fade as the leaves of the forest; and flowers that bloom, wither and fade in a day, have no firmer hold upon life than the mightiest monarch that ever shook the earth with his footsteps. Generations of men will appear and disappear, as the grass, and the multitude that throng the world to-day will disappear as footsteps on the shore. Men seldom think of the great event of death until the shadow falls across their pathway, hiding from their eyes the faces of those whose loving smile was the sunlight of their existence. Death is the antagonist of life, and the thought of the tomb is the skeleton of all feasts. We do not want to go through the dark valley, although its dark passage may lead to paradise; we do not want to go down into damp graves, even with princes for bed fellows." After all, why shrink from life immortal,

"Since every man who lives is born to die,
And none can boast sincere felicity,
With equal mind what happens let us bear.
Nor joy nor grieve for things beyond our care,
Like pilgrims to the appointed place we tread;
The world's an inn, and death the journey's end."

My moralizing on the Stygian ferry was suddenly relegated to oblivion by a pitiful howl, as if from a wolf, that fell acutely upon my attentive ear. Soon I heard the stealthy footfall of the prowling beast at the edge of the cliff, and then I saw the fierce gleam of his flashing eye and the ugly glimmer of his sharp teeth.

Ah! he is feasting on my beautiful trout, the odor from which doubtless attracted him to the spot. I preferred that he should dine upon them rather than upon my anatomy, though I was positive I could master him if he dared attack me upon my rocky pedestal. Little did I think the lovely princelings of the pool were to assuage the hunger of a savage wolf. It aroused my animosity to ascertain that these highly-prized darlings with the dotted jackets were fast disappearing in the rapacious maw of this accursed animal, and I therefore dearly longed to be where I could give him a fierce battle for the spangled spoils.

My rod, which I had unjointed and put in its sack ere nightfall came upon me, I untied, and taking out the first joint and butt, put them together, and then placing thereon my Frankfort reel, had a slung shot heavy enough to brain any animal of ordinary size. Being thus armed, I stood on the inside edge of the rock and waited and watched with faithful patience in hopes of getting in a fatal blow upon the purloining wolf—for such I took it to be—should he come near the edge. At last I was rewarded, for the crafty animal in his gluttony had nosed one of the trout near the brink of the cliff, and just as his gleaming teeth were about to close upon the radiant fish I gave him such a swinging blow with the reel that he staggered and fell with a howl of pain, his head and forelegs hanging over the ragged edge of the rock. Quick as a flash, I fortunately grabbed one of his legs in that cimmerian gloom, and giving it a sudden and energetic yank, the apparently senseless animal involuntarily slipped from the cliff, striking the water with a splash and a yelp, and was soon dashing down the torrent never again, I hope, to feast upon a *fontinalis*. Although my hands were crimsoned with gore, and my situation a desperate one, I smiled to think that the little Chubb rod was doing double duty, taking trout at one end, slaying wolf at the other, both sustaining and defending life. Trifling as the sanguinary incident was, it revived my drooping spirits, giving me an assurance that I might possibly succeed in fighting the battle for my release.

I had become very cold by this time, it requiring the most active exercise on that flint rock to restore me to any degree other than severe suffering. In addition to this, a dense blackness with "ragged rims of thunder brooding low" had now settled all around me and to such an extent that it became impossible to see even the inner shore line or the edge of the rock upon which I stood. Soon the heavens were rent in twain by a blast of lightning that seemed to fly like a dazzling shaft of flame from the north. It was almost instantly followed by a crash of thunder, ear-splitting as the explosion of a park of artillery. This was the signal for the elemental war, for upon its heels came violent winds that made the forest howl in some stirring lamentation, while the heavens were alive with lurid flashes, accompanied by peal after peal of deafening thunder that found its counterpart in the roar and rush of the wild waters of the singing river. It was a spectacle to call for the hand of Dante or Milton.

"Compared to these storms death is but a quail,
Hell somewhat lightsome, the Bermudas calm;
Darkness, light's eldest brother, his birthright
Claims o'er the world!"

"All this clangor and crash was like unto the denizens of a thousand forests that were flying before the roar of a tornado among the trees, every savage beast raising its own savage cry as it went," and with such a horrible clamor as to make you shudder at the unknown forces that fracture mountains wild and shake the very earth. Rain was now the next element I had to contend with, and that would soon come marching along "with beaded bubbles winking at the brim," deluging the land with its copious showers.

Oh! how I prayed for the dawn that I might make some rash attempt to escape, even if it proved unsuccessful; for my position was becoming unbearable amid the terrible wrath of the elements that so enveloped me. I struck a match to look again at my watch, and was rejoiced to learn that it was nearly 3 o'clock, and that but a short time would elapse before the welcome gray in the eastern sky would appear. This gave me some slight hope, and my courage rose accordingly. Would the sombre clouds break and drench me with their cold showers and chill me to the marrow, or, like the roving wolf, was I to follow its fatal course adown the frantic stream in any maddening attempt I might make for escape by the wild and riotous rivers. My mind was now strung to the utmost tension, ready for any desperate struggle with the coming dawn, yet reason held me in abeyance and whispered "Wait;" and then my companions in camp came in mental review, and prudence again enthroned itself.

In these high latitudes during the summer solstice Aurora begins to brighten the eastern horizon as early as 3 o'clock, though a few stars, the eternal jewels of the night, may still twinkle. Yet the black pall, which now enveloped everything, would doubtless delay the herald of light. Oh! how I watched over the eastern hills for the first glimpse of dawn, cold, hungry and exhausted from the night's vigil amid the wild roar of the elements above and the raging river of seething foam below. I, of course, was somewhat nervous from intense anxiety, though at no time was I completely demoralized.

After a tiresome watch, which seemed hours, the gray dawn began to streak the eastern belt of the horizon, and then it gradually commenced to lighten the silent earth and creep along, as I thought, at a snail's pace. The summits of the hills appeared in sombre shade, with here and there clusters of pine and balsam looming up in the air, as it were, and framed like pictures in fading mist. A burden of leaden damp, with all the warmth, the glories of color, and lovely bits of landscape disenchanted by the universal pall. No sunlight, like angel spears, flashed along the heavens or over the earth. The tumultuous gods with their roar of thunder, their vivid lightning and their crape-like clouds sweeping like spectral armies, were in absolute control. It was a dawn of grief so human in its sadness, so melancholy in its aspect, and yet so fraught with hope, that I dared not anticipate any realization from it other than of success, and with that feeling patiently awaited the first glimpse of coveted morn. At last the triumph of day is fully assured, and I now see outlined my painful surroundings. All this time the reverberations of thunder and the glare of lightning continued, yet the threatened rain had not fallen. With serious intent I take in every foot of shore line, looking like the drowning man for even a straw to cling to. As I view the huge bulwarks of stone at the head of the pool, against which the water is dashing with desperate violence, my eye is gladdened with the sight of a small sapling, one end of which is rapidly vibrating on the surface edge of one of the huge blocks of nature's masonry. Like lightning it flashed upon me that if this were secured it would pave my way to freedom. It was hope's precious pearl, and, though it was about 30ft. away, I immediately commenced solving the problem as to its possession. As I was well up in natorial skill, I was confident that, with a dive from the rock and a few bold strokes the prize would be in hand. The great danger was cramp from the icy water, and probably the resistance of the current, which, however, was not so strong but that it could be overcome by unusual strength. The well-worn axiom that "he who hesitates is lost" came just then upon me with full force, and determined me to make the attempt, let the result be what it would.

"Better to sink beneath the shock
Than moulder piecemeal on the rock."

I at once unrobed in the frigid air that almost numbed me, and quickly taking position on the edge of the rock, made a desperate dive, which alone must have covered fully 20ft., and on rising to the surface chilled to the very marrow, made a few bold strokes and gained the rock completely exhausted and exceedingly cold. It took but a moment to dislodge the quivering sapling, which was about 20ft. in length, and then placing it at right angles with the current, set it afloat with a directing aim that would surely bring it abreast my prison rock. However, I did not wait for it to reach the position desired, fearing that some untoward turn of the current might drift it into the rapids below, so I again sprang into the water, and having the current with me, soon overtook the slender spruce and had it abreast the rock, which I quickly mounted, with my teeth chattering and my limbs shaking as if in palsy. A rub or two of the dripping water from my trembling body and I began with unsteady hands to complete my toilet. I

assure you I was somewhat akin to a small iceberg when I started to robe myself, but the task once completed and an actual dance or two upon the rock with rapid beating of arms around my body, I was soon in a fervent glow, and felt recuperated to a degree that not only surprised but comforted me. I now took the sapling, which appeared to be perfectly sound, and which had doubtless found its way into the stream from the heavy wind of the prevailing storm, and placing it in position against the shore rock, had an inclined bridge which readily opened the way to freedom. After throwing my rod upon the bank, I took hold of the infant tree, a pearly path to me, and with apparent ease reached the shore with a breast so overflowing with joy at my timely escape that language would feebly express it. I fully realized how exquisite is pleasure after pain.

"That's my joy
Not to have seen before; for nature now
Comes all at once, confounding my delight."

Looking around for my landing net and rod, I was agreeably surprised to find that the banqueting wolf had left untouched four of my magnificent trout. These I strung upon the crocheted branch of a maple, and then securing my tackle, started on my tortuous tramp for the trail and camp. Little did I heed the warring elements now that I was free and could with King Lear exclaim:

"Blow winds, and crack your cheeks! rage! blow!
Your cataracts and hurricanes spout
Till you have drenched our steeples."

Once over the steep rocky ledges I struck directly for the well-worn path, which I soon reached, and then I had about three-quarters of a mile of easy walking, which I was sure to make before the threatened rain began to fall. As I progressed with a happy heart, I could see in the far west the dark clouds pouring down their floods, which were gradually approaching, and would, I opined, soon be upon me. The deep-toned thunder had now subsided into a mere mutter, while the electrical flashes were scarcely visible upon the inky clouds. Jove had about expended his ammunition, satisfied to conclude his grand battle with pacifying showers to the parched earth. I hurried along with flying footsteps, and ere long had the satisfaction of seeing the silent tents under which I reposed in restful slumber my warm-hearted companions, who were doubtlessly worn out with their night's anxious search. It was really an impressive sight in the gray of that dark and quiet morning, with the white surges of the cataract in their front leaping and then driving along the grassy edges of the roaring stream, with the foliated trees swaying and moaning to the relentless storm. Nothing living was astir. Yes, there is the leap of a spangled trout in the eddy of the falls, and still another by yonder bush that laps the swift flowing waters. Here comes in view the freebooter of the fields, a sparrow-hawk with his feathers ruffled to the swift breeze, scouring along the rugged shore in search of some affrighted game, and as if in defiance of the storm, a solitary woodpecker is beating a tattoo from some hollow tree near by, while

"The loon's weird laughter far away."

comes plaintively upon the ear. There stands the giant rock breaking the foam of the falls, where but "yester morn" I lured several of the speckled *fontinalis* to the banquet of the flies. Just beyond, on the rocky shore, a tiny wild flower or two is struggling into beautiful life from a granite crevice, and as if awakening under the first caress of day, some delicate mosses, bathed in gemmy dew, are rejoicing in the companionship of these crimson-hued buds; while the grasses which sparkle in beads of moisture run riot in the virgin forest so solemn in mantle of green.

So enthused was I with the magnificent beauty of this picturesque panorama, particularly with the swirl and foam of the rapid river, as I overlooked it from the eminence I had reached, that I stopped to drink my full of the entrancing landscape which the wild stream, in its solid walls and serrated shores of aspiring pines and hemlocks, presented.

But a few moments ago, while on my prison rock, its inspiring grandeur was so inappreciable to me that I could see nothing but hazard of life in its charming rapids, its foaming cascades, its leaping cataracts or its dimpled pools. Now beauties the most fascinating and romantic were peeping out and confronting me from every side. It is really the conditions under which you view nature that gives it true value, for it can only be fully enjoyed with a happy heart.

Having satisfied, for the novice, my love of matchless nature, I took up my tramp and entered camp as a troubadour, singing "When Johnnie Comes Marching Home." The wild wind took up the cheerful refrain and wafted it to the ears of the sound slumberers, who awoke and listened to the familiar voice in ecstasy of joy, for a moment or two, and then "Old Ironsides," as "our boys" called him, sang out in stentorian voice: "I'll be blanked if he hasn't turned up."

And then from the tents came pouring anglers and Indians, who immediately surrounded me with wondering eyes and gaping mouths, as if I were from the pearly gates of that kingdom where sceptered angels sat as princes. After a few minutes of speechless surprise their tongues flew into active play, and then all talked at once, creating a perfect babel of sounds. Tom, the nimrod of the party and my canoe companion, feeling that the happy event demanded some kind of celebration, brought out his double-barreled shotgun and let a few charges reverberate with a Fourth of July hurrah, while the cook, an *Afriqué*, also enthused, gathered up the frying pan and toasting fork and beat a reveille that went gleefully along with the whistling winds of the forest and the music of the roaring waterfall. I really felt as if I had achieved some heroic feat and was receiving the plaudits of an admiring audience, when in fact I had only escaped from a very foolish venture which freely exemplified the necessary warning of the old adage, "Look before you leap."

"Now, boys," said I, after I had fully recovered from the royal welcome, "give me something to eat and drink, for I am as hungry as a famished wolf and as dry as if I had crossed a burning desert; and then I will relate the night's peril I have passed."

Of course the preparation for the feast was at once made. The hastily prepared meal was soon spread upon the table. After I had satisfied, in a measure, the pangs of my rapacious maw, I commenced the recital of that perilous night with every eye riveted upon me and every

ear an attentive listener. When I had reached the adventure with the prowling wolf, Joe, the half-breed, who was waiting upon the table, interrupted me by saying:

"No wolf—Indian dog."
"Very like a wolf?"
"Yes. Half wolf, half dog."

"All the same, wolf or dog, he is blotted out, and will no more purloin the angler's hard-earned trophies from the crystal pools."

The interruption concluded, I continued till I had related my dive and swim for the coveted sapling, when Tom declared, "Nobody but an insane man would ever have attempted such a foolish feat in such an icy stream, and you are only here to relate it from the fact that your natal star was a lucky one."

The narrative being concluded with my timely escape, I turned to "old Ironsides" and requested an account of the night search they had made for me.

He stated by way of preface, that they did not grow uneasy at my absence till near bed time, for frequently when a distant trip from camp is made it is sometimes quite late before the party returns. Waiting patiently, he continued, till 9 o'clock, and I not then appearing, the entire camp started out with pine torches on the search. They carefully scoured the woods and the river, when they could approach it, until they went fully a mile beyond Hamilton's pool, but in searching they never once thought of then going to the big rapids, for that is never invaded by anglers, being too difficult a path for piscatorial pleasures, and therefore neglected.

It was long after midnight before they returned, and then it was only to snatch a few hours of needed repose that they might recommence the search in the coming morn with renewed vigor, when they intended to follow the river closely from camp. They had shouted as they hunted, and as a result some of the party had their vocal organs so disorganized that if, like little Tommy Tupper, they had had to sing for their supper, they would doubtless have retired with unsatisfied stomachs.

After "Old Ironsides" had finished his brief outline of the search, he solemnly arose from the table that had been cleanly swept of its toothsome food, and beckoning for the little brown jug proposed the health of the angler who never looked before he leaped, but who fearlessly dove and swam in icy currents, that he might retrace the unlooked leap.

Tumblers containing the necessary fluid were clinked and quickly emptied, and then Tom, amid the rain which was now falling, and which necessitated a retreat to cover, proposed three cheers and a tiger for the fortunate Piscator. These were given with a vim and vigor, and the "Night of Peril on the Nepigon" passed into the reminiscence I have here related. ALEX. STARBUCK.

CINCINNATI.

Natural History.

FATE OF THE FUR SEAL IN AMERICA.

Read before the Biological Society, of Washington, D. C., Oct. 17, and illustrated by lantern slides.

THE present condition of the Alaskan fur seal islands is but another illustration of the fact that the ignorance, avarice and stupidity of man have succeeded in reducing an overwhelming abundance of animal life, that by careful and considerate treatment would forever have been a source of immense wealth, to such a condition that it becomes a question of great moment to devise means to prevent its extermination and adopt measures to restore its former abundance.

In 1867 the United States purchased of Russia for \$7,200,000 all of the territory known as Russian America and now as Alaska. At the time it was expected that it would prove a paying investment. Great tales were told of the fabulous wealth that was there in the shape of lumber, coal, precious metals, etc., and but little stress was laid upon the fact that fur seals were found in abundance upon two small islands, but nowhere else in North America. Now, after the experience of over twenty years, what is the result? Alaska itself pays almost nothing into the national treasury; in fact it takes over \$200,000 yearly to support its management, while the two little islands of St. Paul and St. George, with a direct yearly expenditure of less than \$20,000, have almost returned to the National treasury the large sum paid for the whole of Alaska. The net income from the seal islands for the past twenty years has been in round numbers \$6,000,000. The net income for the next twenty years, based on the bids of the new company holding the lease, would be over \$20,000,000; but the actual amount will be less than a million unless stringent measures are taken to prevent a further decrease of seal life and to provide for better methods of management.

It will be seen by this that the preservation of seal life on the Pribilof Islands is really deserving of the utmost consideration and that a proper enforcement of the best means and measures is demanded even from a purely business point of view.

Rainy, foggy and cold nasty weather is the rule on the islands, and to this fact is greatly due the residence and abundance of seal life during the summer. Wherever a rocky slope extends into the sea, there the seals haul out and form a colony. On St. Paul's there are nine of these places, the smallest having a sea margin of 750ft., while the largest, that at Northeast Point, is 15,850ft. in length. On St. George's there are five with an average sea margin of only 700ft. The average width is 100ft. The seals on the islands are divided by name into four groups, or divisions, which are well known to everybody there. The male seals of seven or eight years old and upward are known as bulls, and are the only males large and strong enough to maintain a position on the breeding grounds. The female seals are known as cows, while the young seal of the year is called a pup. The male seals one year old and upward are called "holluschickie," or bachelor seals, and it is from the ranks of these that the killable seals are taken. The breeding grounds are known as rookeries. In 1874 Mr. Henry W. Elliott, as the result of two seasons' work, estimated that there were on the rookeries 3,193,000 breeding seals and young. Last year, as a result of another survey of the rookeries on the same basis, it was found that less than 1,000,000 breeding seals and young were left.

About the end of April there appear about the islands a few old bull seals; these gradually increase in numbers

until by June 1 all have arrived and occupied positions on the rookeries. This is only done as the result of continual fighting and bellowing which is kept up incessantly. About June 10 the cows arrive and by the middle of July they have all landed on the rookeries.

Soon after the cow lands, sometimes the same day, she gives birth to a single young, and in the course of a week or two returns to the sea to procure food. For this purpose they travel from 50 to 100 miles west, southwest and northwest of the islands, where they only too readily fall a prey to the seal hunters, who have learned to await their arrival at these places in Bering Sea.

While the fur seal is a quiet, shy and easily alarmed animal, it has several peculiar habits which are taken advantage of by the seal hunters and render its capture almost an easy matter. Fur seals are commonly seen scratching themselves while at the surface of the water. A seal having satisfied its hunger, and desiring to rest, will ascend to the surface, and with only the tip of its nose and a small portion of its back, with now and then a flipper out of water, will sleep, though in a rather fitful manner, or with closed eyes it will roll over and over, keeping its body in a continual slow motion, with one flipper gently beating the water and bending its body in every conceivable position. I had many splendid opportunities of observing this habit of the seals. On one occasion I waded out until I could have touched with my fingers a fur seal floating on the surface. With its eyes closed it rolled over several times a minute, at the same time bending and twisting its body into every possible position, using one of its fore flippers as a paddle, and occasionally scratching itself with a hind flipper. I stood thus for more than fifteen minutes, and could at any moment have easily killed it. But suddenly, as it was slowly drifting to leeward of me, its great eyes opened, a look of astonishment seemed to pass over its face, and in an instant with a great plunge it had disappeared below the surface, only, however, as is the habit of the fur seal, to rise again a few yards away, take a last look at the strange object that had alarmed it and again disappear, this time for good.

It is to this habit of the fur seal that the success of the pelagic seal hunters is due. On a calm day hundreds of the seals may be seen on the surface engaged in this manner; the poachers are provided with canoes, mostly manned with Puget Sound Indians, who stealthily paddle up to the unconscious seal from leeward, and shooting it through the head immediately attempt to prevent its sinking by catching it with a pole armed with hooks. It is known that from five to nine of the seals out of every ten that are struck sink before they can be reached, so that the waste of seal life by the pelagic seal hunters is from 50 to 90 per cent. But there is to be added to this statement another fact. The greater number of the seals captured in the waters of Bering Sea are females which are on their way to or have left their young on the rookeries while they are seeking food. As it is a well-known fact that a mother seal will only suckle its own young, and that the young seal is unable until it is several months old to procure its own food, it necessarily obtains that the death of the pup follows that of its mother in a short time. The numbers of dead pups about the shores of St. Paul's began to attract my attention about the middle of July last year. On Aug. 2 I stood on Zoltoi Beach and counted 17 dead pups within ten feet of me, and a line of them stretched the whole length of the beach. Many of them starve to death on the rookeries, but by far the greater number sink in the deep water along the margin of the rookeries.

But pelagic seal fishing is not the only cause of the decrease of seal life on the Pribilof Islands.

Probably an equal cause is the unnatural method of driving seals that has been followed on the islands since the first seal was captured.

The mere killing of seals as conducted on the islands is as near perfection as it is possible to get it. They are quickly dispatched, and without pain. One soon recognizes, as in the killing of sheep, that in the quickness and neatness of the method lies its success, all things considered.

But the driving is a totally different matter. I doubt if any one can look upon the painful exertions of this dense crowding mass and not think that somewhere and somehow there is great room for improvement. It is conducted now as it always has been; no thought or attention is given to it, and with but one exception no other method has been suggested or even thought necessary.

Each day during the season, which lasts from June 20 to Aug. 1, there are three killings; one on St. George, one at the village of St. Paul, and another at Northeast Point, St. Paul.

I have marked on outline maps of the islands the extent of some of these drives, which are as follows: Monday from the Reef, Tuesday from Lukannon, Wednesday Toltoi, Thursday at Half-way Point (the drive being brought from Polovina), Friday at Zapadnie (when the water is smooth the killers go by boat to Zapadnie, but in rough weather the seals are driven to the village), Saturday and Sunday drives are made up from some of the places driven from earlier in the week, or a number of small drives from several places are united. At Northeast Point drives are made commencing at one end on Monday and continuing round wherever enough seals can be found. On St. George drives are made from each rookery in succession, the killing ground being just below the village. Some of these driving trails are from a quarter to a mile long, but the longest, from Zapadnie, is five miles.

The fur seal is utterly unfitted by nature for an extended and rapid safe journey on land. It will progress rapidly for a short distance, but soon stops from sheer exhaustion. Its flippers are used as feet; the belly is raised clear of the ground, and the motion is a jerky but comparatively rapid lopp. When exhausted the animal flops over on its side as soon as it stops moving, being unable to stand up.

The drives are conducted in this manner. As soon as it is light, which is between one and two in the morning, several natives make their way between the seals hauled out near a rookery and the water and cut out as large a drive as possible. As it is the habit of the seals when alarmed to get as far as possible from any strange object, it follows that they are easily driven in any direction by simply walking behind them waving the arms and making a noise. The character of the ground over which the seals are driven is in many places utterly unfit for the purpose; up and down the steep slopes of sand dunes,

over cinder hills studded with sharp rocks, some places being so bad that they are avoided by the people themselves; but the seals have been driven over the same ground for many years, and on some of the hills deep paths have been worn by the passing of tens of thousands of seals. No attempts have been made to remove the rocks or to lessen the difficulties of the passage, and the seals are still driven pell-mell over huge rocks and down steep inclines, where many are crushed and injured by the hurrying mass of those behind. When the drive reaches the killing ground it is rounded up and left in charge of a man or boy to await the killing, which begins at 7 A. M. A pod of perhaps sixty seals are then cut out of the drive and driven to the killers, who with long wooden clubs stun those seals that are of proper size and condition by a blow or two on top of the head. The seals that are not killed are then driven away by tin pans and a great noise, and while in an excited and overheated condition rush as fast as it is possible for a seal to go into the icy-cold waters of Bering Sea.

It will thus be seen that these seals are subjected on an average from two o'clock in the morning until ten, to a long drive over very rough ground, then to a dense herding where they are continually in motion and crowding each other, thence to an intense excitement on the killing ground, and finally in a condition little better than madness rushing into icy cold water. Uncivilized and partly civilized man has no pity for dumb brutes, and as these drives are conducted entirely by the natives, who prefer indolence in the village to the discomforts of a drive in the fog and rain, it follows that the seals are often driven much faster than they should be and absolutely without thought or care. But this is not all. The seals that are spared soon haul out again near a rookery, and perhaps the very next day are obliged to repeat the process and again and again throughout the season, unless in the meantime they have crawled out on a beach to die or have sunk exhausted to the bottom. The deaths of these seals are directly caused as I shall explain, and as far as I am aware it is mentioned now for the first time.

A seal body may be said to consist of three parts, an inner, which is the flesh, bones, etc., a ring of fat surrounding this of from one to four or five inches thick, and then the skin which carries the fur. I think it will be readily seen that a forced drive for a long distance over rough ground, up and down hills and over and among huge boulders and fine sand, with a subsequent herding, and then after a most violent exercise a sudden bath in icy cold water, must of necessity disturb that equilibrium of vital forces which is essential to the good health of any animal. It is known that the stomachs of the fur seals on the islands contain no food, and that in all probability many of them have fasted for several weeks. When driven into the water the seals are weak from two causes, the drive and lack of food; before they can secure food they must rest, and rest is only obtainable at the expense of that most vital necessity of these animals, their fat. I remember looking with great curiosity for the cause of death of the first dead seal that I found stranded on the beach. Externally there was nothing to indicate it, but the first stroke of the knife revealed instantly what I am confident has been the cause of death of countless thousands of fur seals. It had been chilled to death; not a trace remained of the fat that had once clothed its body and protected the vital organs within. Since the day that it had escaped from the drive it had consumed all its fat in the effort to keep warm, and nothing remained but to lie down and die. I opened many after this and always discovered the same, but sometimes an additional cause, a fractured skull perhaps. I have even noted those left behind in a drive and watched them daily with the same result in many cases. At first they would revel in the ponds or wander among the sand dunes, but in a few days their motions became distinctly slower, the curvature of the spine became lessened; eventually the poor brutes would drag their hind flippers as they moved, and in a few days more become food for the foxes. In every case the fat had disappeared.

It will be seen also that by this driving process the two or three-year-olds, which are the only ones killed for their skins, are culled out almost completely from the seals which visit these islands, and therefore that very few male seals ever reach a greater age, consequently there are not enough young bulls growing up to supply even the yearly loss on the rookeries, much less to provide for any increase.

It should also be thoroughly understood that until a cow seal is three years old she is but a cipher so far as a natural increase of the rookeries is concerned, and that a male seal must be at least seven or eight years old before he can possibly secure a footing on the rookeries. During these three and eight years they have to run the gauntlet of the poachers. If they escape the driving—and this seems impossible—they have their natural enemies to encounter, sharks and killer whales, so that taken altogether nearly everything is against this increase.

During the eight years minority of the few male seals that have escaped their enemies it is safe, I think, to assume that at least four summers were spent in getting an experience of the drives. Does any one think that they were then capable of filling their proper functions on the rookeries?

But some one is not satisfied with the accidental landing of the seals on the beaches from whence they can be easily driven. Along the sea edge of the rookeries are many small outlying rocks, on which the young male seals congregate in large numbers and survey the rookeries from which they are disbarred by their inferior size and strength. An old bull seal will suffer himself to be slaughtered rather than yield an inch of his chosen location. The cows are so timid that only the greatest exertions of the bulls prevents their being stampeded, while as to the "holluschickie" the sight, even the scent, of a man or strange object will drive them pell-mell instantly into the water.

The natives have been provided with whistles, and when a boat finds itself near a rookery (and a pretense for its presence is easily found) good use is made of them with a consequent confusion among the seals and a probable increase in the next morning's drive. And yet a stranger on the islands is bamboozled with the information that his presence a few yards from the village is fraught with great danger to the company's interests.

The breeding seals on the rookeries represent the principal of the sealing industry, while the quota of 100,000 skins taken annually for the past twenty years is

the interest on the principal. Owing to poaching and the effects of driving and culling, the principal has become seriously impaired, so that it is no longer possible to pay this large rate of interest. The work on the islands has been directed entirely to collecting this interest at any cost. The principal was left to take care of itself.

The decrease in seal life began about ten years ago, before then it was an easy matter to secure 100,000 skins a year from St. George's Island, the rookeries near the village of St. Paul and at Northeast Point. The rookeries at Polovina and Zapadnie were then never driven from. But ten years ago it became absolutely necessary in order to secure the full quota of skins to make drives from these places, and the custom has been continued since, to the great injury of the seal business.

But these drives from Polovina and Zapadnie and the decrease in seal life seem to have been carefully concealed from the Government and others interested in the welfare of the seals, in fact it has been strongly put forth in the reports of the Treasury agents in charge and elsewhere, that the seals have actually greatly increased in numbers; but a comparison of the sketches alone in Mr. Elliott's "Monograph of the Seal Islands," made in 1873-4 and 6, with the actual condition of affairs at present on the islands will convince any one that the opinions and reports of political appointees are almost worthless when dealing with the fate of the fur seal.

How can it be otherwise? Their tenure of office exists only with that of the Secretary of the Treasury; with every change of that office new men who know nothing of seals are sent up, and these men are entirely dependent on the seal company even for their passage and board while there. All visitors to the islands are regarded as interlopers and meddlers.

It may be interesting for a moment to compare the management of the Russian side of Bering Sea with our own. Dr. Stejneger, of the National Museum, who has spent several seasons on the Commander Islands, assures me that instead of decreasing the fur seals there are actually increasing in numbers. A comparison of the Russian ideas of seal management with our own will readily show the reason. The necessity for great care in the driving and management of the drives seems to be a fixed fact in the minds of the Russian officials and natives of the Commander Islands, while on the Pribilof Islands not the slightest interest is taken in the matter. On the Russian side the natives are firm in the belief that their interests lie in the proper care of the seals, consequently when a drive is made it is composed of many small drives carefully selected and slowly driven, so that the large and small seals unfit for killing are gradually weeded out, and when the drive reaches the killing grounds it is composed almost entirely of killable seals.

On the American side, on the contrary, the seals are driven as fast as possible, the only ones weeded out being those too weak to go further, while of those rounded up on the killing ground by far the greater number are allowed to escape. Out of a drive of 1,103 counted by me only 120 were killed; the rest were released. On the Russian side it is a settled fact that the islands and seals belong to the Russian Government, and that the company taking the skins has only certain restricted rights for that purpose; but on the American side it seems to be a settled fact, at least in the minds of the company's people, that they own the seals and the islands, while the duty of the Government is to collect the tax and appoint agents to subserve the interests of the company only. The natives are utterly dependent on the seal company for their support, and while having a very vague idea that somehow the Government is a big thing, they naturally look to the company for everything affecting their interests.

Sealers have no doubt about the fate that would be their lot if caught poaching on the Commander Islands or within three miles of their shores, and accordingly have given them a wide berth; but they have heretofore done as they pleased about the Pribilof Islands and even on the rookeries. In the absence of the revenue cutters the islands are utterly defenseless and liable at any time to be raided.

I have only touched lightly upon several questions of the sealing industry and have by no means exhausted the subject, but enough has been said, I think, to show that if an industry which eighteen months ago was expected to pay the Government a net profit of over 2,000 per cent., and is, besides, a great natural exhibit, the only one of the kind America can produce, is to be saved, reform is necessary. For twenty years the fur seal has been the spoil of politics and the victim of the poacher. Inexperience on the one hand and avarice on the other have well nigh ruined the industry in American waters.

There are then two chief causes of the decrease of seal life on the Pribilof Islands—poaching in Bering Sea and the driving and culling of the seals on the islands. The remedy is simple. 1st. No seals should be killed by any one at any time in the waters of Bering Sea. 2d. All seals driven on the islands should be killed, none should be driven and again allowed to enter the sea.

These remedies are not new. Nearly twenty years ago Capt. Daniel Webster, whose knowledge and experience of sealing are second to none, said, pointing to the drive, "Every one of them should be killed, none should be allowed to return to the water," and gave reasons which while unsupported by evidence then, and which in view of the immense abundance of seal life seemed absurd at the time, are now beginning to be accepted as true.

There should also be a close time for at least five years to allow the rookeries to be replenished, and then by careful management by a bureau and employees of the Government, trained in the knowledge and care of animal life, a rich and profitable industry will be saved.

WILLIAM PALMER.

U. S. NATIONAL MUSEUM, Washington, D. C.

A WOODCOCK IN BROOKLYN.—A woodcock flew into the new Brooklyn Post-Office building last Friday, was killed by a workman and was sent to be stuffed for Col. Booth, the superintendent.

GOING TO CALIFORNIA.—A person can take a seat in a palace car at Dearborn Station any afternoon and go over the Atchison, Topeka and Santa Fe Railroad to San Francisco, Los Angeles or San Diego without changing cars. The fast express on this line makes at least twenty-four hours quicker time to Los Angeles than any other line, and in fact the Santa Fe is the only thoroughly comfortable route to take. The office is at No. 212 Clark street, Chicago.—Adv.

AMONG THE WILDFOWL.

THE sports of an outdoor life are many; and fortunate it is that there is such variety, for each one of us may choose that which best suits his taste. Wildfowling has its devotees, and we will ask that you spend the day with us in our blind among the brown sedge grass. True, 'tis not a perfect day for ducking, rather too calm; but the air is crisp and cool, and those "sheep-

too late—an elegant shot too. Now keep your eyes peeled, there are more where he came from and they will soon be along. There! take him! Bang! Splash! among the decoys, "a clean kill." Stand up and stretch your legs, while I fetch him. If we let him drift like enough the gulls will tear him badly before he comes ashore. By the way, did you ever know a dead duck will drift the way he is headed almost every time? I have not always found it so myself, but some of the old baymen will swear to it. Down! Quick! Here they come; little suspicious, eh! I wish we had a larger show of decoys. Keep still! they are swinging in again, see 'em set their wings. No! off again, evidently not satisfied yet. Now look out! they mean business this time. Now! and as with outstretched necks, fluttering wings, and feet thrown forward they bunch over the decoys, we let them have it. Did you ever cripple a shelldrake? Well, of all the flouncing and spluttering I ever saw they make the most. Knock one out of a flock and the moment he strikes the water he will flounce around like mad for a moment, and then sit motionless as though paralyzed with his sudden fall. The instant you show yourself, however, presto! he's under, and it takes lively work to stop him. At times he will have as many lives as a cat, and unless you hit him just where he lives he will carry away a pile of shot in his tough old carcass. Come! let's take up and get home. We've had enough

Many a time, and oft, have my friend Albertson and I sent our compliments from Shell Point and the Goose Box, below Salt Cove, as well as other choice spots in the Great Back Bay, from our heavy 10-bores, in the shape of 1½oz. No. 4 shot, backed by 5drs. powder, to a wary canvasback—heard the "biff" of the shot as they struck him amidstships, saw abundant feathers floating down the wind, and heard the "tchuck" of the quarry as he struck the water, as dead, apparently, as ever duck was killed—only to see him right himself up out of reach, discover where his trouble came from and forever disappear from view! Mr. Townsend has evidently been there, and is to be congratulated for so truthfully depicting the scene and giving such moderate utterance to his sentiments as "You Son of a Gun." GEORGE MCALEER.

WORCESTER, MASS.

WISCONSIN GAME.

MILWAUKEE, Oct. 22.—From all sides come pouring in reports of the flight of the wildfowl, good, bad and indifferent. Water is undeniably very low. Without doubt this will materially injure the shooting on migratory birds, as they will follow the Mississippi more closely in their southward flight.

AMONG THE WILDFOWL.—VIII.

BROADBILLS—A TRIFLE SUSPICIOUS.—"WHAT DO YOU FELLOWS SAY? SHALL WE TRY IT?"

skins" floating up in the northwest sky may give us a breeze ere long and set the ducks to moving. There is often hard work in ducking. Cold weather makes the fingers numb, and in the old days of muzzle-loaders the putting on of percussion caps was often a difficult as well as a painful task. Oh, those "old days" and "old guns." Who does not remember what a trouble it was to load, when after a day's sport, the barrels were so foul with constant firing that the wads could hardly be driven home? We used a 12lbs. 10-gauge muzzle-loader then, made by John Mullins, and to drive the charge home effectually we had a stout hickory rod, at least 8in. longer than the gun barrels, and with this, no matter how foul the gun became, we generally succeeded in driving the charge down. While the breech-loader does away with all these impedimenta and enables one to be more at his ease, still the "old boys" with their "old guns" used to "get there," and there was just as much delight in "downing" the fowl then as now. In a snug blind on some sedgy point, how soul-satisfying it is to lie at full length and hear the wind piping through the reeds and grass, to sniff the salt breeze and see the scurrying clouds flying overhead, and now and again feel the thrill of success as a good shot makes the blood bounce through the veins. It is worth all the rheumatic pains and aches of later years. Well, if not all, at least most of them. The Doctor tells me that my gunning for ducks, lying out in blinds in all sorts of weather, laid the foundation of my rheumatism. Be it so. I've had lots of fun. Here comes the breeze at last, and there goes a bunch of broadbills—one can always tell them as far as he can see, for they fly compactly, rarely scattering or stringing out like other fowl. Whisht-t-t! I didn't see him until

for to-day, and to-night you can lie between the sheets and dream it all over again; you will hear the whispers of the wind in the sedge, and see the quivering foam flakes clinging on the edges of the blind, even sniff the brine-laden breeze, and in the morning take the train for town with the record of another bright day, carefully treasured in memory's note book for future reference. WILMOT. The many and valuable features that appear in rapid succession in the columns of FOREST AND STREAM deserve the warmest commendation from its readers. Such versatility and enterprise must touch a responsive chord in its army of sportsmen readers, and it emphasizes the fact that their favorite journal is still well abreast of the times, and although its years of adolescence are past it is still full of energy, virility and ambition to excel. No one feature that has enriched its pages in recent times—and it has furnished many that have contributed to the writer's pleasure and benefit—has furnished us so much entertainment as the sketches of Mr. Townsend, "Among the Wildfowl." We desire our thanks to go on record not only to Mr. Townsend for the admirable truthfulness and suggestiveness of his sketches, and for the labor of preparing them, but also to FOREST AND STREAM for placing them before its readers. They are admirable in their conceit, and to gunners of experience among the sea fowl of the coast of Virginia and North Carolina, they appeal with all the force of personal experience and serve to recall vividly many a pleasant day and thrilling experience. They are all true to life, but the one in issue of Oct. 1 came home with more force to me than any of the others. I have turned to it time and again and as often enjoyed a hearty laugh.

A party of three leaves to-morrow for Marquette, where they will spend a few days among the Puckaway canvas, redheads and bluebills. Messrs. Chapman and Atwell have recently returned from their annual trip to Minnesota, where they had royal sport with the snipe and duck. Chickens they report as being very scarce. Recent shooters from Poygan Lake report the flight just on, but the birds very hard to get at, owing to the low water. Last Monday morning I saw a magnificent string of at least 100 jacksnipe, to say nothing of a large bundle of ducks, bluebills, widgeon, butterballs, etc. The snipe were being borne upon the broad shoulders of Louis Aner, who, with his party, spent Sunday at Pewaukee, where his shooting box is situated. One sometimes sees amusing things even on "blue Monday." As I left the St. Paul depot for my office on the morning of the 19th, an object just in advance of me arrested my attention. It was a tall, thin youth clad in the height of fashion. His short overcoat allowed the wind (which by the way was anything but springlike) to gambol with the many folds in his trousers. From one shoulder there depended a dainty russet bag such as a lady might carry on a shopping excursion. Over the other shoulder was borne a tiny .22cal. Flobert rifle, while in his hand he proudly carried a string of four rabbits. Considerable activity is being shown among the shooters in Oconomowoc just now. While in that city last week I heard of several very fair bags of woodcock having been made lately. L. J. Stone of that place has lately returned from Sioux City, Iowa, where he has been during the two weeks past. Quail are quite plentiful there,

and the Missouri River bottoms are alive with snipe. In one afternoon, in company with Mr. Frank Kimball, his brother-in-law, Mr. Stone killed 31 quail, while the afternoon following they bagged 64 snipe and a number of ducks. Oconomowoc has lost its crack shot, as Mr. Stone has removed to Chicago this week to engage in business with his brother, Mr. Percy F. Stone, well known among that city's shooters.

On Sunday last, with two friends, I visited a tiny lake at the further end of a long drive over heavy roads. I refrain from mentioning any names, as this lake (which is more of a pond than a lake) is a particular favorite of mine. We made an early start and arrived at daybreak. An engagement called us away in season to reach home at 1 P. M., but before we left we had collected a handsome bunch of birds, nearly all mallards. Of fifteen birds I knocked down I could secure but ten.

I have promised myself that when the sun goes down next Saturday night it will find me happily located inside my Protean tent on the bank of —. I came very near mentioning the place, which for lack of substitute name, we will call — Lake.

I also know of a very choice bit of snipe marsh, which I hope to have time to run over early next week. It lies upon the west shore of Bark River, some seven miles from town.

Mr. Doolittle, of the Northwestern Mutual Life Ins. Co., of Milwaukee, has to-day returned from Koshkonong Lake, where he has been stopping at the Black Hawk Club House. There are thousands of ducks on the lake, but it will take rough weather to put them in motion. There is a weak spasmodic flight morning and evening, but during the interval the birds bed out in the open water, where they cannot be approached. Mr. Doolittle brought in some forty ducks, five canvasbacks among the lot. Ex-Gov. Hoard and son are now spending a few days at the Black Hawk club house. GREENHEAD.

OUR MOOSE HUNT UP THE OTTAWA.

HAVING read in the October *Harper's* Mr. Ralph's charming account of his moose hunt near Mattawa on the Ottawa, we were so badly attacked with the desire of going and trying our luck that we found there was no cure but to go, so just dropped business and everything else and went, and as our experience may be of interest to the readers of the *FOREST AND STREAM*, we tell the story of the trip, how we went, and what we saw.

On the evening of Oct. 31, 1890, Mr. E. and the writer took the 9:15 train on the Hudson River R. R. for Morristown, where we arrived at 10 the next morning; and crossing the St. Lawrence River by steam ferry, we reached Brockville, Ont., Canada? Yes, that we knew for there stood the Custom House officer waiting for us. We soon found they had heard of the McKinley bill, for his greeting was, "What have you got, gentlemen?" and upon our answering "Only our guns; just going for a little hunt," he replied, "Any ammunition?" "Yes: 50lbs." "Well, gentlemen, fifty per cent. duty on that, and you will have to go up to the Custom House with me and have your guns appraised, as you will have to pay duty on them also. New order, just out." We went and found we were the first victims at Brockville under the new rule of collecting twenty per cent. duty on all sporting implements brought into the country, and which they keep. Formerly the duty was returned when one recrossed again. Arguing was of no use, so we paid. After dinner at the Revere House, and meeting its genial proprietor, Mr. John Bain, who is a good man to know when up this way, and who did all in his power to start us right, and whom we wish now to thank for his courtesy, we left Brockville at 3 P. M., making close connections at Carlton Junction with through train on Canada Pacific for Mattawa, our object point, where we arrived at 11:50 P. M., making the run from New York in about twenty-seven hours. The ride was a pleasant one on the C. P. R. R., thanks to the fine service of the road. Every one—engineers, brakemen and conductors—were all, it seemed, either hunters or fishermen, as we were regaled all the way up with stories of forest and stream. At Mattawa we were met by stage from the Ottawa House, whose proprietor, far-famed (around there) Mr. Peter O'Farrell, had furnished much amusement for Mr. Ralph and Frederic Remington, as set forth in the account of their hunt in *Harper's*. The stage, like its owner, was an odd affair, the like of which we had never seen before—a long, low body with low top of sheet iron, which rattled and banged while riding over the frozen ground like mock thunder in a theater. Upon asking the driver why it was made of iron he replied, "Because O'Farrell did not want it to break when the stage turned over, which it did very often." This reply made us cling to our guns the tighter; but we soon reached the Ottawa House without accident, and were glad enough after our long ride.

Sunday opened cold and raw. Slight fall of snow during the night gave promise of a good tracking snow. After breakfast, when seated around the stove in the "office," we were selected by listening to the talk that we had made a wise selection by coming to Mattawa, as several sportsmen had just returned and nearly every one had been successful in getting a moose; and as for deer, they were everywhere. Mr. P., a New York lawyer, had shot a big buck from the steamboat going up the river only a day or so before. Our hopes ran high, and during the day we engaged two Indians, Peter La Clair and Joe, at \$10 each per week; and good guides they proved themselves to be, willing and clean, and they knew their business. Our tents and supplies were furnished by a firm who make a business of outfitting parties in addition to their general store. In doing this we found we had made an error, as they charged us with everything, but on our return only gave credit for a little that was returned; but perhaps it was an error on their part. Camping utensils can be purchased reasonably at Brockville, and the Canada Pacific make no charge for sportsmen's baggage.

We were to go up the Ottawa to a point where Peter said we would be sure to find moose; and Monday morning found us after breakfast waiting on the dock for the engineer to thaw the ice out of the boiler. About nine we got off, with full cargo of supplies and goods, for the lumbering camps up the river and the Hudson's Bay forts, away up in the wilderness, the goodness knows how far. The river is a noble stream with a swift current and with rapids every few miles. The steep rocky banks on each side are covered with small pines and cedars, the timber having been cut off years ago. Four miles above Mattawa

we reached the first rapids, where we leave this steamer for another, and walk across a narrow point to the one in waiting, while freight is run over on a flat car on tram way, a much easier way of making a portage than the old style of carrying everything over in packs. We made four of these portages on the way up; and it was well along toward night when we reached Seven-League Lake, a name given to an expansion of the river where there is little or no current. Going up this lake some 10 miles, with the help of a boat from the steamer and our canoe, we soon reached camp. Just back in the woods a little way from the water we found a logger's shanty, of which we took possession, and soon had a fire going and frying-pan and coffee pot on.

After an all-day's ride on the river, plain, old-fashioned fried pork and coffee was not so very bad. We had a call from an Indian, and to judge from the jabbering of French-Canadian-Indian carried on between him and Peter, they must have been old friends. Peter said the man told him that he had been hunting, but had seen no moose, so the best thing for us would be to go further up the river. By getting an early start in the morning we could reach the end of the Long Sault at the head of the lake, where we could take the narrow-gauge road that runs up some ten miles to Lake Temiscaming, another expansion of the river, as near there he knew of a place where we would be sure of finding moose. As our canoe was too small to carry us all and our duffle, we engaged the Indian to come at 4 the next morning and take Mr. E. and the scribe up in his canoe. What a night we put in at that place when the fire got low! It was cold enough to freeze one, and besides it was the first on the trip in the woods. We were glad when we saw Peter putting on the teapot and getting ready for breakfast, even if it was half-past 3—a little earlier than we had been getting breakfast of late. On turning out and going to the door of the shanty we seemed to be looking at a picture of bygone ages; for at our feet a few rods off on the shore of the lake we could see in the dim light one of the Indians bending over his canoe, turned bottom up, stopping a leak with a birch bark torch to warm the pitch, which he then pressed into place again with his thumb. Soon everything was packed and loaded in the canoe, for these Indians move quickly, and we were off up the lake. It was a nasty morning, cold and foggy, and it was very uncomfortable being cramped up in the bow; but it almost made a fellow feel warm to see that Indian paddle, he only stopping once in about five miles to give us a shot at a muskrat swimming along shore. But even the longest and coldest rides have an end. At a little past 7 o'clock we could hear the roar of the Long Sault, and soon were at the landing. We were told that there was good deer and partridge shooting just across the river; and in fact we learned that deer can be found all along the river with little trouble. About 10 o'clock our train started. The freight comprised barrels of pork, beans and beef, axes, pikes and poles for the lumbering camps, bags of shot and supplies of all kinds for the Hudson's Bay forts, hundreds of miles up the river, some we saw even going to the fort on Lake Abitibi, just south of James Bay. This freight was being rushed up for fear the river would freeze and travel cease. On leaving the end of the Sault the road follows the river, and the views from the car were very fine even in winter; it must be charming in the spring and fall.

The road is built on a very narrow gauge, the cars look almost like playthings and are pulled by a funny little dummy engine, which at times is not strong enough to pull the train over the grades; a conductor said it was a common thing to get stuck on a grade and then have to fill the boiler with a pail from the river. But we made the trip in safety and arrived on time, if there was any stated time of arrival, for by 11:30 we were at Gordon Creek, the last stop on the road. The "town" consists of freight shed and tavern; but it is a place of much importance, as it is at the foot of Lake Temiscaming, another expansion of the river, at the head of which, some sixty miles up, are located some very promising silver mines, reached by steamboats from this point. Good muskallonge, bass and pickerel fishing may be found in the lake.

Stopping only long enough here to arrange the packs, we were soon pushing our way up the river bank and back into the woods to the spot where Joe said we were to find the moose. Reaching the top of the hill, a fire was started at the foot of a dry stub and dinner was soon under way. While the guides were busy with this we had a chance to look about. And such a view as lay before us. The sun was shining brightly on the snow, making it a dazzling white, covering the mountains as far as the eye could reach, while at our feet rolled the noble river, which we could see for miles winding in and out. Rapids foam-crested, glassy pools and eddies followed each other in regular order, rushing on and on until the river was lost in the St. Lawrence many hundreds of miles below, a wild stream, but used as the highway for the great stretch of country away to the north and west.

But views and rivers were forgotten when dinner was announced, even though it only consisted of fried pork, bread and tea. With pipes alight we again took the packs and struck into the woods, this time following an old logging road. As we left the river behind we found more snow, some six inches, so walking was not bad and we had enough snow for tracking. To me that walk was one of the most interesting I had ever had, for at every few yards would be seen tracks of deer, martin or fisher. The woods seemed to be alive with game, but never a thing did we see, save one lonely red squirrel. Following this road for some two miles we came out on a beaver meadow. (Petersays) "Shantymandie turn into old beaver and makes meadow." "A little back from this we made camp, as Joe said we were close enough to the brûlé, where we were to hunt.

Leaving the guides to make camp we took a fish line and went to find a trout stream they said was near, in the hope we could change the pork diet to one of fish. We found the stream, but no trout; but along the banks saw many tracks of deer; and some much larger than the rest we put down as being made by a moose: so we returned to camp with bright hopes for the morrow. The men had up two tents, ours heated by a small folding sheet-iron stove, which we found worth its weight in gold.

After an early breakfast the next morning we were away into the woods, Joe leading, followed by the scribe armed with a Winchester .45-60 carbine, Mr. E. and

Peter following, the former carrying a .44-70 half magazine Winchester, the guides only carrying their axes and the lunch. The day was one in a hundred for our purpose, high wind and a melting snow, so we made no noise. We had not left the camp but a mile or so behind when we came to a track of moose, but made the day before; and we decided to look for a fresher one. Soon we came to where the snow was all mashed down flat and much cut up with tracks, and around which were some fresh droppings. Then the fun commenced. The guides acted like a pair of setters, working back and forth, and in whispers reported that three moose had made a bed there last night and must be very near by. Joe and I circled off to the left, and the others to the right; and we had hardly lost sight of them when crack, crack went Mr. E.'s Winchester. Joe shouted, "Moose, moose, shoot, shoot!" but just then my foot went into a hole and I went into the snow. Recovering myself and running a few yards, I caught sight of a streak of something going through the trees; and let drive, but the "something" did not stop. All this time I could hear a regular Fourth of July over Mr. E.'s way, and running up a few yards more I saw my first moose standing perfectly still. I could see all but the head, which was behind a tree. As I was within 100 yds. I stopped and, aiming just behind the shoulder, fired. It gave a jump and went out of sight. Slipping in another shell, I ran up to where it had been and found quite a lot of blood on the snow. All hands coming up, we followed the trail and within a few yards came to a big buck down in the snow. Looking him over, we found that one ball had cut a furrow across his nose and another had gone through his heart; but, much to my regret, this last shot was on the right side; and as I had shot from the left I knew it was not my bullet.

While Mr. E. and I were looking him over the guides had discovered that there had been three in the bunch and all had been hit. And sure enough, for there were two tracks leading away, and both leaving blood marks behind. Following them up a ways we saw a yearling calf going like a streak, and as it had stopped bleeding we did not shoot but let it go, for the Indians said it would no doubt get well as it was not hit hard. Though we followed the other track until late in the afternoon we could not get a sight of the moose again. Talking it over on the return to the dead bull, the guides said we had come upon a bull, cow and yearling calf all lying down and perhaps asleep; that Mr. E. had killed the bull and hit the calf, while I had shot the cow through the hump on the back. How did they know that? Because they saw where she had brushed against a tree and there was blood on both sides of the trail. Am glad I did aim a little high, as knowingly I would not kill a cow moose. On returning to the bull the guides set to work cutting him up, and we wished for a Kodak that we might get that picture, the great wicked looking beast, the Indians and the two cold and tired, but happy hunters, for now the excitement was over, we soon found how cold and tired we were. Cutting off the hindquarters, head, hide and tongue, the former we left hanging to a tree, and were off for camp, which seemed much further than it was in the morning. But a good supper of moose steak put us in shape in short order and we thought it was the very best meat we had ever tasted even if Joe did put on enough pepper nearly to take the roof of one's mouth off.

After supper we turned in and knew nothing until morning, though the fire went out and it must have been very cold in the night, as we found everything frozen stiff, even my boots. This made still-hunting out of the question, had we desired to hunt; we therefore decided to pull out for home. The guides went out to bring in the meat, and by the time they returned we had everything ready to start. The return to the river was without interest, and just as night fell we were again at Gordon Creek, where we passed the night at the tavern, price \$1 per day. Friday we found it raining when we turned out and it continued all day. Train came along about seven and we were soon again on the steamer going down the river. On board we met Mr. and Mrs. McDonald, of Ottawa, who had been on a farm up on Lake Temiscaming for a month fishing and shooting, and they promised us, should we come again next year, a deer every day, and trout and partridges without number, cream, fresh eggs and butter from the farm, and a good time all around. We live in hope that the day will come when we can enjoy these good things with them.

Though we kept a sharp lookout all the way down for deer, we saw none. The captain of the steamer we met at the dinner or middle stop said one swam across the river as he came up, but as they had no gun on board they did not get it. We reached Mattawa at dark, left again at 3:20 Saturday morning, and arrived at Brockville at 1:30; and taking the train again at Morristown at 3:30, arrived at Grand Central Depot at 7 A. M. Sunday, and our moose meat with us also.

The trip was a very pleasant one, the people we met did all they could to help us out, and without doubt we were lucky in finding the game so soon; but we are convinced that this is a great game country, and another could have nearly as good luck. As for expense, there is very little outside of railroad fares, and for about \$60 one could get a two-weeks' trip. As to being easy of access there is no question, for I do not believe we had to walk five miles from the time we left New York until we reached camp. A party of four or five can make very liberal terms with the Canadian Pacific Railroad, and it is indeed a pleasure to travel on that road. NIAGARA.

A STORY OF WOLVES.

"DID you ever see a wolf?" asks a friend of mine. Yes, more times than once. The first time was in this wise. We were boys together, Johnson and myself, born in the same neighborhood, strapped with the same piece of leather in the red schoolhouse that topped the hill, behind which was a pond in which we bathed and swam together; gathered beechnuts into the same basket, shot partridges in the same woods, and last, but not least, trapped wolves and other game, honestly dividing the proceeds between us. It was winter, the snow 2 ft. deep in our settlement, which was in the Province of New Brunswick. Wolves were plenty, and Johnson and myself were doing a good business trapping them. On each was a bounty of \$10 and each skin was worth \$3 more.

One Sunday morning after Johnson had made himself ready for church he thought he would examine one of his traps set in the edge of the woods near his father's field. Putting on his heavy boots, and without gun or axe, he

strolled across the field. When near the spot, the rattling of the chain by which the trap was fastened quickened his pace; and behold a large wolf was in the trap. Johnson saw at a glance he was slightly caught by the end of his paw. Now he soliloquized, "If I go back for the gun he may succeed in getting free before my return," for the brute was making frantic efforts to free himself. The bounty \$10, skin \$3, it would not do to miss him. Being a fine athlete, Johnson made a bound for the wolf, catching him by the throat. In the meantime the wolf had cleared himself from the trap. Then came the tug-of-war in that 2ft. of snow. The struggle was short and furious. Johnson held his death grip, sometimes on top and again underneath the brute, both so covered in snow it was difficult to distinguish wolf from man. The wolf at last was overcome, kicked and choked to death by his powerful antagonist. Johnson did not attend church that day, for his Sunday clothes hung in tatters; besides there were some ugly scratches from the sharp claws of the now dead game. "I never will try that again, Mack," he said to me, "I thought myself a match for almost any wild animal of these woods, but this fellow was a bigger job than I reckoned on." Johnson was but 17 years of age and I was 16. That winter was my first experience with wolves.

Five years later, I was working in the logging woods at a place called the Narrows, head of Grand Lake, in Maine. The second evening after our arrival at camp the most of the crew had turned into their berths, the cook only was outside the camp door, when he called, "Boys, I hear a dog howling across the lake." I had seen a wolf track that afternoon, and knew the kind of dog across the lake. We were all outside the camp in a few seconds. The moon was full and bright, and the wind asleep—not a sound but the howl of the wolf. Soon another and another gave tongue, until the recruits numbered a dozen or more. "Boys," I said, "those devils are up to some mischief; they are old acquaintances of mine. Listen!" One would think pandemonium had broken loose. They had discovered a deer at our water hole. Over they came, the hills echoing and re-echoing their cries, making the night hideous with howlings.

The startled deer rushed by our camp, with wolves in close pursuit. It was an unequal match. The poor animal found they were closing with him; and ran back to the lake, the merciless pack at his heels. Again he made for the woods, and in a clump of thick cedars they took his life. There was but one gun in our crew and that was not loaded. We did not enter into the scuffle. Not one of the men but myself had ever heard or seen a wolf before; and none of us had desire for a nearer acquaintance. The next morning we visited the spot. After killing their game they had dragged it out on the ice; and so completely demolished was the carcass that scarcely a vestige remained. H. P.

ADIRONDACK DEER.

Editor Forest and Stream:

Four Uticans, and the writer was fortunate enough to be one of them, spent the last three days of the season when it was legal to hunt deer with dogs at Henry Paul's, in the town of Wilmar, on the southern edge of the Adirondacks. As the 18th inst. was Sunday, of course the dogs were not put out, but we took a stroll as far as Mill Creek Lake, three miles distant. On our arrival we found that two hunters from a neighboring resort had preceded us and killed a deer which they had already dressed and hung up. The day was bright and warm, and the pretty little lake nestling at the foot of the mountains, and the brilliant colored foliage of the trees which covered the latter from base to summit, formed a picture of rare beauty. We were loth to leave the spot, and passed the greater portion of the day there enjoying the beauties of nature.

The next day was a counterpart of its immediate predecessor as far as the weather was concerned, but we spent it in a very different manner. Soon after daybreak every one in the house was astir and an early breakfast was had. Then we were assigned to runways on the West Canada Creek, and the proprietor of the house and one of his men started out on the mountains with five hounds, which were placed on the tracks of deer. It so happened that a party from Kreitzer's near Morehouseville was hunting on the same territory that we were.

In the Kreitzer party was a man from Cold Brook, Herkimer county, and it transpired that he was assigned to the same runway that one of our party had been. The two hunters met on the runway, and agreed that if either killed a deer it should be equally divided. During the forenoon a doe came over the runway ahead of one of Kreitzer's dogs, and safely ran the gauntlet of the Utican's rifle and the Cold Brook man's shotgun. Later, however, Paul's dog drove a fine buck into the creek at the point, and it was killed by the Utican, although his companion, who was very excitable and got his shots mixed, first filled the animal's hide with bird shot. A pole was cut and used in carrying the buck to the spot where it was decided to leave it until the day's hunt was over. Subsequently the pole, on which a few twigs remained, was thrown into the Stillwater and it slowly floated down stream. A little after noon the hunter from Cold Brook caught sight of an object in the creek, which he mistook for the head of a buck swimming in the water, and at once opened fire on it. Shot after shot followed, until more than a score had been fired and his ammunition was exhausted. He then persuaded the Utican to shoot three or four times. Still unsatisfied with the result, the excited hunter upon the arrival of two other members of the party, who had been attracted by the fusillade, endeavored to borrow their guns to continue the attack. When his request was refused he excitedly exclaimed:

"Well, if you won't shoot, the deer is dying anyway."

"Where is the deer, in the creek or in the woods?" queried one of the new comers.

"Why, in the water. Can't you see his horns?" replied the Cold Brook man.

"Great Scott! that is the brush on the pole we threw into the creek," exclaimed the Utican, who had killed the buck, as he burst into a roar of laughter, in which all but the excited man joined. It was some time before the latter could be thoroughly convinced that he had been shooting at the brush instead of a deer's head.

Another member of the Utica party had a shot that day, the first he ever had at a deer. He was stationed on

an island at the head of the Chestley Stillwater, and between 10 and 11 A. M. beheld a magnificent buck walking leisurely down the stream and coming directly toward him. Biding his time until the buck had come within eight rods of him, the Utican fired one barrel of his shotgun, and as the animal bounded into the air he endeavored to discharge the other, but in vain. The hammer fell again and again with a dull thud, and the shell stubbornly refused to explode. The deer, after nearly running over the hunter, escaped into the woods, and the latter sat down and tried to decide whether it would be better to throw his gun into the creek or take it home and get the lock fixed.

As Oct. 20, the day when the hounding season closed, was dark, cold and rainy, none of us cared to spend a great deal of time out of doors.

From the time the season for running deer with dogs began until it ended, the cervine animals had but very little rest in the West Canada Creek country. Over 70 deer were killed. George Dorn of Albany shot the biggest buck of the season, at Morehouseville. It weighed 236lbs.

An unusually large number of deer have been seen this fall in this part of the woods, and also in the vicinity of the State reservoirs on Black River. The Trenton Falls Lumber Co. is engaged in blasting rocks on the West Canada Creek above the Stillwaters, to enable it to float logs, and in the Woodhull and Moose River country heavy blasting is being done on the line of the Adirondack and St. Lawrence Railroad. Old hunters think the deer have been driven out by the noise, and that this accounts for their being plentiful on the outskirts of the Wilderness. There is a growing sentiment among the guides that both hounding and floating, or jacking, should be abolished.

UTICA, N. Y., Oct. 24.

PORTSIA.

DEER IN WISCONSIN WOODS.

CHICAGO, Ill.—For the benefit of your Chicago readers I will write a short sketch of a deer hunt on which I went in October of 1890. The impression is generally held here that to hunt deer it is necessary to go a long distance from home, and that even then the deer are few and far between. My object in writing of my experience in the lumber region of Wisconsin is to dispel these ideas.

Our party consisted of Mr. Willard, Mr. Dixon Bean, Mr. Thatcher and myself. We left Chicago Friday, Oct. 17, on the Wisconsin Central at 5 P. M. and reached Phillips, Wis., at 5 A. M. next morning. Friends at Phillips had already located our camp and had engaged an experienced hunter with his dogs and a cook. I have since learned that our hunter named Eaton has killed more deer than any other man in that part of the State. Upon our arrival we immediately set out for camp, twelve miles through the pine forests on the Big Elk River. During the logging season cabins are built by the lumber men for the accommodation of the cutters and when the lumber is all cut in a given vicinity the camps are deserted and new camps located in another portion of the country. Our camping grounds were made in one of these abandoned camps, and were very picturesque as well as comfortable. Our beds consisted of straw thrown upon the floor and a large blanket placed upon it, and to a tired hunter such a couch under the circumstances answers as well as the regular made article.

After breakfast we tramped across the country through the slashings and windfalls to the river. Our stations were assigned us by Eaton, and he confidently assured each and every one of us that a deer or perhaps many would come down the runway each man guarded. In my eyes, my runway looked particularly inviting to deer, and I could not see how they could resist the temptation to come up and get shot.

I examined my rifle very carefully to see that everything was in working order, and then gave myself good advice as to how I should not get the buck fever at the critical moment. After straining my eyes and ears for at least two hours for the sound or sight of a deer, I at last heard in the distance the deep melodious baying of the hounds. At times the sounds drew near, and then again they seemed but a mere echo. My runway was particularly free from deer, and I amused myself by bringing my rifle to bear upon an imaginary deer some distance up the runway, and it is needless to say I brought him down at the first shot. I watched and waited in vain, and thought deer shooting excessively tame compared to duck hunting.

My discouragement received a sudden check when I heard two sharp reports of a rifle, and my spirits revived when I thought that perhaps the deer was not hit and would come my way after all. My excitement was intense, and I could not resist the temptation to abandon my runway (an unpardonable sin) and make my way through the forest in the direction of the shooting. In a short time I came up with several members of the party and gazed upon the first fallen prize—a fair two-year-old buck, weighing, so Eaton said, about 150lbs. I rejoiced with my friends over our success, but was a little disappointed to learn that Eaton had shot the buck.

After returning to camp we rested, and about half-past one again made our way through the woods to our respective stations. Our spirits were all at a very high point, due to the success in the morning, and each felt sure of shooting a deer before nightfall. We found plenty of tracks, which seemed to me to be very old, but Eaton assured us that they were quite fresh.

The entire afternoon was passed away without our vigilance being rewarded, and we returned to camp foot-sore and weary from our long tramp, but hoping for better success the next day. Like genial Micawber, we had hope and faith to buoy us up.

We arose next morning at 4 o'clock and after a hearty breakfast set out for the positions already assigned us by Eaton. We were not in our positions more than an hour when the hounds were heard. They drove a deer down a runway watched by Mr. Bean. His aim was good and at twenty rods the deer fell in its tracks.

The next day we pulled stakes and set out for Smith's camp, which was a logging camp about three miles from our own. A logging camp consists of several log houses, one is used as a sleeping apartment, another as a dining room and another a barn, etc. The sleeping apartment is particularly interesting to a new comer. On each side are arranged bunks similar in appearance to the interior of a sleeping car. The men sleep two in a bunk, and during the cutting season Smith's camp will accom-

modate about 75 men. The men are mostly Norwegians and Swedes, and as a rule are tall and well-made. Their clothing is made up of materials of many colors and the wider the stripe and larger the square in the materials the prouder the wearer. They seem to love bright colors and nine out of every ten wear heavy red socks pulled up over the trousers. The effect may not be very harmonious in coloring from an æsthetic point of view, but the general appearance is very pleasing to a tenderfoot. They rise at 4 A. M. and work until sundown and retire about 8 o'clock, all work and no play being the rule at the logging camps.

Over the stove in the sleeping department are branches of trees suspended from the ceiling; upon these the men hang their socks to dry and to warm them up before putting them in use the next day. Having no ventilation these cabins are so close that it is with great difficulty I could breathe the foul atmosphere. When the order for all lights out was given I sighed for my soft bed at home and wondered if I could sleep a wink during the night. But being very weary I found no difficulty in sleeping; and in my calm repose killed more deer than the mightiest hunter could have slain in a lifetime. We were called at 4 o'clock, and that day we were fortunate enough to shoot another deer, making three in all.

On the fourth day, when I took my lonely watch I was heart-sore and weary. My hunting boots were stiff and hurt my feet, and altogether I voted deer shooting a failure. My spirits revived when I heard the baying of the hounds and I forgot for the time being my misery and kept a sharp lookout over my district. I was on a high point on the river bank, which commanded a view of the opposite shore with considerable territory back of it.

In a short time I was overjoyed to see in the distance a doe coming at a break-neck pace down the runway toward the open with the dogs slowly gaining upon it. I stepped behind a stump and breathlessly awaited its arrival. My nerves were steady, and the much-dreaded buck fever seemed to have no power over me. This being my first deer I naturally felt a wave of excitement pass over me, and I settled down to business. When the doe got within easy range I took a good steady aim when she rested upon the ground and fired. The ball was well directed and I was delighted beyond measure to see her fall. I shouted for joy and regardless of the swift current I forded the stream and looked with pardonable pride upon my first deer. My companions soon came up and I was congratulated upon my success. In a modest way, I think, I increased the distance at which I shot about ten rods. We returned to camp, and I concluded that deer shooting was far more interesting than bird shooting. We now had four deer to our credit, and all of us felt very happy.

Mr. Thatcher left our camp that afternoon to visit a friend camping three miles down the river from us. He returned to our camp the next morning, and we saw from his smiling face, as he came toward us, that he had succeeded in killing a deer. He related his experience, and was quite positive that the buck he shot was the largest ever seen in that portion of the country. It weighed when dressed 186lbs. Mr. Thatcher was of the opinion that the buck always remained in the stream because his antlers were so large that he could not get through the woods with them with any comfort. It was said that Mr. Thatcher fired his entire magazine at the buck and yet but one shot struck him. Mr. Thatcher explains this by saying that all the shots were directed at the same spot and made but one hole. We had our opinion regarding this point and annoyed the gentleman by expressing it.

Our party succeeded in killing seven deer, and being gone but one week we considered our success as phenomenal. I hope my article will reach some who are ignorant of the fact that such rare sport is within such easy reach, and I can recommend Mr. Eaton as a good hunter and a splendid shot. The trip will repay any one fond of outdoor exercise, and is comparatively cheap.

SAM R. JENKINS.

STREAM LAUNCHES AND HUDSON RIVER DUCKS.—*Editor Forest and Stream:* In last week's issue of your paper I noticed a letter from Mr. W. H. Mead complaining of certain sportsmen in Sing Sing shooting ducks from a steam launch off that place. It certainly is unsportsmanlike and the law allowing them to do so ought to be repealed at the next session of our Legislature. It to the gunners of Sing Sing is a well-known fact that the law was changed in 1887 simply to allow this family the privilege that they now enjoy, by a certain resident of that district, then a member of the Legislature. These men have been known to steam by a gunner who had sighted a flock of ducks, and was sculling upon them in a sneakboat (a fair and sportsmanlike way of shooting duck, and one that embodies more labor than the steam launch shooters care to employ), and shoot among them, thus robbing the hard-working gunner of his sport. One of these men spends most of his time in scanning the bay with a glass, and as soon as a flock of ducks arise he is after them at once. Is this fair to the gunner who employs fair means and plenty of hard work in trying to get a shot? How many shooters are there living on the banks of the Hudson below Iona Island who can afford to hunt ducks in steam launches? I dare say you can count them on the fingers of one hand. Individuals who are fond of sport and have very limited means to enjoy it with are generally set down as pot-hunters, while the rich individuals who sport fine guns, etc., are sportsmen. I ask the readers of this paper who are the pot-hunters in this case: the poor gunner who employs fair and legitimate means in approaching his game, and is satisfied if he kills two or three ducks, or the wealthy individuals who employ steam launches and 4-bore guns and are never satisfied no matter how many they may kill.—SNEAKBOAT.

MR. E. M. MESSENGER, of the Bromfield House, Boston, last week gave a very interesting lecture on the scenery of Alaska, the mode of life and customs of its inhabitants, illustrated by the stereopticon from pictures taken by himself during a recent four-months' visit to that and other portions of the country. The views, embracing a large variety of subjects, were of unusual excellence, while those of the icebergs and glaciers may be especially mentioned for their clearness and brilliancy.

THE IDEAL MANUFACTURING Co. report that after delay due to exhaustion of their first edition they have been unable to supply handbooks, but that these are now ready.

NOTES OF THE GAME.

OTTAWA, Kan., Oct. 22.—Last Sunday I witnessed the first large flight of geese and cranes in this part of the country. Finer weather than this could not be wished for and the woods are full of squirrels. Quail there are, also, but the law protects them for about ten days yet and I think it has been pretty well observed this year. Although there are not so many birds as there were last year, there ought to be enough to go round. Ducks will probably be very scarce this year because the streams and ponds are so low that they could not find feed.—F. B.

During the past two weeks the coots, ducks, etc., have been quite plentiful and the gunners have had good sport. One man killed 67 in a day in Ipswich Bay. During the last storm there was quite a flight of yellow-legs, beetle-heads and grass birds. I know three men who shot a bushel of grass birds in one day and 60 yellow-legs and beetle-heads on another trip. E. F. LOCKE.

GLOUCESTER, Mass., Oct. 16.

GUNS AND LOADS.—*Editor Forest and Stream:* I notice in your edition of Oct. 8 an article by "S. F. A." regarding feather-weight guns, etc., wherein he claims that it is necessary to use 3½drs. of powder in a 12-bore gun, and that the recoil is so great in an arm weighing even 7½lbs., that a bruised shoulder is the result, which is more than carrying a cannon. I formerly had the same notions as to the necessity of a heavy charge of powder to do good work, and carried an 8½lbs. No. 12 gun, loaded with 3½drs. of powder, and it certainly weighed a half hundred at night. My attention being called to the feather-weight I purchased one on trial and loaded with 3drs. of Schultze powder. The result was a heavy recoil and a bruised shoulder. I at once reduced the load to 2½drs., and the result was marvelous. No recoil, great velocity and long range. I easily killed partridge at 50yds., and can do good execution at any ordinary shooting distance. Let "S. F. A." load a gun for what it is built to carry, and he will not have bruised shoulders nor complain of inability to bring down his game. I would not carry an 8½lbs. gun if it were made a present to me.—W. F. B.

BEAVER DAM DUCK CLUB.—Memphis, Tenn.—The great influx of northern wild fowl, now swarming at Beaver Dam, Duck Lake, gave earnest zest to the eighth annual meeting of that clever organization last week, and a letter from the faithful keeper, Andrew Jackson Bounds, says the fall flight is now fully on, with mallards, teal, sprig-tails and gray ducks. The beautiful and dainty wood ducks are still abundant. The old officers were re-elected as from the genesis of the club: Dr. R. W. Mitchell, president; Col. A. C. Treadwell, vice-president; W. A. Wheatley, secretary and treasurer; M. L. Seldon, George Gilham and J. A. Austin are the executive committee; housekeeper, Mrs. Victoria Bounds. New cooking and heating stoves were bought, with full culinary outfit, and from the gorge of moss, jonkapis, coltsfoot and periwinkles abounding in Beaver Dam, excellent sport is in sight. Much of this duck food was planted by the club, and much more has grown from deposits of seeds and bulds by the two last overflows, filling the lake with vegetation.

WORCESTER FUR CLUB.—The annual grand hunt and dinner of the Worcester Fur Company will be held tomorrow, Oct. 30. Headquarters will be at the Bay State House. The hunter's horn will sound at 5 o'clock on the morning of the hunt. The start from the hotel will be at 6. Carriages will be in readiness to convey hunters to the grounds. The meet will be at Heywood farm at 7 o'clock. The annual dinner will be served at the Bay State House at 7:30 o'clock on the evening following the hunt.—E. SPRAGUE KNOWLES, Sec'y.

BUFFALO FOR ENGLAND.—Ten of Buffalo Jones's buffalo passed through this city last Monday on their way to England. They have been purchased for the private park of Mr. Leland, of Liverpool.

AN ISLAND ON THE COAST OF MAINE, stocked with deer and other game, is advertised for sale in another column.

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price \$2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price \$1.50. American Angler's Book. By Thad. Norris. Price \$5.50.

THE ANGLER'S PROTECTIVE CLUB.

RANGELEY, Maine.—*Editor Forest and Stream:* This Association has been in active operation for the past two seasons under the title of the "Franklin County Fish and Game Association." The name has been changed as indicated above, as the old name implied that the interests of the Association were confined to but a portion of the lakes and streams embraced in the Rangeley or Androscoggin Lakes region, while its object is to preserve and propagate game and fish in all the waters of this system. The season of 1890-91 was too far advanced when our hatching house was finished to enable us to obtain any spawn from this region. We obtained, however, from Messrs. Stanley and Stilwell, the Fish Commissioners of the State of Maine, some 40,000 spawn of the landlocked salmon, hatched in our troughs a large percentage of the spawn, and fry were turned into streams tributary to Rangeley Lake in June, 1890.

During the season of 1890-91 we were again indebted to the Fish Commissioners of this State for a supply of salmon eggs and hatched some 12,000 fry. We took also from this neighborhood about 250,000 trout eggs, of which not less than 225,000 were successfully hatched. Of the salmon 4,500 were placed in Toothaker Brook, emptying into Cupsuptic Lake, 2,500 into Whetstone Brook, a tributary of Kennebagog Stream, 3,000 went to Kennebagog Lake, 3,000 to Parnachenee Lake, 500 to Dodge Pond and 500 into the stream emptying into Smith Cove, Rangeley Lake. Of the trout 40,000 were placed in Whetstone Brook, 20,000 in

Witham Brook, a stream emptying into Mooselookmeguntic Lake near Camp Bemis, and the balance, 165,000, were placed in Smith's Cove Brook, Haley Pond Brook and Niles Brook, tributaries of Rangeley Lake. It has been the aim of the managers to distribute the young fish in different localities, suitable for their development, and in proportion bearing some relation to the interests of those contributing to the funds of the club.

It is our desire to conduct during the coming year one or more ponds on lands to be owned by the club in which we may keep young trout and salmon until they are a year old and thus more able to care for themselves. For this purpose we need about \$500, and special subscriptions are solicited from the friends of the Association. For the coming season we expect to be able to make temporary arrangements for keeping our fish in a private pond, under our own control, but it is eminently desirable that we should own our own ponds as soon as possible.

It is proper that we should acknowledge here the uniform courtesy and generous support which we have received at times from the Commissioners of the State of Maine, Messrs. Stanley and Stilwell. We also desire to extend our thanks to the Phillips and Rangeley, Sandy River and Maine Central Railroads for generous financial aid in the past.

We urge the members of the club to call the attention of the friends to this meritorious work, to solicit aid from those interested in this region, either as residents or visitors during the summer season, to subscribe liberally toward the construction of the ponds, and to see that those in arrears for their annual dues make prompt payment of the same to the treasurer; Mr. Arthur L. Oakes, Rangeley, Franklin county, Maine, to whom all remittances should be addressed.

FREDERICK S. DICKSON, President.

ARTHUR L. OAKES, Secretary and Treasurer.

SANDUSKY BAY WHITE BASS FISHING.

THERE is no portion of the great Lake Shore route which so interests the traveling public as the ride from Marblehead Junction to Venice—a distance of five miles—across the Sandusky Bay. I think the majority of the readers of the FOREST AND STREAM are familiar with the name, at least, as it has been the favorite route for years to the islands of Lake Erie. Aside from the varied and pretty scenery and the enjoyment of the ever-refreshing lake breezes the average traveler seldom thinks of the life at the bottom of the bay, or cares about the depth, the width, the length or the changing currents; but an angler is anxious to learn more about this broad sheet of rippling water. He wonders whether the channel is deep and winding, if the water is always clear and fresh, or if the bay is shallow and covered with marsh grass, subject to change according to wind and tide, and whether any one has ever tried to steal from its inviting eddies, deep holes and shallows the cunning black bass, the savage pike, the timid sauger or the often welcome, but greedy, "pan fish." Some time ago my business called me in the immediate neighborhood of this bay and I questioned the shore farmers as to the fishing with hook and line, and kind and quantity of fish caught in the many pound nets leading from the shore. Their experience as anglers were not very flattering, but I was respectfully referred to Mr. John Robinson, a fellow townsman, whom I learned was a native of this vicinity and had the reputation of being the most successful fisherman "in all the country round about." "Why," said one of the pound fishermen, "he can make more tempting varieties of bait out of a red and white piece of cloth than all the spoon manufacturers in the land." I promised to see him when I returned home. John Robinson is a detective, quiet, unassuming, of very striking appearance, and his manner is characterized by the nameless charm which shows itself when you ask, "Do you enjoy fishing with the spoon?" He was the last man I would select as being an admirer of the rod and line. An engagement was very quickly made. "Meet me at the depot at half past three Wednesday morning and I will show you something not found in books." I was there on time.

Many stories have been told about the great quantities of white bass caught in the tributary rivers of the bays of Lake Erie; even the venerable Judge Potter informed me that a long time ago he stood upon a Maumee River dock, and with the barb removed from the hook filled barrel after barrel with silvery white bass and never touched a fish with his hands. "Simply dipped them out."

The anglers along the Maumee have been listening to these exciting stories for years, and until but recently has the Judge's experience been verified in Sandusky Bay.

A short distance from Marblehead Junction the Lake Shore crosses a drawbridge, and all trains stop a moment going east and west before going over. It was at this draw we were to do our fishing. "Now, we use no minnows," said Mr. Robinson. A small spoon was tied at the bottom, a foot above a hook with a narrow piece of white cloth, and another above this, with a fourth hook tied to the sinker. In the channel around this draw, and in fact between the trestle work where the water runs freely in and out, since the 20th day of June to the present—the 30th day of September—the water has been at times literally alive with white bass. Thousands can be seen sporting at morning, noon and evening, a continual stream going in and out for hours at a time, now chasing a frightened perch, following a crippled fly, darting here and there with lightning rapidity. "And has all this been going on for months," I said, admiring the picture, "and, too, in sight of some of the best anglers in America?"

At the first cast hundreds of these handsome fish darted right and left after the moving, deceiving bait. Often two, sometimes three, and occasionally four bass were caught at a cast. The fish would swim in schools, and, as if tired of moving in the same direction, would suddenly disappear but to make the water foam at another point.

Mr. Robinson, by actual count, landed 305 white bass, weighing from a half to a pound each. As for myself, there are a few readers of the FOREST AND STREAM who would "wink the other eye" if I named the number caught; but suffice it to say when the noon train stopped at the draw, homeward bound, I should not have refused assistance, had it been offered me, to get on the coach. From casting and hauling in fish my arms were lame for a

week after. It was the richest treat I ever had the pleasure of enjoying, and even greater catches have been made by expert fishermen during the closing summer months.

The bass are not always in sight during their sporting movements, but they are there and ready to take the spoon. They readily took a minnow, and the deeper fished the larger the bass. Many lake pickerel were caught during the past month.

Capt. Jerry Dewey, of Cleveland, who received his graduating lessons in capturing large fish from Col. Edwards, landed a pickerel that supplied one of the largest hotels in Sandusky, and half an hour after he caught the fish there was not enough money in Sandusky county to purchase it. There has not been a day since the middle of June, so the bridge tender informed me, but that great schools of white bass were sporting around the stone-filled piers and trestle works; and, contrary to some fishermen's signs, the stronger the wind blew from the east the greater number of bass appeared in the openings, and any person familiar at all with the rod and line could catch more fish than they could carry in a short time. This fishing has not been equalled in years, and has only been enjoyed by a few who were familiar with the facts.

By accident I had the pleasure of meeting the Izaak Walton of Port Clinton, a Lake Shore, Ohio, town, the genial angler W. M. Montgomery, and after listening to my wonderful white bass story, he raised his hands and moved them toward me and blandly said, "That ain't anything. You fellows don't know what fishing is. I can take you to a place where black bass are so plentiful that if you are an expert at handling a landing net you can just dip them out, so to speak. The territory extends for many miles, never been fished with hook and line, and is to-day the finest black bass fishing grounds in the United States."

I readily accepted the invitation to accompany him. He named the day. I was there; and if the reader can stand another exciting fish story I will tell you something about the "greatest large-mouthed black bass fishing grounds in the world," in a later issue of the FOREST AND STREAM. J. E. GUNCKEL.

TOLEDO, Ohio.

THE LAMPREY EEL.

Editor Forest and Stream:

Can you tell me whether the common lamprey eel of our American rivers is fit for food, as is his European congener. If so, whether at all seasons or only a certain period of the year. And also, whether any particular method of preparation is necessary.

E. W. GREENOUGH.

SUNBURY, Pa.

[The great sea lamprey (*Petromyzon marinus*), which runs up our rivers from the ocean during the shad season from March to June is edible and may be obtained in the markets of many large cities. Those who like lampreys prize them very highly, but the demand for them is very limited in most localities. Along the Connecticut they are held in high favor. Many New England families formerly salted the fish for use in winter. The mode of taking this eel is singular and is based upon the curious habits of the species. The apparatus used is a pole about 6ft. long, with a hook in its end, or a shorter piece of iron terminating in a hook. The lampreys ascend the streams in schools and build nests of stones heaped together by fastening their suctorial mouths and drawing the stones into heaps. As the fish are found in shallow water their capture is easily accomplished; they may even be taken readily by the hands, the fishermen wearing mittens to prevent the fish from slipping from their grasp. In Germany and France lampreys are cooked in earthenware jars with vinegar and spices. In early days in Europe they were drowned in wine and afterward stewed. In New England, after being salted for a few weeks, the eels are fried, and are said to be very palatable. The lamprey has a cartilaginous skeleton and there are no ribs, so that after the removal of the "backbone" in dressing the whole of the flesh can be eaten.]

INTERNATIONAL FISH PROTECTION.

A MEETING of representatives of different sections of the United States and Canada, who came together in response to an invitation sent out by Mr. A. D. Stewart, secretary of the Ontario Game and Fish Commission, met at the Fifth Avenue Hotel, in this city, last Thursday. Those present were: Messrs. H. M. Smithers, of Washington; R. U. Sherman, E. G. Whittaker and Robt. B. Roosevelt, of the New York Codification Commission; Henry C. Ford, of the Pennsylvania Fish Commission; G. H. Welschour, of Pittsburgh; E. G. Blackford and L. D. Huntington, of the New York Fish Commission, and E. P. Doyle, Clerk of the Commission; Frank J. Amsden, of the Cheaper Food Fish Association; J. M. Skinner and G. H. Strough, of the Anglers' Association of the St. Lawrence River; A. D. Stewart and G. A. McCallum, of Ontario; J. U. Gregory, of Quebec.

R. B. Roosevelt was appointed chairman and A. D. Stewart, secretary. After some discussion as to the precise line of effort, it was voted to confine the effort to securing proper uniform fish legislation for the Great Lakes. A sub-committee of nine was appointed to meet and draw up a report to be submitted to an adjourned meeting to be held at call of the chair. The sub-committee will meet on Nov. 10, at Rochester. It is made up of the following: Messrs. H. W. Smith, A. C. Ford, Henry Burden, J. A. Henshall, G. A. McCallum, F. J. Amsden, R. U. Sherman, Dr. Parker and J. U. Gregory.

BLACK BASS EAST OF THE ALLEGANY DIVIDE.—Portsmouth, O., Oct. 19.—*Editor Forest and Stream:* In your issue of the 15th I noticed Mr. Poindexter would like to know who introduced black bass in the waters east of the Allegheny Divide. Mr. Thomas Schreiber, of Wheeling, W. Va., placed 14 bass and 9 catfish in the tank of a locomotive and sent them to Cumberland, Md., where the bass were thrown into the river and the catfish into the canal, in the summer of 1853. From them has sprung our fine bass fishing.—G. B. LEARY.

A FULL ROE SHAD was caught last Tuesday at the mouth of the Great Wicomico River. Mr. Noel, who is in the oyster business, says it is the first time he ever knew of such a catch in those waters in this season.—Baltimore Sun, Oct. 24.

TROUT AND OLANANICHE.—One of the handsomest displays of trout and olananiche (winnish) ever seen in this city is now on exhibition at Wm. Mills & Sons, 7 Warren street. These fish are among the largest that were taken by Messrs. Chas. A. Bryan, Jas. Rice, Jr., D. N. Coats, Lody Smith and D. Willis James, Jr., members of the Springfield Fishing and Game Club, while at the club's newly opened paradise for sportsmen on Lake Amabelish, Canada, during the two last weeks in June of this year. The specimens of brook trout are certainly beautiful and range from 4lbs. to 6lbs. in weight, and of the olananiche (famous landlocked salmon from the Lake St. John region) equally fine examples from 5lbs. to 4½lbs. in weight.

A LARGE BLACK BASS.—Richmond, Ind., Oct. 19.—Inclosed find outline dimensions of a bass caught in Cedar Lake, Starke county, Ind., Aug. 10, 1891. Although it was in "dog days," when no sensible fish would so far demean himself as to be inveigled, yet he was a willing victim to a dancing frog at the end of a line. When taken from the water he weighed 7lbs. 2oz. by steel yards. I have him nicely mounted and suspended in my office. —W. T. DENNIS, Fish Commissioner. [The outline referred to represents the fish to have been 6in. deep and 22in. long. The weight brings it close to the limit of size in northern waters, and makes it a splendid trophy of angling skill.]

Fishculture.

COLORADO TROUT AND WHITEFISH.

COLORADO with its six thousand miles of streams and its numerous beautiful lakes, is one of the very best fields for the artificial propagation of fish in this country. It may truthfully be said that nearly all of the waters of the Centennial State are the home of the black-spotted trout, which is indigenous, and many thousands of rainbow trout and Eastern brook trout have within the past few years been liberated, and are shining in several of the mountain streams and lakes. The most beautiful, and probably the largest specimens, of the black-spotted trout, are to be found in the Gunnison River, in the vicinity of the Black Cañon, where it is not an uncommon thing for a good angler to take them weighing as much as 3lbs. each.

The native trout are preferred to either the rainbow or speckled brook trout by many of the veteran anglers of Colorado, among whom Senator Teller probably is the most prominent and best known. Another very good fish, usually known as the Rocky Mountain whitefish (*Coregonus williamsoni*) is found, I believe, only on the western slope of the Rocky Mountains in Colorado, notably in the White River. It reaches a length of a little more than a foot, and a weight of about 1lb. It spawns in October and November, entering the small tributaries for this purpose. Judge France of Denver, the well-known writer and angler, is a great admirer of this little fish, and speaks kindly of it in his delightful book recently published, "Mr. Dide, his Vacation in Colorado," as follows:

"These whitefish were the first we had taken, although they are quite plentiful in the stream. (White River) and are sometimes an annoyance to those who are seeking trout only. Why they should be a source of vexation to any one is a mystery. The fish is beautiful in contour, more slender than the trout, has a delicate mouth, rises eagerly to the fly, and its meat is delicious. Break a Brazil nut in two, and the firm white kernel will remind you of the meat of the whitefish when it has been properly cooked. They are good fighters withal, though they do not break water when hooked as readily as the trout. To my mind the complaints have in them somewhat of affection, unless one is indulging solely in the science of angling."

As will be seen, Judge France has quite a weakness for the whitefish, and I understand is taking steps toward introducing them in some of the waters nearer Denver. This is an excellent move, and the artificial propagation and distribution of the mountain whitefish would be well worth trying.

JOHN GAY.

WASHINGTON, D. C.

HUDSON RIVER SALMON PLANTING.—Mr. A. N. Cheney has selected a stream in Vermont (one of the headwaters of the Hudson) to receive a planting of 5,000 yearling salmon by the United States Fish Commission. It is Green River, a tributary of the Pattenkill, at a point near the village of Arlington, 2½ miles from the line between Vermont and New York.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price \$2. Kennel Record and Account Book. Price \$3. Training vs. Breaking. By S. T. Hammond. Price \$1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 4 to 8.—Sixth Annual Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill.
Dec. 10 to 14.—Inaugural Dog Show of the Freeport Poultry and Pet Stock Association, at Freeport, Ill. T. E. Taylor, Sec'y.
Dec. 20 to Jan. 2.—Fourth Annual Dog Show of the Mohawk Valley Poultry and Kennel Club, at Gloversville, N. Y. F. B. Zimmer, Sec'y.

1892.

Jan. 5 to 8.—The New York and New England Poultry and Kennel Club's Dog Show, at Albany, N. Y. W. C. House, Fort Plain, N. Y., Sec'y.
Jan. 5 to 9.—Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Sec'y.

Jan. 13 to 16.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.

Jan. 21 to 25.—Second Annual Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. C. A. Bowman, Sec. Feb. 9 to 12.—Fourth Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Sec'y.

Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.

March 1 to 4.—Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. F. S. Brown, Sec'y.

March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.

April 7 to 10.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 10.—Second Annual Trials of the International Field Trial Club, at Chatham, Ont. W. B. Wells, Sec'y.

Nov. 16.—Eastern Field Trials Club's Thirtieth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.

Nov. 23.—Irish Setter Club's Field Trials, at High Point, N. C. G. Davis, Secretary, Philadelphia, Pa.

Nov. 23.—Gordon Setter Club's Field Trials, at High Point, N. C. L. A. Van Zandt, Secretary, Yonkers, N. Y.

Nov. 23.—Second Annual Trials of the National Beagle Club, at Nanuet, Rockland county, N. Y. F. W. Chapman, Sec'y.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

1892.

Jan. 10.—Second Annual Trials of the Bexar Field Trial Club, at San Antonio, Texas. G. A. Chabot, Sec'y. Amateurs only.

Jan. 18.—Trials of the Pacific Field Trial Club, at Bakersfield, Cal. J. M. Kilgariff, Sec'y.

—.—Fourth Annual Field Trials of the Southern Field Trials Club, at New Albany, Miss. T. M. Brumby, Sec'y.

COURSING.

Nov. 10.—International Coursing Club's Meeting, at Merced, Cal.

THE AMERICAN COURSING CLUB MEET.

GREAT BEND, Kas., Oct. 19.—The man with the dog that can catch every rabbit that jumps up is here, and the dog, as usual, is in the shed just around the corner of the Morrison House. The man who is going to have justice, or knock the props out from under heaven, is also here. The man with the long slender greyhound with four toes off is here, and so also is the man with the condensed and portable greyhound which has lost a set of ribs in a barbed wire fence. Likewise we have with us the gentleman whose phenomenon was unfortunate enough to meet physical disfigurement just before entering in upon an easy course of glory, nor is he absent whose dogs are not in condition, but could win the whole shooting match if they were. Dogs of haughty lineage and inborn toe nails mingle with the plain blue cooking dog with no coronet but a kind heart. Then there are dogs which are fit, which are in condition, which are greyhounds, noble ones, the pick of America's possessions, no doubt. These in quantity and quality surpass those of any previous year. From San Francisco, from Maine, from Colorado, from Illinois, from all over Kansas, these contributions to the fame of the American Coursing Club have come and it is a pleasure to see so good a lot together in this old accustomed rendezvous. The dogs as a class improve yearly. The men stay about the same. The horses degenerate. There are horses here which have been nursed tenderly into an old age far beyond the natural term, simply for the purpose of hiring them out during the coursing meet. The most genuine enthusiast in coursing is a Great Bend liveryman. He fosters the sport at about five dollars a foster.

In past years the desire of the American Coursing Club was to interest the California men and to get some California dogs here. The little visit of some of the club members to the Merced meet last fall has borne good fruit, and now for the first time we have a Coast contingent. The judge of the meet, Mr. John Grace, reputed to be the best practical field judge of greyhounds in the West, comes from San Francisco, thanks to the wise action of the executive. Mr. Cronin, a wealthy Frisco man, sends on two good ones, Kaskaden and Chicopee Lass, the latter runner-up to Sam Nash in the Merced meet. J. J. Edwards handles these dogs and nominates them, as also one of his own, Walnut, of unknown parentage, but bred on Haggis's great ranch in California of alleged good blood. P. F. Canavan handles for Mr. Chas. S. Wieland, another liberal San Franciscan, three dogs—Examiner, entered in the All-Age, and two puppies, entered here as Morning Call and Chronicle, though one of these was run at Merced, I hear, as Charlie Wieland.

From his farm at Poland, Me., Mr. N. Q. Pope, of Brooklyn, N. Y., sends out by his handler, McGregor, a pair for the All-Age, Highland Warrior and Old Stone. The latter is said to be imported. He is a fine-looking brindle and white, reported never to have seen a jack. He is very eager of appearance and would be popular if fit. He is said to have had 25 miles a day for three months, but this cannot possibly be true, as he is not specially hard.

Denver sends down Dr. Johnst. Gower with Baronet and Queen Belle, and Mr. T. W. Bartels with Pearl of Pekin, Monk Bishop and Irish Lass. Of these Pearl of Pekin should do as well or better than any.

Mr. Alfred Haigh sends out Master Glendyne, a Trales dog, from Cable, Ill., and Mr. John Russell, of the same place, has along the old black cable bitch Bar Maid.

Mr. C. G. Page, now of Chicago, has no dog along, but nominates two of Mr. Lowe's exhaustless Lawrence Kennel. Emporia, Kansas, has in only two entries, Dr. Foncannon nominating Brilliant and Salvador.

The Lawrence contingent is exceptionally strong, socially and caninely speaking. Mr. H. C. Lowe has located his breeding kennels there for some time past, and I understand that some of the Lawrence gentlemen present have interest in a few of his breeding. Mr. Frank L. Webster, a bright journalist of Lawrence, and his friends, Messrs. S. T. Field, S. C. and J. P. Usher, W. L. Bullen, H. W. Hayne and R. C. Moody, are all on from Lawrence. The string of Lawrence dogs, including Master Peter, Liberty and Lancashire Lass, which ran last year, is a fine one, Lady of Fashion is as stylish and attractive a bound as ever was seen here. She is by Lord Neversett—Partera, as is also Comedy and Master Neversett. Prince Charlie is by the same dog out of White Lips, the old-time favorite here.

Mr. Luse, of Great Bend, has the black freak Lady in Black, the scarcely less freaksome Lady Barton, his good wolf-dog Lanaradzo, the winner Lord McPherson, and the brindle bitch Little Thought Of, some of which will be remembered as very close to the tail gate of the runnings last year. Mr. Luse is quite a stand-by of the club, and his enthusiasm is not purely selfish. This year the winner of the All-Age will have cause to remember Mr. Luse very heartily, for that gentleman has offered to the greyhound earning that place a fine trophy, the Luse Silver Cup. Terms, winning stake to be by same kennel two years in succession to own, stake to be run down absolutely. This handsome trophy will add greater interest to the chief greyhound event of America.

Much valued is the presence of Mr. J. Herbert Watson, of New York, a gentleman not apparently of vaulting ambition, but who has vaulted high none the less in esteem of the club within one easy year. Mr. Watson brings only a dog, a Greenick puppy, Royal Crest, and this one he had the misfortune to see badly cut on a barbed wire yesterday, the scalp having to be sewed up for some inches. Mr. Watson, as the emissary of the National Greyhound Club, brings yet another cup, a tasty silver one, for the absolute winner in the Puppy Stakes. A still further fraternal gift from the generous Eastern organization is a silver medal, not yet completed, to go to the winner of the All-Age.

Messrs. Price and Royce, of Topeka, who now own about all of Mr. Allison's old Trales stock, and some new dogs also, have on a good line of Glendynes and Trales. Other dogs, some of interest, make up the most notable collection that ever graced the Cheyenne Flats.

The usual preliminary business meeting was held to-night, Vice-President Watson in the chair, Mr. Heizer absent. On motion the secretary declared elected unanimously to mem-

bership, Dr. John Gower, of Denver; Mr. Chas. Wieland, of San Francisco; Messrs. J. P. Usher, Jr., S. C. Usher, Frank Webster and S. T. Field, of Lawrence, and Mr. N. Q. Pope, of Brooklyn, N. Y. There were elected honorary members Mr. John Grace, J. J. Edwards and P. F. Canavan, of San Francisco, and Mr. B. Hayman, of St. Louis. The National Greyhound Club rules were adopted, barring the registration clause for this year. Messrs. C. G. Page, A. C. Schermerhorn and Ira D. Brougher were appointed field marshals. Mr. Brougher has made a good club secretary the past year. The old reliable Arthur Massey is again to act as slipper. The drawing of the dogs began nearly at midnight. It was found that 46 entries were made in the All-Age, 38 being the largest previous entry. There were 23 entries for the Great Bend Derby or puppy stakes.

The running will be as formerly, on the old Carney ranch, but it will not be the same old place. If it is good to be missed, Mr. Carney should be happy in his present home in Portland, Oregon, for there is simply a lament that he is not here. The ranch house stands silent and smokeless on the hill. There isn't going to be any annual press dinner this year, and Louise and the Shetland pony will not be in line.

Tuesday, First Day, Oct. 20.

The day was fair and warm. The line started from the club house at 10:15. The Cheyenne bottoms were wet this fall and the grass is high. A long walk was had before a hare was started. The brace down in the first round of the All-Aged Stake was

BELLE—QUEEN.

a good slip. Queen did it all in speed and the little work. Belle tripped to no merit. Queen killed in air and won.

LADY ALICE—BLACK BESS.

On a long lead-up, Lady Alice was the better, and also turned and killed. Bess was gaining, but too late. Lady Alice won.

TROUPE—MASTER PETER.

One hare unsighted. The walk was long. Master Peter became bad in the slips, sulking, and the brace was taken up, temporarily.

PRINCE CHARLIE—FLEETFOOT.

Fleetfoot was keener than Charlie, and dragged him, Charley not at all cleverly broken to slips. One hare was unsighted. The party took lunch.

TROUPE—MASTER PETER.

These now got a good slip on a fine hare, well sighted. Master Peter forgot his slouching, sulky gait, and showed great quality, running up, doing all the work, and a lot of it, quite alone, and killing after a hot course. Troupe was pointless. Master Peter won.

PRINCE CHARLIE—FLEETFOOT.

These got a good course. Charlie led and did the work for a quarter of a mile, placing Fleetfoot, which scored and killed, but too soon. Prince Charlie won.

BARONET—LADY OF FASHION.

Lady had all the superiority in the run up to a demon hare on the short grass. The hare led for the hills, and though Lady drew close, little work was done. No kill. A course of over a mile. The judge spoke well of Lady. Baronet was pointless. Lady of Fashion won.

LADY ILIFF GLENDYNE—WILL-O'-THE-WISP.

The beating was now on the short grass near the bluff by the old red barn. Here Mr. Carney had planted all his phantom jacks, marked and guaranteed. Ever and anon one with a brass ring in its nose and a blue smoke wreath in its rear arose and flitted for the hills. Mr. Grace said these were faster than any hares he had seen in California, and some of them he did not think could be caught by any two living greyhounds. This pair, however, killed a hare not quite so good as the best. Will-o'-the-Wisp shot in ahead and scored for a half mile. Lady drew by and was rapidly cutting down the lead, but killed too soon. A pretty course. Will-o'-the-Wisp won.

QUEEN BELLE—BAR MAID.

Maid went up, and went wide on a squat, but regained well. Queen got possession, but there was exchanging, after a little of which Bar Maid began a series of exhibitions of the most flagrant sorts of running cunning. Queen, none too fast, was honest and killed. Queen Belle won.

LANARADZO—VAN RICHARD.

Lanaradzo ran up, but lost to Richard. A bruising course to the hills, three-quarters of a mile. Van Richard won.

COMEDY—BRILLIANT.

Comedy, very fast from slips, got the run-up and two points ahead of Brilliant before the tremendous hare started the procession for the hills. Little work done then and no kill. Comedy won.

MONK BISHOP—CHICOPEE LASS.

Lass led up, very quick and clever, with plenty of work for 300yds., Monk helping very much. Lass worked the closer and killed. She is a very eager and clever worker, though not guaranteed to stay. This was the neatest course of the day. Chicopee Lass won.

LORD MCPHERSON—LADY R.

McPherson led up, and at 300yds. turned and held second place in the procession, the hare a very good first. Lady was placed, but fell out of it. Lord McPherson won.

PEARL OF PEKIN—BABAZOUN.

Two hares sprang, and a bad sight. Babazoun, much favored in the sight, ran up, but went wide and placed Pearl. They exchanged. Babazoun fell heavily, Pearl appearing then in the lead. Babazoun drew in, but later Pearl gave him a go-by, and worked the closer to the end of a three-quarter mile course. The kill was in a gully and unseen. Pearl of Pekin won.

VERDURE CLAD—LANCASHIRE LASS.

A very fast jack. Verdure led up and scored distinctly. Lancashire Lass showed ahead as the hare straightened for the hills, but did no scoring. Verdure drew by later, the Lass not running strong, but showing less determination than was expected, as she is usually so good. Verdure Clad won.

Dolly and Lady in Black went in, but found no hare. The runnings for the day were declared ended. At this time it does not seem possible to finish the running of both stakes within the week.

Wednesday, Second Day, Oct. 21.

The line left the club house at 10 A. M. The weather was very pleasant. A crowd of 1,000 or more, very unruly toward evening, impeded the sport to some extent. The hares were found in good numbers in the afternoon on the grazed ground near the hills. Seventeen courses were decided, the Puppy Stakes being nearly finished for the first series. The sport, as sport purely, was good. The best display of coursing ever seen here for evenness and pluck was shown by Dolly and Lady in Black, in the All-Age. The finest individual performance ever seen here was that of the puppy Royal Crest.

Running was continued in the first round of the All-Age:

DOLLY—LADY IN BLACK.

Lady passed when they straightened after an imperfect sight, and was faster to the first turn, also wrenching. Dolly seemed to gather speed, and when placed held to a turn. Dolly and trading of points followed for each dog now. Dolly

then forging ahead for a quarter of a mile, for the bulk of the work closely assisted by Lady in Black. The scoring then became rapid and constant, both the little bitches working admirably close. Their staying was wonderful, for the hare was very fast and strong. The kill was in corn. Dolly had the course in hand toward the close. Dolly won.

KATHLEEN—MASTER GLENDYNE.

Kathleen ran up and killed the hare, which had a hindleg down, within 100yds. Master Glendyne was outside, crowding to get in, but it was over too soon. Small test, and the dogs should have gone again. Kathleen won.

LADY BARTON—IRISH LASS.

Lady a length ahead in a tight run-up, turned and worked to five points ahead of Lass. The latter, placed, did little, Lady drawing by and working in her close style, ran up eight points more and turned the hare to Lass's kill, the latter, however, of some merit. Lady Barton won.

MAJOR GLENDYNE—HIGHLAND WARRIOR.

One hare was unsighted, but a good slip and sight on another followed. Highland Warrior, the Maine dog, had never seen a hare, and did not know what was wanted, and was startled to find his collar jerked off from him, leaving him alone in the middle of the Cheyenne bottoms. Major closed rapidly, and Warrior grasped the situation, thereafter cheerfully endeavoring to get a look in over a very long and bruising course, but falling out when placed. Major led for three-quarters of a mile. Warrior soft and unconditioned, moreover not handled understandingly in the last two days here, showed great pluck and followed. Major ran the hare to a standstill, and reaching for it, turned to Warrior, which killed. Major Glendyne won.

LIBERTY—PUZZLE.

Full sisters, both owned by Mr. Lowe, Mr. Page naming the latter. The slip was short, the dogs being excited. Liberty, favored by the hare, ran up, turned, wrenched and killed in 100yds. Pretty short work, but perhaps enough. Liberty won.

LITTLE THOUGHT OF—LITTLE CLIMBER.

A long course. Little Thought Of led up and did the first work, but Climber drew by and was quite the better for a half mile. Little Thought Of got one go-by, but lost on the turn. Climber now took it up and, showing wonderful staying quality, followed hard to the hills, Little Thought Of losing interest. Little Climber won.

WALNUT—PRINCE RUPERT.

After lunch these dogs, which found no hare when first down, went in again and got one soon. Prince, favored by the hare, ran up, going wide on the turn. Walnut, now placed, followed carefully on the bank of a wet strip. Prince, going by him, making straight for the hare. Walnut got one go-by, but lost, Prince working the truer and closer, placing Walnut to kill. Prince Rupert won.

LADY GRACE—GIRL'S FAVORITE.

One hare badly sighted, and Girl broke away, but was taken up. Two more hares got off unsighted. When slipped, Girl did it all, Grace only placed for scant work, the score being 16 to 5. Girl's Favorite won.

MASTER NEVERSETTLE—OLD STONE.

A tremendous course. Old Stone justified the hopes of seeing a good greyhound proved in him. It is a pity he was not conditioned. He seems certainly, however, to have coursed before. His showing was good, though he could only lose against so fit a one as the Kansas one. Old Stone had the run-up, and for three-quarters of a mile was the faster, working handsomely, but could not stay on his form. At the mile Master passed him and cut down the lead. The hare then turned and came directly back from the hills for which it was making, Master now in the lead. The course passed through the line of vehicles. The California dog, Morning Call, carelessly held by a boy, broke away, ran in and killed the hare, on which Master could not close. Old Stone was pluckily following close and showed good quality. Mr. Canavan was fined \$5 for allowing his dog to escape, which fine he promptly paid. Master Neversettles won.

P. D. Q.—EXAMINER.

Colorado against California. Examiner, the Coast dog, ran up and did the work over a sharp course of one-quarter mile. P. D. Q., placed, picked up the hare in his stride. Examiner won.

This closed the first round of the All-Age. Running was now begun in the Puppy Stakes, or

GREAT BEND DERBY.

A grand lot of youngsters, and they showed themselves as killing as their elders. In the 22 entries there are some good ones. The first down were

MORNING CALL—STARLIGHT.

The former is one of Mr. Wieland's, of San Francisco. Starlight was given by Mr. M. Phister, of Cincinnati, to Mr. Luse, and is better than she looks, she not being in especial form. Starlight is by Norwegian out of Buenretiro. Starlight was thrown out by the slips hanging, but drew up, and in one-quarter mile had won a go-by and a lead. Call also scored, but was again passed by the fawn, which held to a kill of merit. Starlight won.

ROYAL CREST—LAPLANDER.

Two hares ran, the slips holding back Laplander. Royal Crest went up and placed Laplander as he came up. Royal Crest is now a long and rather lathy-looking one, and cannot be called in condition, being, moreover, still fresh from a wire cutting. He, however, showed his Greentick blood, and set the crowd cheering, for he turned close as a monkey and had speed and grit beyond belief. He had all the work to do. The hare was very fast, and on the hard short grass Crest could not reach it. He, however, coursed it in noble style alone for a punishing run of over a mile. He ran the hare dead and picked up. Mr. Grace, the judge, as he came back, said, "That is the grandest puppy in America. If mine, \$1,000 could not buy him." Certainly he did not look capable of the grand work he showed here. Royal Crest won.

VAN RICHARD—CHRONICLE.

The California puppy Chronicle went out. Van ran up sharply, led well, scoring fast, giving Chronicle only placed points till toward the close, Chronicle, then drawing in, killed too soon for his own good. Van Richard won.

VAN PETER—LAVINIE.

Little choice on run up. Peter first to turn. Lavinie scored two go-bys, Peter three and led ahead to the hills, putting a fast hare to earth. Van Peter won.

EMPORIA LASS—BRITTON YET.

Neither was too fast or too honest. Lass led up, turned and wrenched. A long course followed along the edge of the hills, Lass, the better plainly and crowding the hare, which took to earth. Emporia Lass won.

BOB HOOD—BLACK PRINCE.

In a twisting lead up Prince was the better, but Bob then did it all, working close to a kill of great merit. Bob Hood won.

BELLE BARTON—TWISTER.

Belle held by the slips, Twister favored, but after they were both placed to score Twister showed faster, and held ahead in the exchanging, turning the hare to Belle, which picked it up, dropped it, Twister then killing. The latter

is a White Lips puppy, only 13mos. old. Belle was point-
less. Twister won.

Salvator and Blue Maid ran a good course, even points, undecided, and were taken up.

Viola and Gallant Boy went in and a long heat in the high grass on the wet bottoms raised no hare that was sighted. It growing late the running was declared closed for the day. A successful and pleasant day's sport.

Thursday, Third Day, Oct. 22.

Weather cooler. A very early start from town was made, but the first pair did not go down till 9:25. The sport to-day was more like ploughing corn than coursing, as the hares proved very scarce in the middle of the big pasture where most of the time was spent, only 14 courses and 2 byes were gotten off, and that by dint of late work. Mr. Grace cannot be complimented too much as a judge. He is a good rider, prompt, pushing, and moreover, a judge of coursing. His decisions have been unimpeachable, and if the club can get him next year, it should by all means do so. That may not be possible, for Mr. Grace finds the iron soil of these plains harder to ride over than the Merced springy footing, and the hares extremely "long." To-day the hares were very strong, in nearly every instance leading the dogs close to the hills, whether that meant a mile, a mile and a half, or even further. Some grand courses were consequent, and the class of coursing seen was good. The pasture in which most of the beating was done is 1,950 acres in the clear without fence.

The American Coursing Club is a private concern, supposed to be made up of gentlemen, but in the crowd on the grounds to-day an ignorant spectator might have gathered wrong impressions, as a goodly mob of hoodlums and semi-hoodlums were present. The colored "gemman" who occasionally shows up and runs the affairs of the day was on hand, and also several vehicles adorned by toughs who carried imposing Kansas jags. The order was not good. In days coming a better system must be adopted and enforced, or the gentlemen of the club must see the pleasantest features of

THE D. C. LUSE CUP.

their sport ruined. An admission fee of 25 cents was charged, and some paid it, many free citizens whipping past the gate keeper. There is talk of getting some sort of a lease on these grounds. If that be done, a regular fence and gate should be established, and an admission fee of at least \$1 charged. That would bar out the worst of the mob. A line of 100 breeders would be worth more than the 600 or 800 disorganized people who spoiled the pleasure to-day. It is hard to see what the club gains by the presence of the mob, which spoils sport, but does not add to it. The day must come when all this will have to be faced and settled. The last of these meetings will be disgraceful and dangerous, and the condition of things was not far from that to-day.

Running was continued in the Derby:

SALVATOR—BLUE MAID.

This was the undecided in the Derby first round yesterday. Two hares were unsighted. On the next, Salvator fell an awful cropper in the run up, and squealed with pain, rolling clear over. Blue Maid was much the faster, and rolled up a score of thirty points, unchecked, though Salvator came stronger at close. The hare went to earth, and Uncle Bobby Smart pulled her out, placing her in the crate with Blue Maid, which made no further effort to damage her. Blue Maid won.

VIOLA—GALLANT BOY.

Viola not well sighted, Boy went up fast. Viola, placed, could not hold for a point, and the White Lips puppy, unaided, made a grand course for one only 13 months old, crowding the hare to the hills, where it escaped in weeds. Viola beaten pointless. Gallant Boy won.

ORPHAN BOY—VANNESS.

Orphan first up, but favored by hare. Vanness drew by, and outpointed the other distinctly in the exchanging to the bluff, Boy then coming stronger. An unseen kill was made in weeds. Vanness won.

LIVING YET—VAN'S GENERAL.

Living Yet better in run-up, but thrown out by the hare. Van scored, but the other led with one point to the good, and increased this by a clean go-by. No kill. Van's General nearly quit. Living Yet won.

ALL-AGE STAKES—Second Round.

The first rounds in both the All-Age and Puppy stakes were now finished. In the second round the first pair found no hare for a long time. Going in to lunch, the crowd became boisterous. Some foul disobeyed the reiterated injunction which forbids smoking on the grounds and threw the stub of a cigar in the grass. It flared up, and had it not

been promptly stamped out the fire would have run wild in an instant, ruining the ranch for the season and putting an end to the American Coursing Club. The miscreant was not found. Some day the club will learn to make rules and enforce them, but this may be at the cost of a shocking lesson.

After luncheon Dr. Q. Van Hummel proceeded with his greyhound auction, as advertised, he offering to sell Babazon. Verdure Clad and four of their puppies. Mr. Canavan, auctioneer, was unable to get a bid on any of them, so none of them were sold.

QUEEN—LADY ALICE.

A short course. Alice ran up, was better and closer. Queen killed. Lady Alice won.

MASTER PETER—QUE BELLE.

Slouchy Peter, the most unattractive of Mr. Lowe's attractive string, suddenly woke up at sighting the hare, and threw large gobbs of cold alkali dust into the countenance of Dr. Gower's Denver bitch. Peter was very fast, and had a long score to the good when the hare as usual straightened for the hills. Que Belle, which certainly was not in condition, but apparently sick, then unexpectedly found strength, but could not cut down the lead. Kill unseen. Master Peter won.

PRINCE CHARLIE—VAN RICHARD.

Van Richard announced withdrawn. Prince Charlie ran a bye with Babazon, and had no difficulty in making a blooming spectacle of the latter. Prince is Lord Neversettles—White Lips, and shows the clan of the latter.

LADY OF FASHION—CHICOPEE LASS.

Mr. Lowe's most beautiful, though not perhaps his best bitch, now went down with the California bitch, Chicopee Lass. The latter showed a very fine drawn, graceful, eager little bitch. The Lass was much the faster up, and turned beautifully close, an ideal coursing greyhound if she can do this often. She passed Lady of Fashion at will on straight go-by, placing her for about all she got, and staying phenomenally. She was fresh and keen still when the hare, a big white-tail, went to earth, Lady being well worn out. The score was the almost incredible one of 53 to 7. Chicopee Lass won.

We are not familiar enough with the California dogs. I should have stated, to be correct, that Chicopee Lass is a litter sister to Sam Nash, which ran up to Al Farrow, winner at Merced meet last fall.

WILL-O'-THE-WISP—LORD MCPHERSON.

A bruising course, the longest yet run, and a close one, though the hare was too fast for much scoring. Will o'-the Wisp ran up and scored ahead of Lord McPherson, seeing fast. McPherson took it up, and with only 4 points against 6 went ahead toward the close, but could not cut the lead. No kill. Will-o'-the-Wisp won.

COMEDY—PEARL OF PEKIN.

Mr. Lowe's Comedy is by Lord Neversettles—Partera, and is thought good. She had a nail off to-day. Pearl of Pekin is St. Patrick—Daioy Dublin. She looks a beauty, fine drawn and trim. Honors were even up to the hare, but Pearl had the speed of it when they straightened. Comedy really had the first turn, but the hare favored Pearl, who placed it to Comedy. Comedy tripped and killed handsomely, but too soon. The score was 8 to 6. Pearl of Pekin won.

VERDURE CLAD—DOLLY.

Verdure led up and earned her 6 points ahead. Dolly turned once, got a straight go-by and killed, too soon. Score, 12 to 5. Verdure Clad won.

KATHLEEN—LADY BARTON.

Kathleen is another of the California dogs. Lady Barton is one of Mr. Luse's last year winners. Kathleen ran up and turned, Lady turned, Kathleen turned twice, assisted, doubled close and killed neatly. Kathleen won.

MAJOR GLENDYNE—LIBERTY.

Major Glendyne drawn, his foot being disabled in his first course. Liberty ran a bye with Belle, one of Dr. Shaw's twin bitches. They got a tremendous hare on pumping course, no kill.

LITTLE CLIMBER—PRINCE RUPERT.

Climber, nominated by Mr. Page, is really Mr. Lowe's property. She is by Lord Neversettles out of Partera. Prince Rupert is by Lord Neversettles out of White Lips, and is also owned by Mr. Lowe. Prince Rupert led up, and left Climber in possession but briefly when placed. He took the hare by himself over a most punishing course, perhaps two miles, allowing Climber nothing. The score was 18 to 8. Prince Rupert's performance was admirable. Prince Rupert won.

GIRL'S FAVORITE—MASTER NEVERSETTLE.

Girl's Favorite is the Emporia nomination, and is by Trales, an American C. C. first, out of Bessie Lee, Mr. Luse's winning bitch of three years back. Master Neversettles is by Lord Neversettles out of Partera. Little choice in the twisting run up, but Girl's Favorite far the better when both extended, placing Master. A merry course then to the close, Girl picking up the hare in her stride, then falling with it. Girl's Favorite won.

EXAMINER (A BYE).

This was run off with Dr. Shaw's Dolly, the other twin, a good hot course.

It was now nearly sundown, and the running closed. The second round of the All-Age was now completed.

Friday, Fourth Day, Oct. 23.

The start was at 9:35. Weather pleasant till afternoon, when the heat was oppressive. A rattling morning's work was run off, 9 courses before lunch, 11 and a bye after lunch, or 21 in all, the hares being more abundant.

To-day the crowd was orderly and pleasant, only one incident marring the enjoyment. Van Hummel's handler, a specimen of the exceedingly fresh dorky, who has made himself a disgusting nuisance throughout the week by his forwardness, fell foul of Arthur Massey, the slipper. As Arthur was trying to slip the dogs in the bye race which closed the day, this fellow ran his horse ahead after the hare, yelling as usual. Arthur called out to him, "Here, nigger, come back there, nigger!" This offended the "gemman of honah," and he later had words with Arthur. The latter made up to smash his head, when the negro, before he was approached within 20ft., reached in his hip pocket and pulled out a knife. Judge Grace stood ready to catch his hand, but others interrupted in time. Arthur Massey was unprepared to administer the correct treatment to the ruffian. I mean he was not heeled. The necessity of the slipper of the American Coursing Club going heeled in order to be safe is one which must be a trifle humiliating to the club. Should the committee allow this ruffianly handler on the grounds to-morrow, it will have established, in a brief and easy way, the fact that the club has no respect for itself whatever. This I do not fancy will be the case.

GREAT BEND DERBY—Second Round.

The work began just nicely at the second round for the puppies.

STARLIGHT—ROYAL CREST.

Crest ran up fast on a fast hare, worked out his six points, then doubled them up to twenty, placing Starlight, which could not hold. On soft ground Starlight showed to front, but wrenched only feebly. Kill not seen. Royal Crest won.

VAN'S RICHARD—EMPORIA LASS.

Richard first up, Lass not sighted well. When scoring began Richard was much the closer. Lass a bit cunning and unable to hold when served the hare. At the hill Lass drew by on speed and turned twice, but could not cut down the lead. Lass killed. Van's Richard won.

VAN'S PETER—BOB HOOD.

Peter ran up, turned twice, placing Bob, which killed, 100yds. Van's Peter won.

TWISTER—BLUE MAID.

Twister had the lead up and scored his six points ahead, then doubled up four more, leading for a half mile. Maid was placed, scored twice, and Twister then led to hills. No kill. Twister won.

GALLANT BOY—VANNES.

Boy first up to the turn, but went wide. Vanness, very quick and handy, held for ten and a half points ahead. Boy drew by clearly, but lost again, and they traded for a time. Vanness the better, Boy ahead at close. Boy killed. The full score was 27 to 19. This was a most punishing course, probably two and a half miles in all. Hare and dogs were both at a standstill. Gallant Boy lay down on the hare he killed. Vanness won.

LIVING YET (a bye).

This, a merry go with Lavinie for running mate, closed the second series of the Derby.

ALL-AGE STAKE.—Third Round.

In the All-Age the running last evening was also nicely stopped at the end of a series, running now beginning in the third.

LADY ALICE—MASTER PETER.

Peter held in the slips, but yet ran clearly first in the lead up of 50yds. Alice was close and picked up place at the second turn. Peter drew by, and was much the faster, cleverly handling his hare for a half mile. Alice was placed and scored, but lost on a go-by. On the line to the hills trading was easy, both staying. No kill. Score 10 to 4. Master Peter won.

PRINCE CHARLIE—CHICOPEE LASS.

Chicopee's short tail attempted to curl with eagerness. She was badly punished in the work of yesterday, and Edwards, her handler, said she had only one leg to run on. With this one leg she was swift as a hawk. The slip was a bit short, though the grass was high. Chicopee ran up, turned, and with mouth wide open for 15ft. of her stride, glided up and killed within 75 or 100yds. Rather slender work, and many judges would have said no course, though Mr. Grace's theory is that work after the slips are off must count. Chicopee certainly showed speed and cleverness. Chicopee Lass won.

WILL-O'-THE-WISP—PEARL OF PEKIN.

This course brought out the most admirable individual performance of the day. There was really not much difference in the lead to the swerving hare. Will perhaps first up, but he went very wide on the turn, though scoring later. Pearl then handled the hare beautifully, and cut down the lead, going by Will. She had four points the lead when she picked up the hare and apparently killed. The hare, however, again started. Pearl then ran past, scored as she liked alone to nine points additional and killed. Her performance was remarkable. Pearl of Pekin won.

VERDURE CLAD—KATHLEEN.

Kathleen was one of the good array of California dogs still in it. Kathleen ran up and turned twice ahead of Verdure. The latter, placed, worked cleverly and evened things in the first quarter mile. Kathleen took a go-by out of Verdure, and handled the hare, a terrible customer, along the edge of the hill, and scoring after the first three-quarter mile, which has been the exception on these hill demons. No kill was seen, though later a man said he found the hare dead, and Kathleen nearly dead. Kathleen won.

LIBERTY—GIRL'S FAVORITE.

One by one Mr. Lowe's dogs had been going out, and now he lost another. Liberty was first up, and earned five points ahead, placing Girl, which rolled up an equal score. The hare struck the hard road, and here Girl wrenched it from side to side, Liberty falling out of it. No kill. There was not much to spare between them before they struck the road. Girl's Favorite won.

PRINCE RUPERT—EXAMINER.

In the opinion of "Greyhound" (Mr. J. R. Dickson), of the *California Spirit of the Times*, Examiner was not thought in perfect condition when he left San Francisco, but had run well so far through the meet, and now dismissed another of Mr. Lowe's candidates. Examiner ran up and turned to five points ahead. Rupert was close and clever, but in a quarter of a mile of it Examiner drew by twice. Rupert helped honestly to the close, and killed on the hard ground over which the hares usually escape. Examiner was leading chiefly. Score 13 to 9. Examiner won.

During this course Mr. P. Canavan, riding after Examiner, was thrown by his horse stumbling. He landed on his expansive stomach, which saved his life, though it cost him his wind for some time. He woke up calling "Examiner wins" and sure enough he was right about it.

GREAT BEND DERBY.—Third Round.

The winning puppies had to repeat their races to-day in spite of the heat.

ROYAL CREST—VAN RICHARD.

Mr. Watson's Greentick puppy had become a favorite. He was not, however, in hard enough condition to repeat to-day and did not make so good a showing. Crest ran up and turned, and honors were easy for the next three corners. Richard drew by, rolling up a formidable showing for a quarter of a mile. At the foot of the hills Crest drew by, not scoring. No kill. Van Richard won.

VAN'S PETER—TWISTER.

No merit in the lead up, both dogs at fault for a moment. Twister scored five points ahead, losing to Peter, which worked very keen and close on the twisting hare and killed to merit. Mr. Lowe's last puppy was now out. Van's Peter won.

VANNES—LIVING YET.

Living Yet a three-points run up, and three turns, then eleven points total ahead. He appeared the superior in the later turning, well assisted. This was a punishing course of over a mile, and the hare left the dogs, which got at fault and ran about for a time unsighted. Living Yet won.

ALL-AGED STAKES.—Fourth Round.

In the next course Mr. Lowe saw his last dog, Master Peter, go out of the running. Mr. Lowe has been unfortunate, several times coming near winning, but not winning. He brought the handsomest specimens of greyhound seen here this year, and has always brought good ones, fine ones, albeit perhaps carrying a trifle too much flesh. His bitch White Lips, carried back to Greentick blood (say Royal Crest), would get him some puppies which would win. Of course, Mr. Lowe would not hear to this, but he might well do so. Of stud greyhound material in this country we have next to nothing that is first-class, though of bitches there is a plenty of grand ones. Mr. Lowe's White Lips puppies showed well here. Many think White Lips the best greyhound that ever stood on these grounds, considering type, blood and performance. Would not a shade of closer-turn-

ing quality bring such puppies out winners? Mr. Lowe comes nearer to his ambition every year, and that, I believe, is to breed a dog which can go back to England and win in one of their large stakes. He has had his eye on a dog in England this year whose blood suits him, but whose get is not yet determined.

MASTER PETER—CHICOPEE LASS.

Chicopee led up and turned twice ahead. Peter, placed, evened the score. Chicopee raced by, and then showed superior, staying beyond belief, and moreover scoring, to her own kill. She has been called a "park dog," a "whippet" and the like, but her performance here showed her far more than that, for quarter dogs have no business with such hares as these after a mile of work. Chicopee Lass won.

PEARL OF PEKIN—KATHLEEN.

A grand course between grand performers. Pearl led up and turned twice. Kathleen promptly cut this down, but could not stay the pace. The dogs passed a wire fence, which stopped the horsemen, but Pearl could be seen clearly in the lead and scoring in fine style. Both bitches are white, but Kathleen has black ears. By this it could be seen that Kathleen killed, her head showing dark as she turned to the hare. Pearl of Pekin won.

GIRL'S FAVORITE—EXAMINER.

Examiner led up and earned his six points ahead, and led quite speedily for half a mile, putting the hare to earth, and leaving Girl practically pointless. Examiner won.

GREAT BEND DERBY.—Fourth Round.

By the rules, Living Yet having had one natural bye, was not entitled to another, and so went in against the top dog left above her on the card. The pair was therefore

VAN RICHARD—LIVING YET.

Living Yet ran up and turned, showing a great burst of speed, though where he got it after his late hot and long course no one could tell. Richard, when placed, could not hold before him, and the hare went to earth with the score of 5 to 3. Living Yet won.

Mr. Luse named this puppy "Living Yet" in no view of a juncture like this. The puppy was sickly and was long expected to die, but bung on to life. Every morning Mrs. Luse would ask, "Is that puppy dead yet?" and Mr. Luse would answer, "No, he is living yet." This grew from a byword to a name, which latter Mr. Luse thought to-night was not a bad one.

Van's Peter a bye. This closed the day.

Saturday, Fifth Day, Oct. 24.

The start was at 10 A. M. Weather still glorious. Not a large crowd was present, but it was cheerful and orderly. The colored member of the executive committee, self-appointed—the same "gemman" that wanted to use his cutlery on the slipper—was conspicuous by his absence, and a vast quiet reigned over the Cheyenne plains.

THE NATIONAL GREYHOUND CLUB DERBY CUP.

ALL-AGE STAKES.—Fifth Round.

CHICOPEE LASS—EXAMINER.

The gritty bitch that wore the red collar showed as game as any that ever gazed through any collar. Her feet were torn raw. The training of California does not fit a dog for this cast iron soil. In spite of all this Chicopee Lass ran up for two points, turned for a third, and then led the white a merry bout over the level to hill, placing him once for a turn and a wrench. The hare straightened with Examiner in the lead, but on the hillside the Lass drew straight by and led over the crest of the bluff. No kill. Score 8 to 1½. Chicopee Lass won.

PEARL OF PEKIN (a bye).

Pearl of Pekin was thought a certainty for first, being much less punished by earlier work. In the bye with Monk Bishop she did not perform, and as the judge remarked, the latter would have won had it been a course, as Pearl was a bit shy, and apparently not warmed up to it. This was a trifle startling, as her earlier work had been grand.

ALL-AGE STAKES.—Sixth Round and Final.

CHICOPEE LASS—PEARL OF PEKIN.

It was a question of feel for the Lass. It seemed cruelty to let her run, but cocaine and her native sand kept her going on them. The bitches made a pretty picture, both being bright and eager in slips, and fine-drawn elegant hounds. Unfortunately now occurred a mishap to mar the perfection of what might have been a perfectly pleasant course. The hare was started in rather high grass, and the crowd happened to be gathered close about, having just come through a gate. At the slip the hare was right among the horses, and amid great confusion numbers of horsemen rode after the dogs as they doubled through the crush. Chicopee Lass went up as swift as a falcon and took away the run-up and the turn. Pearl got in four points, serving the hare to Lass, which then added two turns more to her score. At this point J. J. Edmunds, nominator of Chicopee Lass, was riding through the crowd following the course, and the hare doubling sharply, Pearl ran into Edmunds's horse, striking sharply and yelping with pain. The judge did not see this accident, the crowd being in the way at that moment. Pearl continued gamely, but Lass drew by her like an arrow and killed. Score 10 to 4.

Chicopee Lass won the All-Age.

At once upon the rendering of the decision, Mr. Bartels, owner of Pearl of Pekin, announced a protest, on the ground that his greyhound had been ridden over by his opponent (Rule 26). This was referred to the executive committee for action during the business meeting in the afternoon.

Much discussion arose over this last course, Mr. Bartels standing on a literal construction of the rules and making claim for the first place and the money. Others disinterested could only see that this rule was meant to cover merely the case of brutality in intentionally riding down an opponent's dog, which latter was not attributable to Edmunds in the least. This being the case, it became merely an accident of the field. The weight of opinion ran decidedly in this direction.

As to the relative merit of the two greyhounds, as they ran to-day and as they ran in this course, there was not the slightest question possible. Had the hare ever gotten out to live longer, Chicopee Lass would have beaten Pearl of Pekin in a style simply hollow. Mr. Bartels may think this accident a misfortune, for now he can still believe that Pearl of Pekin was as good to-day as she was yesterday, and this may be some comfort for him, though no disinterested coursing man who followed these runnings could think it for a moment.

Meantime there had been run the

GREAT BEND DERBY.—Fifth Round and Final.

LIVING YET—VAN'S PETER.

Another surprise was in store here. Living Yet was thought sure to win the Derby, but he could not do what he did yesterday evening. Peter ran up, and gave Living Yet what little he had. The latter drew by, possibly on the inside, as the hare straightened, but both dogs struck a wire fence cruelly hard, and the hare went to earth just beyond.

Van's Peter won the Derby. At the closing of the day's work Mr. D. N. Heizer, the president of the club, made a neat address, felicitating the members upon the success of the meeting, and particularly upon having secured so perfect a judge as Mr. Grace. In this latter Mr. Heizer was not only complimentary, but correct. With all due deference where that belongs, Mr. Grace is the best judge ever seen here, and doubtless the best in America, as he is universally held on the Coast. Much of the pleasure of success of the meet has been due to him, and there is not one of us fit to criticize a single decision that he made. I venture to say that nothing has helped this club more than to see coursing done as it should be done. Very appropriate is the remark that that rough diamond Uncle Bobby Smart made, "The judge has given me his picture, and by—I'm going to frame it, so I can sleep in the same room w' an honest judge." Cheers were given for Mr. Grace, for Arthur Massey, "the best slipper in America," for Mr. Heizer, and lastly for Chicopee Lass. That nery brute deserved it as much as any man.

THE ANNUAL MEETING.

The regular annual meeting of the club was called at 4 P. M. at the Morrison House, President D. N. Heizer in the chair. The secretary's report was read and approved, and the disbursements of the treasurer also approved. A vote of thanks was tendered Mr. John Grace, of San Francisco, for the able manner in which he had discharged his duties as judge of the meet. A vote of thanks was extended to the press. Routine committee reports followed.

Mr. Bartels formally protested the decision in the final course of the All-Age, Chicopee Lass—Pearl of Pekin, claiming first for Pearl of Pekin, on the ground that she had been run over by the handler of Chicopee Lass. Referred to the executive committee, who asked time to collect evidence as to the facts. Later on, after hearing much unpleasant and unfortunate "kicking," the committee decided that the protest could not be allowed. Mr. Bartels offered to compromise and Mr. Edmunds refused. The latter made affidavit on request to the effect that the collision was pure accident. This closed the matter and Chicopee Lass goes home to-night a winner of first, where on her showing she honestly belongs.

Election of officers followed with the following results: President, Dr. N. Rowe, Vice-President, Dr. S. J. Shaw, of Great Bend; Secretary, Mr. Ira D. Brougher, of Great Bend; Treasurer, Mr. J. V. Brinkman, of Great Bend. Executive Committee, Mr. D. C. Luse, of Great Bend; Mr. H. C. Lowe, of Lawrence, Kas., and Mr. C. G. Page, of Aurora, Ill. Grounds Committee, Messrs. Dick Taylor, A. C. Schermerhorn and D. C. Luse, all of Great Bend.

Votes of thanks were extended to Dr. N. Rowe for his annual \$100 cup purse; to the National Greyhound Club, of New York, for the handsome trophies offered to the American Club; to Mr. D. C. Luse for his fine trophy cup.

Much discussion has been on of late relative to a possible international coursing meeting, to be held on these grounds in 1893, a 64 dog stake, 32 English and 32 American nominations, £10 entry, £500 guaranteed, £700 to first, £500 to runner-up, £100 each to next two, and £10 each to the next four. Mr. J. Herbert Watson, of New York, was earnest in agitating this, and moved for a committee to work to that end. It was finally decided to leave the appointment of this committee to the incoming president. In 1893 sporting events will be larger than any we have ever seen in America at turf, trigger or leash. In 1893 this great meeting can be held and held successfully. One member of the club, Mr. R. R. Pri-e, of Topeka, guarantees \$500 toward it and thinks the Santa Fe road will add \$500. The purse can be raised. Is it too much to say that this must be and will be?

In the evening the California party started West. Mr. Grace takes with him for entry in California events one of Mr. H. C. Lowe's beautiful young greyhounds, Prince Rupert. "He comes out of the best kennel in America," said Mr. Grace, "and there is not as fine a one on the Coast." Dr. G. I. Royce and Dr. S. J. Shaw are planning and may go on to Merced meet. It is proposed to trade years with California, Merced meet being brought bodily to Great Bend next year, and vice versa. Of this more later, and let us hear from our good friends of the Coast. This is how California came to what it calls the East and what we call the West, and showed us how to course. Colorado and Kansas, we may be sure, will not grudge her the honors after the smoke of battle, or rather the alkali dust of these same Cheyenne Flats shall have cleared away.

The following is the

SUMMARY.

ALL-AGE STAKES.

First Round.

Ira D. Brougher's (Great Bend) f b Queen (Arkansas) b	beat	S. J. Shaw's (Great Bend) f b & bdl b Belle (Trales Hummingbird).
Traveler—Mary Anderson		
Price & Royce's (Topeka, Kas.) b & w b Lady Alice (Joe Burnside—Humming Bird)	beat	Alfred Haigh's (Cable, Ill.) b & w b Black Bess (Spiddell—Alice).
H. C. Lowe's (Lawrence, Kas.) bdl d Master Peter (Lord Neversett—Partera)	beat	D. H. Halladay's (Great Bend) bdl d Troupe (Trump—Miss Blue).
H. C. Lowe's w & b d Prince Charlie (Lord Neversett—White Lips)	beat	J. H. Gower's (N.S. Denver Col.) b & w d Fleetfoot (Gladstone—Ticler).
H. C. Lowe's w & f b Lady of Fashion (Lord Neversett—Partera)	beat	J. H. Gower's w & bld d Baronet (St. Patrick—Daisy Dublin).
H. C. Lowe's bdl & w d Will-o'-the-Wisp (Lord Neversett—Partera)	beat	Price & Royce's w & b b Lady Hiff Glendyne (Trales—Lady Graham Glendyne).
J. H. Glover's f b Qne Belle (Blondie—Browne)	beat	John Russell's (Cable, Ill.) b & w b Bar Maid (Charles Boyle—Alice).
Dr. Van Hummel's (Kans. City) bdl d Van's Richard (Babazon—Verdure Clad)	beat	D. C. Luse's (Great Bend) f & w d Lanardo (Trales—Dick's Darling).
H. C. Lowe's w & f b Comedy (Lord Neversett—Partera)	beat	T. F. Foucaumon's (Emporia, Kans.) w & b b Brilliant (Briton Still—Elfrida).
J. J. Edmunds's (San Fran.) w & b b Chicopee Lass (Chicopee—Lily of Killarney)	beat	T. W. Bartell's (Denver, Colo.) w & bdl dog Monk Bishop.
D. C. Luse's w & bdl d Lord McPherson (Trales—Dick's Darling)	beat	S. J. Shaw's w & bdl b Lady R. (Lord McPherson—Jessamine).
T. W. Bartell's w b Pearl of Pekin (St. Patrick—Daisy Dublin)	beat	Dr. Van Hummel's r d Babazon (Briton Still—Fascinator).

Dr. Van Hummell's bdl b Verdure Clad (Greentick- Couillon)	beat	H. C. Lowe's bdl b Lanca- shire Lass (Lord Neversett- le-Partera)
S. J. Shaw's w & bdl b Dolly (Trales—Humming)	beat	D. C. Luse's b b Lady in Black (Trales—Dick's Dar- ling)
J. J. Edmonds's w & b b Kathleen (Killarney—Calve- reen)	beat	A. Haigh's w & b d Master Glendyne (Trales—Little Lady Glendyne)
D. C. Luse's f b Lady Barton (Trales—Dick's Dar- ling)	beat	T. W. Bartlett's w & b b Irish Lass
Price & Royce's w & bdl d Major Glendyne (Trales— Little Lady Glendyne)	beat	N. Q. Pope's (Brooklyn, N. Y.) w & bdl d Highland War- rior (Balkis—Cassandra)
H. C. Lowe's bdl b Lib- erty (Lord Neversett-Par- tera)	beat	D. G. Page's (Aurora, Ill.) w & bdl b Puzzle (Lord Nev- ersettle—Partera)
D. G. Page's (N. S.) w & bdl b Little Climber (Lord Neversett-Partera)	beat	D. C. Luse's bdl b Little Thought Of (Trales—Dick's Darling)
H. C. Lowe's w & b d Prince Rupert (Lord Neversett- White Lips)	beat	J. J. Edmonds's b d Wal- nut
T. F. Foncannon's b b b Girl's Favorite (Trales—Bes- sie)	beat	R. Smart's (Ellinwood, Kee.) b b Lady Grace (Trales —Miss Smart)
H. C. Lowe's bdl & w d Master Neversett (Lord Neversett-Partera)	beat	N. Q. Pope's bdl & w d Old Stone (Oresto—Bouncing Bessie)
Chas. Wieland's w d Ex- aminer (Snowdrift—Lady Emma)	beat	Dr. J. H. Gower's w & f d P. D. Q. (St. Patrick—Daisy Dublin)

Second Round.—Lady Alice beat Queen, Master Peter beat Que-
bec, Van's Richard beat Prince, Charlie, Chicopee Lass beat
Lady of Fashion, Will-o-the-Wisp beat Lord McPherson, Pearl of
Pekin beat Comedy, Verdure Clad beat Dolly, Kathleen beat Lady
Barton, Liberty (a bye) [Major Glendyne withdrawn], Prince
Rupert beat Little Climber, Girl's Favorite beat Master Never-
sett-Partera, Examiner (a bye).

Third Round.—Master Peter beat Lady Alice, Chicopee Lass
beat Prince Charlie, Pearl of Pekin beat Will-o-the-Wisp, Kath-
leen beat Verdure Clad, Girl's Favorite beat Liberty, Examiner
beat Prince Rupert.

Fourth Round.—Chicopee Lass beat Master Peter, Pearl of Pekin
beat Kathleen, Examiner beat Girl's Favorite.

Fifth Round.—Chicopee Lass beat Examiner, Pearl of Pekin (a
bye).

Sixth and Final Round.—Chicopee Lass beat Pearl of Pekin and
won the championship.

The conditions of the All-Age Stake are as follows: Open
to the world. For thirty-two or more all-age greyhounds.
Entrance fee \$10; the winner to receive 50 per cent. of en-
trance money and cup (\$100 cash) donated by Dr. N. Rowe;
also a solid silver cup, donated by D. C. Luse, owner of
American Coursing Kennels; cup to be won twice by the
same kennel; to be withheld if stake divided; also a silver
medal, donated by the National Greyhound Club, of New
York city; the runner up 50 per cent. of the remaining en-
trance money; third and fourth, 25 per cent. each of the
money remaining after second division.

The names, positions and winnings of the winning dogs
are as follows: First, Chicopee Lass, \$330 in cash, the cham-
pionship of America, the Luse silver cup and the National
Greyhound Club medal. Second, Pearl of Pekin, \$165 cash.
Third, Examiner, \$28.75 cash. Fourth, fifth and sixth,
in order, Girl's Favorite, Kathleen and Master Peter, \$9.50 cash
each, of which winnings 12½ per cent. is retained by the club.

Chicopee Lass, first, is a 45lbs. white and black bitch
(Chicopee—Lily of Killarney), 4 yrs. of age, still perfectly
true and of great dash. Her quality lies much in her per-
formance, though she is muscled right and has room to
breathe.

Pearl of Pekin (St. Patrick—Daisy Dublin), runner-up is
only 20 mos. old, about 50 lbs., white, and much of a grey-
hound.

THE GREAT BEND DERBY.

First Round.

D. C. Luse's f b Starlight (Norwegian—Buenavento)	beat	Chas. S. Wieland's w & b b Morning Call (Dan B.—Lady Emma)
J. H. Watson's (Brooklyn, N. Y.) b d Royal Crest (Greentick—Royal Rate)	beat	D. C. Luse's b d Laplander (Trales—Dick's Darling)
Dr. Van Hummell's bdl d Van's Richard (Babazoun— Verdure Clad)	beat	Chas. S. Wieland's b & w d Chronicle (Dan B. Lady Emma)
Dr. Van Hummell's r d Van's Peter (Babazoun— Carmire)	beat	D. C. Luse's f b Lavinie (Trales—Dick's Darling)
T. F. Foncannon's r b Em- poria Lass (Lord McPherson —Tennie)	beat	J. Russell's bdl and w d Britton Yet (Prince Trales Glendyne—Busy Bee)
J. V. Brinkman's w & bdl d Bob Hood (Lord McPherson —Jessamine)	beat	J. Russell's b & w d B'ack Prince (Prince Trales Glen- dyne—Busy Bee)
H. C. Lowe's w & b d Twis- ter (Lord Neversett—White Lips)	beat	Richard Taylor's b & w b Helle Barton (Trales—Thor- na)
Robert Smart's bl b Blue Maid (Tom Sayers—Daisy)	beat	T. F. Foncannon's bdl d Salvator (Lord McPherson— Tennie)
H. C. Lowe's w & b d Gallant Boy (Lord Neverset- tle—White Lips)	beat	Dr. Van Hummell's bdl b Vance (Babazoun—Verdure Clad)
Dr. Van Hummell's r d Vance (Babazoun—Ver- dure Clad)	beat	S. J. Shaw's b d Orphan Boy
D. C. Luse's w & f d Liv- ing Yet (Trales—Dick's Dar- ling)	beat	Dr. Van Hummell's r & w d Van's General (Babazoun —Verdure Clad)

Second Round.—Royal Crest beat Starlight, Van's Richard beat
Emporia Lass, Van's Peter beat Bob Hood, Twister beat Blue
Maid, Vance beat Gallant Boy, Living Yet, a bye.

Third Round.—Van's Richard beat Royal Crest, Van's Peter beat
Twister, Living Yet beat Vance.

Fourth Round.—Living Yet beat Van's Richard, Van's Peter a
bye.

Fifth and Final Round.—Van's Peter beat Living Yet and won
the Derby first.

The conditions of the Great Bend Derby are as follows:
For 16 or more greyhounds, 18 months old or younger. En-
trance fee \$5; the winner to receive 50 per cent. of entrance
money, \$30 cash, donated by the Morrison House, Great
Bend, and silver cup by the National Greyhound Club,
of New York city. The runner-up 50 per cent. of the remain-
ing money, and one-fourth of \$50 donated by citizens of Great
Bend; third and fourth, 25 per cent. each of money remain-
ing after second division. Affidavit of age must be made by
owner.

The names, positions and winnings of the winning dogs
are as follows: First, Van's Peter, \$107.50 cash and the Na-
tional Greyhound Club Derby Cup. Second, Living Yet,
\$53.75 cash. Third, Van's Richard, \$13.40 cash. Fourth,
fifth and sixth in order, Vance, Twister and Royal Crest,
\$13.40 cash each, of which winnings 12½ per cent. is retained
by the club.

Van's Peter, winner of the Derby first, is a compact grey-
hound, perhaps 47 lbs. weight, red fawn, a consistent per-
former. He is by Babazoun—Carmine. His dam must be
good.

Living Yet, runner up, is a white dog, about 45 lbs., im-
pressing one as rather lathy-looking, but is a flashy, snappy
performer. He is of Mr. Luse's favorite old strain, Trales-
Dick's Darling.

A few pedigrees of dogs entered have not been given.
Some are unknown, and a few not handed in are not obtain-
able at this notice.

E. HODGKIN

PHILADELPHIA WITHDRAWS.

Editor Forest and Stream:

As a delegate to the American Kennel Club I feel obliged
to make some reply to the untruthful and impertinent
sneal that the disgruntled president of the Philadelphia
Kennel Club makes in the last issues of the sporting papers.
In the first place he suggests pulling down a structure
which he claims is run in the interests of a few men living
in New York city and that has injured the cause of dog
breeding. Certainly no organization could be founded on
broader or more liberal principles than is the A. K. C. It
remains with the kennel clubs spread throughout the land
to correct any mismanagement, and the Philadelphia Club,
if they see anything wrong, as they claim, should retain
their representation and endeavor to correct it.

Compare the status of dog breeding now and before the
organization of the A. K. C. and will any one posted breeder
say we have gone backward?

Will the president of the Philadelphia K. C. explain in
what way the New York city men have gained any more
through the A. K. C. than have those living outside? Un-
fortunately many of us residing within easy traveling dis-
tance to New York are serving as delegates for distant clubs
through their urgent requests, but so far as I am concerned
I accepted the position with reluctance, and only on condi-
tion that the club I represent would advise my action on
important questions. I was not advised how to vote in the
matter of the Philadelphia club's field trials, and no clique
or other delegate in any way influenced my vote. To me the
question was too ridiculous to be worthy of serious consid-
eration. The Philadelphia club might with equal reason have
asked recognition for wins at a family bench show arranged
for the dogs owned by members of their club.

It seems to me in this instance that the "clique shoe" is
on the other foot, and that the Philadelphia club were try-
ing to take advantage of the representative body of all other
clubs to gain a point which I very much question if they
would have been willing to extend to the other clubs had
similar requests followed.

I would gladly resign my appointment as delegate to see
an active member of the club I represent take my place, but
I am told such is not practicable. If the Philadelphia club
sees a remedy for the present method of representation, by
all means return to the fold and present it. As to the "cut
and dried" proceedings of the A. K. C. and the inability of
their delegate to get a hearing, that is absolutely untrue.
I have seen none of it, and having attended all of the meet-
ings for more than a year, I have always had my say when I
wished it, and if the representative of the Philadelphia
club has not found a hearing he must have sadly lacked
gumption.

The Philadelphia Club may have been one of the parents
of the A. K. C., but their action in this matter, together
with the letters of their president, savors strongly of their
having reached their second childhood. "The Peshall busi-
ness has been simply disgusting." So say we all of us, but
why, oh why, didn't their delegate suggest some practical
and dignified plan of terminating this very "humiliating"
affair, instead of joining issues with this other disgruntled
boy in the conception of a clique bugaboo, the membership
of which they assert are furthering their own ambitions
and passions." The field trial ambitions of the Philadelphia
Club fortunately were a mouthful a bit too large for the
majority of the delegates to the A. K. C. to chew, and for-
tunately again, with all due respect to the Philadelphia
Club's delegate, he could not be heard sufficiently to poke
his down our throats in spite of our better senses. The
officers of the A. K. C. are active in its interests. Had they
not been they would not have received their present dis-
tinction.

In every organization that I have been a member of I have
found that the real work, usually unpleasant and thankless,
has fallen upon a few, but I am sure that those now bearing
the brunt of the dissatisfied minority, who lose no oppor-
tunity to publicly vent their abuse, will gladly step down
and out whenever the satisfied majority are desirous to have
them do so.

I am sorry the A. K. C. has lost the co-operation of the
Philadelphia Club, but if their feelings are truly represented
in the letter of their president, they have outgrown their
usefulness, and we can better spare them than not. In spite
of all dissatisfaction the kennel club grows. Never was it
stronger in membership and finances than it is to-day. It
cannot be easily destroyed. Its improvement is but a
question of unselfish co-operation which is extended to all.
H. T. FOOTE.

DISPOSITION OF BLOODHOUNDS.

Editor Forest and Stream:

In your "Dog Chat" you refer to the act of the Massachu-
setts Legislature in passing the act of 1886, Chap. 340, in
reference to keeping a bloodhound and also ask my opinion
of the bloodhound, as to his general disposition. That
such a law as this could have been passed seems strange to
me or any one who has ever seen or been familiar with a
pure bred bloodhound.

Certainly the laugh is on the learned Legislature of 1886
then, for there was not an English bloodhound in America
at that time. The first kennel that was ever shown in this
country was in 1838 at the Westminster Kennel Club's
show by Mr. Edwin Brough, of Scarborough, England. But
the makers of the Massachusetts law are the same as ninety-
nine in a hundred that visit my kennels to see the blood-
hounds. Their first remark would be, "Are those blood-
hounds? They don't look as I thought they would. Why,
they cannot be a cross dog." The bloodhounds would be so
pleasing and plead to be petted that before they were aware
the children and ladies were caressing and petting them.
How can it be otherwise, his breeding association and the
care he has received from association with the oldest fam-
ilies is stamped plainly on his deeply-wrinkled solemn face
and deep-set eyes. They speak a majesty and pathos which
at times is startling.

The breeding of certain strains of the old English blood-
hound has been kept as pure and extends as far back as the
time of William the Conqueror, and breeders boast of it as
they do of their own.

The general appearance, disposition and intelligence of
the bloodhound are the strongest proofs of this assertion.
Their appearance at the New York dog show was a revela-
tion to the American public.

He probably got his name by his use in the past in track-
ing wounded game, and his unerring scent. When once
laid on any trail he knows that one trail and no other, no
matter how many times the trail is crossed and recrossed.
In 1888, when Mr. Brough exhibited his kennel at New York
I was fortunate enough to become associated with him and
to retain all but one of his team. Since then they have been
shown at most of the principal shows from New York to
San Francisco, and at all of these shows there has not been
a hound shown or imported, with one single exception, that
did not come from or trace back to us. In quality and
number of dogs I can say I have stood second only to Mr.
Brough in England, usually having thirty or more on hand.
During the summer months it keeps one man occupied most
of the time to show the dogs to visitors. They will all bear
me out in my assertions that they never saw a cross blood-
hound at my kennels, and that they and their children
handled them with the greatest freedom. Further, I will
say of all I have bred I never had one but that any child or
lady could pet and handle at all times, even when eating, or
that it was not perfectly safe for them to go into the kennel
where they had puppies, if I was with them. That I cou-

sider the greatest test of any dog's disposition that can be
made. I should make one exception to the above, I did
have a very fine blooded stud imported whose disposition had
previously been spoiled by confinement and his keeper. I
soon disposed of him to a party in Dakota, where he ran
with a pack of hounds and had the greatest liberty; here he
became one of the best natured dogs.

Another point for the bloodhound. Where have most of
the dogs gone that I have sold? Not surely to people who
want a savage, dangerous dog. They have mostly been
bought by the same class of people who own them in Eng-
land; have been taken into the families of the wealthy as
companions, and by ladies as house pets. Mr. Glazier prob-
ably can get letters from some of these parties which would
have some weight. I would like nothing better than to
have the honorable body visit my kennel with their good
ladies and children, and I would assert that before they had
been there long the ladies and children would be petting and
caressing them the same as other people.

About the time I commenced breeding bloodhounds I was
at the kennels of Mr. E. H. Moore, of Melrose, Mass. He
laughingly gave me his experience in court the year before.
It seems some one was bitten by a dog. The owner was
sued for keeping a bloodhound. Mr. Moore and other ex-
perts testified the dog was not a bloodhound, nor had the
slightest resemblance to one in any way, and more than that
they did not know of one in America.

Another instance will show what they know of blood-
hounds in the South. I sold the very fine specimen Jack
the Ripper to a lady in Jackson, Miss. This is a terrible
name for one of the most gentle and affectionate dogs I ever
bred. She entered him at the New Orleans dog show last
winter as a bloodhound, but on his arrival they denied that
he was a bloodhound, and put him in the miscellaneous
class. Poor Jack! Imagine his feelings in being called a
mongrel and put among them; but his revenge came when
he was brought before the judges, who, not content with
giving him the first prize and pronouncing him the best one
in America, but in addition awarded him the much-coveted
special prize for the best dog or bitch of any breed in the
show. Afterward Jack made the rounds of the shows, and
still remains unbeaten. I am pleased to say he has passed
into the hands of Mr. Geo. W. Glazier, of Salem, Mass., with
several other fine ones. Among them is Belhus, one of the
most famous man trailers of England. I have also imported
for him from Mr. Brough's kennel the fine bitch Benison,
which he secured on the 15th inst. Besides her, he has a
very promising young one, sister to Victor.

One of the most powerful arguments that could be used
for the repeal of the section relating to bloodhounds would
be to have a committee visit Mr. Glazier's kennels with their
wives and children, and if then they do not find them the
most affectionate, gentle and pleasing dog they have ever
seen, I will then agree with them that the law is right as it
stands.

J. L. WINCHELL.

FAIR HAVEN, VT.

LORD CLOVER'S PEDIGREE.

Editor Forest and Stream:

I am sorry that the owner of a pug dog named Lord Clover
should be thrown into such a state of excitement by reading
anything in the "Prize Pugs of America and England." My
first impulse was to send him a prescription for a sedative;
but as time often works more wonders than drugs, I hope
he has returned to his normal state of mind.

I have four different pedigrees of this pug. One published
by Messrs. Hudson and Gillivan, the former owners, one in
the A. K. C. Stud Book, one written by the present owner,
and one compiled by me from the best information I could
obtain at the time. I find no two of these pedigrees agree-
ing, and am still inclined to think the one compiled by my-
self is correct, and if I should publish another edition of the
book I would not change or extend it unless I had more
proof than has been furnished me.

The present owner claims that the dog's grand dam on
the maternal side is champion Little Dorset. Will he kindly
furnish me, through your journal, with her English Kennel
Club Stud Book number? Also the E. K. C. S. B. number
of Nelly, if she has one? I have examined the English Stud
Book on several occasions to find these two bitches, but have
so far failed, except Nelly as the dam of Lord Clover; their
numbers would assist me.

M. H. CRYER.

PHILADELPHIA, Oct. 26.

COLLIE CLUB SPECIALS.

Editor Forest and Stream:

Now is the time to begin to get your dogs in condition for
the early spring shows. The Collie Club announces the
following specials for the Westminster Kennel Club's bench
show:

The Collie Club trophy, a silver cup, value \$500, for the
best American-bred collie, exhibited by a member of the
Collie Club; the silver club medal, value \$20, for the best
stud dog; silver club medal for the best collie dog under
2 yrs. of age bred by a member of the Collie Club; silver club
medal for the best collie bitch under 2 yrs. of age bred by a
member; a bronze medal, same die as the silver medal, for
the best collie in novice class exhibited by a member. Also
a grand collie sweepstakes, open to all, entry fee \$5; \$50 added
to the stake. Blank forms of entry with conditions, etc.,
may be had from the secretary of the club. Entries for the
sweepstakes close Nov. 15.

J. D. SHOTWELL, Sec'y.

No. 82 HILLSIDE AVENUE, Orange, N. J.

BARZOIS—PSOVOI.

Editor Forest and Stream:

Up to date I have refrained from emitting any judgment
on the subject of the controversy re the Barzoi. I did not by
any means want to be styled an "authority," and to have my
name indiscriminately used for the support of this or that
"sharp" business purpose. At present I am ready to answer,
as far as I am able, any questions your readers may ask me
through the medium of your esteemed organ.

I protest against the use of the terms "Russian wolfhound"
and "Barzoi," by which the variety introduced in England
and America is generally designated. The first name has no
meaning whatever, and the second is a generic name, used
throughout Russia to designate any breed of coursing hound.
I venture to propose the use of the term "Psovoi," literally,
"thick-coated," used in Russia to designate the breed which
has lately appeared in the show rings of England and
America.

LIEUT. G. TARNOVSKI.

MERV, Transcaspien Province, Sept. 25.

THE HOSPICE OF ST. BERNARD FUND.

WE sincerely trust that, for the reputation of American
generosity, our breeders and lovers of St. Bernards
will respond to the call for funds published in our last issue.
This benevolent institution is in danger of ceasing to exist,
and it should be the care of every St. Bernard fancier to con-
tribute whatever he can afford to keep alive such a time-
honored institution. Mr. Croskey has started the ball, let
it roll up a goodly sum.

Editor Forest and Stream: I see by your valuable paper
that the monks of St. Bernard are in need of funds. In-
closed you will please find ten dollars, which please forward
in the name of Lord Bute of the Menthon Kennels. Every
lover of the St. Bernard should open his heart and give
something, if it is only \$1.—KNOWLES CROSKY.

"Lord Bute."

UNITED STATES FIELD TRIAL CLUB ENTRIES.

Editor Forest and Stream:

The following is the list of entries to the All-Aged Stake of the first annual trials of the United States Field Trial Club. There are 25 setters and 30 pointers:

ENGLISH SETTERS.

PAUL BOO (Richard Merrill's), black, white and tan dog (Paul Gladstone—Bohemian Girl).
DAISY HUNTER (J. H. and J. A. Hunter's), orange and white bitch (Gath's Hope—Daisy F.).
THE CORSAIR (E. O. Damon's), black, white and tan dog (Dan Gladstone—Haidee).
MINNESOTA (Paul H. Gotzian's), black, white and tan bitch (Mook of Furness—Lady Fayette).
MARK'S MACK (W. L. Taylor's), lemon and white dog (Gath's Mark—Georgia Belle).
NANNIE G. (P. E. Gregory & Bro.'s), black, white and tan bitch (Bryce—Dora Gladstone).
NORLE COUNTY (S. A. Elliott's), orange and white dog (Mae D.—Lady Mac).
FERNZI (H. J. Smith's), black, white and tan bitch (Gath's Mark—Flame Gladstone).
CIGARETTE (J. L. Case, Jr.'s), black, white and tan bitch (Royal Rod—Clara).
BLUE DUKE (Geo. W. Earhart's), black, white and tan dog (Blue King V.—Blue Queen V.).
DIX (J. R. Hayes's), orange and white dog (Dom Pedro—Fannie).
LULA HILL (Wm. A. Hinesley's), black, white and tan bitch (Ben Hill—Nora).
DONCASTER II. (St. Mark M. Mundy's), black, white and tan dog (Doncaster—Louise Gladstone).
LOR NOBLE (B. Ridgeway's), black, white and tan bitch (Count Noble—Alphonse).
COUNT RODRIGO (Wm. C. Kennerly's), black, white and tan dog (Rodrigo—Lady Gladstone).
BEX W. (P. J. Wielig's), black, white and tan dog (Don Gladstone—Charlotte C.).
FINGAL (E. H. Osthaus's), dog (Toledo Blade—Lady G.).
SIMONIDES (N. T. Harris's), black, white and tan dog (Gath's Hope—Gladys).
LEMONS (J. E. Dager's), liver and white dog (Toledo Blade—Lady G.).
JOE R. (H. T. Smith's), black and white dog (Count Rodrigo—Fry Noble).
DON'S NELLIE (H. J. Gleason's), black and white bitch.
DON OF ALMA (A. J. Gleason's), black and white dog (Dan Foreman—Don's Nellie).
CRICKET GLADSTONE (R. M. Riley's), orange and white bitch (Rush Gladstone—Quail).
COUNTS RUSH (Blue Ridge Kennels'), black, white and tan bitch (Count Noble—Belle of Piedmont).
BONNIE BOYDHU (Geo. A. McLean, agt.), black, white and tan bitch (Count Wakefield—Pearl Bonduh).

POINTERS.

BOUNCE (G. W. Amory's), liver and white dog (Bob—Sall).
BERTRALDO (Hon. J. E. Guinotte's), liver and white dog (Coruerstone—Bessie Buford).
ROSALINE WILKES (Hon. J. E. Guinotte's), black and white bitch (Ossian—Fannie K.).
BLACK WONDER (J. H. and J. A. Hunter's), black dog (Ike—Bang Bang's Pride).
DON FIS HELL (U. R. Fishel's), black and white dog (Devonshire Sam—Nellie Bang).
NASO BOW OF THE ELMS (Paul H. Gotzian's), liver and white dog (Naso of Kippen—Lass of Bow).
REX (Mrs. Geo. A. Castleman's), liver and white dog (Mainspring—Dell).
NUTWOOD (James Board's), liver and white dog (Ossian—N—the E.).
JOE H. K. (J. H. Kerr's), black dog (Joe Pape—Nan).
DONOVAN (J. M. Vaughan's), liver and white dog (Creep—Pearl).
PEARL'S FAN (Louis Stuchmer's), liver and white bitch (Luck of the Goat—Pearlstone).
MCMAUS'S ALONE (Thos. Ward McManus's), black dog (Black Joe—Dianorah).
MCMAUS'S HERO (Thos. Ward McManus's), black dog (Black Joe—Dianorah).
MCMAUS'S WISH BONE (Thos. Ward McManus's), black dog (Black Joe—Dianorah).
MCMAUS'S COUNTESS WANDA (Thos. Ward McManus's), black bitch (Black Joe—Dianorah).
JOE'S ACE (Thos. Ward McManus's), black dog (Black Joe—Dianorah).
BLACK JOE JR. (Thos. Ward McManus's), black dog (Black Joe—Dianorah).
PROMOTION (Dr. John R. Daniels's), liver and white dog (Lord Graphic—Belle).
FRANKLIN (J. L. Adams's), liver and white bitch (Robin Adair—Blossom).
THELMA (F. E. Willard and E. P. Hilliard's), liver and white bitch (Lord Graphic—Minnie Ha Ha).
JOE (R. B. Morgan's), liver and white dog (Gascon—Cannie).
HOPS II. (Ossian Pointer Kennels'), liver and white bitch (King of Kent—Hops).
MANTON (Munson and Scudder's), black and white dog (Luck of the Goat—Clary).
PAXICO (A. J. Gleason, agent), liver and white dog (Ossian—Nellie E.).
KING ROBIN (Ed. Rowland's), liver and white dog.
PICKWICK (McGuffin and Madison's), liver and white bitch (Graphic—Marguerite).
LA GRIPPE (C. C. Weaver's), liver and white dog (Ralph—Brown's Mudge).
BEN A. (Dr. D. W. Yandel's), black and white dog (Stoddard—Jet II.).
INDEX (R. P. Daggett's), liver and white dog (Ossian—Nellie E.).
MAGGIE (John F. Shipley's), bitch.

P. T. MADISON, Sec'y.

NOTES AND NOTIONS.

IT seems a pity that the articles by Mr. Geo. R. Krehl, headed "Fancy Free," now appearing in the *Stock-Keeper*, should not have ornamented some journal of wider pretensions. True, some lover of dogs with a soul above the pettiness of the usual round of doggy matters, may draw in a breath of satisfaction with the reading of such charming descriptions, wherein humor is ever present and buoyancy always absent; but still, the bits of quaint moralizing and the sound views of life deserve a wider and more permanent medium. Certainly I cannot remember anything in any of our leading magazines—*Harper's*, *Century*, etc.—as charming as these fresh bits of life.

Are you not somewhat mistaken in your inference that doggy interests are advancing, as demonstrated by the high prices paid for St. Bernards? Any moderately prudent business man dreads a "boom" as a great evil, and his course is to make as much money out of it while it lasts, and to lose a little in the revolution as is possible. A very wise manufacturer once said to me, "I hope—(his manufacture) will never get to \$50." "Why?" I asked. "Why, because when it gets to \$50 I will be so over-sold that when it gets to \$50 I will be bankrupted." Is not the present absurd price of these dogs of the nature of the very worst sort of boom? You may say that business principles do not apply to questions of "fancy." Well, so much the worse, fancy then becomes fashion, and imagine, if you can, hoop

skirts or microscopic bonnets being counted as assets. That there will be a turn in this maniacal boom is as certain as fate. Either purchasers will grow weary of paying preposterous prices, or owners will become tired of such expensive fads. In either event the bottom will drop out of the "boom," and not a few of the boomers will fall through the hole.

It would be totally foreign to the spirit and purpose in which "Notes and Notions" have always been written to take any part in any disputes, acrimonious or personal in their character, and therefore "The Onlooker" does not intend to discuss the invited quarrel as to the withdrawal of the Philadelphia Kennel Club from the American Kennel Club. But doggy interests are paramount to any question that can ever arise as between any doggy organizations, and it is well to point out the courses in which such a dispute should run to do the least mischief, or, perhaps, even the greater good. In addition to specific ground in the rejection of certain proposals affecting field trials, the Philadelphia club arraigns the American Kennel Club on the ground of cliquism, incompetent and discreditable management of public affairs. Now the charge of "cliquism" is one very easily made, and its proof generally difficult, the difficulty lying in the fact that if there is a clique existing, the members of it take excellent care that no definite proof of their collusion is permitted to escape. Therefore the charge can only be sustained by general evidences, inferences and indications in the vast majority of cases, and, therefore, it is incumbent on the American Kennel Club that in any defense they may make to the charge of cliquism, they do not shelter under the mere letter, avoiding the spirit. This very difficulty in proving a charge of collusion or conspiracy is one of the reasons why such a charge is so often accepted, when another charge, capable of definite disproof, is disregarded. The American Kennel Club can well afford to disregard such charges coming from private individuals, either privately or through the press; but they cannot afford to pass them by as insignificant when brought by so weighty a body, practically the entire dog lovers of Philadelphia.

THE ONLOOKER.

DOG CHAT.

OWNERS of field dogs which they desire to run in the Free-for-All Stake in the coming Central Field Trials, must remember that the entries close Nov. 1. The stake is open to all pointers and setters regardless of previous winnings, and those sportsmen who pride themselves in the possession of dogs noted for endurance as well as speed should not let this opportunity pass of winning \$1,000 and lots of glory. Entry fee is \$50, with \$50 additional to fill.

Col. C. H. Odell, secretary of the Central Field Trials Club, informs us that at a special meeting of the club, held Oct. 17, the following gentlemen were elected members: H. B. Hollins, C. O. Iselin and Wm. L. Davis, all of New York city; John K. Garnett, Savannah, Ga.; Dr. S. W. Battle and J. S. Churchill, of Asheville, N. C., and N. Wallace, Farmington, Conn.

Sufficient entries and subscriptions have not been made to enable the Gordon Setter Club to hold the Gordon setter field trials this year. If owners of Gordons generally had shown an interest equal to the Irish setter men, and come forward with their dogs and money, the trials could have been held; but it cannot be expected that a few will again bear the expense and trouble as was the case last year.

As a result of the Hamilton show and a feeling that he must own a good dog, Mr. Andrew Murdoch, the vice-president of the H. K. C., has recently purchased the Irish terrier bitch Rugby Norah from Mrs. N. Carthew, of Hartford, Eng., a well-known exhibitor on the other side. *Stock-Keeper* (Eng.) says: "Through her parents, Rugby Mike and Rugby Silko, she combines the blood of champions Pagan II. and Bachelor. Norah is a stylish terrier of a nice size, with a good coat of the orthodox color, quite free from white. Her toe nails are black, small ears perfectly carried, a good front, straight legs and a well-formed body. Norah is game and an admirable companion. She was a winner in the open and second in the novice class at Chelmsford, second puppy and three specials Manchester, second Gloucester, third Darlington." Norah has been bred to Ben IV. and will be brought out to her new home next February.

Mr. Chas. H. Mason's address is now 310 West 116th street, New York.

There seems to be no end to the virtues and accomplishments of the Mexican hairless dog. Besides having the power to hypnotize the panther, as gravely related in these columns some time since, we now hear that he is *facile princeps* as a cure for rheumatism. Let him lie against the affected part, and the heat from his body will draw the pain so quickly that the hottest mustard plaster will burn itself out with envy.

Dog shows are increasing the interest taken in dogs in Canada, and besides the notable ones recently held, shows have taken place at Barrie, Ont.; Winnipeg, Man.; Halifax, N. S.; Victoria, B. C.; St. John, N. B., and other places.

Those who fancy the coming breed of Barzoi or Psoroi, as Lieut. G. Tarnowski calls them, will be interested in this Russian gentleman's letter explaining the true meaning of the misnomer Barzoi. The breed has not become so general in this country but that the name Barzoi can be dropped and Psoroi substituted. Lieut. Tarnowski is an authority on the breed and a Russian, and should therefore be able to put us on the right track in this matter. When we have seen a letter written by this gentleman on the breed we shall most likely have some further interesting communications to make.

Mr. J. C. Crugom, of Milwaukee, Wis., has had the misfortune to lose by death, through pneumonia, his valuable pointer bitch Dolly C. This bitch, with only six weeks' preparation, won second in the All-Aged Stake at Bicknell, Ind., when she was 15 months old. On the bench she won first at Chicago last spring in heavy weight bitches, and we remember speaking favorably of her in our report. Mr. Crugom is not disheartened, for he has two Duke of Hesse pups and a sister of Dolly C. that are very promising, and is enthusiastic over a brace of English setter dogs by Gath's Mark out of Paxie Maid, which are two of the "finest," and of course are not for sale.

The Elmira (N. Y.) Poultry and Pet Stock Association will hold their second annual dog show Jan. 21 to 25, 1892. Mr. C. A. Bowman is the secretary. After the next meeting full particulars will be given out, but it is expected that the prize list will be on a basis of \$7 and \$3, and a large number of cash specials will also be given.

Sheepdog trials seem to have become quite popular on the other side, several having been held during the past month. The one at Rhayader, Wales, was a most successful gathering, although the time allotted (ten minutes) to pen the sheep was too short, considering the difficult grounds to be traversed. One dog, a cross between a collie and a bobtail, did some very good work in his exhibition after the trials, having lost the prize through having one bad sheep. He was the best trained dog on the ground, working entirely by

whistle, and his creeping and the way he answered every sound of the whistle is said by the *Stock-Keeper* to be extraordinary. The specials were puppies given by Mr. C. H. Wheeler, the noted collie breeder, and a very good plan, too, to disseminate collies of pure breeding among the farmers and shepherds. Some trials were also held at Rhyl, Wales. The entries were very large, 40 being entered in the Tidal Stakes. The sheep used were a wether, a ewe and lamb, a contrary enough trio in all conscience. The time allotted to pen was ten minutes. One performance in the Local Stake was especially noteworthy. Gett, an old-fashioned silver-gray, had a trio that was very wild, one fell, another broke right away, and they all took to water, but still he penned this difficult lot in nine and a half minutes. Taking three sheep like this across a bridge to pen is no easy matter, as those who have been accustomed to the contrary ways of of these "lamb-like" animals will testify. The trials which our Collie Club intend to hold next year will, we trust, result in a new interest in breeding for work. At present, as might be expected, the entries in these trials on the other side are chiefly either cross breeds or dogs of indifferent lineage, very few dogs known to fame on the bench taking part.

Mr. W. C. Reick, who purchased Princess Florence during his short stay in Europe, returned on S. S. Gasconne Monday last. Meeting him on the dock we found him loud in the praise of the Princess. He says she is just as "pretty as a picture," and that unlike the first sight of many animals with a big reputation, his expectations were more than realized when he saw her. The price paid must have been a stiff one, as Mr. Chapman, it is said, had been offered \$5,000 for her. Mr. Reick was not impressed by any of the dogs over there now, with the exception of Salvator Rosa and Young Bute. The former cannot be purchased, and Young Bute is held at too high a figure. How Alta Bella came to beat Princess Florence is an enigma, explained perhaps by the fact of the latter's poor condition at the time, for Alta Bella is described as very faulty in hindlegs. Princess Florence weighed 197 lbs. when Mr. Reick purchased her. She will arrive with young Keeper, a pup, on the Aurania next Sunday or Monday.

The intelligence of the collie has once more been brought to notice through the brave work of a dog of this breed at a fire in Covington, Ky., the other day. The fire broke out at 5 o'clock in the morning, in a one-story house occupied by a widow and her four children. The animal was permitted to sleep in the kitchen, and sometime after the fire had broken out he managed to reach the bedroom adjoining, and jumping on the bed, barked and scratched at the face of his mistress until he aroused her. Both the rooms were now in flames, and another moment's delay would have been fatal to the entire family. The mother managed to reach the front door, and her screams aroused the neighbors and then she fell to the floor, overcome by the dense smoke. In the meantime the faithful dog had dragged the two young children from the bed in which they were lying half dead from the smoke and had pulled them to the door, where they lay when the neighbors arrived and found the dog, half smothered with smoke, barking at the other two children. The dog was badly scorched, but would not leave the house until the family were all safely outside. The house and two others adjoining were destroyed. But the crowds attracted to the scene were more anxious to see the dog than the ruins. And yet some people will say a dog is a nuisance in the house.

Our readers will find that in another column our Hospice Fund has commenced in earnest. It does not happen very often that dog lovers particularly, are called upon to subscribe to any charity so nearly allied to a certain breed as this of the Hospice of the St. Bernard. We are sure that every owner of a St. Bernard, or at least he who makes of his dog a companion, will, in imagination, when patting its head, discern a mute appeal in the eyes of his favorite, and we trust that few will be able to withstand it but send on their dollars to this office, where they will be acknowledged and forwarded to the English *Stock-Keeper*, which started the fund. Winter is close upon us and when the weather is cold and bleak the knowledge that your mite may have contributed to the saving of one poor life in the snowy passes of the Mount St. Bernard will be a comforting reflection indeed.

The following is a copy of the notice sent to the secretary of the New Jersey Kennel Club to appear before the Advisory committee:

[COPY] NEW YORK, Oct. 22.—Mr. George L. Wilms, Sec'y N. J. K. C., Jersey City, N. J.—Dear Sir: You are hereby invited to attend the meeting of the Advisory committee, to be held Wednesday, Oct. 8, at 3 P. M., at the office of the American Kennel Club, where an opportunity will be afforded you to show cause why the New Jersey Kennel Club should not be proceeded against, under Article IX, Sec. 1 of the constitution of the A. K. C., as per notice sent you per registered letter Sept. 18, 1891. You are also requested to produce the books of the New Jersey Kennel Club at said meeting. Yours truly, A. P. VREDENBURG, Sec'y. (Per registered letter.)

We are informed that no specific charges have been formally preferred against the N. J. K. C., and it is doubtful if they will be represented at the meeting.

The noted bulldog Forceps, after many rumors, has at last definitely changed hands, Dr. Benison having sold this good bulldog to a Mr. Weston Bell.

Talking of bulldogs reminds us of a visit we had from Mr. Frank F. Dole last week. He is having the usual experience of those who breed these "hangers on." His bitch Queen Adelaide, recently imported, after whelping in good shape, lost the whole litter with the exception of one. As these were by the celebrated dog King Lord, the loss is a severe one. This dog is one of the best in England, his record at Edinburgh show (Scottish Kennel Club) being first in under 45 lbs. class, special for best in open classes and the Berrie cup. Friend Dole tells us, however, that he plucks up courage by taking a look at the splendid litter of seven that the noted dachshund bitch Janet, which Mr. Mannie imported through Mr. Dole, has whelped, and which are doing well in his care. The pups are by the great Pterodactyl, the crack dachshund now in England. Mr. Dole has just purchased from Mr. Wright the bull-terrier Ben Battle, that won third at Toronto show last month. Ben may find his home in California before long. Mr. Dole has also sold Edgewood Fancy to Mr. Wright.

The New Jersey Kennel Club, at a meeting held last Tuesday evening, decided to hold a dog show, and claimed the dates Feb. 16 to 19, 1892.

The trials of the New England Field Trial Club will be held at Assonet, Mass., instead of Wareham, as first proposed. Assonet is 42 miles from Boston on the Old Colony Road, and 8 miles from Fall River, Mass.

Our advertising list is increasing weekly, showing that advertisers with dogs for sale appreciate a good medium. Among the new ones this week we find that C. H. Gengenbach has pointers for sale; Box 179, pair pointers; Fairmead Kennels, Great Dane pups; O. H. Randall, pointer pups; E. H. Bragg, beagles; C. E. Glass, English setter pups; Dr. Lordy, Gordon setter pups; D. H. Lockwood, Irish setters; C. T. Brownell, Gordon setter pups; C. F. Kent, trained foxhounds, etc.; F. W. Proctor, Irish setter; Jos. Crugom,

English setter pups; Box 386, black cocker dog; J. E. Hills, black field spaniel dog; E. C. Hanford, mastiff pup. Wants, E. T. Bradway, pointers.

Another crack St. Bernard for America. Mr. Reick, the owner of the New York St. Bernard Kennels, has just purchased the great stud dog Refuge II, from Mr. Robson, of Hanley, Staffordshire, England. This is a very important purchase, for Refuge II is considered about the best stud dog in England, having won the stud dog medal at the Agricultural Hall, London, this year. His head, bone and size are said to be enormous. Besides being the biggest St. Bernard in England at present, he is also the best-headed son of old Plinlimmon. These qualities he transmits to his stock, and he is the sire of many winners. Refuge II is by Plinlimmon out of Recluse, and was whelped April, 1886. His addition to Mr. Reick's kennel will be a valuable one for breeding purposes, and will make his team very formidable on the bench. Mr. Reick is making an enviable record as a plucky St. Bernard buyer.

We draw attention to the publication, *Portraits of Dogs of the Day*, advertised in our business columns. The October number is particularly interesting. One subscriber writes: "Enclosed find one dollar for October number, which sent at once, as they are too nice to wait for long." The *Portraits* are for sale by FOREST AND STREAM.

In "Club Member's" letter last week on the beagle trials the words reading "magnanimity exposed" should have read "magnanimity expressed."

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Diana of Naso. By G. Cushman, Southboro, Mass., for liver and white ticked pointer bitch, whelped June 15, 1891, by Spot Dash (Sir Philip Sydney—Tempest) out of Nady of Naso (champion Nick of Naso—Tempest).

BRED.

Prepared Blanks sent free on application.

Peggie II.—Bonsor. W. A. Williams' (Memphis, Tenn.) pug bitch Peggie II. (champion Joe—Tody) to A. E. Pitts's Bonsor, Oct. 1.

Penrice Girl.—Bonsor. Howard Kennels' (Columbus, O.) pug bitch Penrice Girl (Penrice—Vic) to A. E. Pitts's Bonsor, Sept. 28.

Queen.—Bonsor. Rev. B. V. Hervey's (Granville, O.) pug bitch Queen (champion Kash—Nellie) to A. E. Pitts's Bonsor, Aug. 27.

Too Sweet.—Bonsor. W. A. Williams' (Memphis, Tenn.) pug bitch Too Sweet (champion Kash—Peggie II.) to A. E. Pitts's Bonsor, Oct. 14.

Flossie.—Kash. Mrs. J. V. Newton's (Toledo, O.) pug bitch Flossie to A. E. Pitts's champion Kash, Aug. 21.

Nellie.—Kash. J. W. Pitts's (Binghamton, N. Y.) pug bitch Nellie to A. E. Pitts's champion Kash, Sept. 9.

Maple Grove Luath.—Randolph. Maple Grove Kennels' (Logan, O.) collie bitch Maple Grove Luath (Clifton Hero—Sparkle) to J. A. Long's Randolph (Archibald—Petunia), Oct. 12.

Carrie R.—Bang Graphic. F. C. Rochester's (Logan, O.) pointer bitch Carrie R. (Meteor II.—Carrie) to G. Falloon's Bang Graphic (Rancho—White Rose), Sept. 28.

Lillian P.—Ben Hill. J. S. Hudson's (Covington, Ky.) English setter bitch Lillian P. (champion Dad Wilson—Gathli) to his Ben Hill (Druid—Ruby), Oct. 5.

Pearl of Tempest.—Dad Wilson. J. S. Hudson's (Covington, Ky.) English setter bitch Pearl Tempest (Ben Hill—Tempest) to his champion Dad Wilson (Cambridge—champion Dido II.), Sept. 12.

Ida Gathli.—Dad Wilson. Northwood's (Martin's Ferry, O.) English setter Ida Gathli (Mark—Dell) to J. S. Hudson's champion Dad Wilson (Cambridge—champion Dido II.), Oct. 5.

Creed Gladstone.—Dad Wilson. F. Milhaus, Jr.'s (Wooster, O.) English setter bitch Creed Gladstone to J. S. Hudson's champion Dad Wilson (Cambridge—champion Dido II.) Oct. 9.

Lord Bute.—F. E. Lamb's (Baltimore, Md.) rough St. Bernard bitch Lord Bute (champion Save—Sabrina), Oct. 7.

Lady Nellie.—Woodbrook Sultan. F. E. Lamb's (Baltimore, Md.) rough St. Bernard bitch Lady Nellie (Leo—Lore) to his Woodbrook Sultan (champion Beauchamp—Kron), Aug. 23.

Mountain Queen.—King Regent. O. W. Volger's (Buffalo, N. Y.) rough St. Bernard bitch Mountain Queen (Burns—Lady Valentine) to his Mountain Queen's King Regent (Prince Regent—Duchess of Kent), Sept. 28.

WHELPS.

Prepared Blanks sent free on application.

Cilver Queen. A. C. Pitts's (Columbus, O.) pug bitch Cilver Queen, Aug. 17, four (two dogs), by his Bonsor.

Golden. E. C. Hookway's (Wooster, O.) pug bitch Golden (champion Kash—Peggie II.), Sept. 3, five (four dogs), by A. E. Pitts's Bonsor.

Lady Ruby. Wm. Stuke's (Mt. Sterling, O.) pug bitch Lady Ruby, Aug. 25, four (two dogs), by A. E. Pitts's Bonsor.

Bessie Marshall. J. S. Hudson's (Covington, Ky.) English setter bitch Bessie Marshall (Ben Hill—Tempest), Sept. 13, eight (five dogs), by his champion Dad Wilson (Cambridge—champion Dido II.).

Riga. F. E. Lamb's (Baltimore, Md.) rough St. Bernard bitch Riga (Othello—Bessie Bayard), Sept. 14, nine (four dogs), by his Woodbrook Sultan (champion Beauchamp—Kron).

SALES.

Prepared Blanks sent free on application.

Mack's Juno. Liver and white ticked pointer bitch, whelped July 1, 1890, by Rex Morgan out of Fleet, by W. B. McCloud, Hyattsville, O., to C. W. Hughes, Fostoria, O.

Monarch. Silver fawn pug dog, whelped Aug. 17, 1891, by Bonsor out of Cilver Queen, by A. E. Pitts, Columbus, O., to L. Lamb, Clinton, Ia.

Legal Tender. Silver fawn pug dog, whelped Aug. 28, 1891, by champion Kash out of Nun Nicer, by A. E. Pitts, Columbus, O., to Wm. Marx, Cincinnati, O.

Tracey. Fawn pug bitch, by Mrs. Peabody, Union Furnace, O., to F. C. Rochester, Logan, O.

Susie Gladstone. Black, white and tan English setter bitch, whelped May 2, 1886, by Gladstone out of Jessie Turner, by J. S. Hudson, Covington, Ky., to W. G. Neale, Lexington, Ky.

Duplicate. Black and white English setter bitch, whelped June 23, 1891, by champion Dad Wilson out of champion Bohemian Girl, by J. S. Hudson, Covington, Ky., to J. S. Hutchinson, Shreveport, La.

Woodbrook Victor. Orange and white rough St. Bernard dog, whelped June 13, 1891, by Princlimmon out of Nun Nicer, by F. E. Lamb, Baltimore, Md., to J. J. Davis, Clarksburg, W. Va.

Woodbrook Lina. Orange and white rough St. Bernard bitch, whelped June 18, 1891, by Princlimmon out of Nun Nicer, by F. E. Lamb, Baltimore, Md., to C. Coutts, Chicago, Ill.

Ben Hill. Dolly's whelp. Black, white and tan English setter dog, whelped May 9, 1891, by J. S. Hudson, Covington, Ky., to F. J. O'Connell, Coal Grove, O.

Dad Wilson. Daisy Cambridge II. whelp. Black, white and tan English setter bitch, whelped April 21, 1891, by J. S. Hudson, Covington, Ky., to N. H. Jones, Athens, O.

Dad Wilson. Bohemian Girl whelps. English setters, whelped June 23, 1891, by J. S. Hudson, Covington, Ky., a lemon and white bitch to W. W. Titus, West Point, Miss., and a black and white bitch to E. H. Light, Lynn, Mass.

Lord Bute. Clydesdale Nell whelps. Orange and white rough St. Bernards, whelped Aug. 3, 1891, by F. E. Lamb, Baltimore, Md., a dog each to A. H. Moore, Colmar, Pa., and H. R. Granger, Catonsville, Md., and a bitch to J. R. Teague, South Framingham, Mass.

PRESENTATION.

Josef M. White. black and tan English setter bitch, whelped July 23, 1891, by Mack III. out of Nell IV., by J. B. Murphy, New York city, to T. T. Greene, Port Royal, S. C.

SALMON REARING at Craigs Brook, Me., is meeting with noteworthy success. At last accounts the number of fry held for this purpose was about 265,000, all of these but about 30,000 are Atlantic salmon; the rest are principally atlantic salmon and Loch Leven trout.

RUN THE BEAGLES ON THEIR MERITS.—*Editor Forest and Stream:* The announcement made by the Forest Beagle Kennels in a recent issue of your journal savors very strongly on the one hand as a "free ad." and on the other of "we're afraid." If a dog should win once in poor company, when some of the competitors he would have met had to be withdrawn for obvious reasons, it does not seem to me that such a dog is entitled to much honor or glory or that it is in any way in the interests of the National Beagle Club that his owners should refuse to run him. I expect to start a beagle or two in the coming trials to be held at Nanuet, and if there is one dog more than another that I should like to meet in competition that dog is Frank Forest. I do not believe it will make one entry (bar his own) difference whether he is entered and starts or not. May the best dog win and win on his merits.—BEAGLE.

EUTHANASIA—HAPPY DEATH.—New York.—*Editor Forest and Stream:* Having recently seen a good deal of correspondence in your columns as to the most humane way of destroying dogs, and as you refer to it again in "Dog Chat" this week, I thought I would give you my experience. I find that prussic acid is undoubtedly the best agent to use, and if administered hypodermically it causes almost instantaneous death. Here in America it is most difficult to obtain a strong solution of the acid, that usually sold in drug stores is too weak. This, I think, accounts for so many of your correspondents differing as to its action. Such a powerful poison ought only to be handled by competent persons.—T. G. SHERWOOD, M.R. C.V.S.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

R. F. H. Lowell, Mass.—The conjunctival membrane on the eyes of my 7 months English setter puppy appears to be abnormally extensive. It also seems to be unusually fleshy in character and near the center of the outer deriphery there is a small rather having the appearance of a cyst. At all times the lower part of the membrane is bloodshot, as if inflamed, although I am not certain it is the source of any pain. A pus-like matter forms in both eyes frequently during the night. It gives the pup that old and mournful appearance that we sometimes see in the sunken eyes of old dogs. A veterinarian told me a couple of months ago the membrane could be removed and that sometimes it was necessary to do it. Can you form an opinion as to the advisability of such action in this case and if it should be done, whether now or later. I am inclined to think it interferes somewhat with the dog's vision, as he apparently sees things "crossed." In looking at me, for instance, his eyes seem directed to a point several feet to one side, generally to the right. Ans. I presume by the conjunctival membrane you mean the "haw," or membrane nictitating a third eyelid. It is the membrane one often sees passing over a dog's eye. If this is the membrane that is affected the enlargement can easily be removed. Try the following lotion first: Sulphate of zinc, one scruple; tincture of opium, two drachms; distilled water, six ounces. Apply to eyes frequently with a piece of sponge.

W. J. H., Guthrie, Ky.—I have a St. Bernard bitch, eight months old, that passes large quantities of short flat worms. Will you please let me know what to do for her. Ans. Give, after eighteen hours fasting, two scruples of powdered arsenic nut and four grains of santaline. Two hours after give dose of castor oil. Repeat powder in a week.

Rifle and Trap Shooting.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Oct. 27-29.—Savannah, Ga., Chatham Gun Club, assisted by the Inter-State Manufacturers' and Dealers' Association.

Nov. 3.—Blauveltville, N. Y. See announcement.

Nov. 26.—Canajoharie, N. Y. Gun Club Tournament, Thanksgiving Day: live and clay birds; open to all. T. C. Pegnim, Sec.

Nov. 26.—South Side Gun Club Tournament, at South Norwalk, Conn. E. H. Fox.

1892.

June 13-18.—New York State Sportsmen's Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

RANGE AND GALLERY.

THE REVOLVER CHAMPIONSHIP.

With the coming on of the season for indoor work with rifle and revolver the interest in the revolver championship increases. Already a number of galleries have applied for designation as places for the record shoots. So far as possible their requests will be complied with, as this will accommodate the shooters to the widest degree without in any way establishing any preference. Any open range, with good light and sufficient ventilation, will give a shooter all the advantages he can ask. There are no tricks of the wind to study. There is no long line of shooters each starting the next and giving clouds of smoke just as the inopportune moment. When records are made they ought to represent just what the shooter could do at that time. His score will be free from any flukes or fluctuations due to outside influences.

Mr. N. P. Leach, the "Stanstead" of FOREST AND STREAM, has kindly volunteered to manage for us any competition in which Ohio shooters and others may participate, at the special range of the Creedmoor Cartridge Company, at Akron, O. The range there is an excellent one, and the Creedmoor Company have been so much interested in the revolver match that they have been holding a series of preliminary shoots. It would not surprise us if the winner were to be found very near that spot. As Mr. Leach has been authorized to represent the FOREST AND STREAM, for contestants convenient to the range, correspondence with him is invited.

THE MASSACHUSETTS STATE SHOOT.

SOUTH FRAMINGHAM, Mass., Oct. 21.—Col. Chase, as State Inspector of Rifle Practice, put through the regular day of test with some passably good showing in some directions, but generally the scoring was disappointing, especially for a Massachusetts range. The match opened at 9:30 o'clock, the 200yds. range being covered. There was a strong breeze blowing across the range at this time, but the men were assisted in holding by the protection afforded by trees created at the firing point.

There was more or less poor marking, and several shots were challenged, yet the distance was covered on time, and all hands withdrew to the 500yds. range.

The shooting chances had improved here, for the wind had dropped, the sky became overcast, and during a portion of the time a light rain—not enough to disturb anybody—fell.

Scores at this distance should have shown great improvement over the 200yds. range, but the record don't show it. While the shooting was fair, it could easily have been made excellent if any sort of coaching had been done. But one team on the ground was really well handled, and that team pulled up because it was handsomely and intelligently directed.

There were but few visitors, and the absence of military officers was noticeable.

Col. Chase was ably assisted by Maj. Briggs, 1st Brigade Staff, and Lieut. L. O. Garrett, Naval Battalion. Lieut. Parker, 1st Infantry, was present as mustering officer, and Assistant Surgeon H. L. Chase, 1st Battalion Artillery, was present as the medical director.

Besides the team matches, all competitors (excepting distinguished marksmen competent, first, for the two highest aggregate scores by sharpshooters of record took place with this result: First Prize, Private B. Denrick, Co. F, 8th Infantry, score 61; second prize, Private G. G. Bradford, Co. A, 2d Cadets, score 60.

Also, for the three highest aggregate scores for first-class marksmen. They resulted as follows: First prize, First Sergt. N. Hill, Co. D, 2d Cadets, score 60; second prize, Private J. D. Fowle, Co. G, 5th Infantry, score 60; third prize, Corp. C. W. Facey, Co. B, 5th Infantry, score 59.

Then there were prizes for the four highest aggregate scores of the junior classes, which were won as follows: Corp. F. E. Gray, Co. A, 6th Infantry, 59; Sergt. H. A. Harvey, 5th Infantry, 53; Adj. J. A. Frye, 1st Infantry, 52; Lieut. L. O. Garrett, Naval Battalion, 52.

Other individual scores were: Major Hinman, 1st Brigade, 61; Capt. W. H. Bean, Co. G, 6th Infantry, 51; Private W. W. Tolman, Signal Corps, 1st Brigade, 55.

J H Kruse.....	240-1380	D Hencken.....	232-1364

The club's representative ten men team are getting in readiness for the season's work.—J. H. Kruse.

A GALLERY COMBINE.—An invitation has been sent out to all the local clubs of New York and New Jersey to send delegates to a meeting to be held at the Excelsior ranges, 76 Montgomery street, Jersey City, on Wednesday evening, Nov. 11, to perfect arrangements for the league contests. The plan as outlined is to arrange a series of matches for teams of five or ten men, preferably the former, from each of the clubs in the two States, each team to shoot a house and home match with each other team. If five men teams are decided upon there will probably be best two out of three matches on each range. Each club will pay a given amount into the treasury at the commencement of the series, to constitute a fund for the purchase of prizes. The following clubs have been invited to take part: Essex Amateurs, Puritans, Newark, North Wards, Orientals, Independents, Oakland, Howards and our Owns, of this city; Excelsiors and Equables, of Jersey City; Hudsons, of Maroon; Friday Nights, Standards, Leitz, Hermanns and Millers of Hoboken; Zettlers, New Yorks, Empires, Turtle Bays and Harlems, of New York.

CREEDMOOR, Oct. 22.—Henry Cox, a farmer of Hempstead, applied to Justice Cullen in the Supreme Court, in Brooklyn, to-day for a writ of mandamus to compel Charles P. Robbins, State Inspector of Game Practice, to discontinue the use of the Creedmoor rifle range. He swore that he used the land adjoining the range for pasturing horses. After the range was established he had to keep them in during the day and let them out at night. The place was dangerous because of stray bullets went over the embankment in the rear of the range. He had leased the land to three different persons, but they all refused to renew their leases. In 1886 the land owners received compensation up to that date, but when the range passed into the hands of the State they refused to accept the compensation. Judge Advocate-General Jenks said that Creedmoor was not dangerous. The court took this view and said that the remedy was for the relator to apply for an injunction to restrain the person in charge of the range from using it.

NEW ORLEANS.—A somewhat peculiar condition of affairs exists in East Feliciana parish, in this State, as may be judged from the complaint that the Parish Superintendent of Schools makes to the School Board of the habit of boys, even in the lower schools, going there armed with revolvers. He insists that this is a bad custom, that boys ought not to carry pistols, and that the teachers should prohibit them from doing so, and makes the following suggestion to the School Board in his official report: "Carrying pistols to school should be positively forbidden, and any teacher knowingly permitting it should be dismissed. If people see fit to allow their boys to go on in this uncivilized manner they should not be permitted to carry weapons to school to cripple the children of other people." The board favors the proposition, and the revolver will no longer be regarded as a necessary branch of the curriculum in the East Feliciana public schools.

CANADIAN RIFLEMEN.—There is much talk in the Dominion over the prospect that the next year's team is to be commanded by a petty political potentate of some sort, but not a shooting man. The Canadian *Millie Gazette* is most outspoken about it. Than such a step as this nothing could be better calculated to discourage the body of riflemen in the ranks or of officers over them to better themselves in the art of accurate shooting. There are plenty of methods of tacking hippodrome junketing members on to a team without exalting them to the captaincy.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WILLIAMSPORT, INDIANA.

WILLIAMSPORT, Ind., Oct. 14.—The third annual tournament of the WilliamSPORT Gun Club closed yesterday. The meeting passed off pleasantly under the management of W. L. Slater; Thos. Harvey referee. Weather fair, American Shooting Association rules, ties divided, unless noted.

In shoot-off in fourth shoot, R. O. Heikes, M. J. Eich and M. A. Keller div. first, W. P. Mussey won second.

RAYLE HIGG.

THE INTER-STATE LEAGUE.

THURSDAY last, the day upon which the fourth of the Inter-State League contests came off, was one of the most unpleasant days imaginable for trap-shooting. A cold northeast storm was in progress, and rain fell continuously throughout the entire day. Despite the inclemency of the weather fully 150 enthusiastic sportsmen were gathered at John Erb's shooting range to witness the contest. The rules of the League allow no postponement of the affair had to be run off. At 11:15 A. M. Referee Hugh Goodwin called the first squad to the score, and C. M. Hedden leading off, scored a dead bird for the Newark, and the match was under way. From start to finish the contest was an exciting one, the leaders kept close enough of the weather fully 150 enthusiastic sportsmen were gathered at John Erb's shooting range to witness the contest. The rules of the League allow no postponement of the affair had to be run off. At 11:15 A. M. Referee Hugh Goodwin called the first squad to the score, and C. M. Hedden leading off, scored a dead bird for the Newark, and the match was under way. Thursday's run, the second, was little like the first, barely half the distance, in clear warm weather and through smooth water; but a number which would have made the whole cruise under such conditions had been left behind in the trying run of the opening day. With Volunteer and Merlin added, however, the schooner fleet was nearly complete, though Sea Fox did not show up as expected. Constellation had sailed ahead for Newport, leaving an easy victory for Palmer in the class, after a slow and uninteresting race. Fortuna came alongside of her old rival Montauk for the first time in two years, though it is longer than that since either has done any real racing. This time Fortuna won very easily, coming in 45m. ahead. Volunteer and Merlin sailed a close race with less than a minute between them; but as the two were half an hour astern of Mayflower their work attracted but little attention.

Mayflower's performance was equal to that of the previous run, as she easily ran away from the whole schooner fleet; the first time that she has at all justified the expectations of her admirers since the change from cutter to schooner rig in 1889. This year, with a good owner and under a skillful skipper, she has sailed in better form than in any year since Gen. Paine owned her. Marguerite rather turned the tables on Iroquois, while the two kept well clear of Eneone. Quickstep had no real antagonist, and was forced to sail alone.

The great race of the year for the schooners is the Goelet cup, and although a cup is provided for the sloops and cutters as well, the prominent feature of the day has always been the schooner racing. It is for the Goelet cup, and over the two courses off Brenton's Reef, that the most famous schooner races of recent times have been sailed, and the honor of heading the class for the year, held successively by Montauk, Grayling, Sachem and Sea Fox, has been won here. Even the presence of Volunteer, Mayflower, Puritan and Priscilla in the single stick class failed to detract from the performances of Sachem and Grayling sailing side by side with them. This year, sad to say, the schooner racing was, so far as the numerous spectators were concerned, a mere incidental attraction, the great event of the day being the race of the 46ft. class. This was in part due to the reappearance of Gloria for the first time since her successes in June at New York; but it was also due to the slow working of the schooner division through the windward portion of the race.

With only a moderate breeze, and starting a few minutes after the smaller boats, the schooners were soon astern as the little fellows chased out to windward, and the movements of the big boats were doubly slow in comparison. Marguerite led the fleet for a long time, Volunteer being second and Iroquois third. In cruising trim, and with some weight aboard, Mayflower had done well both in light and moderate weather, but unfortunately the tradition that a yacht must strip to the ceiling for a race was too much for the judgment of her skipper, and she was completely cleaned out in the morning. The result was that she lagged astern through the early part of the race, and made but a poor showing all day, being beaten on even time by Iroquois. The latter sailed the race of the day, saving her time on Volunteer in the windward work.

It was at the end of this first leg, when Volunteer had taken the lead of her class and was well head of all but Iroquois, that the memorable collision with Gracie occurred. Although Volunteer lost some time in the actual collision and was obliged to sail the remaining 21 miles with a great rent across her mainsail, the whole strain coming on the leach rope, she did her best sailing after the accident. Iroquois chased her hard all day, and the ownership of the \$1,000 cup was only decided by a close measurement of each boat depending on some dozen seconds.

The third run, to Vineyard Haven, amounted to little, as the wind was light and fluky, in part a drifting match. Mayflower beat Merlin and Phantom easily, while Marguerite was over an hour ahead of Iroquois and Eneone. The special race in Vineyard Sound fared better in the matter of wind, there being plenty to spare all day, a fresh southwest breeze, much the same as the Vineyard Haven race of 1889 was sailed in. Dauntless, Palmer, Fortuna, Mayflower and Merlin were classed together, while

Marguerite, Iroquois, Eneone and Quickstep made up a second class. In addition a prize of \$200 was up for the four keel boats. Dauntless, Palmer, Fortuna and Eneone. Mayflower again defeated Merlin, beating her on elapsed as well as corrected time, the larger boats being well astern. Marguerite was 11s. ahead of Iroquois, making a very even race, but both were beaten, on elapsed, on allowance by little Quickstep. In the keel class the small boat, Eneone, won easily.

Mayflower now left the fleet, and only six schooners made the run to New Bedford, Iroquois and Quickstep each sailing alone. Volunteer sailed against Merlin but was badly beaten. The last run, from New Bedford to Newport, was under similar conditions to the first, though only half as long, with a strong head wind and rough water. Unfortunately the fleet was so small that the racing was without interest. Constellation sailing alone, Fortuna and Merlin against Iroquois, while Quickstep sailed alone. This practically ended the class racing of the season, as the runs of the Eastern Y. C. cruise were limited to Volunteer, Mayflower and Eneone.

To sum up, it was a matter of course that Constellation should win in her class, her only important antagonist being Palmer. Fortuna sailed in rather hard luck, having no classmates, and the pretty little Quickstep was in the same position; so neither had any chance to make a record. Had Montauk continued the racing, there would have been some interesting fights between the two ancient adversaries. What Volunteer might have done had she been ready a few weeks sooner and sailed the entire cruise, is a matter of speculation; but she sailed enough to show that she is in a probability as fast under two sticks as she was under one, and that the alterations of hull and rig have been successful. The chief point in the 90ft. class is what Mayflower did do, which was to make the best showing of the year in the schooner classes. The result should be gratifying to her owner and skipper, as they have proved that the old boat was and still is a fast one.

In the 80 ft. class Marguerite takes the prizes; but Iroquois has done exceptionally good work, better than her record shows on its face. In the hard race of the first run she made the best showing of the whole large fleet; in the Goelet cup she missed the great prize of the year by a few seconds only, beating three larger rivals on elapsed time; and in the Vineyard Haven race she almost tied her chief competitor, both being beaten on allowance by a much smaller boat. The chief point about her is that she was designed for sea-going; she has done some remarkable work in deep water, spending nearly every winter in the West Indies and about the Florida coast. Her reputation as an exceptionally fine cruiser is established beyond question, and yet, with her regular crew and sailed by her owner, she has this year succeeded in hurrying a number of yachts which are in every sense racing boats. The cruise was followed by two private matches off Newport, in one of which Marguerite defeated Iroquois by 3m, and in the other she defeated the cutter Huron, of 65ft. l.w.l. The cruise of the Eastern Y. C. in the latter part of August was a rather quiet, family affair, the schooners racing on but three of the five runs. Sea Fox took part, but won nothing; Volunteer won the three runs and first prize, Mayflower won two seconds and one third. The high gave her second prize, while Eneone, through one second and one third, took a third prize. The first and third races were short and of little importance, but the second, of 64 miles, in a fresh breeze and open water, lacked only starters to make a stirring race. The Larchmont fall regatta was a failure, all that finally came of it being a match between Viator and the cutter Clara, the latter finally being disabled and withdrawing. The fall regatta of the Eastern Y. C. was also of little interest owing to the calm and fluky weather. The season was finished by a couple of quiet matches off Larchmont between Viator and the old Rebecca, now owned in New York again.

Since the season closed there has been a ripple of excitement among yachtsmen over the change in ownership of the big Constellation, Vice-Com. Morgan, who built her in 1889 having sold her to Mr. Bayard Thayer, former owner of Pappoose and present owner of Sayonara. It is well known that Mr. Thayer has been

anxious for some time to build a large yacht and visit England, and now that he has Constellation there is every probability of his doing so.

It is too early to forecast the prospects for schooner racing in 1892, but the outlook thus far is favorable, even more so than last year. What is needed in most classes is not more new boats, but no more new ones and more racing among existing craft. In the smallest class, under 70ft., there is now but one boat, Quickstep, with any pretensions to speed, and of course there can be no racing until something is built to beat her; but in the principal class, the 90ft., there is already a very fine fleet, Volunteer, Merlin, Sea Fox, Grayling, Mayflower and Sachem, enough to make very good racing if all would start.

Already the usual rumors of new yachts are afloat, but yachtsmen have heard the cry of "vol!" so often that they are a little incredulous until they see the keel laid. The loud promises of new nineties and 65-footers which were made last fall were not realized, it is needless to say, and when one hears the same stories now he may be pardoned for a little doubt. At the same time one yacht then mentioned has become a certainty, as the final signing of the contract took place in New York last week. Mr. Gardner has designed her, for Mr. L. M. Clark, of St. Louis, and she will be built by W. B. Coggeshall, of South Boston. She is a keel craft, 90ft. l.w.l., 19ft. beam, and 13ft. draft, with a forward overhang that will be fully up to date. Another 90-footer is talked of for Mr. Bloodgood, who has been negotiating with the Herreshoffs. It is also a fact that a number of yachtsmen have of late been looking at Quickstep with a view to something to beat her, as she offers a most convenient size of boat for both racing and cruising, and it is not unlikely that one or more additions may be made to the class this winter. Next week we shall take up the larger single stick classes.

NEW YACHTS.

THE present time is the duller of the year in yachting, and until later in the winter; but at the same time there is now a fair promise of new yachts, both sail and steam. Mr. J. Beaver Webb has in hand a small auxiliary for E. M. Fulton, for whom he designed the Gadabout two years ago. Mr. Gardner has lately formed a partnership with C. D. Mosher, the designer and builder of the Buzz and Norwood, an engineer who has made a special study of high-speed yachts, and the two are now at work on a 75ft. craft for W. B. Coggeshall. She will be built by Wood, of City Island, the hull mainly of mahogany, and will carry quadruple expansion engines of 600 H.P. They have in hand also a design for Mr. C. A. Postley, former owner of Resolute, schr., for a cruising steam yacht of 140ft. The design for the Clark 90ft. schooner has been sent to the builders, Lawley & Co., and the yacht is now being laid down. The 55ft. cutter for Mr. Bullock will be built during the winter. Mr. A. Cary Smith has been very busy this season with large steamers for passenger use, but he has just completed a design for an auxiliary steam yacht of 116ft. l.w.l. for an American yachtsman now in Japan. The yacht will be built of wood. He is now at work on a design for a 90ft. schooner. Mr. H. J. Gielow has just placed a contract for a steam yacht of 95ft. over all, 78ft. l.w.l., 15ft. 6in. beam and 6ft. draft. She will be built by Fulton & Sons, Seldenberg, of New York, and will be schooner-rigged. At Herreshoffs' the frames are out for a new 46-footer, the owner being unknown, though she is credited to Mr. Bayard Thayer, owner of Sayonara and Constellation. The boat will be an improved Gloria. Messrs. Stewart & Binney have an order for a new fisherman, an enlarged Carrie E. Phillips, for the same owners. The original boat has just been sold to Provincetown parties for \$8,000, or but \$1,500 less than her cost four years ago, and she has proved a very profitable vessel. The new one will be 97ft. l.w.l., 25ft. beam and 12ft. 6in. draft, and will be built by Storey, of Essex. Mr. Waterhouse has recently designed a cat yawl for the Lakes, to be 37ft. over all, 29ft. l.w.l., 8ft. 6in. beam and 6ft. draft. The single-hander for Marblehead Harbor will be 30ft. over all, 20ft. 10in. l.w.l., with jib set to stemhead

CHARLES DALY HAMMERLESS SHOTGUN

WITH OR WITHOUT
AUTOMATIC SHELL EJECTORS.

Important Notice!

Instead of giving the dealer larger discounts we have decided to give the sportsmen the benefit of a reduction, and have concluded to make extraordinary low **Net Prices** on the **Charles Daly Guns**.

While making this reduction we might mention that the high standard of workmanship for which the Daly gun has always been renowned shall be retained. We have expert testimony that these guns are equal in workmanship to the celebrated Purdey guns, and far superior to all other SO-CALLED London makes, such as Greener, Scott and Westley Richards. An examination will soon convince the unprejudiced customer. They are more conscientiously made, more beautifully finished, handsomer in appearance, with shooting qualities unsurpassed, in fact far ahead of guns costing \$100 more.

Should you live in or near New York, we would invite you to call and examine our stock and be convinced. If you live anywhere else in the United States and your dealer has none in stock, insist upon his ordering one, or order one direct from us. **Send for Catalogue.**

Scientific Education of Dogs FOR THE GUN.

A new work by an English writer,
"H. H."

The instructions here given are the result of the author's amateur practical experience of thirty seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing many new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS.

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

STOCKING YELLOWSTONE PARK WATERS.

IN our columns of Nov. 13, 1890, we announced the planting of 70,400 yearling fish of the salmon family, by the Fish Commission, in the waters of the National Park. It is gratifying to learn that this experiment, in continuation of the work accomplished in 1889, has been eminently successful. Commissioner McDonald sent Prof. B. W. Evermann to the region last summer to ascertain and report upon the results of the planting, and has received a communication to the effect that specimens of brook, Loch Leven, rainbow and black-spotted trout were found in the stocked streams, and all of them in excellent condition, showing that the surroundings are favorable and the future of the fish promising. Information was obtained from Mr. Elwood Hofer that he had discovered trout in Nez Perce Creek Oct. 9. These are the Von Behr or brown trout (*Salmo fario*). The brook and Loch Leven trout, which were planted in 1889, must have spawned in 1890, for yearling fish of these species were collected by Prof. Evermann. The high temperature and mineral character of the water of Twin Lakes apparently proved fatal to the whitefish brought there from Horse Thief Springs, Montana, and the Yellowstone River contingent probably fell victims to the voracious trout which abound in that stream. In the fall of 1890 Shoshone Lake received a plant of about 24,000 lake trout from Northville, Mich., and Lewis Lake was supplied with about 12,000 lake trout and 3,350 Loch Levens from the same station. The Loch Leven trout were found in goodly numbers in Heron Creek, a tributary of Shoshone Lake, and Mr. Hofer saw trout rise in Shoshone, Oct. 7, about 75 yards from the shore. The evidence of successful planting and of conditions favorable to the growth and multiplication of trout and salmon in the Park waters is conclusive, and we trust that the work will be regarded as no longer experimental, but practical, and will be pushed with renewed vigor.

CARP IN CALIFORNIA.

NEARLY two decades ago, and five years before the United States imported the fish from Germany, Mr. J. A. Poppe placed five small carp in one of his ponds at Sonoma, Cal. Nine months later (May, 1873) his stock had grown to 16in. in length, and 3,000 young were obtained from the first breeding. The fish were sold to farmers throughout the State, and some were shipped to Central America and the Sandwich Islands. The increase of the species, especially in the marsh or "tule" lands, was remarkable, and the demand continued steady. Now a reaction appears to have set in, and a most unjustifiable style and amount of abuse is being heaped upon a really valuable food fish, which has also long held a worthy place among the anglers' favorites in countries wherein it was best known. The qualities which led to the action of the Government in behalf of carp acclimation were the following:

1. Fecundity and adaptability to the processes of artificial propagation.
2. Living largely on a vegetable diet.
3. Hardiness in all stages of growth.
4. Adaptability to conditions unfavorable to any equally palatable American fish and to very varied climates.
5. Rapid growth.
6. Harmlessness in its relations to other fishes.
7. Ability to populate waters to their greatest extent.
8. Good table qualities.

These properties still exist and no amount of unreasonable prejudice can alter or reduce them. When we are told that the carp is a kind of sucker and "sucks the roots out of the banks of the ditches, causing the banks to wash out," we are bound to reply that California is noted for the variety and size of its suckers, but the carp is not one of them. The habit referred to is not observed in the carp and the real culprit must be sought in some other direction. It is gravely asserted also that the food of the ducks and other wildfowl is consumed by the carp and the game birds are deserting the marshes in consequence. Again, it is charged that the salmon and trout waters are being invaded and the eggs devoured on the spawning beds. Carp in water having a summer temperature of 54 degrees would be about as untimely as oranges on the tundra at Point Barrow. We shall next hear that the carp has utterly destroyed the salmon industry of Alaska and driven the seals out of Bering Sea. As a matter of fact, California has many native fishes of the carp or minnow family, some of which swarm in the irrigating ditches, while others inhabit trout waters, and certain of these are known to be very destructive of eggs. In the Pit and McCloud, for example, may be found a large species of *Ptychochilus*, known as the Sacramento "pike," which is really a giant minnow, growing to a length of 5ft. This, or something like it, is probably the fish for whose sins the carp is now suffering in the estimation of many good people of California. Before passing final judgment on the subject, send some of the cold water carp and the burrowing nuisance to some one who knows the fishes of the State for identification. Dr. Jordan, at the Leland Stanford, Jr. University, will settle all doubts for you; and FOREST AND STREAM will take pleasure in aiding investigations of any sort into the habits of fishes.

SNAP SHOTS.

WHAT is to be done when a fish which ought not to be caught and which one does not wish to catch, perversely insists upon being captured, whether or no, and actually forces itself into one's possession? That was the question that stared Mr. J. U. Gregory, of Quebec, full in the face when he was fishing for trout at Tadousac one fine day of the past season. The trout were lawful game, but salmon, in the same waters, forbidden fruit. It was then with a sigh of sincere and unfeigned relief that the angler saw a hooked salmon after a bit of magnificent play break away with the hook and parted leader. But satisfaction was changed to dismay when the leaping fish came with one grand vault after another directly for the boat and at last lay stunned and helpless in the canoe. Mr. Gregory promptly solved the problem by regaining his fly, and assisting the fish back into its element, there, like the patriotic orator, to sink or swim, live or die, survive or perish.

The celebrated North Pond, or Hebron Pond, case has just been settled finally by a decision of the Connecticut Supreme Court, which Dr. W. M. Hudson sends us and

we print to-day. The facts in brief are these: North Pond was formerly open to the public, and the people of Hebron were accustomed freely to fish in its waters. Years ago Mr. P. W. Turner, a manufacturer, came into control of the flowage of the pond and of all the land surrounding it, whereupon he claimed also to control the fishing, and for twenty years he has succeeded in preventing any person's fishing without permission. The residents of Hebron did not surrender without a bitter and prolonged legal fight for what they claimed were their fishing rights in the pond; and after failing to sustain these rights, they finally appealed to the courts to lay out a highway to the pond, thus giving the public free access to it. The petition was granted, and the highway laid out. Mr. Turner appealed from the finding of the committee, and on the contention that the road through his property to the pond was not a public necessity, carried the case up to the Supreme Court. The decision just handed down reverses previous findings, and sustains Mr. Turner. The case is an involved one, as are most of those wherein riparian rights are involved.

The British soldier in India who wants to go shooting, is permitted to do so only under a somewhat complex and it might be thought irksome system of regulations. No shooting party may consist of less than three men, and one of the three must be able to talk in the vernacular of the district, but no matter how fluent may be the linguist of the party, they must not converse with any native woman. One of the most important of the restrictions, as outlined in the *Asian*, is that which forbids shooting animals regarded by the natives as sacred or entering upon certain sacred localities. There is posted in each barrack room an official list of such animals and places. It is a pity that for the sake of the game supply we have not a liberal number of sacred localities in this country.

The pith of the decision just rendered by the Connecticut Supreme Court, respecting the constitutional character of the law forbidding the export of game, is contained in these words: "It being conceded that the State, under its general police power, may lawfully prohibit the killing of the game birds in question it may, of course, control such killing and the times and purposes thereof. It may lawfully enact that they may be killed, and sold and held for sale only for domestic consumption. The State in the exercise of its power, instead of prohibiting the killing altogether permits the person killing them to acquire only a qualified right in them, namely, the right to appropriate them to his own use and the right to sell or transport them for domestic use."

The discovery of one or more wild deer in the woods of eastern Connecticut has awakened considerable excitement in the vicinity, and every man and boy possessing a gun is reported to be on the warpath. Whereupon Mr. John H. Gould, of New Haven, suggests that a fund be raised for the purchase of deer to be put out in Connecticut woods, where he thinks with protection they will undoubtedly thrive, multiply, and in the future furnish fun for a host of sportsmen.

Among the good things in store for FOREST AND STREAM readers will be a series of papers by Mr. Charles Hallock descriptive of the shooting and fishing attractions of the eastern counties of North Carolina. Mr. Hallock sailed via the Old Dominion Line yesterday, for Norfolk, Va., whence under commission from this journal he will proceed by canal and sound, for an extended tour of observation and investigation, the results of which will be given timely publication.

The note in our shooting columns of the "battue" of English pheasants at Tuxedo Park the other day has a decidedly foreign flavor and might have been clipped from an English journal. It records a phase of shooting which will be common enough in this country ten years from now, for confirmation of which fore-telling consult Vol. LVII. of the FOREST AND STREAM.

By the death of John B. Clarke, editor of the *Mirror and Farmer*, New Hampshire fish and game interests have lost an influential supporter. For many years Mr. Clarke was president of the New Hampshire Fish and Game League, in the work of which he took active part, and to it contributed substantial aid.

The Sportsman Tourist.

SMOKE WREATHS.

IT is, as you see, a very ordinary brier-wood with an amber mouthpiece. The amber has been broken off and rudely mended with the brass shell of a cartridge. The leather case is scratched and worn, and its velvet lining is faded. Just an old brier-wood pipe. But then you remember Aladdin's lamp was old and battered so that no one guessed its wonderful power. As the magic lamp was only for its possessor, so this old pipe unfolds its secrets only to me, its owner.

I am not much of a smoker, and I use my pipe but seldom. It is smoked oftener by others, who never get an inkling of its magic properties, but think of it simply as a sweet one which they enjoy.

But when I light it, and the curling wreaths of blue smoke float gently upward, while the subtle influence of the tobacco soothes the senses, then it is that it becomes, to me, different from other pipes. On those same curling wreaths of smoke I am carried away to other days and scenes, some of which are separated from the present by long intervals of both time and space—to places and times when the old pipe was my companion and in the smoke come visions which, while ever changing, are replete with vivid pictures, familiar forms and well-loved faces. Wild scenes most of them are; mountains, forests, lonely lakes and rushing rivers. Places where the cry of the loon, the tread of deer, the splash of leaping trout are the sounds which mingle with the voice of the wind in the pines trees. And the faces—three there are which come oftenest, and one is more often a reality than an illusion, though in the smoke I see it again by my side in the woods and by the streams; the sweet face of a woman into whose dear eyes God grant I may look for many years to come. And the other two—one, a younger brother whose love of nature is the same as mine; the other, the best friend a man ever had, and like another older brother in the affection I bear him.

Other faces there are, some of which have the copper tint of the aboriginal races, but all, except the first one, are far away under the blue skies of New England, many miles from our home on the shores of Lake Michigan.

As I touch my match to the tobacco I have in mind a stanza from Whittier, who above all others is the poet of New England, of her history, her traditions and her people.

"Wildly round our woodland quarters,
Sad-voiced autumn grieves;
Thickly down these swelling waters
Float his fallen leaves.
Through the tall and naked timber,
Column-like and old,
Gleam the sunsets of November,
From their skies of gold."

The lines run through my mind, and they and the magic of the pipe form in the curling smoke a picture.

On the shore of a lonely lake in the wilderness a giant pine stands alone near the water. Some of its branches are bare and dead; some are clothed with the living green. Beneath the pine tree is a small tent gleaming white in the twilight, and in front of it a camp-fire is burning merrily, throwing out a grateful heat and cheerful light. Back of the camp is the forest, through which many and many a mile intervenes between the little tent and the nearest settlement. In front is a strip of hard, white, curving beach, stretching for half a mile around the water; and the sand is covered with the tracks of deer; a larger hoof print shows where a moose has come out to quench his thirst. Across the placid surface of the lake in which the dying sunlight is reflected, the purple peaks of a mountain range are sharply defined against the amber sky. To the north a stupendous mountain rears its lofty summit far above the timber line, its black sides showing the white scars of avalanches which occurred no man knows when. A birch canoe is drawn up on the beach and a rod and rifle lean against the tent. The carcass of a deer hangs on the pine tree, its antlers showing it to be a buck. By the fire two men watch the light fade from the western sky. The one an Indian, the other a white man, and there is no other within many miles of them. For days they have been voyaging down from the head waters of the stream, their frail canoe borne onward by the flood till at last they pitch their tent under the big pine tree on the sand beach. It is late in the afternoon when they land, and after preparing the camp they go out in quest of game. It is a warm, glorious Indian summer day, and as they paddle across the pulsing water, the canoe, now empty of its burden, leaps forward like a thing of life. Across the lake they go and in among the shadowy islands near the inlet.

The white man in the bow places his paddle carefully by his side and takes his rifle. On they go through winding channels where great trees overarch the dark water, and the shores are bordered with grasses and lily-pads. Here and there a maple in its autumnal splendor adds a splash of gaudy color to the sombre evergreen forest. The minarets of the firs and spruces sharply cut the sky and the peace of the dying day is over all. The Indian's paddle is as still as death as he sends the canoe along through this beautiful, silent land. Hark! a stealthy tread is heard in the bushes, but nothing is visible. Then a snort from the hidden buck proclaims that his keen nostrils have apprised him of lurking danger. It is useless longer to look for him, and again the canoe steals forward.

The daylight is fast growing dimmer among the islands, but as the hunters emerge from them into another pond there is more light. This sheet of water is even more lonely than the lake on which the camp is situated. It is smaller and the mountains approach more closely, their dusky slopes hem it in on all sides. How still it is, as if the solitude had never before been disturbed nor the bosom of the lake kissed by gliding prow. As the view first bursts upon the sight it is like a revelation of nature. The eyes of the white hunter search every rod of shore and behind him two other eyes are on the alert.

No word is spoken; both men sit motionless but the arms of the Indian are working from the shoulders; the blade is not lifted from its element. The canoe, apparently without propulsion, goes on ward like the shadow of a cloud across the water.

Suddenly it stops,

"Nol-ke nah-za-ket," whispers the Indian in his own tongue. "There is a deer over there."

Yes, on the opposite shore can be seen a moving red body, but so far away that but for the motion it might be mistaken for a dead spruce top. Once more the canoe steals forward, but though it moves swiftly there is not the least suspicion of a sound. The rifle is cocked and ready. The distance rapidly decreases and the deer can be plainly seen. It walks along the shore, turns toward the woods and disappears behind the windfall. Has it gone? Is there to be no meat in the camp to-night? The same gliding motion of the canoe continues, and eyes are strained for the reappearance of the game.

Ha! there it is coming toward the shore. It stops, gazes out across the water, and the canoe ceases to move. It lowers its head to eat and again the silent boat is in motion. The deer is apparently restless; will it remain in sight till the rifle is near enough to speak? Then further up the shore another deer comes out to drink and eat the succulent lily pads. The first one is now standing knee deep in the water drinking. It lifts its head and looks toward the canoe, and then turns toward the woods. It is a buck, and as he turns, a few swift, strong strokes send the light craft swiftly, but just as silently, nearer to him. He is now headed directly away from the hunters and presents a poor mark, but there is no time to lose. The rifle is brought to the shoulder, and as the antlered head is turned to take another look at the strange object on the water, the sharp crack awakens the echoes, and at the sound the buck drops in his tracks. Reverberations bound and rebound across the pond from one mountain to another. The second deer gives one hasty, startled glance, and with prodigious leaps seeks the cover of the woods. Another cartridge is thrown into the barrel, but it is not needed, for when the canoe reaches the quarry it is found lying amid the grass in the edge of the water, shot through the neck, dead.

"Good shot. Not much time to lose that time," is the brief comment of the Indian as he takes his hunting knife and prepares to dress the animal.

In a short time the work is done, and then with the fatigue of the day forgotten, the game is placed in the canoe, the bow is pointed campward and the paddles are wielded by arms into which success has infused new life. It is after the return, and the fire has been rebuilt and preparations made for the night, that we see them sitting by the blaze. Two loons out on the lake and the deer tracks in the sand are the only signs of life. The light fades away and the night comes. The soft, black shadows creep out from under the hemlocks and spruces, and gradually envelop all things in their sombre covering. Through the branches of the pines above the tent the moon floats slowly upward and the stars begin to twinkle in the sky.

The silence is broken only by an occasional remark, sometimes in the soft, musical language of the Abenaki, sometimes in the more sonorous English. More wood is heaped upon the fire, and as the warm flame leaps into the air, dissipating the darkness in one small circle, but making the outer blackness more intense, they sit and smoke.

And one of them is smoking an old brier wood pipe.
W. A. BROOKS.

THE RED SHANTY CLUB.

AN account of a week spent in a permanent camp, on the shore of Barnegat Bay, may interest some of the readers of the "good old paper." The first week of August, 1891, will long be remembered by four "camping cranks," who had fun galore in a tight little shanty built on stout piles driven into the salt meadow.

Everything having been collected, on the morning of Aug. 1 the duffle was packed on board the crack naphtha launch Neptune, owned by the writer's father, and we started down Toms River. The wind was blowing hard southeast, and when we got out in Barnegat Bay we caught it fast and furious. A few minutes sufficed to wet us to the skin, our oil-skins being spread over our duffle. The Neptune, 25ft. over all, and a staunch little craft, rode the heavy seas admirably, and we made the run of 7½ miles in one hour and twenty minutes, with a heavy yawl in tow, having water barrels on board.

The shanty is painted red, hence the name of the club, which, by the way, is a close corporation on account of the shanty being 8x12ft. in size. We soon had things snugly fixed. Two of us had bunks, one over the other, and the other two fellows had one cot and the other the floor. But we had good beds—after we had appropriated enough salt hay for mattresses.

We spent the ensuing week fishing, crabbing, swimming, and last, but really it ought to be first, eating.

If any dyspeptic wants to find a good appetite let him spend a week or two near the salt meadows; the salt air and the peculiar smell of the black salt mud will make him want to eat a cow raw. *Mem.* White potatoes boiled in salt water have a remarkably fine flavor.

Business compelling our return to office and shop, on Aug. 11 we reluctantly broke camp, resolved to spend a whole month next summer in the "Red Shanty."

BROADBILL.

TEXAS TURKEYS.

WITH very little ceremony in preparation, but with ample of everything that was substantial in the way of camp fare loaded into our wagon, we mounted to the seat about 10 o'clock, and bidding a merry good-bye to the ladies, went off down the road on our way to the hunting ground on the river, leaving all care behind; and living in the present were boys again. After following the public road for a while we turned off into the chaparral, and taking a trail reached the river about 2 o'clock.

We rested in camp until late in the afternoon, and then started out in separate directions to sit around and listen for turkeys to fly up to roost. My old friend and I went together. Just about dusk we heard one gobble away off, but too far to reach him; so when it became dark and it was useless to wait longer on our stand, we started back to our camp about one-half mile away through the woods. The timber which skirted the creek was so narrow on the side which we were traveling that we felt certain if any turkeys were roosting on the creek we must pass under them. We moved cautiously, expecting to see one at any time on the roost. When about 200 or 300 yds. from camp I felt my companion pull me; and he pointed ahead into a large tree. I knew what it was at once. Who that has hunted the magnificent game can

ever forget? That form was unmistakable, so plump, so graceful, so erect and keenly alert to all surroundings, it poised on the limb in a nonchalant attitude, clearly outlined against the horizon, while we below were obscured by the shadows of the trees. I saw at a glance that it was a nice gobble, and raised my gun to bring him down. My companion whispered "Wait," and then cautioned me that I must not mistake a large grapevine running parallel with him for his head and neck and shoot that. Although I felt confident that I could see distinctly, still I waited to take a good look, and being satisfied of him, drew a bead on his head and neck and fired. Out he rolled, and the fall was a heavy one, echoing through the woods far and near. We ran to him, neglecting to look about for others in the trees, as we should have done; and they commenced to fly out, quite a bunch leaving us. We went into camp, and soon retiring to bed, slept the sleep that can only come to those who live out of doors.

Long before daylight next morning we were up sitting around a merry crackling fire drinking coffee and waiting until it should be time to start out to hunt them on the roost. When we started each went in different directions. This time I was all alone. Going up the creek near to where we had been the evening before, I sat down to listen and wait. It was quite dark under the trees, but the sky was lit by myriads of twinkling stars. The stillness was oppressive; not a voice of animal life to break the quiet, all nature seemed hushed in sweet repose. The witchery of the scene was contagious and I caught the inspiration. Sweet spirits, voiceless and unseen, hovered near, and the atmosphere, heavy-laden with perfumes of early spring blossoms, breathed into motion by the plants and flowers. The large forest trees towering majestic, silent and stately in the shadowy background, were massive columns in an enchanted castle in which I, the sole occupant, was musing all alone. How small I seemed and how grand the surroundings, brought thus face to face with nature. How weak was I and all mankind compared to this. Where is the use of the perpetual struggle going on the world; the strong trampling down the weaker; the rich man's continual strife to accumulate more riches; the poor man's ceaseless struggle for bread? What care I, living in this enchanted garden, for stocks or bonds, or for panics or crises? Who would not lay aside the jealousies, the heart-burnings and follies of society to abide in these surroundings?

My reveries were interrupted here by the twittering whistle of the redbird, the first tiny herald of the approach of morning. Soon his note is answered by another, and another, and then taken up by all the feathered tribe of the woods. Then sound multiplies sound in gradual volume, until all the world seems to be awaking from its slumber. Soon the god of day gives one shy peep—like a lazy boy from his bed—over the surrounding hills, probably to ascertain if the little stars were still watching. But they were not; the timid little things had long since said their good-night and hastened away to hide. Thrown back on the curtain of mist and darkness which so recently enveloped the world, and with one bound the sun springs out full, robed in the grandest of his habiliments and sheds a smile over the whole world. His coming dispels my dreams—for dreams vanish with the stars—and as I have not heard any gobbling I rise and take my way back to camp. Soon the others come in, my Richmond friend with two nice turkeys, but both hens. Our host would not hunt except to pilot us about, he did not even carry his shotgun with him from the house, for he said he wanted us to have a good time and do the shooting.

We passed the day pleasantly around the camp resting and fishing. For dinner we had fish and the breast of turkey cooked as steak, which was delicious.

For the evening hunt we planned to cross the river and hunt in the broader bottom of the other side, hunting the turkeys at night while on the roost. It was too late in the season to do this successfully, as the leaves had all come out thick on the elm trees, making it hard to see them at night. We went a mile above camp to a shallow ford and crossed over the river, waiting until it became quite dark, and started down the bank of the stream. We had poor luck, scoring out quite a number, but killing none for quite a while. When about opposite to our camp and we had been scattered out into the woods for some time, I came upon my companions standing close together and holding a whispered conversation about something in a tree which attracted them. One of them said he thought it was a turkey, but the other said it was a bunch of moss. I guessed what it was, and solved the problem by firing into it, and not waiting to express an opinion on the subject. Out rolled a turkey. My friends were teased of course. This was all we killed, and being near to camp we waded the river and turned into camp and beds.

The next morning was our last in camp, and we arose early, as usual, and went out to our stands. My host and I went together again on a stand, when, just before it was light good, there opened up quite near us an old gobble, who was joined in a chorus by others. I went to the roost, which was quite near, as quick as I could, and after looking around soon located the tree which contained the leading spirit of the flock. It was hard at first to see him, but when my eyes became accustomed to the surroundings I located him and brought him out. Just before I fired my friend shot one about 30 yds. from me with his rifle, but did not get it. After I had fired and was looking into the tree for others which I could hear but not see, my friend came running up to tell me to go to some others not far off. He did not know the tree which I had killed one out of was full of them. Out they all went and left me with only one. That ended the prospects for that bunch, but before I picked up my gobble to leave there came one from down the creek and went whirling through the trees. As it passed I fired and brought it down with a broken wing, but it got away although I gave it a second barrel at long range, knocking it down. When we got back to camp my other friend was there with a fine gobble.

We broke up our camp and started home that day. It was Saturday and we felt that we had enough game for one short hunt.

The next day our host took us back to Beeville in his hunting wagon; we had enjoyed our hunt to the utmost but were willing to go home. On our way in that morning we had no idea of shooting anything, for besides having had hunt enough, it was Sunday, we were all inclined to respect the dog. But who can withstand temp-

tation? The best of us will yield when the tempter comes. A villainous coyote crossed the road directly in front of us and looked at us saucily. It was so like a "dare." Of course, he didn't stay there long, but moved off of the road to let us pass and stopped on our right about 150 yds. off. I grabbed my gun and a buckshot cartridge, and jumping out of the back on the opposite side told the others to drive on, which they did without halting, and the wolf's gaze was attracted to the hack and its occupants. I fixed my gun and ran in a stooping position toward him until I was within 100 yds., then rose and fired, turning him over. It was a splendid shot. Is it any harm to kill a coyote on Sunday?

We reached home that night, having killed twelve turkeys and one wolf, not counting small game, bringing with us the recollection of a delightful hunt. We said good-bye to our friend and host at Beeville regretfully, and trust some time to join in another hunt as pleasant.

GALVESTON, TEXAS.

S. D. CALDER.

IN NEW YORK CITY WILDOODS.

VAN CORTLANDT, New York City, Oct. 25.—In these last autumn days, those who like myself are fortunate enough to enjoy them up here must feel as I do—a great longing that many more of the inhabitants of the great city might be privileged to inhale the pure air of these hills and revel in the glad sunshine of departing summer. A glimpse only of this fair country would be necessary to induce a long ramble, such as we had to-day, across fields and deep into the woods—the woods of New York city—for on this northern boundary, away from the limits of noisy, paved streets, there are generous, wood-covered hills, with many grand old trees, running brooks and little lakes. The birds have been very silent of late, and scarcely visible, so it is almost startling to find that every coppice and all the woods are filled with the songsters of bygone days. They are here gathering their clans for a journey to the south and tarry by the way to feast on the abundance of bright berries that adorn almost every shrub. The silver birches have already shed some of their foliage, but are scarcely less beautiful, while the light let in from above permits them to see their graceful lines reflected in the mirroring pools. Thrifty squirrels are busy everywhere laying in winter supplies, and in a shady valley is the moss-grown rocky home of a chipmunk's family. First acquaintance with him recalled the days of boyhood when the discovery was made that chipmunks liked whistling and in that way could be coaxed from their holes in the stone wall. This chipmunk has the same tastes. He was brought out to-day and sat contentedly listening to the melody from puckered lips, until his eyes began to close, and the other fellow suggested that the whistle had made him tired, thus demonstrating the human qualities of the chipmunk. The sun has sunk low as we return, tinging the sky with rich color that indicates another day of radiant warmth. This may be followed by a bleak gray day or two, but even these melancholy days have a beauty and great poetic charm all their own.

THE PORCUPINE.

Editor *Forest and Stream*:

Since I sent in some notes on the porcupine last winter, hinting strongly that it was a nuisance, there has been published a good deal of correspondence concerning this prickly animal.

Mr. Jack thinks the porcupine is not especially noted as a trespasser on man's domain. Here his observations differ from mine most widely. Leaving out my experience in the State of Maine, which was mostly in the deep woods, I have seen ten porcupines within inclosed fields for every one I ever saw in the woods. The injury to the horse, the raid on the hen house, and the mingling with the turkeys, mentioned in my former letter, all occurred not less than a half-mile from any woods. Dr. W. L. Macdonald, of Boston, who lives two or three months each summer on his farm near here, has killed one or two around his house every season for the last six years. In June, 1877, I saw one enter the open front door of the house of R. P. Colpitts, of Elgin, about 9 P. M., one evening—the house was in the center of a good-sized milling village. A young man (Mr. Henderson) of Forest, Me., told me that he had killed two in the act of gnawing their way into his house. Every year I see evidences of their ravages in the buckwheat fields around here, and the crops of two men, Messrs. McAlary and Belyea, whose farms abound in rocky ledges, are materially injured by them.

Mr. Jack does not think that they girdle and kill trees. Though I had seen trees barked, gouged and partially trimmed by them, previous to 1887 I never had seen more than a half dozen small trees that they had girdled. But in the bouldery country adjoining the Chiputeticooc lake (that is the place for porcupines) there are hundreds of large trees bearing such unmistakable signs of having been killed by porcupines that "he who runs may read." I have seen where they had gnawed the bark off a space of 4 ft., extending clear around a hemlock tree that would "top" 12 in. at a distance of 30 ft. from the ground. The gnawing would be above the first branches, but the tree would be as dead as Julius Cæsar. I saw yellow birches, spruces, beeches and elms that had been similarly treated, and one big malformed beech, about 18 in. in diameter at the butt and 30 ft. high, had evidently been used by them as a boarding house, it was completely denuded of bark "from the lowermost root to the topmost bough," as the dorky said. This was at the head of Spruce Mountain Cove, Spedunc Lake; and any one who visits that place can easily see all I have described in the way of tree mangling. It was there that I made up my mind that the porcupine was a nuisance and did much damage to Maine timber.

"The Drummer" says that the flesh of the porcupine is good for food, and that alive he is an interesting pet. As to the latter, I think it is a case that would justify the use of the much overworked *De gustibus* proverb; but if it is a question of taste with which I am not disposed to quarrel. I don't think I would have to overtax myself much to find nine hundred and ninety-nine animals that would seem more desirable to me in that capacity. I never tasted the flesh of the porcupine, but almost any

one around here can tell you "that it tastes just like mutton," though you will search long and diligently before you find a man that will plead guilty to having eaten it in any quantity or even to tasting it at all. Week before last Dr. Macdonald, mentioned earlier in this letter, killed a large, fat porcupine. His nephew has a "squaw-man" living on his farm, who assists him in the farm work, and the man begged the Doctor to give him the carcass. "He had often eaten porcupine," he said, "and it was good—it tasted like lamb." The Doctor told him to take it home and dress it, but to save him a small piece. Next morning the Doctor asked him how the "lamb" went. "The devil," he said, "could not eat that particular porcupine, it was so strong, but taken in small quantities it might be blanked good medicine for cholera. His wife couldn't go it either," he added, "and they gave it to the cat and dog and they didn't appear to care about it." Now, there is a saying that "anything is chuck to an Indian," and a diet at which a squaw and her dog and cat turn up their noses does not seem to me extra desirable for white people. "Jacobstaff," in his recent letter to *FOREST AND STREAM*, sums up the porcupine about right in my opinion. Though I am sorry to be obliged to differ in my views from Mr. Jack, a man who is much my senior in years and woodcraft, and whose writings have given me so much genuine pleasure, I have tried to show that my opinions are not loosely or hastily formed, and that the conclusion to which I have come is not without some show of reason.

MCDONALD'S CORNER, N. B.

L. I. FLOWER.

THE FEEDING HABITS OF SHARKS.

DURING the summer of 1887 there were in one of the aquaria of the U. S. Fish Commission at Woods Holl, Mass., three sand sharks, each about three feet long. They became very tame, taking chunks of fish, or whole fish of convenient size, either alive or dead, from the hand, just as a dog will; but one had to be careful of one's fingers, as it mattered not to the sharks whether they took fish or flesh. There was never, to the writer's knowledge, a tendency on the part of these fish to turn on the back to take food, nor could one imagine a necessity for so doing under the circumstances.

In a large walled tidal pool outside, however, there were several large sharks, about six feet in length. These were fed with fish taken from a pound-net close by. When the fish were thrown in the sharks quickly gorged themselves with the dead and with the injured ones which could not swim well; but they did not seem expert at catching the active ones, with which the pool was well stocked. They would dart after them, sometimes rolling completely over, but the fish were generally able to escape by darting close to the wall and into some woodwork supporting steps arranged around the pool. It is probable that the sharks would have had better success in the open water, as they were unable to move very swiftly for fear of striking a wall. As they were not fed regularly, they sometimes became very hungry.

The writer took much interest in watching them and found that, at times at least, they look quite as much interested in him. At all events when at high tide the water was on a level with the step on which his feet rested, the sharks would come up so close, turning on one side and smiling so benevolently, with a "come-in-out-of-the-wet" expression, that he was fain to get up a step higher, as a matter of precaution at least. Whether they were but asking in their way, as other fishes do, to have some fish thrown them or whether they were thirsting for human blood can only be conjectured. They were not of the so-called "man-eating" kind. It was inferred, however, from those observations that their actions in taking food were, and would likely be, controlled by the character or the position of the prey. There is nothing more probable to the writer than that in attacking a larger fish, a school of fish, or a man, they would come up beneath to prevent escape, and considering the position of the mouth nothing seems more probable than that they would at times turn on their backs. It is a mere question of expediency, however, and not necessarily a fixed habit. For an object of small size it would not be necessary.

WILLIAM P. SEAL.

"FATE OF THE FUR SEAL."

Editor *Forest and Stream*:

In the editorial column (p. 285) of your issue of Oct. 29, under the caption "Fate of the Fur Seal," commenting on Mr. Palmer's interesting paper, several statements which I never made are mistakenly attributed to me. As I have been accessible here at any time since the paper of Mr. Palmer was presented to the Biological Society, it would have been better for the gentleman who undertook to report my remarks on a subject of so much importance, to have submitted his version to me before sending it away for publication. The misunderstanding of a word or phrase so easy in hasty notes of an off-hand discussion may, and in the present case does, entirely change the statements so modified.

For instance I said that "Mr. Elliott's estimate" (not "the estimates") of the number of seals "on the rookeries" (not "on the islands") was "a gross exaggeration," a fact which cannot be controverted, since his estimate, one seal to every two square feet, depends upon a physical impossibility.

I said also that in my opinion "there never were three million seals (not 'a million') on the rookeries; three million being Mr. Elliott's estimate, taken in round numbers. I said that 'in 1866' (not 'in the early days of the industry') I purchased first-class fur seal skins at 12½ cts. apiece, that being the price at which they were sold by the Russians. The point of this observation lies in its application to the oft repeated statement that as Mr. Palmer says 'little stress was laid upon the fact that fur seals were found in abundance' at the time of the purchase of the Territory by the United States. No stress could reasonably have been laid upon it, since 100,000 seals would at that time have been worth only some \$12,500, which would have hardly paid for the trouble of taking them. Of course, almost immediately afterward, this was no longer true.

I did not say that "the diminution now apparent to every one is due chiefly to the number of young males legally killed," nor did I attribute "the present decline chiefly to the excessive killing of young males." Such has never been my opinion. What I did say was to intimate that after the killing in the open sea (the most important factor in the diminution), the second factor was

the killing of too many young males rather than injuries caused by driving; the latter being a view much insisted on by Mr. Palmer.

Again, I did not credit Raymond with the invention of the machine for removing the coarse hair, which machine is of English origin. What Raymond of Albany did was to invent a method of dyeing the underfur.

But I have said enough to show how incorrectly I have been reported. This is not the time, nor your excellent paper the present place for me to discuss the details of a question now under a quasi-judicial investigation. The matter is too complicated and the factors concerned are too numerous to be handled hastily or in *ex cathedra* fashion. The testimony which will be brought before the commission which is inquiring into the subject will doubtless throw much needed light on all the many sides of the question, which can then be discussed with proper knowledge and due consideration.

WM. H. DALL.

SMITHSONIAN INSTITUTION, Washington, Oct. 31.

THE ANTICS OF A TAME JAY.

AMONG the birds which my children raised this year is one which gives us more pleasure than I ever expected. It is a bluejay, and he is the most cunning plumed fellow you can think of. I had to clip his wings because he would not stay in a cage, but likes to hop and flutter around the house. He is not afraid of the dogs, will hop around and about them, sit on the head of a big bloodhound and yell at the top of his voice just for mischief. He defies all the chickens if they try to take some food away from him. I suspect his terrible war cry scares them. He will sit on our shoulders and hands and beg for food, but as soon as his appetite is satisfied he takes what more are offered him and hides it away in some nook. Sometimes he will put it down in my vest pocket or under the collar of my outing shirt. Water he likes exceedingly well, and shows signs of disgust if without his regular bath; and lo! how he will jump in when the dishpan is filled with the fresh, cool liquid—drink, dive, splutter and yell for joy. Then out he goes to the sunny lawn and lies down on one side first, spreading the opposite wing, then he turns over to spread and dry the other one. He will also take dry sun baths in the same manner.

If nobody is around he will perch on a chair on the porch and sing; and he can sing right well in a low voice, imitating other birds. His efforts to talk are also remarkable. Everybody in the house loves him, but we have to keep out of his reach everything that glitters and is not too heavy for his strength. This, of course, is the inherited vice of the corvine tribe, and the only complaint I can raise against him. The ladies don't like him to enter the house, as he will leave marks of his existence. But taking it all around, I can highly recommend to lovers of pet birds to raise and tame a young bluejay, as it will certainly be a source of great pleasure to them.

CINCINNATI, O.

D. W. D.

A BLACK CHIPMUNK.—Some ten years ago three specimens of black squirrels, or what I considered common "chipmunks" dressed in black, were brought me during the months of October and November for mounting. Save in color I could distinguish no particular wherein they differed from the "chippies," which are so abundant in Maine; in fact the lateral stripes were almost discernible through their black coats. From that time till the present month I have not encountered another, but within a week I have caught one, which I now have caged. Its coat is as black and glossy as possible, and I can distinguish no indication of the side stripes, as I am quite certain I could in the previous specimens. Is it probably a case of melanism or may it be a separate species or variety, or are there two types of "chippies," the normal and the black, as there are the red and gray types of mottled owls? Will some one kindly post me through the columns of *FOREST AND STREAM*—J. C. MEAD. [This is clearly a case of melanism, and a very interesting one. Dr. Allen, in his monograph of the rodents, states that melanistic examples of the striped squirrel or common chipmunk are rare. He mentions a skin of the collection in the Cambridge Museum of Comparative Zoology from Norway, Me., which is intensely black throughout excepting a narrow white streak on the breast. He notes also that Dr. Adams has met with several instances of melanism in this animal in New Brunswick.]

ENGLISH PHEASANTS AT TUXEDO PARK.—Editor *Forest and Stream*: Last Thursday, Aug. 29, the Tuxedo Club held their experimental battle of English pheasants. It was in every way completely successful. Six guns came to enjoy the morning's sport in magnificent weather, and by mid-day 100 out of the 120 birds turned out had been accounted for. The members of the club are so pleased with the result that it is proposed to hold battles every week next season. Their stock this year was supplied by the pheasantry at Mountain Side Farm, Mahwah, N. J., but it is their intention (as they have a most capable rearer in J. Ainsworth) to have a small pheasantry of their own for the future, to supply a portion of their requirements, and for that purpose have kept back a small head of birds. The cocks flew splendidly, and it speaks columns for the accuracy of the six well known sportsmen who enjoyed the fun that so many birds were bagged. It only remains to congratulate the club sincerely on the success of their spirited endeavors to permanently introduce this game bird on a large scale, and to offer them every good wish in their efforts in this direction in the future—G.

AN UNFORTUNATE NEST BUILDER.—Cincinnati, O.—Two years ago we had in a bush in our garden the nest of a little yellow warbler (*Dendroica aestiva*). The bush was so near the porch that we all enjoyed watching the little things while building. One day my son remarked that he had not seen the birds for a day or two, and by peeping into the bush he found the male bird dead at the entrance to his nest, hanging by the neck, entangled in a long human hair, which he had woven in with his other building material. You can imagine how sorry we were for the sad fate of our lovely little neighbor.—D. W. D.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Gloss," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

WEAPONS FOR GAME.

[Concluded from page 270.]

I HAVE succeeded in making a .45 express shoot solid bullets of pure lead weighing 270grs. quite as accurately as the longer hollow bullets of the same weight by using powder about as slow-burning as the Hazard FG instead of the English No. 6 grain, reducing the charge from 125grs. to 110grs., and putting a thick lubricated felt wad under the bullet in order to diminish the suddenness of the blow of the powder gas upon its base. The grooves in this rifle had only one turn in 48in., and I doubt if good shooting could be made with a much quicker twist unless the lead were hardened or the quantity of powder reduced.

The two facts in Baker's observations upon rifles which seem to me most worthy of note are:

1. He is not willing to sacrifice accuracy for the sake of a very flat trajectory. He objects to even 3dr. of powder over the usual 6drs. charge, because the latter "produces greater accuracy at long ranges." The proportion of powder in his .577 rifle is only one-fourth the weight of lead. This, with the No. 6 grain made for rifles in England would give rather more than 1,600ft. a second muzzle velocity, which would mean a trajectory about 2in. high up to 100yds. and about 10in. up to 200yds.

2. Baker's experience has not made him in love with very small bores. Few living men have killed as much large game, and he is known to be an excellent shot at both running and standing objects. His hunting has been chiefly in localities remote from civilization, where the game would be approachable within comparatively short ranges. For years together he has shot in order to provide food for large numbers of camp followers, and must therefore have had immense practice in stalking.

With all this we do not find him stating, as that "a little bullet is sufficient when put in the right place."

For anything not larger than a fallow deer (which is about the size of the Virginia deer) the least powerful rifle recommended is a .40 with 85 to 110grs. of powder. For such game as the moose, wapiti, caribou and grizzly bear, the advice practically amounts to, "Use the most powerful rifle you can handle with efficiency." And this seems to be on the ground of humanity as much as of safety to the hunter. When an animal struck properly in the shoulder gallops 100yds. before falling, the shooting is called "clumsy." "Do not wound, but kill outright."

While saying that men should be armed in proportion to their strength, he himself prefers a .577 of 12lbs. weight. Doubtless this is because he is, or at least was when in his prime, far superior to ordinary hunters in physical power. For men of average strength who may desire to try the system advised by Baker of large gauges and solid bullets of pure lead, I imagine there could not well be better weapons than the American .50 95 or .50 110 repeaters, with bullets of about .350grs. A .50-95 Winchester which I tried at 100yds., with only the short 300-grain bullet, carried very accurately, and although only about 8½lbs. weight, the recoil did not seem more than that of an ordinary shotgun. Even with a 300-grain solid bullet it might be found to have plenty of penetration, but I have read that it is not liked by American hunters.

The .40-110 rifle of the Winchester Company has probably been tried by many hunters upon the ordinary small deer, though I have not seen the results mentioned in any American paper. For my own use I would prefer the .40-82-260 on account of its superior accuracy, and cannot understand why Baker likes the .40 express for antelope shooting. A very good express of .40 or .45 gauge will rarely put several successive bullets into less than a 10 or 12-inch circle at 200yds. The part of a black buck antelope's chest which must be hit in order to insure killing quick is, as Baker states, not more than 4in. square. I have killed numbers of those animals and know from experience that it is often impossible to stalk nearer than 200yds., and they are frequently too wild to allow of even that. If, therefore, an express rifle be used, many antelope will inevitably escape with broken arms or badly torn wounds at the edge of the chest, unless the hunter make up his mind (as he ought) never to fire at any animal which he judges to be more than 100yds. distant. Even at this range, if the game be facing the hunter, a shot which, with the .40-82-260 would be accurate enough to hit in the center of the breast, would, with the express rifle, sometimes let the animal escape with the shoulder joint smashed in pieces.

The hollow bullet is certainly advisable for this kind of shooting, because it not only stops in the antelope's body when it hits, but when it misses it is so knocked out of shape on striking the ground that it is not liable to ricochet to dangerous distances. With the hollow as large and deep as in the factory-made bullets, although they are hardened with one-tenth part of tin, they are not satisfactory in their action unless hitting nicely behind the shoulder or in the breast. If fired at game running straight away they make a disgustingly torn wound in the quarters and do not penetrate to the vital organs. When express rifles were first used in India the most absurd accounts were written in the newspapers of their wonderful effects, by sportsmen who had given them a limited trial. The bullets were stated to travel without any perceptible curve up to 200yds.; to either penetrate three feet into an animal's flesh or knock him three feet backward; to either drop tigers on the spot or paralyze them so that they could neither charge nor run away.

I soon bought a single breechloading .45, carrying 110

grains of powder with a 280-grain hollow bullet, and tried it upon a couple of black buck, one at 120 and the other at 130yds. Each was killed in his tracks and I thought the rifle perfect, except that shooting at a target had shown it to be unreliable beyond 150yds. Shortly afterward I was sent on a seven weeks march in charge of more than 600 army remount horses, with a corresponding number of natives to lead them; and then I accidentally discovered the want of penetrating power of the hollow bullet. At one of the camping grounds several of the mussulman grooms (called syces) came to my tent and asked me to kill for their food "a wild bull" which they had found in the neighborhood. I thought it might be a bison or buffalo, so took the express rifle and accompanied them to a field covered with a crop of a leguminous plant called dhall, 5 or 6ft. high. Some animal completely hidden in it was making a kind of grunting and moaning noise. So to obtain a better view I mounted a piece of ruined mud wall about 5ft. high and watched. In a few minutes a bull nyghai raised his head above the dhall 50yds. distant and I instantly fired at the root of his ear. He fell, apparently dead, but when we went near he jumped up and galloped away. I followed at a run and found him in a field of sugar cane half a mile further on. As it was impossible to move through these without alarming him, I walked round the edge of the field and at last saw the lower part of his neck through an opening in the canes 60yds. distant. I fired at the spine, when he ran a few yards into a thicker part of the crop and stopped. The blood could be heard pouring upon the ground and in a few minutes he fell. I then sent the mussulmans in to "halla," or make him lawful to eat, by cutting his throat before life was extinct.

When skinned I found the first bullet in fragments at the root of the ear, the base resting on the bone, which was slightly cracked but not driven inward. The second bullet had struck the spine without even fracturing any part of the bone, but one piece of lead flying downward had cut open the large blood vessels of the neck.

There were numerous wounds on the skin, showing that he had been driven out of a herd by another bull. The nyghai, being as closely related to the ox as to the antelope tribes, is not eaten by Hindoos, owing to religious prejudice. A full-grown bull is about 14 hands high, with large dense bones and a hide so thick that it was formerly used by the natives for making shields.

DEVONSHIRE, England.

J. J. MEYRICK.

NORTH CAROLINA GAME REGIONS.

Editor Forest and Stream:

Some time ago I made reference to the game regions of North Carolina. This letter is written for those readers of *FOREST AND STREAM* who have requested fuller details.

There is unusually good shooting this year in the territory. Birds are plenty, squirrel and coon are numerous, and deer and bear are familiar sights to any visitor. Sportsmen who have first-class dogs, and who can cope with the discomforts which must necessarily confront the northern visitor, unacquainted with the peculiarities of the soil-tilling Carolinian, should visit the Albemarle section.

Good shooting can be had within fifteen miles of Norfolk, and there sport combined with comfort can be procured. Geese, duck and swan are plentiful in Linkhorn and Lynnhaven bays. Deer and bear can be found in the Dismal Swamp. Partridges are plentiful along the eighteen mile line of the Norfolk, Albemarle & Atlantic Railroad, from Norfolk to Virginia Beach. A train leaves Norfolk at 6 A. M., returning at 7 P. M. The sportsman should leave the train at London Bridge or Oceana, and walk to Virginia Beach, a distance of only a few miles. The country is open and a guide will not be needed. Dinner can be procured at the Princess Anne Hotel at any time of the year.

If the sportsman cares to enter the Virginia desert immediately north of Virginia Beach in quest of deer, bear, wild cattle or hogs, a guide and cart can be procured at Drinkwater's. The guide is an absolute necessity to a stranger, the cart a luxury one cannot well do without. The Dismal Swamp, too, with its plethora of wild game, is within easy distance of Norfolk, Snowden, Indian Creek and Hickory Ground, on the Norfolk & Southern Railroad, can also be made in a day, and it is at those places where the birds are found in larger coveys than at any other points in the United States.

Sportsmen who wish to go further south and yet wish conveniences impossible to procure in a private house should go to the hotel at Elizabeth City, Hertford, the Edenton, Avoca, Pantego, or Belle Haven (P. O. Belport). All of these places are in North Carolina, and are on the Norfolk & Southern Railroad. At Elizabeth City the grounds are good for snipe, squirrel, deer, bear and fox. At Edenton turkey are more plentiful than at any other point, unless I except Avoca. Hertford affords excellent sport for the bird shooter. Belle Haven is noted for deer and at Pantego one can find abundance of birds. Beech Ridge, ten miles from Pantego, offers very attractive partridge shooting. Guides can be obtained at all these places, and good horses will be furnished at moderate prices. At Pantego last week Sam Shavender, who appears to have been built after sketches by "Porte Crayon," drove me eighty-two miles with the rain pouring torrents in eleven hours, changing horses but once. For this service he charged me but \$5.

There are but few farm houses I can recommend to any visitor. The ordinary Carolinian farmer has a fear of strangers, and to them, I dare say, he is not an overcordial host. The visitor is largely to blame for this apparent lack of hospitality, for he is usually very critical, and at times unpleasantly sarcastic. Breakfast is seldom served before 9 o'clock, and supper at an hour equally inconvenient to the sportsman. The table is hardly up to my idea of "what's what," though usually better supplied than that of the average Northern farmer. Private houses which rank closely with the hotels, and ones which I can recommend any one to, are as follows: Station agent Eber-edge, Indian Creek; W. L. Northern, Hickory Ground; and Mr. D. Sier, North West, Virginia; C. R. Van de Car, Movock; Milton Snowden, Snowden; Dr. Shaw, Shawboro; Mark Gregory, or J. W. Snall, Okisko; and James Towe, Chapanoke, North Carolina. Of course, even Northern sportsmen are well aware that at Currituck the best points for wildfowl are controlled by clubs, but Mrs. Nettie Midget, whose address is Coinjock, Va., controls some very good ones, and she is the only party who can accommodate sportsmen.

There are a few marshes in North Carolina which are for sale, but I would not advise any one to purchase until the game laws of the State are adjusted properly.

For shooting wildfowl in Carolina waters a No. 13, 8lbs., 30in., or a No. 11, 9lbs., 36in. gun is the best, the heavier the weight in the breach the better. With proper handling one can do all the execution which opportunity may afford. For shooting turkey I believe a rifle is the only proper instrument to use, as well as in killing bear and deer, though many use a shotgun loaded with buck-shot.

The shooting for birds commences Nov. 15, though I believe that January is a better month, from the fact that at that time the cover stalks have been broken down by the cattle which are turned into the fields about Dec. 1. The birds are found within a few yards of underbrush or else in the numerous ditch rows which cross the fields. Pointers are of very little use. A large share of the work is done in the ditches, which are full of briars, creating labor fatal to the delicate-skinned pointer. The birds rise singly, and a favorite form of ditch work is for two hunters to follow the ditch from each side, dropping the birds as they rise.

The lovers of bear and deer hunting can find the best sport on the Alligator River. This is unknown country to most sportsmen, as one must be prepared to rough it in every sense of the word. The Alligator River can be reached only on Tuesdays and Fridays. The sportsman must leave Norfolk, via the Norfolk & Southern, at 9:45 A. M., and at Elizabeth City take the steamer Lizzie Burrus for Fairfield and Alligator River landings. On application to Bill Basnight, East Lake, N. C., the sportsman will be notified when to come, though I will say January is the best month for bear, as at that time they take to the gum trees, which are full of juicy berries. Mill Tail and Whippin's creeks undoubtedly afford the best opportunities for the bear hunter in the Alligator River region. Deer may also be found there, though the records made at Belle Haven this year compel me to recommend that place over all others.

Most lands in North Carolina are posted, but this is chiefly for the purpose of keeping off the negroes, who with a gun in their hands are as dangerous as a cask of dynamite. Permission to shoot can be obtained of any owner by any gentlemen. FRANK A. HEYWOOD.

Editor Forest and Stream:

Mr. Heywood's article in your valuable paper relative to game in North Carolina, stating I would give any information relative to Avoca, has caused a considerable number of gentlemen to address me letters of inquiry. While it is pleasant to commune with the sportsmen of other sections, said letters are absorbing much more time than I have to spare, and as my business calls me away frequently, causing much delay in rendering the information asked for, I will with your permission place where your many sporting friends will see what I am writing to individual inquiry.

First, Avoca is nineteen hours from New York city and easily reached. Fare from Norfolk \$2.70 instead of \$3.70 as stated in article alluded to. At Avoca is the House Dukinfield. Board \$10 to \$14 per week.

As to game, you will find attached to the property ten thousand acres of protected shooting lands, well stocked with deer, turkeys, birds and squirrels, foxes, etc. Geese and ducks are about four hours' run below us, but easily reached. The birds this year are in great abundance, large pea fields offering best of cover and feeding ground. Deer are plenty and easily found within 1½ miles to 4 miles. Turkeys are more plenty than for years, there being great quantities of beech, hickory and oak nuts. There were 28 seen in two flocks two days ago by parties at work on my plantation. Squirrels are plenty and on good dry grounds for hunting. Mr. Todd, an amateur, killed two gobblers, one with each barrel, as they rose, aggregating 43lbs., last spring, 1890.

In Salmona Creek, near the hotel, you have a nice stream for boating. It is well filled with North Carolina speckled perch and big-mouth bass, that are game and take live bait or fly. Tom Webb caught 84lbs. aggregate at two successive fishings, with common hook and line and live bait, this season. W. R. CAPEHART.

COONS IN "BANKS'S HOLLER."

IN the southern part of "York State," fifteen or sixteen miles above the Pennsylvania line, some twenty five years ago, a group of about thirty houses, a blacksmith shop, tavern and grocery store, situated at the intersection of two main roads, constituted the village of P—V—. The inhabitants were of that kindly class of people who considered themselves superior to none and equal to all. Neighborly feeling prevailed, and old and young, rich—if there were any—and poor, associated on the same level. The grocery store on one corner and the tavern on the other were the principal resorts of the men folks, when their day's work was ended, for an hour or two's social gossip before bedtime. Then the frequenters dropped out by ones or twos for their several homes, for bedtime was an early hour, and 9 o'clock usually saw the proprietors putting up their shutters for closing, except in the amusement season, when sleighing parties and protracted meetings were in vogue. Then the nights were enlivened by the jingling of old-fashioned sleigh bells and the good-natured hilarity of sleighing parties on their way to some distant farmhouse to spend the night in dancing to the tune of "Money Musk" or whatever the fiddlers chose to give them by way of music, until hard cider or mayhap a secreted bottle of something stronger got the better of the leader or of both of the musicians, when, if there were none in the party who could or would take their places, it broke up and returned home to a late breakfast and the duties of the day.

When the protracted meeting season was on, which, designedly or otherwise, usually came after dancing parties began to lag, footsteps were turned toward the old red school house a little further up the road on the hill, where, night after night, the circuit preachers, elders and deacons held forth with all their might and eloquence to re-enthuse the good people of the town and surrounding country in the work for their spiritual and moral welfare, and bring back to the fold such as had so far strayed away as to be considered backsliders. Aside from the good that was done, this made excuse for beaux and sweethearts to meet oftener, and for them the season was too short.

There were some congenial characters in the commun-

ity whose tastes inclined a sportive way, and among their favorite pastimes of hunting, fishing and trapping was "coonin'." Hardly a night in the season passed that the baying of Silas Larkum's black hound was not heard among the buckwheat and cornfields or the woods and hollows of the low surrounding hills. Other dogs, probably as good when alone, frequently added their voices to the night's concert; but old Don was acknowledged by all to be their leader, and it was said that he never struck a trail that he did not find the end and his master the coon.

One night in the latter part of September the door of the tavern opened and Hank Bender, a tall, handsome woodchopper, entered with an axe and lantern, followed by a young spotted hound, and after a glance or two around the room he set his axe in one corner, and drawing one end of a long bench a little nearer to the big box stove, whose sides now gave out a ruddy glow, for it was a cool night, inquiringly remarked as he sat down: "Guess Sile 'nd 't'other fellers ain't bin round yet?" To which the portly landlord, who bore the name of Askem, replied, "No, but I bin expectin' on 'em every minit. Sile said he'd be here 'bacut half-past seven 'n' it's most that naow," glancing at the clock which hung on the wall above a small looking-glass and a row of bottles and glasses behind the counter.

A lean individual, whose presence Hank had not noticed

Sile he thought they had "better be gittin', for it's a mighty good night, and 'f we don't git coons to-night we won't never." Then they took note of their equipments, which consisted simply of Hank's axe and lantern and a campaign torch carried by Joe, who reminded Sile that he had his "pipe 'n' tobaccker 'n' a pocket full o' matches, 'n' guessed he'd take a smoke," which was a signal for the rest to do the same; and then the quartette filed out, leaving the landlord and Pete to comment on the questionable pleasures that induced men to go "skivin' raound thro' the woods at night after coons."

Along the road the party proceeded, the lantern throwing out magnificent shadows of moving legs, for Joe would not light his torch until they were in the woods. Up the hill, past the school house and down the other side a half-mile further they went, until they came to bars which opened into a lane leading a short distance further, where it ended at the corner of a cornfield and at the foot of a wide hollow through which a small creek ran. The dog knows their duty and without any orders commenced to hunt while the rest sat down to await the result of their investigations. The night was dark, except for the stars, which gave a faint light, and the moon would not rise until near daylight so Sile said.

"Wal, I don't care about no moon 's long 's we got this," said Joe, patting the handle of his still unlighted torch and for want of something better to say. Hank

baying and waited for the hunters to do their share of the work.

It was the duty of some one to climb the tree, Joe volunteered his services, and as the rest were willing he handed his torch to Jim, doffed his coat, and cutting himself a stout club, gave a glance upward to locate the lower limbs, spat on his hands, and grasping the tree with both began to "shin it" in so adept a manner that he soon reached the bottom branch and drew himself out of sight in the foliage. At Sile's suggestion Jim gathered twigs and wood to build a fire, which, by the time Joe was well up the tree, was burning brightly. They now waited patiently for some report from Joe, and had not long to wait, for he soon shouted, "Here 'e is!" "Which side?" inquired Sile. "Upper side, I haint got to him yet," returned Joe, as the scraping of his boots and clothes against the bark of the tree told that he was still climbing. "Look out, now," came from the tree, "Git round further up hill. There; that'll do now. Hank, he'll fall jist about where you be. Are ye ready?" "Yes; let 'im come," shouted Sile. "All right; look out." Whack. "Darn ye!" Whack. "The dum cuss!" Whack. This time the club struck something soft. Whack, crash, rattle, "There 'e comes." Thump. Don and Jack were in the right place, and so was the coon. For three or four minutes pandemonium reigned supreme, but the dogs, aided by Sile's club whenever he could strike with-

A CRIPPLED CANVASBACK MAKES A GOOD DECOY.

until now, and whose equilibrium was almost upset by the movement of the bench, having recovered his balance, inquired, "Where be ye goin' to-night, Hank?"

"Well, I d'no where we'll end up, we made it out to go over to Banks's holler first; Bill said the coons 's workin' on his corn, 'nd judgin' from the way they bin eatin' on it, there's a passel on 'em there; then we'll likely get over the ridge into Widder Hodge's woods 'nd down past Dilmore's cornfield 'nd so on through the big woods home. But ye can't never tell where ye'll get to. Sile 'll go wherever his dog 'll take 'im 'nd that might be clear down to Millport."

"Sho! wal, ye got a long tramp ahead o' ye, 'n' I'd rather it 'ed be you 'n' me. Fer my part, I'd rather sleep 'n go runnin' raound the woods in the dark, breakin' my shins 'n' legs over stumps 'n' logs 'n' sich. I don't see no fun in sich kind o' fun no way. Why don't ye hunt daytimes like decent folks?"

"Oh, git out, ye don't know what fun is; 'nd don't I hunt daytimes, too? But there's more fun in coonin' 'n ye'll ever see 'till ye go, besides ye can't hunt coons in day time, 'nd ye see things in the woods at night 't ye don't see in the day time, too; 'nd it's kinder bewilderin' to know jist where ye be sometimes, 'nd then it's fun to hunt yer way out, 'nd ye have more fun talkin', for folks talk different, 'nd the woods smell different, 'nd the trees 'nd the bresh look different, 'nd—well, there's more fun in it anyway."

"Wal, everybody to his taste. That's Sile, I guess," returned his listener, as the tramping of half a dozen feet was heard outside. A moment later the door swung open to admit Sile with two companions and the coon dog Don, a short-bodied black half-hound, whose battle-scarred head had lost almost every vestige of hair and one eye.

"Wull, Hank, ye'r on time," said Sile, who, like his dog, was short-bodied and stoop-shouldered, and who loved to hunt, fish and go coonin' more than anything else. "Me and Joe here was jist sayin' 't we might have to wait on ye, but I'm glad we won't."

"Well, ye won't have to wait any, for I'm ready," replied Hank.

drove his axe into the log on which the rest were sitting and refilling his pipe sat down to listen quietly for the first warning from the dogs.

So still was it now that the sniffing and the rattling of the corn stalks could be heard as the dogs worked their way through them, now far away, now nearer. Once Don came back so near that Joe thought he had given up the hunt, but continued past until he was so far away that nothing could be heard of him. Thus the time passed, until even Sile began to grow doubtful, when a short, quick bark gave notice that one of the dogs had found scent. "That's Jack," said Hank. Jest wait a little," said Sile, as the young man Jim arose. "Don 'll git 'round there purty soon." Another bark a little closer and then the young dog came nosing along past the hunters and disappeared in the corn. Soon the barking became more frequent and then stopped for a few minutes, until a long-continued howl caused Sile to get up and say, "That's Don, and he's struck the track ahead o' Jack." "How d'ye know that?" jealously inquired Hank. "How d' I know; why, coz Don won't never speak 'f there's another dog ahead o' him. What 'd I tell ye?" as Jack gave tongue again, by which his position was known to be in the rear. Don's baying now became regular, and Sile, picking up the lantern, started to follow, leaving the others to get along as best they could, stumbling and falling over rocks and stumps, until Don's voice changed to a quick succession of yelps and then settled down to long and continuous baying. Then Sile stopped and waited for the rest to come up, remarking, "He's got 'im treed, and ye needn't hurry."

"Jack's got another one," said Hank, unwilling to deprive his own dog of his share of the honors, as he continued to give tongue, but in the same direction that they were going. "Mebbe," said Sile, "but I think he's on the same track, we'll see."

Joe now lit his torch and they got along more comfortably, climbing a tall fence and following the direction of the sounds into the woods a few hundred yards, they came upon both Dan and Jack sitting at the foot of an ordinary-sized hemlock. Then the dogs ceased their

out hitting a dog, soon made the battle a short one, and as Hank snatched the still panting beast from the young dog's jaws and held him up to the light he pronounced him "a ol' sollaker."

The fun was not yet ended, for while they waited for Joe to descend, his voice came down, "By gosh! here's another on t'other side; I can't reach 'im, 'n' 'll have to shake 'im out. Git further down. Now wait, I got to climb down a limb 'r two." The scraping of boots and rattling of loose bark and twigs was heard, accompanied by some puffing and blowing, until Joe set foot on the branch that held the coon. Joe had descended further than he thought he would have to, and his boots and part of his legs were now visible in the light of the fire. As his body was lowered and he peered out into the darkness, the eyes of the others followed the direction, and the young man who held the torch exclaimed, "By gum! I see 'im; there he is. See?" pointing toward a bunch which began to move slowly toward the outer end of the limb. The hunters now had every advantage, for they knew jist where to place themselves. Joe crawled out as far as he dared to, and began a lively shaking, but the coon clung tighter. The man could not reach the animal with his club, and to go further was to endanger the breaking of the brittle hemlock. If he had a long pole he thought he could reach the coon and punch him off. There were poles enough to be had for the cutting, but Joe was out of reach of the longest that could be handled. However, Hank selected a tree sapling, and having cut and trimmed it, Jim bethought himself that he might climb far enough to hand it to Joe, but he made Joe promise that he would not commence the punching until he was safely on the ground again. The idea seemed good enough, and after much labor, during which the coon exhibited more patience than any of the others, Joe was in possession and Jim had returned to the ground. Now Joe carefully poised his weapon, pushed so hard that he nearly lost his balance, and missed. After several efforts more carefully managed, he succeeded in giving the beast a dig in the ribs that made him snarl and partly let go and hang by his fore paws, vainly striv-

ing to recover his lost hold, until another dig knocked him completely off, and he fell, catching on to a lower limb for an instant, then dropped to his death.

Joe reached the ground in time to view the dead animals, as Sile laid them out side by side near the fire; and he felt no little satisfaction in the knowledge that his share in the honors was not small. "Tell ye what," he said, "them fellers looked mighty big up there, 'n' when I hit that first one he jumped right at me, and if I hadn't give it to 'im good we'd a had a tussle." His next move was to get out his pipe, which he filled and lit at the torch.

"Well," said Hank, as he picked up half a dozen large chips from a pile of his own making, where he had been chopping here on some previous day, and threw them on the fire, "f we 're goin' to find 'em 's easy 's this I ain't goin' to hurry," and he threw himself on the ground the better to enjoy his smoke. Sile and the rest were disposed to follow his example, and as they reclined in peaceful comfort under the soothing influence of the weed, too comfortable even to talk for a while, the flickering glare of the fire on their faces and the surrounding trees and bushes made a fantastic and effective tableau.

Is it not the memory of such scenes and short periods of restful comfort that go with the greater hardships of hunting, be it for coons or more worthy game, and the happy consciousness of having accomplished a little more than was expected, or nothing at all but the uncomfortable feeling of tiredness which gives excuse to make comfort out of it by stopping to rest awhile that makes the sportsman's life a happy one? Who does not sometimes wish to be alone that he may light his pipe and draw up to the fire of a long winter's evening for no other purpose than to dream over his past hardships and bring back the little comforts that he got out of them, and does not time so soften the hardships that he can see a little comfort even in them?

By the time Sile's pipe was so far smoked that he had to pack the ashes down in the bowl with the end of his middle finger, the fire needed poking and the spell was broken by Joe, who asked Sile "how many coons he ever ketched." "Well, thet's purty hard to tell," returned Sile. "We ketched forty-nine with Don last fall, and I never kep' no count afore, and wouldn't then 'f t'other fellers hadn't bin countin' 'em up one day. Thet's 'bout the best fall's huntin' 't I ever done, and I bin huntin' coons twenty year 'r more. We got seven out o' one tree once."

"Gosh all hemlock! Must o' been a good tree fer coons," said Joe, "where 'd ye do that, Sile?"

"Wull, 'twant a hemlock, but an oak, and 't was 'bout nine 'r ten year' ago. Two on 'em was old ones and 't'other five was young ones, and they was all o' one family 'f none on 'em got away," replied Sile, who seemed to want to let the matter drop. But Joe pressed him for the story, and as Hank wanted to hear it too, he continued: "There was a feller over in Big Flats 't had a coon dog 't everybody was a talkin' about, and I wanted to go huntin' with him, so I made it up with Pete Hawkins 't lived over that way to go over some night and see him. One afternoon Pete come 'round with his boss and wagon, and said he had everything fixed for a hunt that night, and he'd come to take me over. We started 'long about 4 o'clock and got over to the flats about 7. Pete drove 'round to the tavern and put up his boss; and the feller was there, 'n' we went in and took somethin' and talked dog and hunt for a while, and then we took sumthin' more, and the feller he got to tellin' us where we was goin' to hunt that night and where he'd bin huntin' before and how many coons he'd ketched 'round that part 'f the country till I began to think 't we was goin' to do all the huntin' in the tavern, and I said we'd better take sumthin' more and be goin'. Wull, the feller 'd 'bout winded himself and was satisfied, so we went over to his house a little ways 'f'm the tavern and got his dog. Don ain't much for han'some, but he's a beauty 't what that one was—'bout half bulldog and 't'other half nothin', leastwise, I couldn't tell what 't'other half was. The feller said he was half hound; Pete said he was a cross between a bulldog 'n' a barn door. I didn't say nothin', we got started purty soon. We stopped at another feller's house and got him and an axe 'n' lantern, and then struck 'cross lots 'f'm there for a cornfield and a big woods and let the dog go. He wasn't gone more'n five minutes till he set up the alfredest yellin' ye ever heard in one place, and the feller didn't know what to make 'f it hisself. I thought he'd holed a skunk, but the feller said he wouldn't notice nothin' but a coon.

"Well, we hurried up and found the dog barkin' up a big oak tree. We built a fire and Pete clum up, and purty soon he hollered down that he seen 'em and they was coons; he didn't know how many. So when we was ready he knocked one out and the dog grabbed it and killed it before we could git to him. Pete knocked another down and the dog killed that, and another one, and all three on 'em was young ones 'bout half grown. Then Pete told us to look out for the next was an old one, and the dog didn't git away with that as easy as with the young ones, but he had a regular bulldog way of grabbin' 'em, and he soon finished him. Pete kept it up till he knocked out two more young ones and an old one, and said there wasn't any more and he guessed he'd come down. I never seen a dog behave hisself so beautiful. He didn't let one get away, and when he got a grip on one it was a goner."

"How 'd ye count for gettin' 'em all up one tree?" inquired Hank.

"Wull, I s'pose they was feedin' on the acorns and the dog run in on 'em so sudden they didn't have time to run," said Sile. "We got four more that night, but we didn't git 'em all at once and had to cut down a big hem— There's your dog!" exclaimed Sile, as he was interrupted by the baying of Hank's dog, which had stolen away while Sile was telling his story. They were all on their feet and listening now.

Don pricked up his ears and as if ashamed at being outdone by his younger companion soon slunk out of sight into the darkness. Jack continued to give tongue at irregular intervals, moving slowly away into the denser woods; and after Hank had kicked out the now dying fire and Joe and Jim had picked up the two dead coons, they started to follow the direction of the sound. Their course took them through the level woods a short distance, then down into the hollow toward the creek. Jack's voice leading them slowly on until he reached the bottom, when he became silent. After listening a while,

and as Jack was not heard again, Sile declared that he had lost the trail in the water and he moved on, the rest following him, until they came to the creek, where he stopped and listened again. Jack could be heard now as he nosed along the bank trying to find the lost trail. Hank encouraged him, but all in vain, until he was ready to give up; but at that moment the deeper voice of Don broke out loud and musical further up the stream and on the other side, and Jack broke away to join him. When he found the trail again he gave joyful notice of his discovery, and the baying of the two made the woods ring and echo back the glorious sound so musical to the ear of the hunter. After a long chase and as the trail became hotter, and finally ended, when the dogs seemed to be moving no further, Sill said: "He's treed, boys, come on."

The eastern sky was silvery gray when Jonas Askem opened the door of his tavern to go out and take down the shutters of his bar-room windows. He heard voices coming down the road, and listening, he recognized them as belonging to Silas Larkum and Hank Bender. By the time he had the bars down and the shutters set up in their accustomed places the party were within speaking distance, and stepping to the edge of the broad porch he bade them a cheerful good morning, and inquired, "Wal, boys, haow 'd ye make out?"

"Got five," said Sile, nodding toward the ringed tails of as many skins which Joe and Jim held up to view. "Wal, ye done well, but I wish ye'd brought me one a' the carcasses, and I'd had my woman bake it. Tell ye what," he said, as a new thought struck him, "Next time ye git any, 'f ye'll bring 'em to me, we'll git the folks together and I'll give ye all a coon supper, and we'll have a slashin' old-fashioned dance."

"All right," said Hank, who was more than pleased with the proposition, "ye shall have 'em inside of a week. What 'd ye say Sile?"

"We'll git 'em," returned Sile. Then they divided the skins and separated, Joe and Jim each taking one to add to those they already had at home, as they said, when they got enough they intended to 'make buffalo robes out of 'em.' And Sile the rest, for Hank cared for nothing but the fun of the hunting.

J. H. B.

WILD RICE.

Editor Forest and Stream:

On returning from my vacation and on looking over some of the numbers of FOREST AND STREAM which had come to hand during my absence, I found in the number dated Sept. 3, an article on wild rice, signed by Mr. E. Hough. As the old saying is, "One story is good until another is told," I thought possibly my experience in planting wild rice in the fall might be of interest to some of your readers. Last fall I gathered about six bushels of wild rice at Rice Lake, Ontario, Canada. I took the same with me to Lake Nipissing and planted it, about the middle of September in one of the marshes in South Bay. On my return there this fall I found (to use the words of Mr. Hough) the result simply amazing. I found rice growing abundantly over the entire marsh, thousands of yards away from where any had been sown. How it spread itself in this manner is a puzzle to me. Formerly the marsh was full of a sort of joint grass of which I don't know the proper name. I planted the rice wherever I found an open hole in this, and very much feared that the joint grass would choke it out, but instead of that the rice has choked out the joint grass, and there is scarcely any of it left. I also planted some in several small creeks, and in every case it did well, except in one place where the bottom of the creek was clayey, and where in spring there must be rather a swift current.

Unfortunately, I fear that the pains I have taken to improve the shooting in South Bay will be useless, as the Indians, who are a curse to the entire lake, obey none of the game laws, and this summer there were four or five families of them who camped in South Bay until September. During this time they were shooting the ducks, both young and old, and the result was that when I arrived Sept. 8 I found the ducks scarce and wild. When the place is let alone till the season opens, there is very fair shooting during September. Most of the ducks breed there, consisting of black duck, wood duck, pintails, green-wing teal, bluewing teal, and little sawbills. For some reason the fall ducks do not visit the bay. NIPISSING.

BOSTON, MASS., Nov. 2.

GOSSIP OF GAME AND GUNS.

THE quail season should open Oct. 15 in Pennsylvania, simply because those two weeks in October are the halcyon days of a true sportsman's life; the clear bracing air is an exhilaration itself, with gun and dog, neither too hot nor cold to traverse hill, dale, swale, covert or field, and warm enough to bask in the bright sunshine, and to enjoy the crystal waters of some spring and lunch, smoke and compare notes with the hunting friend, and rest or dream the waking dream of beautiful creation all around. One such day is worth a week or more of plentiful shooting in chilling, raw, blustering and (for some years in my experience) rainy November, or the whole two weeks of freezing, icy December.

And what folly; woodcock July 4, squirrels Sept. 1, grouse Oct. 1, wild turkey Oct. 15, quail Nov. 1; that is Pennsylvania game law. A woodcock shooter may respect the law in July because he finds nothing else to shoot; the men who can shoot squirrels in September and fight mosquitoes will shoot anything. Can the true sportsman hunt grouse and woodcock in early October and refrain from full-grown early quail? For example, from Oct. 1 I have been training one of my dogs on grouse, the covers adjacent to fields I find the best localities while the leaves are yet on. An occasional woodcock occurs, but quail are abundant. The other day a grouse flushed near me, which I heard but failed to see. On hunting further with dog well in, he stiffened and a bird rose through dense foliage. I was almost sure I had heard the thud of the dead bird, and sent the dog to retrieve. But neither he nor I could discover it. Then it struck me that probably my imagination only had done what my gun had failed in. So I advanced further along the line of flight, again the dog stiffened, the bird flushed, and this time the whistle (wings or throat) told the tale; but Schulze "did the rest" this time. I was hunting grouse, but was more than pleased when the dog brought a plump, brown wood-

cock to hand. In twenty-five years of quail and grouse shooting I had never raised woodcock in that cover.

Further on, in passing a cornfield, I flushed another woodcock, realizing too late that it was not a quail. After that I flushed a bevy of large quail, and they took the same cover which I was just about to quarter for grouse, and now also for woodcock. The quail were rising constantly, and twice more I let the woodcock go without proper salutation, and finally lost him. My dog now became disgusted and took to chasing, concluding no doubt that if his master was merely fooling and not shooting, he ought to catch a few birds himself. And the master, too, was disgusted and wholly demoralized, almost badly enough to sacrifice honor and law, and shoot a lot of those full grown, plump quail, on which my dog had become staunch last year—its Derby. At two score and ten the 9lbs. gun grew heavy; at three score and a few over I find an 8½lbs. arm very heavy; I trust the 7lbs. hammerless will ease the balance of my shooting, which will be most likely confined to quail on practically level country.

I was tempted with the 6lbs. or 6½lbs. 16-gauge, but was dissuaded by the experience of others, with 2½drs. powder, 1oz. shot, my charge for small game, and with wood powder, a 6lbs. gun might have been better. In the near by and by I may wish 7 were only 6.

I have but rarely, in twenty-four years, found woodcock in any number in October or later, this year is quite an exception, for they are almost numerous enough to induce special hunting for them.

In all parts of Pennsylvania from which I have had reports quail are said to be abundant; but this year there are some of the latest broods I ever saw or heard of. On the 10th inst. my dogs stood a very large brood, which were evidently hatched within a few days only, and I have at least three broods on my place which will not be fit for shooting at the end of the season, at least not for me, for half and three quarter flutters can not, unless maybe in midsummer, send the thrill of happy anticipation through the true sportsman.

JUNIATA.

PENNSYLVANIA.

Editor Forest and Stream:

Let me coincide with your correspondent "W. F. B." on "Guns and Loads." I have shot a good many gray squirrels and ruffed grouse in the course of my life, with a 12-gauge gun, and 2½drs. Hazard or Dupont powder, 1½oz. No. 6 shot, and one good Eleywad on powder. The above are both hard "birds" to kill, but I seldom failed if I held right.

I never shot "crookery," but think the present tendency is to overload. I never wanted a gun to kick me, I preferred that the energy should be expended on the game.

We have had a warm and delightful autumn, and the colors on the hills are just fading into a sombre brown. The maples and chestnuts have about shed their leaves, and they are showering down to day from the elms in the village, but the oaks will keep their colors up a few days longer. I have done no shooting myself for two years, I cannot hear the bark of the squirrel, or the rustle or drum of the grouse, and desk work and spectacles have nearly spoiled my vision for the woods. Well, I have no right to repine, I have had many a happy day in them, first with my brother, and since with my sons, but I fear I have fired "my last shot."

VON W.

THE SPORTSMEN'S JOINT.

GO into any village and a place will be found where the hunters and fishers gather to exchange tales of mighty hunting episodes or big strings of fish. It is natural for sportsmen to meet together where they may converse on the topics of the times and discuss relative merits of weights and gauges of guns, breeds of dogs, quality of powder, durability of bamboo and lancewood rods, and a thousand other points of no earthly interest to the vast majority of mankind, but of profound concern to men of the rod and gun. A village is indeed small where a few congenial spirits do not meet on long winter evenings to converse on deeds of the past and prospective events.

We are favored here with a host of hunters and fishers, and also fortunate in possessing a man, who, while he is engaged in the gunsmith business, is interested heart and soul in chickens, dogs, guns and the trap. Henry Waruf's store is always open to the sportsmen of the world, and a mighty concourse of choice spirits is an assured thing.

Among those who habitually linger through the winter evenings and are always at all call are Will O'Byrne and Abe Francoise, of the Horseshoe Kennels; Will Locher, the fancier of foxhounds; Thomas, the chicken breeder (game preferred); Jake DeKam, the mighty hunter; Ira Johnson and brother, small talkers but good listeners; Charles King, who speaks very little, but always about "my boat," and Reddy Clement, the only man who can catch thirteen bass on the same fly. Waruf presides, or at least we let him think he does as he runs the ranch, and if any of the gang gets a notion that he don't, the proprietor challenges him to the work room in the rear where the boxing gloves are donned and some one gets polished off.

In addition to these many others drop in, but not so regularly. Mr. Wirtz, who has hunted all over the West; Ben O. Bush, who'd rather hunt than eat his game; Chas. Williams, the light-weight; Dr. Gibbs, the "has been"; Charlie Crosby, who travels and therefore can hunt only one day out of the seven; E. H. Ranney, the marvelous Kankakee duck shot; Fred Clough, the truthful James of the joint. Occasionally David McDonald, the druggist, appears, he is a true friend of the dog. Pete Appeldoorn was formerly in the mold, but of late he is rarely seen, having joined the matrimonial alliance.

Mr. Luker, from the great State of New Jersey, is a good sinner and a marvelous story teller; the thrilling recital of how he ran a mile with a 200lbs. buck on his shoulder and escaped from a huge panther is worth going a mile to hear. His salvation rested in the fact that he had a huge chew of navy plug in his mouth, and by ejecting the irritating juice into the catamount's eyes when it followed too closely he came through with a whole skin. The narration is brilliant, and will bring tears to the eyes, as I presume the tobacco juice did to the catamount's.

We must not forget Theodore Shide, who was with us well and hearty less than a year ago, now laid with the great majority. A gentleman by nature, and of pleasing

manners, he will always be remembered as one worthy of our highest regard.

In our informal meetings, six evenings in the week, there are many others who should be mentioned here, and several there are, new comers, who recently joined our growing gang, but space forbids my saying more.

Then there are the dogs galore, which infest the store from every corner of the city. They are all of the best breeds, and would in themselves supply a bench show with prize winners in any class from a beagle up to the size of a pointer or setter.

Let us wish for a long existence of our sportsmen's resort, the prevaricator's roost, as it has been termed, and may all committees have a place of meeting as open for the lovers of rod and gun.

SCOLOPAX.

KALAMAZOO, Mich.

CHICAGO AND THE WEST.

CHICAGO, Ill., Oct. 30.—Our ducks are not here this fall, everything is too dry. Horicon Marsh, in Wisconsin, is the only one near here offering much shooting now. Dr. Buechner, of the Horicon Club, must be meeting good shooting, as he has been up for a week. He got 16 mallards in an hour one morning this week, as the club keeper reports.

A few snipe are in around the Calumet country, but George Kleinman, who lives there, kills them about all before they have a chance to light.

In Barton county, Kan., last Monday Mr. D. C. Luse, of Great Bend, and myself found a great abundance of wildfowl on the shallow lakes of the Cheyenne Flats. With no decoys and poor pits we killed 30 ducks and a goose without much trouble. If we had been prepared to work them properly we could have had splendid shooting, as there were thousands of ducks. Two drawbacks to sport exist there, the rafting up of the ducks on the wide ponds and their habit of clearing out entirely from the smaller lakes when disturbed. With plenty of guns to keep them going, the fun would be fast and furious there. I was surprised to find most of the birds bluebills and ringbills, though greenwing teal and mallards were also numerous.

Western Kansas is alive with quail, and I longed to have a quail hunt, but of course could not. No attention is paid to the law out there. The season opens Nov. 1, but the law seems to read that no one can shoot quail except on land owned by himself. This latter clause may or may not be worth observing, but the Nov. 1 date was of course a bar for any one who knew the law, as very few of the residents do out there.

Chickens are a poor crop this year in Barton county. Rush county is much better.

Mr. D. C. Merrill, of Milwaukee, is in Chicago to-day, on his way to Bicknell trials, Indiana, where he has a dog entered. Mr. Merrill is just back from Colorado, where he and his Milwaukee friend, Mr. Nunemacher, were very successful with the black-tail deer. They were in Delta county, on the D. & R. G.

Illinois, Indiana and Ohio all have an unusual abundance of quail this year. Mr. Frank Place and three friends bagged 137 quail, 2 grouse and 1 woodcock in one day, 12 miles below Warsaw, Ind., last week. Mr. Place says he never saw quails so thick. Most of that country is posted, however.

Two gunshot accidents in Illinois this fall. At Dixon fourth annual tournament C. R. Ken accidentally shot H. Treffer in the face, some of the shot penetrating the nose and passing into the mouth. This happened Oct. 29. On Aug. 28 a yet more unfortunate affair transpired, in that it was fatal. Fred Bowers accidentally shot Joe O'Dowd, of Centralia, Ill., the wounds resulting in death. "Public sentiment," says the correspondent, "is very strong against Bowers, this being the third person he has shot by carelessness."

Hennepin Shooting Club has a fine large new cabin boat accommodating 35 guests, now on the club preserves on the Illinois River.

E. HOUGH.

WESTERN MASSACHUSETTS FOX HUNT

THE interest manifested in last season's Western Massachusetts Fox Hunt was phenomenal, as shown by the unusual number that participated and the large addition made to the membership. There were more than a hundred names added to its roll. This was due no doubt to the fact that the place of meeting had been changed to Westfield. With an enlarged field for action and with its many other advantages, the change was a most favorable one for the club, and it is to be hoped that the grand success of last season will be repeated again this year. The club members are making due preparations for their annual hunt, Nov. 11 and 12. Thus far not a fox has been disturbed in these particular localities. Even the farmer boys have not as yet in any way disturbed reynard, but all are anxiously waiting for the grand hunt of the 11th and 12th.

It is desired that all sportsmen will be promptly upon the grounds the evening of the 10th, as the hunt will begin promptly at 6 o'clock on the morning of the 11th, when the hunter's horn will be sounded and the hunters in twos will start for the grounds selected. The return will be made in season for the evening's spread at the Gem Opera House, where the members of the club with their friends and visiting sportsmen will enjoy the banquet provided as in previous hunts, and which has always proven one of the enjoyable features of the occasion.

WORONOCO.

WESTFIELD, Mass.

ON THE ARKANSAS RIVER.—The party which left Perth Amboy, N. J., Oct. 17, for a hunting trip along the Arkansas River in a house-boat (see FOREST AND STREAM Oct. 23) had to abandon the latter soon after leaving Baxter Springs, Ark., on account of low water. They are now in camp on the Grand River, Indian Territory, about seventy-five miles from their stranded boat, in a beautiful game country, and are taking things easy.—J. L. K.

NORTH DAKOTA GAME.—Grand Forks, N. Dak., Oct. 31.—Returned yesterday from Devil's Lake with an immense bag of geese. Birds moving south gradually and last night it turned cold, wind northwest, some snow and sleet. Saw no redheads or canvas, but plenty of mallards and gray ducks, some yellow-legs and black-breast plover.—PINK EDGE.

ST. LOUIS NOTES.—Oct. 31.—The St. Louis Fish Commissioners have announced that after Nov. 9 they will be ready to distribute young fish. They have a large supply

of young bass, croppie and German carp. The members of the King's Lake Club had their annual coon hunt last Saturday night on their grounds at King's Lake. Some 50 members of the club participated in the hunt, headed by Major Caruth. Ten coons were taken, being the greatest number for any of the previous hunts. Last Sunday "Big Lake," a famous hunting ground for St. Louisians, was burned. The lake is a slough which in dry seasons is covered with rank vegetation and is the home of thousands of rabbits. The fire caught from burning brush, and as the flames swept over the bottom they put in motion vast droves of rabbits, which beat a wide path in their escape to the uplands. Along with the rabbits were occasional coons and opossums, and following all came a mass of moccasin snakes on their way across the railroad tracks. The novel sight was witnessed by many people. The area burned over was about eight square miles. Fishing in the Merrimac, Gasconde and Big Piney has been excellent. The water is low and clear.—ABERDEEN.

BEAVER DAM.—Memphis, Tenn., Oct. 27.—Three members of Beaver Dam Duck Club on Thursday last bagged sixty-seven teal and mallards there in about half the day, and the ducks were in prime condition. They decoyed to the club's fleet of tame puddle ducks, who called them down perfectly. But for a dence fog the bag might have been doubled, as the feed beds hold the ducks within Beaver Dam Lake. Beaver Dam Lake is in Tunica county, Miss., on Louisville, New Orleans & Texas R. R., 43 miles south of Memphis, Tenn.

CONNECTICUT WOODCOCK.—It seems to me that the abolishing of summer woodcock shooting is bearing good fruit. The birds are becoming more plenty than formerly. A friend and myself killed 21 in a couple of days this week.—WM. M. HUDSON.

NON-EXPORT GAME LAWS UPHELD.

Editor Forest and Stream:

Herewith I inclose a decision relating to the constitutionality of Connecticut's game export law. The chief point in the decision of the Supreme Court of Errors is to the effect that game killed within the State is not an article of commerce:

Edgar M. Geer, New London, was caught by Game Warden Robbins sending birds by boat to New York. In the trial he set up the defense that the complaint was insufficient, and also that the law was unconstitutional. The case went by appeal through the City Court of New London, the Court of Common Pleas and the Superior Court, Geer losing each time. The Supreme Court sustains the lower court, so that not only is Geer finally convicted but, a much more important fact, the game law prosecutors are sure of their ground in their efforts to check in the future what is a very serious drain on the revenues of the State. The full text of the decision follows, the other judges concurring:

STATE VS. EDGAR M. GEER. } SUPREME COURT OF ERRORS.
SECOND JUDICIAL DISTRICT.
Opinion of the Court.

SEYMOUR, J.

The General Statutes, Section 2,530, provide that "every person who shall buy, sell, expose for sale or have in his possession for any purpose, or who shall hunt, pursue, kill, destroy or attempt to kill any woodcock, quail, ruffed grouse, calliope partridge, or grouse, shall be fined not more than fifty dollars, and on the first day of October, the killing or having possession of each bird or squirrel shall be deemed a separate offense * * * shall be fined not more than twenty-five dollars," etc.

Section 2,546 provides that "No person shall at any time kill any woodcock, ruffed grouse or quail, for the purpose of conveying the same beyond the limits of the State; or shall transport or have in possession with intent to procure the transportation beyond said limits, any such birds killed within this State. The reception by any person within this State of any such bird or birds for shipment to a point without the State shall be *prima facie* evidence that said bird or birds were killed within the State for the purpose of conveying the same beyond its limits."

The defendant is prosecuted for unlawfully receiving and having in his possession on the first day of January, A. D. 1889, with force and arms and with the unlawful intent to procure the transportation beyond the limits of this State certain woodcock, ruffed grouse and quail, killed within this State after the first day of October, A. D. 1889, against the peace and contrary to the form of the statute.

He demurred to the complaint because: (1) The allegations contained therein do not constitute an offense in law. (2) Because in the complaint it is not alleged that said birds were killed for the purpose of conveying the same beyond the limits of the State.

It will be seen from the section of the statute above quoted that it is unlawful to kill or have in possession for any purpose, woodcock, quail or ruffed grouse between the first day of January and the first day of October, to procure the transportation beyond the limits of the State. It is also unlawful to have them in possession with intent to procure their transportation beyond the limits of the State, if killed between the 1st day of October and the 1st day of January, regardless of the question whether they were killed for the purpose of conveying them out of the State. In other words, if they were lawfully killed, *i. e.*, between Oct. 1 and Jan. 1, and without any intention of conveying them out of the State, can they be lawfully received with the intent to procure their transportation beyond the limits of the State?

In 1882 an act was passed as follows:

Section I. "No person shall at any time kill any woodcock, ruffed grouse, or quail, for the purpose of conveying the same beyond the limits of this State."

Section II. "No person, corporation or company shall transport or convey beyond the limits of this State any woodcock, ruffed grouse or quail killed within this State, or sell or have in his or their possession any of such birds with the intention to procure the same to be conveyed or transported beyond the limits of this State any woodcock, ruffed grouse or quail within this State, or sell or have in his or their possession any of such birds with the intention to procure the same to be conveyed or transported beyond the limits of this State."

Section III. "The reception by any person, company or corporation within the limits of this State of any quail, woodcock or ruffed grouse for shipment to a point without the State shall be *prima facie* evidence that the said bird or birds were killed within the State for the purpose of carrying the same beyond the limits of this State."

Section IV. "Any person violating any of the provisions of the preceding sections shall be fined not less than seven nor more than fifty dollars and costs of prosecution." Public Acts of 1882, chapter 102.

It is evident that under the act as originally passed the complaint would have been good and sufficient.

It is claimed by the defendant that under the act as revised no offense is committed unless the birds, by him held for transportation, were killed for the purpose of being conveyed beyond the limits of the State.

He says that the word "such" in the provision of section 2,546 against transporting or having in possession, with intent to procure the transportation beyond said limits, any of such birds killed within the State, means woodcock, ruffed grouse or quail killed for the purpose of conveying the same beyond the limits of the State.

As already suggested that construction involves a change in the law from the original act, which expressly forbade any person to have in his possession with the intention to procure the same to be transported beyond the limits of the State, any woodcock, ruffed grouse or quail killed within the State.

It seems to us evident, also, upon the face of the statute as revised that the word "such" was used only to obviate the necessity

of repeating the words "woodcock, ruffed grouse or quail," and that to carry its force and operation further, so as to include the purpose for which they were killed, would not only be unnatural but dangerous as a precedent for construction in view of the terms of the original statute.

We cannot believe that careful revisers would have undertaken to change the law without some more definite indication of such purpose.

Then again when the words "such birds" are used in the very next line of the section, it is evident that they are used to take the place only of the words "woodcock, ruffed grouse or quail," as if it read the reception by any person within the State of any woodcock, ruffed grouse or quail for shipment to a point without the State shall be *prima facie* evidence that said bird or birds were killed within this State for the purpose of conveying the same beyond its limits; otherwise we should have the absurd provision that the reception by any person within the State, for shipment to any point without the State, of any woodcock, ruffed grouse or quail killed for the purpose of conveying the same beyond the limits of the State shall be *prima facie* evidence that said birds were killed within the State for the purpose of conveying the same beyond its limits. That is, the fact that they were killed for transportation shall be *prima facie* evidence that they were killed for transportation.

The words "such" in both sentences refer to the same antecedent.

It is plain enough that the revisers intended not to change, but to condense, the sections of the original statute, and the language should be construed in the light of such intention. We conclude therefore, that the complaint is sufficient.

We see nothing in the decision of *Commonwealth v. Hall*, 128 Mass., 411, to which the defendant refers us, inconsistent with our conclusion.

The object of the act therein involved was to protect the game in that commonwealth and not in another. And a construction confining its force to birds killed therein was to be expected in the absence of controlling words to the contrary. All the reasoning in that case may certainly be held sound without impugning the reasoning upon which we arrive at our conclusion in this. But in this view of the matter another question arises. The defendant further demurred to the complaint "(6) because section 2,546 of the general statutes is unconstitutional in so far as it may be construed to forbid the transporting from the State of birds having possession of such birds with intent to procure such transportation to another State, birds described therein, which birds have been sold to parties in such other State, and have begun to move as an article of inter-State commerce. And (4) because it is made to appear in said complaint that the defendant is guilty of having sold such birds to parties in such other State, by the defendant in the markets of this State as merchandise and commerce and had begun to move as an article of commerce."

In short, the defendant insists that the statute, as construed by us, is unconstitutional as restricting inter-State commerce, and refers to *Robbins v. Shelby Taxing District*, 120, United States, 468; *the Daniel Ball v. United States*, 10, Wall, 560; *Hannibal & St. Joseph Railroad Company v. Husen*, 95, United States, 469; *State v. Saunders*, 19, Kansas, 127; *Evans v. Evans*, 140, 23, Pacific Reporter, 115; *Territory v. Nelson*, id., 116, State ex rel. Corwin v. Indiana & Ohio Oil, Gas, etc., Company (Indiana) 22, Northeastern Reporter, 778, and *American Express Company v. People (Indiana)* 24, id., 759.

In *State v. Saunders*, 19, Kansas, 127, *Supra*, the court says it seems to be finally settled, among other things, that no State can interfere with the property of another State in the transportation from one State to another, or through a State of property which is or may be subject to inter-State commerce. That a law which prohibits the catching and killing of prairie chickens may be valid, although it may indirectly prevent the transportation of such chickens from the State to any other State; but a law which allows prairie chickens to be caught and killed and thereby to come into the State for traffic and commerce, and at the same time directly prohibits their transportation from the State, is unconstitutional and void.

Without stopping to consider the construction which was given to the constitutional provision under discussion by the earlier commentators, except to suggest in the language of Judge Story (*Story's Com. Vol. 2, p. 511*) that a very material object of its adoption was to prevent the States, which export and import their game, from the levy of import and export duties on them by the latter, an object which was shown to be important by the experience of the States during the confederation period, we feel constrained to hold the provision of the statute to be constitutional. It being conceded that the State, under its general police power, may lawfully prohibit the killing of the game birds in question, it may of course control such killing and the times and places where it may lawfully be made. It may also prohibit the killing and sold and held for sale only for domestic consumption. The State in the exercise of its power, instead of prohibiting the killing altogether, permits the person killing them to acquire only a qualified right in them, namely, the right to appropriate them to his own use and the right to sell or transport them for domestic use.

The birds in question never become articles of commerce within the meaning of the term contended for by the defendant. They become private property of a qualified character.

The law limited the purposes for which they might be killed and become private property.

The difference between property of this sort and the ordinary private property of commerce is obvious.

The appellate court assumed that the Kansas court above referred to, that game which the law allows to be caught and killed, thereby necessarily becomes the subject of traffic and commerce, meaning interstate commerce, appears to us unsound.

If the proposition were true then the conclusion that a State law interfering with such commerce would be unconstitutional might pass unquestioned. But we cannot acquiesce in a decision which would deny the power of a State to limit the right to kill, sell and hold its own game by any provision short of the absolute prohibition without thereby transforming it into that species of property the transportation of which from the State it is unconstitutional to prohibit.

HARTFORD, Conn., Oct. 23.

A. C. COLLINS.

THE CHATHAM ASSOCIATION.

WE have before called attention to the rapid progress made by the Chatham Fish and Game Protective Association, of Chatham, N. J., this combination between land-owners, farmers and sportsmen. The Association is largely made up of Newark and New York owners of estates and farmers in Morris, Essex, Union and Somerset counties, in the towns of Millburn, Livingston, New Providence, Sterling, Chatham and Hanover.

It will be observed that this territory is in the upper Passaic Valley. The land-owners have very generally joined in this association, and sportsmen therefore will wisely take notice that the regulations granted associations of this character will be thoroughly observed. By the New Jersey statutes every member has the powers of a constable and can make arrests for shooting in this territory. The association is strictly limited to members of the association and land-owners.

In addition to the protection afforded by the new powers given members, the association has had appointments made of special constables by the township committees of the respective townships. In most instances these are farmers located in every part of the territory. They have also employed special game wardens who will be constantly on duty during the open season of November and December. The association has been at large expense in stocking these extensive grounds with game birds, and has wisely limited the number that can be shot by members. It is proposed to prevent the destruction of the birds as has been done in the past by indiscriminate shooting.

It may not be known by non-residents of the State of New Jersey that in addition to the heavy fine inflicted for trespassing, that the law empowers the seizure of the trespasser's gun, and the destruction of their domestic fowl and animals, breaking down of fences and damage to growing crops to the extent of thousands of dollars. And in addition to this, roughs in the guise of sportsmen have inflicted serious personal injury upon farmers who objected to trespassers.

The association has ample financial capital, has retained counsel, and among the members are many prominent lawyers. Therefore, no question exists as to the decisive steps that will be taken in case of any infraction of the law in trespassing upon their grounds. They have advertised in several papers offering large rewards, in addition to the fines levied for trespass, for evidence that will lead to conviction of any one trespassing.

We heartily endorse the position taken by the association, as in this way only can game be protected and preserved, and again become abundant in the vicinity of large cities and towns.

JERSEY BLUE.

PERTH AMBOY, N. J., Oct. 31.—Game prospects hereabouts are fair. A good many ducks are killed in Raritan River and bay, and quail and rabbits are reported plentiful, though woodcock have been scarce.—J. L. K.

THE U. S. FISH COMMISSION EXHIBIT.

MUCH interesting work is now being done in Washington by the several Government departments in preparing the great collective display of the U. S. Government for the World's Columbian Exposition. Captain J. W. Collins, the representative of the U. S. Fish Commission, in charge of the preparation of the exhibit of that bureau, informs us that his exhibit will be the most complete historical representation of the fisheries ever put before the world, although it will be the first of its kind displayed to the American public.

As boats and vessels were the basis from which the fisheries were developed, Captain Collins has undertaken to show these in a historical series, beginning with the fishing shallop of "ye olden time," and showing the successive steps to the type in use at the present time, which will be represented by a model of beauty and grace, as produced by Edward Burgess in his fishing vessel, the *Fredonia*.

Already ten full-rigged models have been prepared, these including an authentic representation of the old-time Marblehead fishing schooner, the *Pinkie*, a type of vessel used during the '50s, another during the '60s, and others during the '70s, and the pioneer of the new deep-draft fishing vessels, the Fish Commission schooner *Grampus*.

One of the interesting features of the display will be a series of the food and economic fishes of North America, including the Atlantic, the Gulf of Mexico, the Pacific, and the Great Lakes and interior river fishes. The work of making new moulds and casts of fishes is being done by Mr. Sherman F. Denton, who uses a certain glue compound for the casts. The secret of this compound is known only to himself, and produces a product that cannot be readily broken like plaster of Paris. This feature is of peculiar importance, since considerable difficulty has already been experienced in transporting casts made of plaster of Paris, because of their liability to break.

Already about 125 casts have been prepared, as well as papier maché casts of larger species, such as sharks, etc. Two most interesting fishes were received at the exhibit not long ago, being additions to the fish fauna of the United States. One of them, the escolar, while known to inhabit the Mediterranean and the waters of the warmer climates, has never been found in abundance, but is highly prized as a food fish at the Canary Islands. The second is the opah (*Lampris guttatus*), the first specimen ever recorded as having been taken in American waters. This is a very beautiful fish, an inhabitant of the Gulf Stream. Its colors are brilliant, the fins and edges of the belly being a beautiful red, its sides a silvery white, and its back and head from a deep to a light blue, with white spots radiating in all directions from the eye. It will thus be seen that its general coloration is that of the national emblem, though Capt. Collins is disappointed that there are more than forty-two spots on the blue field. Both of these fishes were taken on the La Have Ridge by American fishing schooners, and much credit is due to the thoughtfulness of the captains of these vessels in bringing them to port.

The fishculture section is under the direction of Mr. W. de C. Ravenel. Thus far all of the historical apparatus has been brought together, put into shape and packed ready for shipment. There will also be included in this section models of the principal hatcheries in use by the United States Fish Commission, more particularly the representative stations for each of the important fisheries.

It is proposed to show at Chicago a model hatchery in full operation, with jars of eggs of the different species of fish that can be obtained while the Exposition is open, while the process of hatching other fish will be shown by means of artificial eggs.

Our attention has also been called to the proposed plan for the live-fish display. Ample provision has been made for the accommodation of the most extensive exhibit of aquaria ever established in this country, in one of the buildings connected with the fisheries department. Mr. W. P. Seal, the well-known aquarium expert of the U. S. Fish Commission, is in charge of this work, and it is as well to recite what he has to say on the subject:

"The building designed for the aquarium is a polygon, about 135ft. in diameter, having a central rotunda 60ft. in width, in the middle of which will be a pool 26ft. in diameter, surrounding a mass of rugged moss and fern-covered rocks, from which streams of water will ooze and drip to the reeds and rushes in the pool below, where gorgeously colored fishes will disport.

"Surrounding the rotunda, under a glass roof, run two lines of aquaria, separated by a gallery, or corridor, 15ft. wide. The inner line of aquaria, ten in number, will have glass on both sides, one of which will front on the rotunda, and the other on the gallery. These tanks will have a depth of 7ft. of water, the bottoms running down on an incline from each side to about 2ft. below the bottom of the glass, which will be 5ft. high. The diameters of these tanks will be about 10ft. They will be from 15 to 60ft. long, with a capacity of from 7,000 to 28,000 gallons, or a total of over 90,000 gallons, weighing more than 350 tons. The outer line of aquaria, forty in number, will have glass in the front only, the backs being of slate, and what is known as 'slope-back' in design. The glass in these will also be 5ft. high. The width of this series of tanks will be 3ft. at bottom and 6ft. at the top, the length from 5½ to 11ft., the capacity varying from 900 to 1,800 gallons, with a total capacity of over 50,000 gallons. The entire series of aquaria will contain 140,000 gallons of water, weighing about 600 tons.

"Fifteen tanks will be devoted to marine species. These will have a capacity of from 900 to 14,000 gallons, or a total of about 40,000 gallons. The entire amount of sea water in circulation will be nearly 75,000 gallons. The

pumps and piping for this part of the exhibit will be constructed of hard and soft rubber, wood and glass. Two pumps will be made in duplicate, to provide against accidents, though but one will be used at a time. Every effort will be made to provide for any possible contingency in this respect. It is expected that the building will be completed a year before the opening of the exhibition, thus affording ample time for deliberately and methodically establishing satisfactory conditions, and for the transfer of the plant and animal life, so that when the exposition opens there will be one of the most wonderful displays of the kind ever presented to mortal eye.

"Among the fresh-water species of large size that will be displayed will be the Atlantic and Pacific salmon, the masacalonge, the lake trout, the sturgeon, the spoon-bill catfish, the great Mississippi catfish, the long and short-nosed gar, the alligator gar, etc. Smaller species will include all the species of trout, the whitefish and other lake fishes, the basses, carp, buffalo and other Cyprinidae, catfishes, sunfishes, eels, etc.

"Of the larger salt-water fishes there will be represented sharks, dogfish, skates, rays, torpedoes, the goosefish, striped bass, drums, grunts, sheephead, porgies, tautog, flounders, bluefish, squeteague or weakfish and many others.

"Smaller species will be represented by sculpins, sea-robbins, toad-fish, sea-ravens, puffers or swell-fish, mullet, blennies, gobies, sticklebacks, pipe-fish, sea-horses, as well as many Mexican, South American, Asiatic and European varieties. There will also be Octopoi, commonly known as devil-fishes, and possibly cuttle-fishes, but these latter are difficult to transport in good condition when living. The same may be said of the jellyfishes, but attempts will be made to exhibit them at Chicago, with some hope of success. Of the lower forms of life, generally, there will be representatives of the mollusks, anemones, starfishes, sea-urchins, holothurians or sea-cucumbers, corals, etc.

"There will be a wonderful showing in the aquaria of algae, or sea weeds. The exquisite foliage and wonderful coloring of these plants cannot be described, but must be left to the imagination. It may be stated, however, that the colors range through the various shades of yellow-brown, green, red and purple, some species displaying the most exquisitely beautiful hues. The fresh waters will also be represented by natural growths of the great variety of their plant life. The magnificent lilies of our ponds will be seen from their other aspect. We are familiar with them in the ponds of our beautiful parks; but to see them from beneath the water, with the fishes dispersed among them, as never before displayed or even attempted, will be one of the novel and interesting features of the Exposition.

"Outside of the Fisheries Building will be a series of ponds illustrating methods of pond culture and the possibilities in the practical and ornamental use of aquatic and semi-aquatic plants; the question of having in these ponds an exhibition of manatees, seals, sea lions, etc., has been under consideration.

"The time is near at hand when the great cities of the country will vie with each other in the establishment of great aquaria, for the wonders of the waters are fast becoming objects of popular, as well as scientific, interest, and our growing wealth and leisure cannot be devoted to projects of greater interest.

"The experience at Chicago will thus be valuable in affording a basis of practical knowledge which will be available for the general information."

THE BIG TROUT OF THE STONE DAM.

IN the summer of 1890 it was my good fortune to spend a couple of weeks with two companions in camp at the forks of the Magalloway, about four miles below Parmachenee Lake. In the last few years I had met a number of anglers who had been in that region, and each and every one had sung the praises of the pool at the old stone dam on the Little Magalloway, and told, as only anglers can, of the number of two and three-pound trout taken at this pool, but they added that there always remained the giant of the waters, whom many had seen, a few had hooked and had with him a few moments of anxious and expectant pleasure; but none had been able to become intimately acquainted and to place their hands upon his gleaming sides. I had heard so much of this talk, that the one spot on earth, or rather water, where I longed to cast my fly was that stretch at the old stone dam on the Little Magalloway.

It is needless to say that as soon as we got camp well fixed we made a call at the old stone dam, which is about a mile up the Little Magalloway from the forks. A glorious morning's walk over the trail past Sunday Pond brought us to the stone dam. The sun was just giving the pool its early morning greeting as we reached it. It was indeed an ideal spot, and if beneath its rippling surface the patriarchs of the trout tribe were taking their morning swim and were ready for breakfast, I also would sing its praises. Joining our rods, we commenced casting the fly from the head of the pool; and at the first cast they were ready for business. We caught a goodly number before they stopped rising to the fly. They were nice, fat, handsome fellows, from a quarter to three-quarter pound in weight, and made glorious sport on a light rod, as we frequently took two or three at a cast. We did not get any of the old "busters," but I, too, saw the father, nay the grandfather, of the trout of the Magalloway.

I had hooked a good half-pound trout, and it had made a gallant struggle for life and freedom, but the constant spring of the rod was too much for him, and he lay upon his side at the top of the water; and I was slowly reeling him in, when a giant trout rose directly beneath him, opened a pair of monstrous jaws, slowly brought them together again, and my half-pound trout disappeared from view as would a two-inch shiner in the mouth of a 5lb. bass. What happened next I do not know, for I lost my head, had "buck fever," or something else, and the boys said I jumped about two feet in the air and gave an awful "yank." The first thing I realized was that my trout was in the air, and I had a glimpse of a fan-like tail as it disappeared from view. Perhaps it will be best to drop the curtain on the next few moments. Suffice to say that every angler has had some such experience and can picture the scene for himself and I sincerely hope he can do it justice. I cannot.

For the next few days by common consent that pool was my property, and I spent at least an hour there every day. I was there in the early morning before the sun was up, and at night when it was so dark I could not keep

the trail by Sunday Pond—and climbing windfalls after dark is not pleasant traveling. I cast upon its waters flies of every size, shape and color, from tiny midge to large and gaudy bass fly, and when these failed I descended to bait, the abused angle worm, wood grub, a strip of fish, the fin of a trout, and live bait from a two-inch shiner to a half-pound chub. Many a handsome trout did I get, but not one glimpse of the old patriarch of the pool until the last day of our stay.

I was making my farewell visit to the stone dam alone, and was idly casting a fly upon its waters, and was just ready to reel up and leave, when, throwing my fly in the rapids near the dam, it was taken by a small quarter-pound trout and I commenced to reel him in. But he was a gamy little fellow and was darting here and there as quick as a flash; and the thought struck me, why not try him for a bait? But no, I will never be guilty of piercing the sides or lips of a lordly trout and using him for bait; but as this is my last cast, and I can see that you are lightly hooked in the lip, for the gaudy wings of the Parmachenee-belle can be plainly seen, you may take one run down through the pool, and if you do not get away I will gently release you and you shall go free. I drew the line from the reel to give him all the play he wanted; and down to the center of the pool he went, and there he stopped for a few playful darts this way and then that. Then he started again down the pool, until I had all the line from the spool and thought it about time to reel him in. But I could not start the reel, and still he went. I involuntarily struck and raised the tip, and for an instant a big fin showed above the water and I knew I was fast again to the old patriarch of the waters. What a predicament. There I stood on a rock at the head of the pool with one of Chubb's little 4oz. "Raymond" rods in my hand, not a single turn of the line upon the spool of my reel, and 140ft. away, hook-d with a No. 8 Sproat, was the giant trout of the Magalloway. There was one thing to do, and I gave him the butt. Whether the little rod was too much for him or he concluded he had gone that way far enough I do not know, but he turned and started for the head of the pool diagonally from me, and I had time to get a goodly lot of line on the reel; and then I took a good long breath. It is useless for me to attempt to describe the battle that followed. How long it lasted I do not know; but it was down the center, forward and back, cross over and all hands round and repeat, until at last he lay upon his side and was drawn across the landing net, and I had barely strength to lift him from the water. What a big one he was. Four, five pounds; yes, we will call him a six-pounder; as handsome in form and as brilliant in coloring as a half-pound trout. And why should he not be, this cannibal of the waters, who would refuse every kind of bait or fly and would have naught but his own beautiful spotted tribe, his relatives or perhaps his own children. But you have had your last one, you old rascal, and the other trout can now swim in peace.

To understand the "subsequent proceedings" it will be necessary for me to describe the stone dam. This was not made by man, but was a natural ledge, running clear across and extending up the river for perhaps a couple of rods; but the fall was mostly in the last rod before the water fell in the pool below, somewhat more than half-way across, when the water was at its usual summer height the ledge protruded from the water. This was worn smooth by the action of the water, and formed a flat table-like surface with rounded sides. The water upon each side of this ran with the swiftness and force of a race-way; but with care and a cool head it was possible for one to wade and jump to this rock without having the water come above a pair of high boots. Directly below this ledge, and jutting into the pool, were two large rocks, which could be reached from the ledge by a little careful wading, and from these rocks a good caster could reach all the best parts of the pool below. It was from this rock that I had been casting and upon which I now stood with my prize; and I wanted to get to shore with the fish soon as possible. Grasping the net above the trout, I crept to the ledge above and attempted to cross to the shore; but I was so weak I could hardly stand and hold the fish. With my first step the water nearly took my feet from under me; and I realized that I must rest before I could cross in safety. I therefore lay the landing net down upon the ledge with the big trout in it, and the handle pointing up stream, and stepped upon the frame in such a way that the fish could not get out. I had hardly straightened up when I heard a grating on the ledge, and just caught a glimpse of a long handle as it swung or rolled into the water. The moment the full force of the current caught it my feet flew out from under me and I sat down with a "dull thud," and the only reason why the ground did not shake was that I only weigh 130lbs. and there was no ground there to shake; it was all rock.

The current was fast drawing me in; I was wet all over before I could manage to grasp a protruding rock and drag myself out to look for my landing-net and fish. The frame had caught in the rocks and the handle was playing shuttlecock on top of the racing water. Quickly grasping it, I began to raise the net; and as I did so the big trout came to the top of the water, some little way below, and with a dash was carried to the pool beneath. As he reached the more quiet waters of the pool and lay upon his side, he gave one "spat" with that giant tail, which was plainly heard above the roar of the waters, and disappeared from my view forever. No, not forever. Many a time during the past winter, as I have sat by the open fire, my feet upon the fender, watching the fantastic shapes the blaze would assume, have I seen the handsome form of that monstrous trout, and the scene at the old stone dam was all before me. And many a time in my dreams have I fought that battle over again and have been awakened by the "spat" of that fanlike tail as the trout disappeared from view—only to find that the noise was made by the alarm clock.

I told my companions that day that I had not got the big trout, that I had slipped into the water and was now ready to go home. From that day to this I have never told the story of the big trout. It was a very sore spot in my memory (and I had another one somewhere else) for many a day, but time works wonders. The sportsman only remembers the pleasure of a trip, the trial and discomfort are forgotten or are made light of; and now I am enabled to look back with some degree of pleasure and think of that royal battle with the monstrous trout of the big pool at the old stone dam on the Little Magalloway.

OMPOMPANOSUC.

THE DAMS OF THE KANKAKEE.

HOLYOKE, Mass.—*Editor Forest and Stream:* In your issue of Oct. 22 there is a letter from E. Hough concerning fishways on the Kankakee. He writes of the Upper and Lower Dams in Wilmington and cries "Speed the day when they are taken up." As I had the honor of building those dams and the connecting canal, and spent some sixteen years along the banks of that river, and certainly caught my share of bass and pike perch when I was there, I feel that I know as much about that river as Mr. Hough concerning the obstructions to the movement of fish from the Illinois to the Kankakee marshes.

The Upper Dam has a fall of 15ft. and not 17ft., and I have seen bass ascend even that dam in high water. Mr. Hough says that these dams have no mills upon them and are kept up now for speculative purposes. He ussd his eyes to little purpose when he was there, for the second dam supplies power to the electric light works, to the White Cloud Flour Mills, to machine and wagon shops, and to a large paper mill. Negotiations are now progressing for sale of power at the upper dam, and when so used employment will be furnished to thousands; and surely the general public will derive more benefit from such development of new industries than it can from the catching of a few fish by anglers at Kankakee or Momence.

Now I would ask of the **FOREST AND STREAM** what is to be gained by the erection of the fishways at these dams so long as Chicago pours its sewage down the Des Plaines and Illinois? How far do bass and pike and pike-perch migrate? Do they descend the river any lower than the deep pools wherein they winter? Will not these fish spawn just as freely at the head of each reach or pond as though they ascended to the headwaters? If they do get safely through all these fishways and ascend to the Indiana marshes; and if no Illinois angler can fish within half a mile of these dams, when will the Illinois man get his innings? Must he wait until a few fish that have not been caught in Indiana are whirled over these dams to the rocks below?

We have an expensive fishway here in Holyoke, built by us some years ago at a cost of \$30,000, and so far as is known no shad nor salmon has ever yet got to the top of the stairs. We have the black bass, but he does not ascend the way either. Nothing but eels care to go up. The fishways on the Kankakee dams will prove as useless as the one here. Fish are scarce at Momence, not on account of the dams below, but solely for the reason that there are ten fishers where there was one twenty years ago. For ten years after the large dam was built the fishing ten miles above was better than was ever before known, and even now, notwithstanding the number of the fishermen, there are more fish than were there before that dam was built, the reason being that the deep and long pool caused by that dam increases the number of the spawning beds, and secures safe retreats during the winter and furnishes more room for the smaller fish, which are the natural food of the game fishes. Let these dams remain. Put up more rather than destroy the present ones.

E. S. WATERS.

THE BAY OF QUINTE SEASON.

BELLEVILLE, Ont., Oct. 26.—The angling season, which is virtually closed here, has been a fairly successful one. Black bass were more than usually numerous, as also were pickerel (*doré*), many of which ranging up to 8 lbs. were taken, but maskinonge were scarce, although more numerous than last year. A numerous party of Americans, chiefly from Newark, N. J., including Mayor Hughes, of that city, and Mr. G. W. Snyder, of Peck & Snyder, New York, were among the latest visitors to our Bay, and had, I understand, good sport among the bass.

The largest whitefish ever caught in these waters was taken in a seine last week at Point Ann, near the city. It weighed 9 lbs. 1 oz., which I can verify, having seen it weighed.

At Hay Bay, which is a favorite fishing ground for maskinonge, the sport is still being prosecuted, and with good success, as is narrated in the following extract from the *Napanee Beaver* of Saturday last: "Mr. Wellington Loys, who was in town on Tuesday, states that at present the maskinonge is unusually plentiful, and that General Davies, of New York, and his nephew, Mr. David Clark, of Ogdensburg, had caught fourteen in the past seven days. On Tuesday the General and Clark caught one weighing 35 lbs. This large fish was hooked in the side, but by some means the line had become wound about his gills and he was captured after a hard fight. The General in September last succeeded in catching eleven in nine days. He is 82 years old, and for the past seven years has made one and two visits a year to this favorite resort. Although an octogenarian, he is as active as a man of 65, and bids fair to enjoy many seasons yet at Hay Bay."

The deer hunting season opened on the 15th, and the parties who went out early are now returning. The records so far reported are: 10, 4, 3, 1, 0. Several parties are yet to be heard from.

Small game, such as ducks, ruffed grouse, plover, snipe, black and gray squirrels, have been more plentiful than usual.

R. S. B.

LONG LAKE FISHING.

FROM a body of water yielding but a minimum of food fish, Long Lake, in the northern part of Cumberland county, Maine, is developing into as good an all-round fishing region as one can ask for. For nearly ten years it has afforded excellent bass fishing, no very large fish, but plenty weighing up to 2 lbs., and this feature has added materially to the number of summer boarders seeking the locality. In 1881 "fifty odd" white perch were introduced from Winthrop Pond in Leeds; they have thriven beyond all expectation and a catch of 75 to 150 from the steamboat wharf at North Bridgton is no unusual occurrence. They will bite anything from a bare hook to live bait or flies, and afford rare sport for those who do not care to battle with more gamy fish. From earliest history the lake has always contained landlocked salmon, but they had become so depleted and demoralized by spearing that it looked as if their total extinction was but a matter of time. After a while a new sentiment sprang up and an attempt to restock was made; many thousands of young fry were turned into the tributaries

and flourished exceedingly well until they got to be 6 or 7 in. long, and then they fell prey to the brook fishers, who either mistook them for speckled trout or caught them for what they really were without even giving thanks to those whose efforts they were upsetting. Finally it was decided to get certain brooks set aside for restocking purposes, and all fishing in them prohibited. Such an act was accordingly passed by the Legislature about three years ago, and the results have been very gratifying; for instance, during a certain week in September last anglers fishing off the mouth of Rogers Brook (one of the closed streams) caught five "landlocks" weighing from 1 lb. to 5 lbs., and two "red spots" weighing 1 lb. and 1 lb. 9 oz. respectively—probably as many as have been taken in Long Lake with hook and line in twenty years before, so really it looks as if the way to restock this lake is to place a perpetual close time on its feeding streams.

On Crooked River the Commissioners are again operating their weir and have already 200 or more fine landlocked salmon awaiting the time when they will be delivered of their spawn. The great mass of the fish have been kept back by exceedingly low water. It is said the river is full of them and if there should come a few heavy rains probably the catch will be unusually large.

NORTH BRIDGTON, Me.

J. C. MEAD.

CHICAGO AND THE WEST.

[Concluded from page 274.]

AT Kelly's is located the Moire Antique Club, of Cincinnati, eighty-four members strong, president, W. H. Hughes, Chief of the Cincinnati Fire Department, a rugged but pure diamond of a man. As to how the Moire Antique Club got its name, that is another story, but as a club it is a corker. To get at this cosy fishing house the members have to travel all the way from Cincinnati to Chicago and then down again this far. Such is the fame of the Kankakee. Just now the jolly crowd on hand were not having much luck, but they were not troubled by that fact, and slept of nights and fished of days just the same. A good old club is the Moire Antique, though only four years of age. It is built of the fragments of the old Star Club, of Aroma. In its constitution there is embodied a clause which makes the club also a benevolent institution, and it is found that these slight monthly dues serve to hold the club together. A meeting is held the first Friday of each month. The House Rules of the Moire Antique Club are simple, and insist only that no gentleman shall throw bones under the table or step on the tail of the club cat. An officer of the day is appointed regularly, and it is his duty to clean the fish. Any member doing illegal fishing is fined \$5. (Why not expelled?) I am promised further acquaintance of this genial lot of men, and only wish I could take space to write more fully of the club here.

And so for Kelly's. Hey for Kelly's! Would we could all live at Kelly's, where the river talks among the rocks. At Kelly's, with careful Mrs. Kelly and Kelly himself, the two grown-up daughters Kelly and Essie Kelly and Baby Kelly and Kelly's chickens, Mr. Cole and I would fain have lingered. But not a minute even for fishing. It was evening when we got in, and the next morning we left, taking our boat by wagon to Lorenzo, the local station on the A. T. & S. F. Railway, whereto one disembarks for Kelly's. Time was now growing short, and we could not finish the trip by river. We shipped our boat back by rail to Momence, and are gratified later to learn that we didn't altogether knock the bottom out of it.

Good-bye, then, to Kelly's, and a short run by rail up to Joliet, along the Des Plaines, whose junction with the Kankakee is only five miles below Lorenzo. At Joliet we met a very lovable, genuine sportsman and angler, who fishes at Kelly's and helps with money when the warden needs it. With him we spent some moments all too brief, and asked him to watch that fishway, and promised to come down fly-fishing next spring. Then we took the Rock Island train, 35 miles to Marseilles, where our last dam is located. This is really on the Illinois River, but is above the main breeding grounds, and so is essential to be well provided with a fishway.

It was here that Buck had spoken of the way as all in but the cover. Barring the sides, bottom and steps, we found this description correct. The cut had been made, deep down through the comb of the dam, and the slope for the ladder was displayed. The cut was a good, deep, honest one, not in the dry end of the dam, but over a pool 10 ft. deep. We saw that this dam, the most important on the stream, and the highest and hardest, barring Wilmington, would finally be supplied with a good and durable fishway, and at this Mr. Cole gave a long and hearty sigh of relief, for the trip had thus far been rather an unsatisfactory revelation to him.

We talked with Mr. McIvor, the contractor in charge of the repairs now going on upon Marseilles Dam, and found him a thorough workman, and luckily, moreover, of wide experience in building fishways in Canada, where they don't have our loose Yankee way of looking at fish and game. Mr. McIvor promised to put in the way here within the week, as his lumber had now arrived, and we left feeling satisfied that this would, indeed, be the best way on the stream when completed. Mr. Cole is to be notified when it is done, and another trip will then be made to make certainty certain. These fishways must go in, and be absolutely known to be in.

It was now dark on Saturday evening, but we concluded to run on down to La Salle, and see something about the Illinois Valley Association, the vigorous protective society of which earlier mention has been made. Readers will remember reports of work by Warden M. D. Green. It was at the office of Warden Green that, after some search and running around, there finally assembled the little crowd which earnestly talked protection into the wee small hours. Warden Green is known now as a hustler. In Mr. H. L. Watlington, the association attorney, I think I see a lawyer who knows some law, and in Mr. N. W. Duncan there is distinguished the quiet and earnest man, thoroughly and unselfishly interested, who is much to be sought after in all this sort of work.

I can not stop to more than mention this good body of workers. Membership 35, and it will grow. They average about one conviction to every member. They have been successful in most of their work, and have come out boldly with the black flag, declaring that all seining, all netting, all illegal fishing shall be stopped on the Illinois River above the Copperas Creek Dam. They don't go on the supposition that they may lose under that miserable

corporate dam clause in Sec. 6 of the fish law, but on the theory that they may win, and are going to win. Anyhow, they will fight, and so more power to them, for men and not idlers. They have posted notices that they will prosecute all netters and seiners, 1 in., 2 in., or any other sort, found above the Copperas Creek Dam, and have declared for a joined issue to test Sec. 6. Attorney General Hunt, replying to Dr. Bartlett's letter, says that clause will have to be tested in the upper courts, though he is not clear that the sportsmen's interpretation of the law will hold. It will have a chance to hold, or break, for the Illinois Valley Association will go right on after all the netters clear down to the big dam. If this be bad law, make the most of it. It will tie up the seining, anyhow, and meantime the pondering cango on just as well. Some folks always have to hustle while the other fellows ponder.

Mr. Watlington was anxious to get the support of the Chicago Swan Lake Club, whose grounds are not far below La Salle, and promised to come up to Chicago, so that he and I could go and see Mr. John Stockton, of that club. I explained as best I could the relation of that club to their club keepers, the notorious market-fishers, Frank and Tim Woods. To this Warden Green listened with more interest than conviction. He evidently did not like the idea of market men for club keepers to sportsmen.

One point of law I learned of Mr. Watlington that evening, which was brought out in a damage case brought against Warden Green. Ordinarily, the State cannot take an appeal if its prosecution does not hold. The State cannot appeal in a game law case. In a fish law case it can appeal. The fish law is good. The game law is no good. The Illinois State Sportsmen's Association has accomplished little or nothing in the improvement of the game laws, so far as I can learn. But it has killed a pile of pigeons, gentlemen.

Oct. 15.—To-day Mr. Watlington writes me from La Salle:

I am forced to postpone my run to your city until Saturday morning. One reason is that I will in all probability have to go to Putnam to prosecute some illegal fishers from Senachwine Lake, as we have information that fishing is being done there at night with an illegal net. Greene and posse go to-night to raid them. Our committee have determined to suppress all seining, e. c., after the 22d inst. Green has circulars printed notifying all parties that prosecutions would follow violations of the law. No news of importance.—H. L. WATLINGTON.

Oct. 16.—And now comes a letter from Warden Green at La Salle, date of yesterday. It is interesting:

I express you this P. M. a couple of black bass, one of which please send to President Cole. The fish I bought this morning from Woods brothers, of Senachwine, and are a part of a haul I saw them take with a seine. They caught about 3,000 lbs., of which about 300 lbs. were game fish, and none of the game fish of any size were thrown back. This is the way they keep the contract you spoke of while here. Mr. Watlington will call on you Saturday, and I will have something written up for **FOREST AND STREAM** by that time.—M. D. GREEN.

Well now, I have something to write up for **FOREST AND STREAM**, and I want the Swan Lake Club men to read it. The fact is that club is being victimized by its precious keepers, and it ought to know it. It is bad enough for a good club like this to have market-hunters and fishers for keepers under any circumstances. It is worse to have to strain the law to an unsportsmanlike interpretation at least so as to allow these men to fish with quast and questionable legality. It is worse yet to have to pay money, a bribe, to these men to get them to put back into the water all game fish they take in their questionably legal seining and netting. It is worse yet, worst of all, and certainly humiliating to a club member of any self-respect to learn that these same men, bribed to be decent, doubtless bribed to be lawful, are showing their employers a sample of their honorableness. Verily, all is fish that comes into the Woods brothers net, Swan Lake Club and all! How does the club like that and what will it do?

There is only one thing for it to do, and that is to join the fight which goes on to test Sec. 6 of the fish law; join the Valley Association and lend a hand to stop all seining and netting, bar none, Woods boys, club keepers and all; join the work to test that Sec. 6, and if necessary ruin it and replace. Swan Lake Club cares little for fishing. It wanted that Senachwine marsh, and it wanted the Woods boys on its side and not against it. I cannot believe, however, that men like these are not sportsmen all the way through. I cannot believe that they will see themselves fooled and laughed at by men whom they hire. I cannot believe that when they understand the situation they will hold back from the remedy. I do believe that they are sportsmen and will wink at nothing unsportsmanlike in any line. I do believe that they will finally unite and say, "Here, this thing must stop, even though the Woods boys go, even though the lease goes with them. We'll shoot clean-handed or we will not shoot at all!"

At present I do not think Swan Lake Club understands all these circumstances. Mr. Watlington and I will have a good talk with Mr. Stockton, and this will duly be set forth.

Oct. 17.—Meantime the fight has gone on hotly on the lower Illinois. Dr. Bartlett has secured one \$50 fine against the notorious leader of the market fisher's league, Smith, and will follow this with prosecutions in other counties, probably making Smith weary before he quits. The big damage suit against Dr. Bartlett I do not hear from. Smith did, however, get a \$250 judgment against the sportsmen's representative in Beardstown county. This case was appealed. One suit will follow another in the courts there, but the sportsmen of the Beardstown Club have no cause yet to be discouraged. Thank Heaven, we are having a fight, anyway. It's this pondering that eats up armies, men and measures.

CHICAGO, Ill., Oct. 28.—Earlier I have paid some attention to the little differences between State Fish Warden Green, of La Salle, Ill., and the Swan Lake Club, of Lake Senachwine, and have tried to adjust these differences by showing that the club was not responsible for any lawlessness of their keepers, the Woods brothers, but had really paid the latter to return to the water all bass and other game fish they captured in their netting, the latter supposedly legal. Mr. Green sent up some bass which he said he saw taken from the net by the Woods boys. This looked bad for the latter, and I wrote sharply about the relations of the club with these marketmen. The strictures would be quite just on the facts, but first let us get the facts. It is called to my attention that the club paid the Woods boys only to return

bass captured in the creek and narrows, not in Senachwine Lake. It is further stated that the bass Warden Green saw taken were netted in the main lake. I hope this covers all the facts. We should be absolutely just and impartial, even with the Woods boys, and I hope this closes the matter out, so that the white-winged angel of peace will get a chance to hatch out a good understanding between the Swan Lake Club, Warden Green and the Illinois Valley Association. I am glad to state that the predictions as to the feeling and position of the Swan Lake Club were exactly accurate. This club will neither foster nor sanction lawlessness, even by its own keepers. It has, as a club, proved this to the Illinois Valley Association by means of its late hearty financial support in the protective work, and its cordial assurances of sympathy and assistance morally. Speed the time when, out of this timely agitation, the day will come of absolute prohibition of nets and seines on the Illinois and all its waters. Let Swan Lake work for that.

E. HODGKIN.

ST. LAWRENCE PICKEREL.—Mr. Channing Brittain, of Brewster & Co., this city, received one day last week two pickerel, weighing together an even 25lbs., which came from the St. Lawrence River. They were taken by Mr. Geo. F. Hill of Clayton, and the incident of their capture illustrates the style of fishing they have near Clayton. Mr. Hill went out in the afternoon, with Henry Webber as boatman; and within three hours from leaving the house caught these fish and shipped them to his friend in New York.

NORTH POND FISHING RIGHTS.

PHINEAS W. TURNER (Hartford District, October Term, 1891.
vs.
SELECTMEN OF HEBRON. (Supreme Court of Connecticut.)

Opinion of the Court.

ANDREWS, C. J.

On the 16th day of May, 1888, the selectmen of the town of Hebron laid out a public highway in that town over the land of Phineas W. Turner, which layout was approved by the town at a town meeting held on the 6th day of June following.

On the 2d day of July Mr. Turner made application for relief in the nature of an appeal from the doings of the selectmen in laying out said highway to the superior court in Tolland county, alleging as a reason for said application that the said highway was not of common convenience and necessity. In the Superior Court a committee was appointed pursuant to the statute, section 2,701 of the general statutes, to hear and determine said application, and to make report thereon. The committee heard the parties and made their report to the court. Mr. Turner remonstrated against the acceptance of the report, but the court overruled the remonstrance, accepted the report, and dismissed the application of Mr. Turner with costs. From that judgment he now appeals to this court, and assigns various reasons of appeal.

The statute above cited provides that "if said committee shall find that the highway is not a common convenience and necessity, said court shall set aside such layout thereof; but if they shall find that such highway is of common convenience and necessity . . . the application shall be dismissed with costs."

The said committee, after setting forth the facts at some length, concluded that the highway was of common convenience and necessity in the case; and on these facts the law is so that all members of the unorganized public have the right as against the plaintiff to fish in North Pond except the part owned by the plaintiff as aforesaid, then the committee are of opinion and find that the laid out way is of common convenience and necessity. But if on these facts the law is otherwise, then the committee are of opinion and find that the laid out way is not of common convenience and necessity.

The only question we propose to consider is whether or not the law is so on the facts stated that all members of the unorganized public have the right as against Mr. Turner to fish in said pond.

North Pond is a natural pond situated in the towns of Hebron and Lebanon. By deeds which were confirmed by the colonial legislature the title of said pond and the soil beneath it became vested in the proprietors of said towns, much the larger part in the proprietors of the town of Lebanon. This part by sundry conveyances came to Abigail Bosworth in the year 1773. There is no record on the town records, or probate records, or other record that the title of said land ever passed from said Abigail; and so the committee find that the title of said land "never passed from said Abigail Bosworth to any person or persons, but the same has become lost and abandoned." Of that part which once belonged to the proprietors of Hebron a portion has come to and now belongs to Mr. Turner, and the remainder, so far as the records disclose the title, still belongs to that town.

In 1865 the plaintiff became the owner of all the land surrounding the pond. He raised the dam at the outlet so much that he thereby raised the water of the pond 7½ ft. The present area of the pond is 188 acres, of which more than one-fourth is covered by such raising of its waters. The plaintiff applied the water of the pond to use in manufacturing, in which he employs 120 persons. Prior to the time which the plaintiff became so owner, and from time immemorial, all members of the great unorganized public, both near the pond and remote from it, whenever and wherever disposed so to do, fished in North Pond at a master's right at all seasons of the year, in boats during the spring, summer and fall, and through the ice during the winter. This was done without objection from any source whatever down to the time when the plaintiff bought all the land adjoining the pond.

"When the plaintiff became the owner of all the land surrounding and adjoining the pond, he posted notices forbidding all persons fishing in the same, and on one occasion he drove a party with force and arms from the pond whom he found fishing there. He sought to prevent all persons fishing in the pond without his leave, and did so far as it was within his power. At one time he spent the sum of \$100 stocking the pond with fish. His objection to fishing was not on account of the value of the fish, for he freely gave permission to fish whenever requested, but through fear that the public might acquire the right by prescription to fish there."

These facts, while they may not be sufficient to show that the plaintiff has acquired title to the soil under the original pond, do show that he has acquired the right to keep that soil covered with water. The easement of flowing he owns, and so he owns the water. Smith vs. Miller, 5 Mason, 191; Adams vs. Pease, 2 Conn., 41. Nor could the unorganized public, as such, acquire the right of fishing there either by grant or prescription. A deed or devise of the land surrounding the water had been for more than twenty years in the actual, exclusive and uninterrupted possession and occupation of the right of fishing in the entire pond, claiming it as his own and keeping all others away. There is no evidence that since 1865 any person whatever has succeeded in fishing in that pond except he did it by the permission of the plaintiff. Whoever has attempted to fish there without such permission has been driven away.

By the action of the Colonial Legislature in confirming the title deeds of the land under and around North Pond no public or common right of fishing therein remained, if such a right had ever existed. Smith vs. Miller, 5 Mason, 191; Adams vs. Pease, 2 Conn., 41. Nor could the unorganized public, as such, acquire the right of fishing there either by grant or prescription. A deed or devise of the land surrounding the water had been for more than twenty years in the actual, exclusive and uninterrupted possession and occupation of the right of fishing in the entire pond, claiming it as his own and keeping all others away. There is no evidence that since 1865 any person whatever has succeeded in fishing in that pond except he did it by the permission of the plaintiff. Whoever has attempted to fish there without such permission has been driven away.

We are not, however, interested so much to discuss what right of fishing in North Pond the unorganized public may have had in 1865 as to ascertain what right of fishing in that pond Mr. Turner did in fact have in 1888.

Prima facie the right to take fish in any water, other than navigable rivers, belongs to the owners of the soil over which the water flows. This is because in ordinary cases the ownership of the soil carries with it the ownership of the water. But the

ownership of the water may be separated from the ownership of the soil, and where this is done the right of fishing goes with the ownership of the water. The law is stated in Coke's Littleton 4, b. "If a man be seized of a river and by deed do grant *separatim piscarium* in the same and maketh livery of *seizen secundum formam chartae* the soil doth not pass nor the water, for the grantor may take water there, and if the river becomes dry he may take the benefit of the soil, for there passeth to the grantee but a particular right and the livery being made *secundum formam chartae* cannot enlarge the grant of fish against all the world. Chalkley vs. Dickinson 1 Conn., 382; Church vs. Meeker 34 Conn., 421; Preble vs. Brown 41 Maine, 284, 3 Kent 43. And can maintain trespass against any one even the owner of the soil, for taking the fish, Adams vs. Pease 2 Conn., 48; Smith vs. Kemp 4 Md., 187; S. C. Sal- keld 437; Halford vs. Bail y 13 Q. R. (66 E. C. L.) 426; Collins vs. Reubens 47 Phil. 118; Delaware, etc., R. R. vs. Stump 6 Gill and 47; Phillips vs. State 2 Md., 380.

Whether we regard the plaintiff as the owner of the water of North Pond and so the sole owner of the right of fishing therein or as having acquired the exclusive right to fish there by adverse use, we are clearly of the opinion that as against him no member of the unorganized public has the right to fish in that pond. It follows from the report of the committee finds said highway not to be of common convenience and necessity.

There is error in the judgment of the Superior Court. In this opinion, the other judges concurred.

Fishculture.

PACIFIC SALMON FOR THE HUDSON.

GLENS FALLS, N. Y., Oct. 30.—*Editor Forest and Stream:* In FOREST AND STREAM of Oct. 29 there is mention of a plant of 5,000 salmon yearlings to be made by the United States Fish Commission in a tributary of the Battenkill River in Vermont, which in turn is a tributary of the Hudson.

Two at least of the New York daily morning newspapers have printed a special dispatch concerning the planting of these young fish, in which it is announced that yearling salmon are now to be planted because the previous efforts of the United States Fish Commission to stock the headwaters of the Hudson with salmon fry have proven to be unsatisfactory.

This is a misconception of facts which I desire, so far as I may, to correct, although I am in no manner responsible for the error. The yearling salmon that are to be planted in the Battenkill by the U. S. Fish Commission are quinnat, chinook or Columbia River salmon from the Pacific coast, and the National Fish Commission has made no previous effort to stock the Hudson with the fry of this species of salmon. The State Fish Commission did, some years ago, plant fry of the Pacific salmon in the Hudson and elsewhere, and the result was unsatisfactory to those who had the matter in charge. The United States Fish Commission began in 1882 to plant the fry of the Atlantic salmon in the headwaters of the Hudson, and the experiment was highly successful from the first, and the success has been continued to this date. The quinnat salmon to be planted in the Battenkill are not really yearlings, but are about eight months old, and will number 3,500, and are equivalent to the whole number of salmon fry of this species previously planted in New York waters.

NEW ENGLAND FIELD TRIAL ENTRIES.

ALL-AGED STAKES.

BERKSHIRE (F. W. Whitlock's), black, white and tan (Formost—Lady Norma).

ROD'S WHIM (E. O. Damon's), black, white and tan (Rod-erigo—Florence Gladstone).

SNIP (D. A. Goodwin, Jr.'s), orange and white (Edge Mark—Nellie G.).

FOREMAN'S LASS (Harry A. Waldon's), black, white and tan (Foreman—Grace B.).

MISS MONARCH (Chas. C. Gray's), black and white (Roy Monarch—Flossie).

WARD'S SPOT (M. Ward's), black, white and tan (Gloster II. Ward's Mada).

KIT CARSON (E. K. Sperry's), blue belton (Hair's Belton—Lillian Bondhu).

BESSIE (Dr. Henry A. Baker's), black white and tan (Unknown—Unknown).

NINKE PHILIP (E. R. Durkee's), orange and white (Roy Monarch—Saddle Bags).

SPOT R. (Geo. W. Lovell's), liver and white (Covenant—Clover).

TELAMON (C. L. Hopkins's), black, white and ticked (William Tell—Daisy A.).

THE DERBY.

KIT CARSON (E. K. Sperry's), blue belton (Hair's Belton—Lillian Bondhu).

BECKY NOBLE (E. O. Damon's), black and white (Count Noble—Gladstone's Girl).

COUNTSSE (J. K. Wells's), black and white (Kent II.—Jessie Noble).

SNIP (D. A. Goodwin, Jr.'s), orange and white (Edge Mark—Nellie G.).

All of the entries are English setters except Spot R. and Telamon, pointers.

ASSONET, Mass., Nov. 2.—The running of the first field trials of the New England Field Trial Club will begin to-morrow. The drawing to-night was: Derby Stake—Countess against Becky Noble, Kit Carson against Snipe. All-Aged Stake—Bessie against Berkshire, Rod's Whim against Nahmke Philip, Spot R. against Miss Monarch, Snipe against Foreman's Lass, Kit Carson against Ward's Spot.

P. K. C. FIELD TRIAL ENTRIES.

Editor Forest and Stream:

Inclosed please find complete list of the entries for the Derby, All-Aged and Members' stakes of the Philadelphia Kennel Club's Field Trials, to be held at Deatonville, Va., on Dec. 14. As will be shown, there are 20 entries in the Derby Stake, of which there are 12 English setters, 6 pointers and 2 Irish setters.

The All-Aged Stake contains 20 entries, of which there are 13 English setters, 6 pointers, 6 Irish setters and 1 Gordon setter.

The Members' Stake contains 19 entries, of which there are 12 English setters, 6 pointers and 1 Gordon setter.

This is a large increase in numbers over previous years, and it is certainly very encouraging to the kennel club to note the names of many famous dogs on the list. The quality and character of the dogs entered in the Philadelphia trials and the large attendance, place the club among the foremost in the country.

The dogs entered in these trials are owned exclusively by members of the club, but as the membership is not confined to residents of Philadelphia it will be seen that a number of noted dogs, already field trial winners, are entered by prominent sportsmen from different sections of the country.

C. E. CONNELL, Sec'y Phila. K. C.

ALL-AGE STAKES—ENGLISH SETTERS.

TORY LIEUTENANT (F. R. Hitchcock's), black and white dog, 2yrs. (Jean Val Jean—Princess Helen).

TORY PETRONELLA (F. R. Hitchcock's), black, white and tan bitch, 2yrs. (Rodgerigo—Belle of Bridgeport).

EDGEMARK (F. S. Brown's), black, white and tan dog, 3yrs. (Skidmore—Flo MacIn).

PEG WOFFINGTON (G. S. Brown's), black, white and tan bitch, 2yrs. (Ben Hill—Nora).

LOU NOBLE (B. Ridgway's), black, white and tan bitch, 3yrs. (Count Noble—Alphonse).

EZRA NOBLE (L. Shuster, Jr.'s), blue belton dog, 3yrs. (Count Noble—Alphonse).

OLD SMED (L. Shuster, Jr.'s), blue belton dog, 2yrs. (Ezra Noble—Cornelia G.).

JOE LEWIS (J. O'H. Denny's), black, white and tan dog, 2yrs. (Count Noble—Fannie).

BOB H. (Dr. Alex. Glass's), black and white dog, 6yrs. (Count Noble—Belle Boyd).

ROD GEM (E. W. Clark, Jr.'s), black, white and tan dog, 6yrs. (Rodgerigo—Gem).

ALBERT'S DUCHESS (Dr. J. A. Hartman's), black, white and tan bitch, 2yrs. (Warwick Albert—Princess Belton).

ROANOKE (Arthur Burt's), black and white dog, 2yrs. (Bosh—Lottie B.).

BEN HUB FRANKLIN (W. B. Smith's), orange and white dog, 4yrs. (Ike—Leda).

POINTERS.

GENESTA (J. W. M. Cardeza's), liver and white bitch (King of Kent—Hops).

DAVID OF DELPHOS (J. W. M. Cardeza's), liver and white dog (Dick of Delphos—Westmoreland Bessie).

ROCK II. (C. E. Connell's), liver and white dog, 4yrs. (Graphic—Lady Belle).

PONTIAC (Charles Heath's), liver and white dog, 5yrs. (Milton Bang II.—Climax).

ARTHUR (Charles Heath's), liver and white dog, 5yrs. (Graphic—Meally).

DAISY (S. Murray Mitchell's), liver and white bitch, 7yrs., imported from England.

IRISH SETTERS.

SILK (Dr. G. G. Davis's), red bitch, 3yrs. (Chief—Gypsy Maid).

SPINAWAY (Dr. G. G. Davis's), red bitch, 3yrs. (Chief—Tyrell's Nellie).

ROCKWOOD (C. T. Thompson's), red dog, 3yrs. (Desmond II.—Luray II.).

MERLIN (S. Harlan Price's), red dog, 2yrs. (Grab—Flora).

BEAT II. (S. Harlan Price's), red dog, 1yr. (Fly—Norna).

LIMERICK (Thompson & Child's), red dog, 6yrs. (Glencho—Nora).

GORDON SETTERS.

FLASH (B. Frank Hall's), black and tan dog, 6yrs.

MEMBERS' STAKES—ENGLISH SETTERS.

ROI D'OR (F. R. Hitchcock's), black, white and tan dog, 4yrs. (Rodgerigo—Bo-Peep).

TORY MAY (F. R. Hitchcock's), black, white and tan bitch, 2yrs. (Rodgerigo—Bo-Peep).

EDGEMARK (F. S. Brown's), black, white and tan dog, 3yrs. (Skidmore—Flo MacIn).

KING'S MARK (B. Ridgway's), black and white dog, 5yrs. (King Noble—Belle Belton).

JOE LEWIS (J. O'H. Denny's), white and tan dog, 2yrs. (Count Noble—Fannie).

BOB H. (Dr. Alex. Glass's), black and white dog, 6yrs. (Count Noble—Belle Boyd).

ROD GEM (E. W. Clark's), black, white and tan dog, 6yrs. (Rodgerigo—Gem).

LENA (Chas. Heath's), lemon and white bitch, 1yr. (Prince Lucifer—Juneau).

ROANOKE (Arthur Burt's), black and white dog, 2yrs. (Bosh—Lottie B.).
KENO (Isaac Yearsley, Jr.'s), lemon and white dog, 4yrs. (Roybel III.—Fraud).
BEN HUR FRANKLIN (W. B. Smith's), lemon and white dog, 4yrs. (Ike—Leda).
GROVER (Edward V. Dougherty's), lemon and white dog (lightning—Rosy Morn).

POINTERS.

DAVID OF DELPHOS (J. W. M. Cardeza's), liver and white dog (Dick of Delphos—Westmoreland Bessie).
ROCK II. (C. E. Connell's), liver and white dog, 4yrs. (Graphic—Lady Belle).
BLOOMER III. (J. H. Winslow's), liver and white bitch, 3yrs. (Lad of Bow—Bloomer).

ARTHUR (Chas. Heath's), liver and white dog, 5yrs. (Graphic—Meally).
SPORT II. (S. Murray Mitchell's), lemon and white dog, 6yrs. (Sport—Daisie).

GORDON SETTERS.

FLASH (B. Frank Hall's), black and tan dog, 6yrs.

PRINCESS FLORENCE ARRIVES.

AFTER many fruitless efforts to purchase her, the great Princess Florence has at last fallen into the hands of an American, not however until her previous owner, Mr. Hedley Chapman, once owner of her paternal and maternal grand sire, Plinlimmon, had repeatedly refused munificent offers from Mr. Diffenderfer and several other well-known St. Bernard enthusiasts on this side. Her purchaser, as has already been announced, was Mr. W. C. Reick, proprietor of the New York St. Bernard Kennels.

She arrived on the Aurania last Sunday under the special care of her owner's sister, Mrs. Buckley, who curtailed her trip in Scotland, in order to have Princess Florence's companionship. Nor did the latter appear to have suffered under the change of so fair a custodian, for judging from her robust appearance she had evidently received that tender attention which only woman is capable of administering. She looked the picture of health, and but for having lost most of her coat would have been fit to show in the keenest competition, if ever such a marvelous bitch can experience competition from one of her own sex. Her head, which has all the sweetness of expression so characteristic with descendants of Plinlimmon, might to the hypercritical be shorter, but when the vastness of her body, the immensity of her bone and the unprecedented extent of her height is considered, it will be seen that her head is only in proportion to her other wonderful properties. Her neck is beautifully placed into shoulders of great power; her bone is enormous and would make that possessed by the majority of the sterner sex appear trivial, but it is not until one comes to her ribs and loin that her wonderful size reveals itself. In these properties she is phenomenal, and never has there been a dog to approach her in these respects. Her hind-quarters and carriage of stern are in keeping with her beautiful proportions, and being bred in as she is to Plinlimmon, her rich orange color, with correct white markings, are easily accounted for. The following measurements, when only a year old, speak for themselves:

	Inches.	Inches.
Nose to stop.....	4½	32
Stop to occiput.....	7	13
Occiput to tail.....	43	9
Skull.....	27½	31½
Depth below eyes.....	17½	189
Chest.....	39	

To further emphasize this bitch's great size, it may be not out of place to refer to Mr. Reick's impression when he went to Mr. Chapman's kennels to look at her. She was running about with Sir Hereward and Bessie III., and directly Mr. Reick saw her he said to the keeper, "What an enormous dog Sir Hereward is!" "That's not Sir Hereward, it's Princess Florence," was the response. The answer determined her destiny, and from that moment the owner of her sire resolved to have her. The conditions of her sale were to be kept strictly private by Mr. Chapman's request, but that they were in the neighborhood of \$5,000 I am in a position to state.

Princess Florence is a daughter of Prince Regent, by Plinlimmon, and Lady Ida by Plinlimmon; Lady Ida being out of Lady Eva, by Barry. She was born Sept. 27, 1888, and bred by C. Smith. Her winnings are (for the only times she was exhibited) five first and specials, including 100 guinea cup for best bitch in show, St. Bernard Club show, Windsor, 1888, Rev. A. Carter, judge. Four first and specials, Kennel Club show, Olympia, S. C. Norris-Elve, judge. Four first and specials, Birkenhead, 1889, S. W. Smith, judge. Six first and specials, including gold medal for best bitch in show, Scottish Kennel Club, Edinburgh, 1889, S. W. Smith, judge.

Besides purchasing Princess Florence, Mr. Reick could not resist the temptation of buying a young smooth dog named Keeper, Jr., by Keeper from Surprise, by Guide, who is due to arrive to-day. He has also bought Refuge II, who is a son of Plinlimmon, and Recluse (dam of Lord and Lady Melrose). The latter sails next week from England.

BRITTLÉ.

THE GERMAN DOG (GREAT DANE).

Editor Forest and Stream;

At their last meeting, in Frankfurt on the Main, May 30, 1891, the Zwingerverband der Züchter von Luxushunden und Fox-terriers, commissioned by the Court of Delegates of the German Kennel Club, revised and laid down as new principles, the rules and regulations how to judge by points the dogs in the German bench shows.

As an importer and breeder of the "German dog" (and being a member of the above named club and also of the Deutsche Dogge Club), I accepted the order to distribute in this country the book of new rules, and submit hereby to all who are interested in the German dog (great Dane) the following description of the same:

1. General Appearance.—The German dog (great Dane) combines in his whole appearance, height, strength and elegance, more than any other species of dogs. He has nothing of the plumpness and heavy form of the English mastiff, nor of the slender and frail figure of the greyhound,

but stands between these two extremes. The main feature about him is his great size and weight and yet so genteel and elegant, his far-reaching (wide) step, proud carriage, head and neck high, the tail, in its natural position, hanging downward, when excited, level with his back with a slight upward curve at the end.

2. Head.—His head is of medium length, and rather high and compressed on the sides, but not broad and flat appearing. The forehead, seen from the side, shows a prominent curve leading to the muzzle and running almost parallel with the nose backward, or showing a very slight elevation. Looking at the head from the front, the forehead should not be much broader than the well-developed muzzle itself. The muscles of the jaws should not be too much developed. The general appearance of the head should be striking and sharp cut at all points. Nose large. The back of the muzzle straight or very slightly curved. Lips (or flews) vertical and blunt in front, overlapping only a trifle, but with a decided fold at the end. The lower jaw neither projecting nor receding. Eyes of medium size, round, with a sharp expression, the eyebrows well developed. Ears well set and not too wide apart. When clipped, pointed and standing upright.

3. Neck and Shoulders.—The neck long, powerful and slightly curved and well developed, and tapering from the breast to head, showing no loose flesh or wrinkles. Shoulders long and slanting.

4. Breast.—Well developed, but not too broad. Ribs well bent and deep in front, almost touching the elbows.

5. Body.—The back of medium length, the flanks slightly curved, the back part (stern) short and slightly tapering, and forming a beautiful line with the tail. Looking down on the dog, the broad back must form one line with the well-bent ribs. The loins should be well developed and the muscles on the upper part of the leg very prominent. The muscles of the abdomen well drawn up toward the hind-

MR. W. C. REICK'S ST. BERNARD PRINCESS FLORENCE.

legs and forming a beautiful curved line with the bottom of the breast.

6. Tail.—Of medium length and only reaching a trifle below the hocks, broad at the start and tapering to a ratlike tail; but never, even when excited, carried high above the back, nor should it curl.

7. The Forelegs.—The elbows well set; that is, forming a right angle if possible with the shoulder blades, and neither inward or outward bent. The upper arms muscular, limbs strong; seen from the front, they appear slightly bent, on account of the strong developed muscles; seen from the sides, they are perfectly straight down to the foot.

8. The Hindlegs.—The buttocks muscular, the lower shanks long and strong, standing oblique to the short feet.

9. Feet.—Almost round, neither inward nor outward turned. Toes well curved and closed, nails very strong and well curved. Dew claws are not a blemish, but are not desired.

10. Coat.—The texture very short and thick, smooth, and on the bottom part of the tail not very much longer.

11. Color.—A. Brindle colored dogs. Prime color from a very light to a deep red yellow, always showing black or dark stripes. B. Dogs of a plain color, as fawn, gray in different tints, either of one color or with a darker shade on the muzzle, eyes and back; also either black or white. The nose of the brindle-colored or plain-colored dogs (with the exception of the white-colored ones) is always black, eyes and nails dark. White spots not desirable. The gray-colored dogs show sometimes light but never glassy-looking eyes. C. Spotted dogs. The ground color white with irregular spots, but these well divided over the body. Black or gray spots preferred. Other colors than above mentioned are not so desirable. On white dogs glassy or light-colored eyes, as well as flesh-colored and spotted muzzles, also light-colored nails, are not to be considered a blemish.

12. Height.—At the shoulder the dog should not be below 30in. (75 cm.), possibly 32in. (80 cm.). That of a bitch not below 28in. (70 cm.), possibly 30in. (75 cm.).

DETROIT, Mich.	DR. NICOLAI.

GOING TO CALIFORNIA.—A person can take a seat in a palace car at Dearborn Station any afternoon and go over the Atchison, Topeka and Santa Fé Railroad to San Francisco, Los Angeles or San Diego without changing cars. The fast express on this line makes at least twenty-four hours quicker time to Los Angeles than any other line, and in fact the Santa Fé is the only thoroughly comfortable route to take. The office is at No. 212 Clark street, Chicago.—Adv.

DOG CHAT.

NO one will be found to gainsay the fact that Messrs N. Q. Pope and Jas. Herbert Watson show much enthusiasm and pluck in sending their dogs almost across the continent to course the festive jack on his native heath. At the same time their enterprise should be tempered with wisdom. No one familiar with greyhounds could expect to gain a decisive victory over seasoned dogs, and dogs accustomed to the air and country of Great Bend with greyhounds that only arrived there a day or two before the meeting, and besides, as was rumored, never having seen a jack rabbit. If our coursing men wish to win honors in the West they must send the dogs out in August, and so allow them to become thoroughly acclimated and have a chance to harden up and have an occasional brush with the game. All this we pointed out last year, but the suggestion seems to fall on rocky soil. Royal Crest, Mr. Watson's new purchase from England, seems to be a real climber to make the judge, Mr. Grace, so enthusiastic over him, and Mr. Watson must be congratulated upon the acquisition, for this dog ran under very adverse circumstances, both as to condition and the severe accident to his head that befel him in encountering the wire fencing. If Mr. Watson will have this dog properly trained he may yet hope to bring some of the Great Bend trophies far enough east to be exhibited to his fellow members in E. C. C. and N. G. C.

To show the increasing interest our dailies are taking in kennel matters the New York Herald intends to donate several cups as specials at the next W. K. C. show. It has not been decided yet how they will be placed, but it is certain that St. Bernards will get one of them.

We are sorry that the report of the Cincinnati show at Carthage arrived too late for publication last week, and as other papers had already mentioned the show more or less extensively, the time had passed for its publication. That the show was a success is due in great measure to the exertions of Mr. Al. G. Eberhart, the well known pug breeder, for interesting his personal friends in the matter. He worked up a good show, and that the Humane Society of Ohio appreciate his endeavors the following letter will prove: [Copy.] "Mr. Al. G. Eberhart, Dear Sir: At a meeting of the fair commissioners, held on the 21st inst., a resolution of thanks to you for valuable services before and during the fair was unanimously adopted, and the undersigned directed to forward same to you with the best wishes of your fellow commissioners. Respectfully, L. BARNEY, Sec'y Ohio Humane Society."

To kill time in India the army officers and civilians have "invented" or revived many peculiar sports. The Gymkhana at Secunderabad is a novelty and shows the dogs ahead again. We are told in the *Asian* that the chief event of the evening was the Noah's Ark Stakes, a distance handicap for all animals. About forty went to the post and two dogs ran a dead heat. The field comprised ten elephants, a panther, a bear, a bandicoot, a lizard, a hen, a parrot and several sheep, pigs, goats, bullocks and mules.

Among the new announcements in our ad. columns are those of greyhounds by Dr. Van Hummel, pointers by Chas. Garrett and W. H. Hyland, setters by J. W. McCrea, A. H. Brown, D. H. Halladay and Wm. H. Hyland, St. Bernards by F. B. Echlin and the Wyoming Kennels, mastiffs by Wm. Thom, and beagles by A. C. Krueger.

Is it not a remarkable thing that a man should sue another for \$5,000 for a dog bite on his left hand? says the New York Sun. This shows the advance of civilization, but does it not also show how civilization, as it advances its enchantments, also enhances the dangers of living? What was a dog's bite a few years ago? Nothing that one sporting man would speak of to another, nothing that any man would ask damages for, unless his right arm were horribly injured or his face painfully deformed. Not long ago a man was bitten by a dog on his left hand. He has learned from newspapers the horrors and infinite possibilities of hydrophobia; his life has become in consequence a nightmare; he never looks at water without a shudder; he lives in a purgatory that leads to hell. Why should he not be recompensed for his mental sufferings? Civilization brings comfort, but it also brings dread to those who know too much. Why should the susceptible imagination of the man who was bitten receive so great a prize, when the man who ignorantly owned the dog was, perhaps, so innocent and such a simple-minded lover of dogs? A question is asked of serious import. Why should a peaceable man now be punished more for the ownership of a dog than he would have been fifty years ago? It is a question as difficult to answer as it is to evade.

Arriving at Vincennes, Ind., midday last Sunday from New York, on our way to the United States field trials, we found there was no train for Bicknell till the next morning; so as the day was typical of Indian summer weather, we secured a team and drove the 16 miles to Bicknell through a very fine farming country. Midway we passed a thrifty looking farmhouse where over the front gate was a large board on which in large letters was painted: "Bull pup for sale." On investigating, with visions of a possible "dark horse," we found it a fair sample of the dog yept "Boston Terrier," and we thought as we drove on that even in this out-of-the-way district they evidently had a better idea of its true nomenclature than the citizen of the "city of culture."

Everybody says that the FOREST AND STREAM had the only report of the Great Bend meet. No other paper was "in it."

A touching incident is described by the Times (England) correspondent in his story of the decisive battle of the recent Chilean war: "On entering one of the houses, under one of the two miserable beds in this place lay a large black Newfoundland dog. I wondered that it lay so quiet amid all the stir. Then I saw it was dead. It had been shot on the field, and crept into the ranch and curling itself in a corner beneath the bed had thus died. In another corner lay another small terrier, dead from a bullet wound; and just outside the hut, beside a soldier who had been shot through the forehead, lay another dog. In its delirium it had evidently mistaken the dead man for its master, and with the pathos of animal instinct had curled itself under his shoulder and died beside him."

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Nov. 26.—All Day Shoot at Live Birds, Thanksgiving Day. Boiling Springs Gun Club, Rutherford, N. J. Open to all.
Nov. 26.—Cana-Joharie, N. Y. Gun Club Tournament, Thanksgiving Day; live and clay birds; open to all. T. C. Pegnim, Secy.
Nov. 26.—South Side Gun Club Tournament, at South Norwalk, Conn. B. H. Fox.

1892.

June 13.—New York State Sportsmen's Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

HIGHLAND GUN CLUB.

DES MOINES, Iowa, Oct. 24.—The second annual tournament of the Highland Gun Club commenced Oct. 20. The weather was fine but the attendance was not as large as was expected, owing to the fact that a number of sportsmen are game shooting at this season of the year. The shooting was from three screened traps at targets and five ground traps on live birds. Among the visitors were: Chas. Grim, of Clear Lake; S. S. Sessions and H. Durant, of Algonquin; A. R. Elliott and Mr. Bohney, of Kansas City; Chas. Strawn, of Jacksonville, Fla.; J. B. Smith, of Omaha; Dr. Porterfield, of Atlantic Dr. Danforth, of Maryland and Mowry, of Osceola; Mr. Powell, of Ottumwa; N. R. Crosby, of O'Fallon; A. Tucker, of Parker gun fame; Geo. Christianson, of Randall; John Georgeson, of Stony City. Owing to business matters Mr. J. G. Smith, an honorary member of the Highland Gun Club, was unable to attend, and his absence was regretted very much by all, for Uncle John, as the boys call him, is a prime favorite and much liked by all lovers of trap and field shooting who have the pleasure of his acquaintance. On Monday, Oct. 20, Messrs. Bohney and Elliott, of Kansas City, shot two team matches with Messrs. Selby and Budd, of Des Moines, for \$50 a side in each match. Elliott and Bohney won one and Budd and Selby the other, so honors rest equal so far. A number of the boys remained over Friday and a team shoot for birds and supper was gotten up. Ties divided as follows:

First day, Oct. 20.—Shoot No. 1, 9 single targets, entrance \$1.50:
Elliott.....10101011-6 Durant.....10111110-7
Grim.....10110111-7 Hicks.....10101011-5
Bohney.....11111111-9 Georgeson.....11111110-8
Crosby.....11111111-9 Strawn.....11111110-8
Budd.....11111111-9 Tucker.....10101011-6

No. 2, 12 single targets, entrance \$2:
Bohney.....00110111-9 Crosby.....11111111-12
Elliott.....11111110-11 Strawn.....11111110-11
Hicks.....10101011-9 Tucker.....10101011-10
Budd.....11111111-12 Georgeson.....11111110-11
Grim.....11111111-11

No. 3, 9 singles and 4 pairs targets, entrance \$2:
Bohney.....11111111-10 Tucker.....11111111-10-12
Elliott.....11111111-11 Hicks.....10111111-11-11-12
Grim.....11111111-11-10-13 Budd.....11111111-10-11-14
Durant.....10110111-10-11-11 Georgeson.....01111111-09-10-11-9
Strawn.....01011110-10-10-11 Crosby.....01111111-11-10-13

No. 4, 15 singles, entrance \$2:
Bohney.....111111101111-13 Strawn.....111111111111-15
Elliott.....11111111-13 Tucker.....111111111001-11
Crosby.....10101111-11-11-13 Budd.....111111111111-14
Grim.....111111111111-14 Georgeson.....111111111111-14
Smith.....110101000111-10 Budd.....111111111111-15

No. 5, 5 pairs targets, entrance \$1.25:
Elliott.....19-10-11-10-11-6
Crosby.....11-10-11-10-11-8
Bohney.....11-10-11-10-11-8
Budd.....11-11-11-11-10-10
Grim.....11-10-11-11-10-8

No. 6, 8 live birds, entrance \$5:
Grim.....11110111-7
Budd.....11110111-7
Bohney.....11110111-7
Strawn.....11110111-7
Elliott.....11110111-7
Crosby.....11110111-7
Tucker.....11110111-7
Georgeson.....11110111-7

No. 7, 9 singles, unknown traps, entrance \$1.50:
Bohney.....11110111-6 Durant.....01111111-8
Elliott.....01011111-6 Crosby.....11111010-7
Strawn.....01110111-6 Hicks.....11111010-8
Smith.....011111-7 Georgeson.....10110000-3
Grim.....11110111-7 Tucker.....01011111-7

Extra No. 1, 12 targets, entrance \$1: Georgeson 12, Grim 9, Crosby 9, Hicks 11, Budd 12, Georgeson won.
Extra No. 2, 12 singles, unknown traps, entrance \$1: Grim 12, Elliott 8, Bohney 11, Georgeson 10, Strawn 7, Budd 11, Selby 9, Searight 10, Smith 10.

Extra No. 3, 10 live birds, entrance \$8:
Elliott.....211121201-9 Smith.....122222202-8
Grim.....21011111-9 Sanford.....21221211-10
Budd.....122211012-9 Searight.....021222120-8
Bohney.....221122201-9 Canine.....120012101-7
Strawn.....000100012-6

Extra No. 4, 12 singles, entrance \$2: Allentown 12, Strawn 12, Grim 10, Bohney 10, Ray 11, Dauthett 9, Smith 9, Tucker 12, Burnett 10, Byers 8, Searight 8, Kirsner 11, Sanford 11, Georgeson 8, Budd 12, Langley 8, Hicks 9, Kirsner 11, Sanford 11, Kirsner 14, Georgeson 12, Crosby 13, Burnett 11, Sanford 14, Dauthett 9, Hicks 9, Byers 10, Searight 8.

Extra No. 5, 9 singles and 3 pairs: Bohney 10, Budd 13, Mowry 8, Strawn 13, McFarland 8, Grim 11, Tucker 13, Searight 11, Kirsner 14, Georgeson 12, Crosby 13, Burnett 11, Sanford 14, Dauthett 9, Hicks 9, Byers 10, Searight 8.

Extra No. 6, 12 singles, entrance \$2: Grim 12, Budd 12, Strawn 10, Georgeson 8, Crosby 11, Bohney 3, Perkins 6, Searight 9, McFarland 4, Kirsner 8, Sanford 10, Mowry 0.

Second day, Oct. 21.—No. 8, 12 singles, entrance \$2:
Grim.....11111111-12 Smith.....0111110111-9
Sessions.....1101010111-9 Hicks.....1111101110-10
Mowry.....0111010111-9 Budd.....11111111-12
Budd.....11111111-12 Dauthett.....101011011-9
Durant.....0101101011-9 Strawn.....01111111-11

CLEVELAND, O., Oct. 28.—There was a great shoot at the traps of the Cleveland Gun Club this afternoon, and in the face of a gale that blew the targets in all conceivable directions except on a straight line, the work was very creditable. The most exciting contest resulted after the regular shoot, when Upon and McNulty shot off their first place. For round after round the scores of both men were identical until it became so dark that it was next to impossible to see the targets at all. Upon finally won by a majority of just one out of thirty shot at. There were any quantity of unusual good shots made during the afternoon, and much more than ordinary interest was manifested. Five traps were used. Upon won the first badge and Andrews the second.

SAVANNAH TOURNAMENT.

THE ninth and last of the series of Inter-State tournaments took place on the grounds of the Chatham Gun Club, Savannah, Ga., Oct. 27, 28 and 29. The tournament was a pronounced success and all the shooters were highly pleased with the manner in which the meeting was conducted, so much so that the Chatham Gun Club has asked for another tournament next spring, though there was a shortage of \$175.50, which is the first shortage of any account that the association has been called upon to make up. The five representatives of five different members of the association present thought it a profitable investment, and it really was, as it is the first money that the association has given to the shooters. The Chatham Gun Club is the representative gun club of the South, a fact due mostly to the energetic efforts of its secretary, W. R. Curtis. The best shots of the club are John Ulmer, W. R. Curtis, Geo. Cope, H. B. Lemcke, Harry Palmer, and they can hold their own with any team of amateurs in the country. The Forest City Gun Club, of Savannah, has a number of good shots also, among whom are Chas. Westcott and John Rucker. Among the visiting shooters present were H. McMurchy, Neaf Appgar, Geo. Courtney, H. A. Pourse, Thos. Gaines, Alston and Anise of Atlanta, Ga.; Martin, of Bluffton, Ga., and Boykin, of Tallahassee, Fla. Herewith are the scores. The experts were Appgar, Courtney and McMurchy.

First Day, Oct. 27.

BISCAYNE BEY Y. C.—The new clubbook of the Biscayne Bay Y. C., a neat little volume, is now ready, and the active season of the club will soon begin. The membership is 23, with 22 yachts. The club has honored its members—Lieut. Henn, who will be in the coming winter in Florida, Baltimore, and on a cruise; mission all summer, is now advertised for charter during the winter, and Lieut. and Mrs. Henn will soon be in New York. The officers of the Biscayne Bay Y. C. are: Comd., R. M. Murrie; Vice-Comd., J. H. Brown; Secy., Kirk Munroe; Treas., W. H. Browne; Meas., Jean de Medonville.

YACHT RACING IN 1891.

III.—THE 70FT., 61FT. AND 53FT. CLASSES.

THE smallest and least important part of the season's racing is that covered by our table this week, the single-sticker yachts of the larger classes, over 46ft. l.w.l. The "big sloop" class, so-called, that was to have developed into a fine fleet of 90-footers, has dwindled away until only the smallest of the class, Puritan, is left. There is now no indication of its rehabilitation, save in the two remote agencies of a challenge for the America Cup, and that from a 60-foot vessel, the *Thetis*, as was the case in England as on this side. The racing of large yachts in Great Britain is in no better condition than in America, in fact but two yachts of over 65ft. l.w.l. are left in the regular racing class. One of these, *Valkyrie*, is of but 70ft. l.w.l., the other, *Iverna*, being 83ft. 6in. The other yachts over 60-rating, about 65ft. l.w.l., sail only in cruiser and handicap races.

Thus far there are no indications of new yachts over 40 or 60-rating, and it is very doubtful whether either *Iverna* or *Valkyrie* will fit out next season. With such a state of affairs in the home racing everything tending toward small tonnage, and with a tolerably clear, though tardy understanding of the new deed of gift, British yachtsmen are little likely to hurry in a challenge and build a 90ft. cutter. Even if such a thing should happen, the most that could be expected on this side would be the building of two or three new yachts, and possibly the change of Volunteer to her original rig; so far as any permanent establishment of a class of 10ft. sloops or cutters, it is as far distant as before the Puritan-Gosson races. This year even the 70ft. class has been little better than moribund, one or two yachts have followed the racing in a half-hearted way, but there has been no real life nor excitement in the class.

The sad death of Mrs. Iselin last fall, and the withdrawal of Titania's owner from racing, left the yacht laid up this season; and the rumors of her sale that were flying about at one time all proved false; she has been at City Island all summer in idleness. Shamrock's owner took up with the fashionable fad and did his racing in a new 46-footer, so she did nothing all the season, making but two starts. Katrina has only looked in at a few races, Bedouin and Huron attempted nothing more than to keep up with the fleet on the New York cruise, and Gracie, though making the most starts, did not begin her racing until the cruise, and then lost several runs through her unfortunate mishap in the Goelet cup race.

The opening race of the class, the Atlantic Y. C. regatta, found only Shamrock, who sailed over. Two days later Katrina appeared and gave Shamrock a handsome beating in the New York Y. C. regatta, in a breeze and rough water, but it must be said for the latter that her owner and part of her crew were on Nautilus, leaving Shamrock with a small crew. These two events comprised the sum total of the spring racing, and the class was not heard of again until the rendezvous of the fleet at Glen Cove. Shamrock never makes the cruise, but the others were on hand. Gracie, Bedouin, Katrina and Huron, and all started on the first run. Katrina did some notable work on the long passage, leading the fleet, and easily distancing her class, Bedouin beating Gracie by over an hour. Only Katrina and Gracie took part in the second run, the former leading into Newport by 25m.

When the Goelet cup for sloops and cutters was first given, in 1882, it was practically for the 70ft. class, but with the advent of Puritan and Priscilla in 1885 the original beneficiaries were obliged to take a very unimportant place in the procession around Hen and Chickens; and only once in six years has a 70-footer won the annual cup, Titania taking it in 1889, neither Volunteer nor Puritan starting. With the large class off the cruise for an indefinite time, it was to be expected that this year there would be no racing all their own way, there being but one class for each rig. It is gratifying, however, since a new yacht has been added to the class, and while it has stood still, other classes have come forward, and the best of the 46-footers, new this year, have proved themselves able to sail with the 70-footers at any time with a fair chance of success, and to beat them handsily when the conditions are favorable. The first was that on the morning of Aug. 7, with a fair bright day, a smooth sea and a moderate breeze, no less than five of the 46-footers, headed by Gloriana, were at the starting line with one solitary 70-footer, Gracie. Katrina was entered and a long wait was made while she beat out from Newport to the start off Brenton's Reef lightship, but when finally there she announced that she had no intention to start. As events proved, this was a wise move on her part, as she could hardly have saved her time from Gloriana; in fact, she had little to gain and much to lose in such a race.

As for the lone starter, Gracie she was never in the race with the smaller boats from the gun, being at least 7 minutes astern of Gloriana at the windward mark, 12½ miles from the start; where the notable foul with Volunteer took place, the two on the same, starboard tack, pinching up to weather the markboat, Volunteer to windward. The details of this much disputed case, witnessed

by several hundred persons, have been published at length before, and need not be now recounted. Volunteer, though badly damaged, was able to continue the race, and finally won the schooner cup. Gracie was obliged to withdraw, losing her spreaders and some gear, and the establishment of a most important precedent is concerned, it must be confessed that the collision was a failure. The question of facts and positions was hardly considered, and little of the large amount of evidence at hand, including a number of instantaneous photos of various phases of the collision, was called for. The final decision of the regatta committee was mainly technical, the protest of Gracie's owner being thrown out on account of the obviously faulty nature of two of the most important claims. Without attempting to determine the probable result of a thorough inquiry and weighing of evidence, it is safe to say at least that Gracie's own friends were her worst enemies; and that if they had confined themselves solely to Article 14 of the rule, and to the production of evidence that Gracie was in a position to have weathered the mark without tacking had Volunteer been out of the way, they would have presented a very strong case instead of a very weak one. As it is, no official decision has been made as to the rights of a yacht in the position claimed by Gracie; and the question is as far from an authoritative settlement as when first discussed in our columns a year ago.

This race kept Gracie at Newport for a couple of days, and she missed the Vineyard Haven race. Katrina went no farther east than Newport, but Bedouin and Huron held with the fleet, Huron and Thetis sailing a private match for \$250 per side on the run to Vineyard Haven, Huron winning. The special race at Vineyard Haven was a very dull affair for the 70ft. class, Bedouin and Huron being far astern of the 46-footers all day. Next day Gracie sailed alone on the run to New London, and the following day the 46-footers sailed to New Bedford. A few days later Huron sailed a private match with the schooner Marguerite and was beaten, which ended the class for the year.

The sum of its performances and prizes is a small one, but as yet there is no indication that the class will do better next year. The present boats are clearly not up to the standard of the 45ft. class, and while they may still find some sport among themselves in the local cruises, they are clearly not up to the standard of a popular one as long as its members sail only with or against the much smaller size. No new boats are yet talked of, but some are needed before the 70ft. class can hope to be what it might, the principal single-sticker racing class.

The 61ft. class this year has consisted of but one boat, the old sloop Hildegarde, built in 1876 as the Niantic and rechristened Hildegarde by Mr. Herman Oelrichs when he purchased her from her original owner.

In 1888 she was altered to the Americanized cutter rig by Mr. Burgess, and this past winter she had a lead keel added, thus placing her in the ranks of the "compromises." Gracie went through a similar process in 1886 and '89, and Fanny was also remodelled last winter, so that the once representative American centerboard sloop has entirely disappeared. So far as can be judged from the rather solitary performances of Hildegarde this season, with no close competition in her class, she has been improved by both alterations. She sailed alone in the early regattas, finally meeting Mischief on the cruise and beating the latter four out of the five times they met, her best performance during the season being on the run to New Bedford. Mischief's superiority over the old Hildegarde was by no means new, years ago, and cannot be considered as disproved by the recent race. Gracie, however, has been in the runs of the cruise, with no pretensions to being in racing form. The new keel Wayward made a couple of starts but scored no wins.

The 53ft. class is much as it has been for the past four seasons, with but three boats, Clara, Cinderella and Anaconda. The only change in the class is the transfer of Captain John Barr from the tiller of Clara to the wheel of Cinderella. The latter yacht was not in commission until late, and only Clara and Anaconda started in the first races. Clara was sailed by a Corinthian, with a scratch crew, and in fact has been kept at work cruising through the entire season, but she managed to beat Anaconda in two races, the Atlantic and Marine and Field regattas. After her experience of the previous year in the regatta of the New Rochelle Y. C. she did not enter this season, Anaconda sailing over alone and then giving up all racing.

Cinderella and Clara came together at the opening of the cruise, but just after the preparatory gun Clara broke a chainplate, and did not attempt to start in the long race. After some temporary repairs she jogged on, finally catching and passing Cinderella when the latter struck the rough water, and making literally a most brilliant finish by sailing into New London harbor a long way ahead of Cinderella with her whole after cabin ablaze. She had not been timed at the start her performance counted her nothing, but to all intents and purposes the credit for the first run is hers. After repairing the damage from fire and getting a new chainplate on the "lay day" at New London, she started in the second run and won easily, while in the drifting match which

made up the third run, to Vineyard Haven, she was still ahead, though but a few seconds.

In the special race at the Vineyard, Cinderella not only beat Clara by some 16m., but won from the larger Hildegarde, the two classes sailing as one, the strong wind and smooth water giving her a fair chance. Next day on the run to New Bedford, Cinderella again won by so large a margin, 20m., as to indicate a fluke somewhere, the wind being light with a very strong head tide, and the whole fleet being scattered over the breadth of Vineyard Sound. On the last run, back to Newport, Cinderella started in good shape with topmast hoisted, a very wise move as events proved, the wind being strong and the sea fairly heavy, but she was unable to beat Clara, there being over 7m. between them at Brenton's Reef Lightship. This ended the racing for the year, though Cinderella raced with Sayonara and Gossoon in the Eastern cruise, and Clara started once in September in a private match with the schooner Viator, breaking down before the finish.

As far as Cinderella and Clara are concerned, the strong interest which cruising qualities racing has for a great extent disappeared. Cinderella made the cruise this year with old sails and by no means in first-class racing form, while Clara through the season has been used more for cruising than for racing, though starting in most of the regular races. Neither has made even a fair showing besides the 46ft. class, being badly outbuilt.

Just now the usual rumors of new boats for the class are flying all over the place, and the phantom 53 from Fire's yard for Admiral Tweed is likely to be mended very soon by a picked crew from the daily papers and sent on a winter cruise, but the only order yet placed is that of Mr. Bullock for a keel boat, the designs for which have already been completed by Mr. Gardner, though no contract has been made for the building. If built she will be hardly a full powered racer, the comfort of her owner and general cruising qualities being the first to be considered; at the same time, with good composite construction, she should be well ahead of the existing boats of the class. A 53ft. boat of moderate power will probably give more for the money in the way of comfortable accommodation, cruising qualities and utility for racing than can be combined on any other length. We are informed that in the runs of the New York Y. C. cruise a prize will be given for each run, and not for the average, as was done last year. This will make a change in the prizes in our list of last week, but not in the places. The table this week is made up on the basis of a first prize for each run in which two or more started. Next week we shall take up the 46ft. class.

"SMALL YACHTS," by C. P. Kunhardt, was a handsome and most useful manual when first published by FOREST AND STREAM, but the new edition as enlarged is a library of knowledge for those who sail canoes, catboats or sloops. With its eighty-seven plates and numerous cuts in the text, its advice how to build, launch, rig and sail various sorts of small sailing craft, and its careful descriptions of certain types of yachts, the folio is a yachtsman's friend indeed.—*New York Times*.

IO—NEEDLE.—We are informed that the prize won by Io in her race with Needle was given by Mr. W. E. Iselin, of New Rochelle. Io is 23ft. l.w.l., 8ft. beam and 5ft. 10 in. draft. We understand that Io was built from the designs of the cutter Witch, published in the FOREST AND STREAM of March 17, 1887, in which case her sail area is probably about 1,100ft., and corrected length about 28ft., compared with 615ft. sail area and 25ft. corrected length of Needle.

CLARISSA.—The 20-rater Clarissa, designed by her owner, Mr. E. D. McGilwaine, and built in 1880, parted her cable during a gale on Oct. 14, in Ballycastle Harbor, Ireland, and was totally wrecked against the pier.

YACHT SKIPPERS.—The New York Herald has recently begun a series of articles on the leading yacht sailing masters, having published thus far portraits and biographies of Capt. Hansen, of the Quikstep; Capt. Banks, of the Water Witch, and Capt. Dand, of the Stranger.

NORNA, sloop, Com. E. R. Coleman, Philadelphia Y. C., was run into by a brick sloop while at anchor in Gowanus Bay, on Oct. 26, and sustained some damage.

THISTLE-VENTURA.—H. D. Tiffany has sold the Ventura, of Bronx River origin, to Col. Austen, and has purchased the sloop Thistle.

NATYRICH, steam yacht, built this year, has been sold by Vice-Com. Morris to Capt. Y. C., to Henry Whitman, and will be replaced by a larger yacht.

SAY WHEN, steam yacht, now owned by W. C. White, of Cleveland, has just received a Roberts safety watertube boiler.

VETO, steam yacht, Mr. George Law, will be out in half and lengthened 13ft.

Canoeing.

THE RUDDER IN PADDLING RACES.—The rudder and its appropriate foot-steering gear form such an important auxiliary in paddling that it seems strange that it has been little used by the leading racing men. Of course where a paddler stands on the gunwale of his canoe, or has both feet laced in shoes which are screwed to the floor of the boat, or even takes the kneeling position of MacKendrick or Muntz, all use of footgear and rudder is out of the question. These methods, however, are of comparatively recent introduction, and as late as 1887 the majority of paddlers at the A. C. A. meet used the sitting position, with feet extended before them. In fact, the first man to adopt the standing position was Mr. Johnson, who stood in his canoe in the Class I. paddling race at Lake George in 1888. Even when using the sitting position, the best paddlers, such as Rice, Johnson and Leys, used no rudder; the advantage of a rigid foot brace, in some cases with the feet strapped fast, being considered greater than the gain through a straighter course.

However true this may be in perfectly smooth water, or even before or against a light wind, with a little sea and a moderate quartering breeze we have never doubted that a good rudder would more than pay, by virtue of the shorter course and more especially by the saving of power by the division of strokes on each side, for the loss through drag or lessened rigidity of the foot rest. Of late the sitting position has been abandoned entirely by the Canadians, who are the recognized leaders in paddling, the men standing as nearly erect as possible, or kneeling on one knee, with the other foot before them, and there is every reason to believe that these positions permit of a longer stroke, freer movement, and the expenditure of more power, and to better advantage, than in the old sitting position. At the same time it is no easy matter to steer the canoe at any time, and with a quartering wind and sea she is apt to go pretty much where she pleases, regardless both of the course and the will of her owner.

Those who cared to do so, have always been at liberty, as a matter of course, to use their rudders in the paddling races in the past, and no comment has been made. This year, however, both the tandem and club four races were run off in rough water, and won, as it happened, by a canoe using a rudder. This fact gave rise to comment on the part of some of the paddling men, and though no protest was made, there was a good deal of objection to the use of the rudder, the result being seen in the recommendation of the regatta committee, published last week, that the rudder be prohibited in all paddling races.

The sole argument that we have heard against the use of the rudder is that paddling is not only a matter of propelling the canoe, but of steering it as well, and that where a rudder is used there can be no test of skill in steering. This may be perfectly true as applied to one man paddling with a single blade; the entire work of steering is done, not by extra muscle or by an added number of strokes, but through the adroit handling of the paddle, by which the boat is directed by the same movement by which she is propelled. In double-blade paddling, however, the question of skill in steering hardly comes in at all; it is a matter of so many more strokes on one side or the other, and the steering is totally different from the case of a single blade. As the latter has gone out entirely for racing, the superiority of the double blade for speed being long since conceded, the whole argument based on the question of skill falls to the ground.

The facts are briefly, that the man who stands or kneels in his canoe can probably propel her faster through the water than the man who sits down; at the same time, the steering of a canoe by means of a double blade only, involves a longer and indirect course and a serious waste of power from the necessity of doing much of the work on one side of the boat, instead of on each side in alternation. If a man is willing to take a position which of itself is considered to handicap him in the matter of speed, we can see no reason why he should not be allowed to avail himself of the legitimate advantages which accompany the position.

If the use of the rudder is prohibited because it does away with all tests of skill in steering, then it would be perfectly proper to forbid a man to sit down in his canoe in a paddling race, as such a position is no test of his skill in balancing. The rudder is recognized as a legitimate appliance in all varieties of racing craft, especially in rowing boats, and we know of no precedent for its prohibition in canoe racing.

THE LIMIT OF WEIGHT FOR PADDLING CANOES.—The limitation of 40lbs. for the minimum weight of paddling canoes was inserted in the A. C. A. rules in the fall of 1889, and if we are not mistaken was generally approved by the paddling men. The Canadians in particular were desirous of a weight limit which would admit to all races held under the A. C. A. rules the better class of open Canadian service canoes, at that time generally used for paddling races in Canadian regattas, and though these canoes weighed nearer 50 than 40lbs., the latter limit was then considered a safe and desirable one both for the A. C. A. paddling as well as for the regulation of local regattas. Since that time the A. C. A. paddling trophy has done much to stimulate racing and improve the canoes from a racing standpoint, and now there are a number of racing men who desire the abolition of all weight limits in the paddling class. So far as the main purpose of the 40lb. limit

is concerned, the necessity for it no longer exists, the 40lb. canoes at the meet this year were each of them far too fast for the open service canoe, and the entry of one of the former boats would kill the paddling class at any ordinary regatta.

It is claimed by the opponents of the present limit that while it restricts the improvement of the "trophy racer," to coin a term, it at the same time does nothing for general paddling, and so should be abolished. It is simply the old story that is found in all racing, the boats have reached a point of development where the racing craft must be strictly separated from the service boat that formerly did most of the racing and much other work besides. The paddling racers are now few in number, probably not more than a dozen have yet been built, while there are good open canoes by the thousand which have hitherto taken part in the paddling events of all clubs, and especially in Canada. The former class mns; now be recognized and encouraged, as the trophy race depends on it, and at the same time the old class in which so much good racing has been done should not be wiped out by a few racers. There can be no objection to removing all limit of weight from one class, and at the same time placing a certain limit which shall reserve some races in club regattas, if not at the meets, for the open service canoes to which canoeing in general, as well as paddling racing in particular, owes so much.

REPRESENTATION AT THE ANNUAL MEETING.—Next week there will assemble at Albany a body of canoeists representing the largest and most important canoeing fraternity in the world, and including delegates from each section of the United States and Canada; the American Canoe Association recognizing no political boundaries. The work of this body is so important, and within certain limits is so largely national and not sectional, that it is especially desirable that each division should be represented. It has been the wise policy of the Association for some years to conduct its meetings publicly and to allow the greatest freedom in debate, all members of the Association, whether on the executive committee or not, being admitted to the meeting and allowed by courtesy to make suggestions or take part in the debates. The policy of the officers has always been to consult the general interests rather than to cater to local ones.

In order to do this successfully it is most essential that each division shall be fully represented at the meeting, and that the men who are present shall have ideas and opinions and not be afraid to express them; and to this end we would urge upon the division officers the necessity for securing in some way a good attendance from their respective divisions. The rule covering this matter is a very fair one, any member of the executive committee may appoint a member of his division to vote for him at a meeting of the committee, providing that no member or proxy shall have more than one vote.

The Northern Division has been specially lax in the matter of attendance at meetings; for two years, 1889 and 1890, it has been unrepresented at the November meeting, and has shown a general indifference to what was done there. This year in camp, though a number of members of the Division were present, not one brought a proxy for the meeting which is always held in camp, the nearest approach to it being one man who presented himself, saying that two members of the committee had asked him to represent them, though he had no written proxy from either. Of course it is quite a journey and often in a busy season, from Canada to New York, Albany or Boston, but there must be a few out of the many officers and members of the Northern Division who can make it, and probably other members of the Division who are temporarily in the States who could at least be present as proxies. It is not altogether fair to the other divisions for one to be absent entirely from the meeting, as with the best intentions it is not possible for the committee to comply with the wishes of any Division or section unless it is informed what those wishes may be. We hope to see this year a full representation, either by the regular officers or their proxies, from every Division of the Association.

THE RUDDER IN PADDLING RACES.

Editor Forest and Stream:

I would like to know of some good reason why one should not be allowed to carry a rudder in a paddling race if he is willing to handicap himself with its weight and drag?

I presume that the claim is made by the "straight" paddling man that there is no skill in paddling without a rudder, and with him who has a special paddling canoe it may be all right to go without one; but take a decked sailing canoe with a straight keel in a "following sea" and she will shoot from side to side in such a way that it is almost impossible to keep from fouling. I think we are handicapped enough now in paddling a sailing canoe in many races against a mere paddling shell, without depriving us of a necessary appendage. In a large paddling race at the A. C. A. with twenty to thirty starters, there would be less fouling if more of them were carried.

ALL AROUND.

THE RATHBUN CO.—A recent number of the *Northwestern Lumberman* contains a very interesting article on the Rathbun Co. and its works at Deseronto. Mr. F. S. Rathbun, one of the proprietors of this immense corporation, is an old canoeist, having been commodore of the A. C. A. in 1886.

ARTHUR BRENTANO.—Mr. Arthur Brentano, one of the 13 founders of the A. C. A. who were present at the first meeting, and one of the organizers of the Knickerbocker C. C., has recently returned to New York, after a residence of several years in Paris, as the head of Brentano's store there.

A. C. A. MEMBERSHIP.—Central Division: C. D. Martin, Rochester, N. Y.

THE PADDLE IN SAILING RACES.

Editor Forest and Stream:

It has been suggested to me by one of the members of the A. C. A. regatta committee that I state in print the facts relating to my use of the paddle and disqualification therefor in the record sailing race at the meet, and invite a discussion of the merits of the case.

As the action of the committee has been quite severely criticised I think the suggestion a good one, as some comments may help to improve the rule bearing on the subject, or at any rate give some idea of how it should be construed, as its meaning at present seems very vague and uncertain.

Rule XII, states: "The paddle shall not be used in sailing races, except for steering when the rudder is disabled, or for shoving off when aground, afoul of anything, or in extreme danger, as from a passing steamer or from a squall."

The question is, when is one in sufficient danger to justify its use?

The facts in my case were as follows: The record sailing race was one of the hardest races I have ever experienced, and the wind and sea was probably one of the worst that an Association race has ever been sailed in.

The first leg was a beat to windward, and as I rounded the buoy in the lead I let out my mizen sheet as I squared away for the run to the second buoy. As I did so I lost the sheet, which let the sail out far more than at right angles. In my efforts to regain the sheet a squall struck me when on the top of a wave, which yawed the canoe around suddenly and capsized her. I righted her, and then both sails billowed, and over she went on the other side. It was very hard work to right her this time, and as I did so she rolled over again on the other side. By this time I was completely tangled up in halliards and reef lines, and had I gone out of the canoe might have been in a serious predicament. On account of insufficient rubber packing, my deck hatches leaked, and by the time I righted her for the third time, which was very hard to do, the compartments were partly full and center of the canoe entirely so.

I then laid to and bailed out the cockpit, when I proceeded to get my sails in trim, particularly the mizen, which was badly tangled with the aforesaid sheet, so that I had to lower the sail to disentangle it.

While in this position the bow of the canoe fell off the wind and I was in danger of going over again, so took about six or eight backward strokes on the windward side to bring her head up again.

What else could I do? I could not get my sail up in time, as in that weather it took the canoe but a short time to determine what she would do next. And to meet her I resorted to the only thing that seemed possible to accomplish the desired end.

By the time I had sail on again the fleet was far ahead of me, but I continued in the race and worked my way to second place, which earned me a tie for second place on the record, with a protest against the other man.

No protest was made against me, and I felt so satisfied of my position that I did not report it; but the regatta committee took it up, though they did not see it, but simply heard some one say what I had done, and late that afternoon, without any warning, called me up and asked me for my evidence in the matter.

It was a hard thing to give a very clear version of the affair without thinking it over, for between the gybing of those booms and keeping on top of the canoe, things were happening so thick and fast that I was not clear in my own mind at the time. There was no claim that I improved my position by the use of the paddle, and the fact that nearly every one in the race either broke down or upset, and that I had never before in all my experience used a paddle in a sailing race would seem to me to be sufficient excuse, to say the least, for using it as I did.

I shall be glad to have my action criticised, especially by those who were in the race or saw it, as if I misinterpret the meaning of the rule I am ready to be convinced by practical racers; but if I was right there would be a good deal of satisfaction in knowing it, even at this late date; and while the past cannot be undone, it may help to give some one justice in the future.

NEWARK, N. J., Oct. 30.

GEORGE P. DOUGLAS.

TOLEDO C. C.—The Toledo C. C. is now in a flourishing condition, having paid off all its debt. Measures are now being taken to incorporate the club.

Answers to Correspondents.

N. G.—We do not know of a game preserve at Hicksville, Long Island.

E. C., Albany.—1. A rifle of small caliber made by any of the American makers. 2. See our advertising columns.

AN OLD SUBSCRIBER.—Would you kindly inform me if the cat commonly known in the northern New England States as the "coon cat," is a cross between a domestic cat and coon, or a distinct breed? Ans. It is not a cross between the cat and coon, but a distinct cat.

A. G. B., Holland, Mich.—While skinning a rabbit which I killed this morning I noticed a worm or grub about 1 in. long and 1/16 in. in diameter in the middle, between the skin and the flesh on the side of the neck. Color, brown. I have often been told of rabbits having "grubs," but this is the first I ever noticed. Would you kindly let me know the cause of it, and if it injures the flesh for food? Ans. The grub is the larva of the rabbit-hole fly (*Cuterebra cuniculi*); it does not injure the flesh of the rabbit for food, but bores through the skin, which it spoils, and completes its development in the ground. The fly deposits its eggs under the skin, usually on the neck. See *FOREST AND STREAM*, Vol. IX., 1877, p. 207.

L. M., Norwalk, Conn.—1. There is a firm in New York that makes tin cans by the name of Ginna & Co. Please give their address? 2. If a man gets out a patent, can another person make an improvement on the same article and get it patented if he has to use the first man's article to attach his improvement to? 3. Are all trout baskets made in France? 4. If there is any firm in the United States that makes trout baskets, please state their address? 5. Please state the address of a New York firm that makes cork floats? Ans. 1. No. 53 Beach street. 2. One may patent an improvement on a patented article, but may not use the original article, nor may his improvement be used by maker of original; each patent is separate. 3 and 4. Trout baskets are imported from France and Germany. 5. American Net and Twine Co., Fulton street, New York.

TO-MORROW

Possibly you are one of the few who are going to send for a copy of our Buyers Guide "to-morrow" or "some day." Of course our business will go on just the same, whether you do or not—when you are ready for us you will find us ready for you—but we do want to point out to you the fallacy, in these days of postage stamps, of depending upon to-morrow, the day that seldom comes, the day after never.

We like to deal with wide-awake, to-day people.

Montgomery Ward & Co., 111 to 116 Michigan Ave., Chicago

*"Our yesterday's to-morrow now is gone,
And still a new to-morrow does come on.
We by to-morrows draw out all our store,
Till the exhausted well can yield no more."*—Cowley.

CHARLES DALY

HAMMERLESS

SHOTGUN

WITH OR WITHOUT
AUTOMATIC SHELL EJECTORS.

Important Notice!

Instead of giving the dealer larger discounts we have decided to give the sportsmen the benefit of a reduction, and have concluded to make extraordinary low **Net Prices** on the **Charles Daly Guns**.

While making this reduction we might mention that the high standard of workmanship for which the Daly gun has always been renowned shall be retained. We have expert testimony that these guns are equal in workmanship to the celebrated Purdey guns, and far superior to all other so-called London makes, such as Greener, Scott and Westley Richards. An examination will soon convince the unprejudiced customer. They are more conscientiously made, more beautifully finished, handsomer in appearance, with shooting qualities unsurpassed, in fact far ahead of guns costing \$100 more.

Should you live in or near New York, we would invite you to call and examine our stock and be convinced. If you live anywhere else in the United States and your dealer has none in stock, insist upon his ordering one, or order one direct from us. **Send for Catalogue.**

A noted first-prize winner. (A.K.C.S.B. 19,173).

Young stock always on hand. Write for circular and prices.
If you mention this paper 5 per cent. discount will be allowed on all sales.

FOX-TERRIERS IN STUD.

Champion Baby Mixer.....\$15
Reckoner..... 15
Pitcher..... 25

Puppies for sale from these celebrated dogs out
of famous matrons.

HILLSIDE KENNELS,
LANCASTER, MASS.

Imported Fox Terrier (smooth)
PAINTER.
(E.K.C.S.B.) late "Ratan."

A grand dog, perfect terrier head (7 1/2 inches),
beautiful ears, capital bone, best of legs and feet,
short, strong back and grand, hard coat. Own
brother to Ch. Radiance, by Ch. Result—Lady
Ethel. Winner of eight firsts and two seconds in
England, beating Rational, Ebor Spendthrift,
Dudley Starcher, Sundown, Rifleman and other
well-known prize dogs. Secondals, Kingston, Ont.,
1891; 2d, Hamilton, 1891. Fee \$15.

PUPPIES FOR SALE.
H. NORTHWOOD, Martin's Ferry, Ohio.

St. Bernards at Stud.
1. Soggarth, immense rough-coat, the only son of
Lord Bute at stud in America. 2. Patrol, one of
our best smooths, fee \$35 each.
JOHN KEEVAN, 195 King st., Brooklyn, N. Y.

At Stud.—English greyhounds. Gem of the Season,
winner of over firsts and specials. Pious Pem-
broke, winner of over 20 firsts and specials; Dexter,
corded coat poodle. Pups from the above for sale.
GREYHOUND & POODLE KENNELS, Salem, Mass.

YORKSHIRE TOY TERRIER.
Champion Bradford Harry, described in
show reports as "best Yorkshire in America."
Pedigree and winnings free, photos 50c. A
limited number of his puppies for sale. P. H.
COOMBS, 1 Exchange Block, Bangor, Me.

THE FOX-TERRIER.

History and Description with

IRISH SETTERS.

SEMINOLE, (A. 20,088). Fee \$20.

ELEO, (A. 11,450). Fee \$15.

Extended pedigrees of any of the above on ap-
plication. Bitches entrusted to us receive the
best of care. Fine specimens of the above breeds
for sale at reasonable prices, including several
good stud dogs and brood bitches in whelp.

Young Stock Always on Hand.

SIR FREDERICK

(21,741) Champion Royalty—Olinda.

The very cream of all England's breeding; no
better bred English setter lives. Winner of 44
first prizes, seven seconds, seven silver cups and
two gold medals. Extended pedigree with litho-
graph, by mail. Imported August 8, 1891.

Fee \$50.

DAD WILSON'S BOY

(12,880).

Will give you the much coveted Gladstone
Drum and Count Noble blood. Swift as the wind,
pretty as a picture, full of bird sense. Fee \$25.

G. O. SMITH,
WHEELING, W. VA.

ST. BERNARDS.

AT STUD.

VINDEX.

This grand young dog is the best son of cham-
pion Otho out of Lackme, daughter of champion
Merchant Prince. He is 33in. high, of a rich
orange color with complete collar and perfect
markings. He is a wonderfully vigorous young
dog, and has proven himself a great stock getter.
As a stud dog he is unsurpassed. Fee \$50.

Puppies for sale.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, NOVEMBER 12, 1891.

VOL. XXXVII.—No. 17.
No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 50 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

"BOB WHITE" IN CHINA.

IN the Mongolian pheasant China has supplied us with a new game bird; and now the United States is reciprocating by adding an American game bird to the shooting resources of the Flowery Kingdom. Foreign residents of Shanghai, Nankow and Foochow are engaged in the enterprise of introducing American quail for stocking the covers near those cities. Mr. J. Ward Hall, secretary of the "Bob White" Committee, sends us his report to the members, under date of Sept. 22, 1891. From this it appears that there was contributed for the purpose a fund of \$616. Mr. Hall procured in this country 568 birds, which were shipped from Chicago to San Francisco. But owing to over-crowding of the cars, a large majority of the birds perished before reaching the Pacific coast; and when the remnant reached Shanghai only sixty-eight were alive. Of these four died before they could be put out, and the sixty-four survivors were duly turned down, last February, in suitable country near Kashing. How they have fared has not been ascertained; but Mr. Hall is so confident of the ultimate success of the undertaking that he proposes to repeat the experiment in March of next year, with 300 pairs of birds from Kansas. The FOREST AND STREAM wishes them good speed. Thus may our gallant bird make his way around the fence rail of the globe, that the American wanderer in far off lands, greeted by Bob White's cheery whistle, shall in fond fancy see again the loved fields which surround his old Kentucky home, or his Kansas home—or any other home so that it be an American home, which is the best home in the world.

It cannot be said that the Rev. D. T. DeWitt Talmage is remarkably strong on ornithology. Witness, in the *New York Observer*, his exhortation: "Listen to the voice of the condor, among the Andes, battling with the reindeer." Listen also to the grizzly bears shaking pecan nuts from the palm trees in Florida.

NETTING GAIRDNER'S TROUT.

CALIFORNIA fishermen have been taking the so-called steel-head salmon or Gairdner's trout in violation of law through ignorance of its real character. Section 632 of the Penal Code of the State makes it a misdemeanor to catch any kind of trout at any time except with hook and line. Misled by the common name steel-head salmon, fishermen netted these fish in salt water in Eel River in large numbers, and have been warned by the authorities to discontinue this method of capture under penalty of the law. In our Trout Supplement of April 4, 1889, the young Gairdner's trout is well illustrated, and it would be wise on the part of those interested in the protection of this fine game fish to compare doubtful black-spotted trout with this figure. The rainbow, which is more widely known in California, is shown near its relative, the Gairdner's trout. The need of precise information about California trout is made evident by the fact that even the authorities most zealous of the protection and propagation of the valuable species are sometimes at a loss to identify the common kinds. In the excellent paper, for example, of Mr. Wilson, secretary of the California Fish Commission, in the *Overland Monthly* for September, a beautiful cut of the red-throat (*Salmo purpuratus* or *mykiss*) is named *Salmo irideus*, which is the rainbow and a very different species. In all matters affecting the protection, preservation and propagation of our choice fishes let us be sure we are right and then go ahead.

SNAP SHOTS.

THE Havre de Grace duck shooting has not opened auspiciously this year. The fowl are not yet present in great abundance. The shoaling of the Susquehanna flats has been more noticeable this season than formerly; in many instances, on the opening day, decoys and boats were aground, with the ebbing tide, in places where formerly there was abundance of water. Old gunners who have been watching the deposit of sediment and the encroachment of the shoals declare that the time is not far distant when many sections of the flats now famous for duck shooting will become dry land and the ducking boats and decoys will be supplanted by plows and mowing machines. Meanwhile the provident duck hunter is making hay while the sun shines, and the State of Maryland is collecting \$20 license fees for sink-boxes and \$5 for sneak-boats.

The brief of Attorney Fiske respecting fishing rights in Adirondack navigable waters (see our angling columns) is only a lawyer's opinion and has not the authority of a decision by the bench. Nevertheless, it appears to be good law, and the point is of interest to a large class of visitors who resort to the Fulton Chain and to other fishing waters in the North Woods. A large share of the so-called protection or preserving of large tracts of land and water in the United States and Canadian Provinces is accomplished not by legal means, but by "bluff," and these questions of public rights with respect to shooting and fishing in uninclosed ranges are bound to come up again and again.

Private enterprise, realizing the profitable nature of the investment, has begun the artificial culture of the salmon. One of the foremost of the packing companies, having an extensive establishment at Karluk, Alaska, where nearly one-half of the salmon brought from the Territory are taken, in March last sent up a fishculturist with a hatchery and all its equipments complete. The sum of \$5,000 has been expended up to the present time, and the company had 5,000,000 thrifty young red salmon in its ponds at last accounts. The hatchery is located on the Karluk River, and is owned by the Karluk Packing Company. Great credit is due this organization for beginning a work which must benefit others as well as themselves.

It will be remembered that last March the President by proclamation set aside a tract of land to the south and east of the Yellowstone Park as a forest preserve. The power to create such forest preserves was conferred on the President by an act of Congress approved March 3, and this first reservation contains about 1,500 square miles of territory, most of which is rough timber-covered mountain land. In the original proclamation the boundaries of this tract were not altogether definitely laid down, or at all events there arose some question as to

just what lands were intended to be covered by the proclamation. In order to set at rest any such doubts, the President issued this fall another proclamation referring to this forest preserve, which is again described in the following words: "All that tract of land situate in the State of Wyoming embraced within the following boundaries: Beginning at a point on the parallel of forty-four degrees fifty minutes north latitude, where said parallel is intersected by the east boundary of the Yellowstone National Park, thence due east along said parallel twenty-four and one-half miles; thence due south to the parallel of forty-four degrees north latitude; thence due west along said parallel to its point of intersection with the west boundary of the State of Wyoming; thence due north along said boundary to its intersection with the south boundary of the Yellowstone National Park; thence due east along the south boundary of said Park to the southeast corner thereof; thence due north along the east boundary of said Park to the place of beginning." The proclamation warns all persons against entering or making settlement on the tract of land described.

The Vermont Fish and Game League is an institution which means business. Since its organization last November it has caused the appointment of temporary fish wardens in 54 towns, has promulgated the game and fish laws, has warned offenders; and where warnings have not sufficed, has substituted prosecutions; and has in various ways promoted the cause of fish and game protection. A recent modification of the League's membership has been adopted, under which clubs may be represented by an individual delegate. We think that the reduction of membership fee from \$5 to \$3 was a wise one. The members who have worked in behalf of the organization, in particular Secretary Titcomb, are to be felicitated upon the very substantial and enthusiastic character of the League, as shown on the occasion of its first annual gathering last week.

Quail are very abundant in Ohio this year. There is probably no State where the landowners are more particular with regard to trespass by gunners than in Ohio. Farms are for the most part posted; and in numberless cases this protection is insisted upon not only against strangers, but against neighbors as well. Many farmers are sportsmen themselves, and preserve their quail for their own sport, and others save the birds for friends from town. While all this makes it difficult for a certain class of gunners to get much shooting, there are few true sportsmen who find any difficulty in gaining access to all the ground they want. Indeed, there is on the part of sportsmen a strong sentiment in support of strict trespass laws and their rigid enforcement.

The Helen Keller fund for the maintenance of the little blind mute Tommy Stringer, at the Perkins Institution and Massachusetts School for the Blind, in South Boston, has grown to a total of \$1,636.31. Of this sum \$350 has already been drawn to pay his expenses; and the remainder, \$1,286.31, has been deposited with the New England Trust Company, in the name of Mr. Anagnos as trustee, to be drawn as the child's needs may require. The story of how the establishment of this fund grew out of the killing of Helen Keller's mastiff Lioness is a familiar one, but it is an incident of the brighter side of human nature well worth recurring to.

The Texas Court of Appeals has brought that State into line among those which recognize that a dog is property, for the larceny of which a thief may be punished. Before long this will be recognized everywhere, even in Maine, whose courts, it may be recalled, have classed the dog as *feræ nature*. The next question for the courts to take up will be the unjust laws and outrageous practices by which unlicensed dogs are officially butchered off-hand in the public streets. Whether good law or bad law, it is barbarism unworthy of this age and a disgrace to the land.

The Syracuse *Standard* reports that sportsmen in that neighborhood are up in arms against the game protector because he has announced his intention of enforcing the law against hunting rabbits with ferrets. A curious variety of "sportsmen" they must be.

If the New York Legislature shall provide for a live fish display at the World's Fair, the Commissioners promise to send from Caledonia a series of specimens which will do credit to the fishcultural service.

The Sportsman Tourist.

THE POSSUM HUNT.

OF all sports of field or forest, mountain or plain, wooded hillside or swampy jungles, none affords such real genuine, jolly, rollicking fun as the old-fashioned possum hunt, which is a peculiarly Southern institution, and can be seen in perfection only on the old plantations and among the darkies; it is a joyous, boisterous, go-as-you-please frolic, and it is eagerly entered into and enjoyed by all classes, from the learned judge to the irrepressible small boy and the happy-go-lucky cornfield negro. If "all the world's a stage," war and the hunting and killing of men is certainly high tragedy; fox hunting, hawking and such like sports constitute melodrama; while possum hunting is assuredly comedy in its most attractive and enjoyable shape, and no audience ever went to circus or playhouse more determined on fun or in such humor to be pleased as does the party which starts on a possum hunt. The possum is nature's clown, and plays his part to perfection, and the very sight of one is provocative of laughter; I have never seen a man (unless it was some disgruntled poultry owner, whose hen roost had been the objective point of Br'er Possum's nocturnal visits) who could look the "varmint" in the face (no matter whether it was swinging by its tail from the limb of a persimmon tree, or playing possum and feigning death as it lay on the ground, or when it had reached its highest mission and, being nicely baked and browned and garnished and guarded by a cordon of sweet potatoes and rich gravy, filled a big dish and the post of honor on the dinner table and smiled a hospitable welcome to hungry hosts) without a good-humored broadening of his own countenance and a licking of his chops, in reminiscence of the fun of possum hunting and anticipation of a feast fit for the gods; in fact the possum himself appears to know and appreciate his role, and has a droll way of laughing at everything and under all circumstances, seeming to enjoy the hunt and his bodily sacrifice as much as do his captors and the knights of the knife and fork.

The opossum is unique; it has the body of a pig, the coat of a sheep, the sharp head and keen teeth of a coon, the tail of a rat (which is also prehensile, has a grip like a vise), the pocket or pouch of the kangaroo, in which it shelters its young from the weather or in times of danger, feet with four fingers and a thumb like a human hand and which have a firm grasp; the cunning of a fox, an appetite and digestion which devour and assimilate everything that can be masticated, from the luscious grape and the tender spring chicken to the coarsest vegetable and the odoriferous carrion of the common. The possum is, indeed, more omnivorous than the hog and, while he takes his food *au naturel*, nothing at all edible comes amiss to him, yet it must be acknowledged that he has a decided penchant for the sugary persimmon and the fragrant paw-paw, and his favorite haunts are where these fruits do most abound. On account of his promiscuous eating habits, it is common among the more fastidious epicures to have a "fattening pen," where the animal is fed on clean food and vegetables for a week or two after it has been captured, and is well fattened and cleansed from the effects of its too general diet while at large; these pens are made by sinking a barrel or hog-head half way into the ground, sometimes covering the top to keep out rain, but often open, for the possum cannot climb up the sides of a barrel nor, indeed, can he climb any tree whose circumference he can not grasp more than half-way round. There are often a dozen or more possums in one pen, where they are fed and watered regularly and soon become as fat as a Strasburg goose.

The possum when killed is dressed like a pig, that is, the body is scalded and picked (not skinned) clean of its coating and well singed; it is then given a thorough salting and placed in an oven, with a liberal seasoning of red pepper and a plentiful supply of sweet potatoes, and baked until it is cooked through and through and the skin is toasted to a crisp brown; its own fat and juices make the most piquant of sauces and a sea of the richest gravy, in which float the miniature islands of brown potatoes that melt in the mouth. The possum, when cooked, is very much like a sucking pig, both in appearance and taste, but is far superior in that it is so much more juicy and has that gamy flavor so highly prized by gourmands. Next to a possum hunt, there is nothing which a native Southerner enjoys more than a possum supper, for it is to him what a terrapin stew is to a Marylander or a clambake to a Down-Easter, and banquets are often given where a dozen baked possums grace the board. There is one peculiarity, however, about the flesh of a possum, and that is that no dog will eat it under any circumstances; I have time and again tempted and deceived the hungriest of dogs with the daintiest bits of cooked possum meat and bones, but, without exception, as soon as the dog would get it in his mouth and taste it he would drop it as he would a hot cake. Why? No man knows.

In the fall and early winter is the season for possum hunting, for as the darkies say, "possums don't git ripe till 'simmons does." At this time only is the possum fit to eat, and at all other seasons he is allowed to go scot free, and is rather given protection by man from his other enemies. He is essentially a nocturnal animal and is seldom seen in daylight, except under the utmost compulsion or an unavoidable stress of circumstances; but when nightfall comes and "the sable mantle of darkness is spread o'er all the earth" then the possum comes forth in all his glory, "his highway is everywhere," and he forages in forest, orchard, vineyard, henroost, and every other place, a very monarch of the night, seeking what he may devour. It is therefore in the night time that he must be hunted, and as this is a leisure time with all hands, and no expensive ammunition nor costly equipments are required, there are few clear nights when the hunter's horn is not heard or his bright fires seen gleaming in the woods. When a possum hunt is on the tapis, it seems to get into the very air and become infectious, and by some sort of freemasonry is at once known to all male kind on the plantation, from the austere master and the young gentlemen of the "great house" to the white-wooled old "uncle" and monkeylike pickaninnies of the "quarters"—and I have often snatched one of these whimpering and dusky nimmers from the grasp and wrath of his irate "mammy" and borne him in triumph to the woods, he feeling that the luxury was cheaply

purchased even at the expense of the severe paddling he was sure to get on the morrow. Even the dogs, Bruno, the majestic St. Bernard; Leo, the surly mastiff; pointers, setters, hounds, terriers and flece, curs of high and low degree, Tray, Blanche, Sweetheart, all are imbued with the spirit of the occasion and eager for the fray, and the rallying notes of the horn can hardly be heard above the din of shouts and laughter of human beings and the howls and yelps of canines. An axe is usually the only weapon carried on a possum hunt, though occasionally a gun is taken along for a chance meeting with bear or other game, but plenty of matches or a chunk of fire and a supply of "fat" kindling wood are indispensable, for a possum hunt without fire is "Hamlet" with the prince left out.

At a given signal the motley assemblage "makes a break for the woods," laughing, shouting and singing "corn songs," and the dogs keep up a full chorus of delighted barking and baying. Some well-known persimmon grove, paw-paw patch or grape vine thicket is decided on and hither the merry crowd goes pell mell. Soon a young and ambitious hound gives tongue, and is answered by a score of vigorous whoops and halloos; but Uncle Sam, the veteran possum and coon hunter, says shortly, "Dat pup's jess jumped a ole haar [hare], taint no possum, an 'Ise gwine ter larn de dog better sense 'fore I gits done wid him." The noise tones down and the pup and his companions are "blown off the trail," and started on another tack, while the party trudges on. After a while old Drummer, the trailer of the pack, opens with a deep mellow bass and finishes up with an anxious tremulous whine. Instantly all feet stop and all tongues are still until the oracle, Uncle Sam, speaks, "Now, dat's somethin' like, ole Drummer he know what he 'bout, an I'll bet a ginger cake a possum's been 'long dere to-night;" and he cocks his head knowingly to one side and his ears seem visibly to stretch toward his favorite hound. In a few minutes the old dog sends forth a confident and jubilant yelp and immediately is joined by the rest of the pack in full cry. Uncle Sam simply says, "Dat's him," and a shout goes up, waking the echoes in the woods and hills for a mile around, and a rush is made "to where the music is." No attention is paid to briars, bushes, grape vines or creeks, except by those who trip and fall, and they are left to pull themselves together and follow on. A short and sharp run is made and old Drummer's victorious baying tells that the game is treed, and Uncle Sam calls a half-halt with, "Don't you all be in such a big hurry, de possum's dar an' we'll git him, I know, 'cause dat dog don't lie." Still the excitement continues, and all move forward, the hindmost keeping up as best they can. The possum is a clumsy and slow-moving animal on the ground, and when he finds himself pursued will take to the nearest tree he can climb, and try to conceal himself among the branches and leaves, so that a quarter or half-mile chase is the longest, and he is often treed within a few yards from where the trail is struck.

On arriving at the tree, around which the dogs are jumping and howling as if to split their throats, fires are built, if found necessary, and the hunters peer into the treetop and search until one sings out, "Dar he, I sees him," "Whar?" "Ober to de lef' side, on dat limb dar to'ads de moon." And sure enough, there is seen what appears to be a bunch of wool. All wait for orders, which Uncle Sam issues sharply and decisively, knowing they will be obeyed without hesitation. "Here, Pete, you clam dat tree an' shake de possum out. Marse Gus, you hol' Bruno; Marse George, you hol' Leo; an' you little and big niggers hol' all dem oder dogs 'cept ole Drummer, heaint gwine ter hurt de possum. Now min' what I tells you."

Pete goes up the tree like a squirrel, and, finding the limb on which the game has sought refuge, braces himself and commences the attack by shaking the limb vigorously. This is not such an easy matter as the uninitiated may think, for the possum is a close climber and his human-like hands grasp the limb firmly while his prehensile tail is curled around it and drawn as tightly as the coils of a boa constrictor; indeed, so powerful is the animal's hold and so tenaciously does he hang on that the shaking at one end and the weight at the other often breaks the limb, and the possum falls to the ground with his frail support still in his embrace; or each foot may be shaken loose, one after the other, and the possum will hang by his tail alone for a long time, and sometimes it is necessary to cut the branch from the tree to get the game. When Pete has fairly shaken the possum loose, and sees that he is about to succumb, he gives the cry of warning, "Look out, here he comes," and as the quarry strikes the ground it is covered by old Drummer, while the other dogs surge frantically and try to get into the melee. There is no fight, however, for the animal simply curls himself into a ball and "plays possum," while his thick coat of wool and fur protects him from serious injury by the dog's teeth (it is another peculiarity of this animal that it will seldom fight a dog, although it often whips a coon that can get away with half a dozen dogs). When the dog touts the possum until it is thoroughly "sullen," it is put in a bag, or its tail is wrapped around a stick (to which it holds "like grim death to a dead nigger"), and thus it is carried by the hunter. There is a general jollification when the game is bagged, and point after point is visited, with varying success, until the crowing of the chickens in neighboring barnyards warns the hunters to hasten homeward and snatch what sleep they can before morning, when the game is taken home and put in the fattening pen until ready for the bake oven.

Sometimes a dozen or more possums are caught in one night, and again not more than one or two; when a hunt is successful everybody is jubilant in the extreme, and I have seen a dozen men and boys and twice as many dogs return from a hunt with only one possum, yet cheer more enthusiastically than other parties who came in laden with deer, turkeys and bear. But if a possum hunting party that gets caught in the rain and secures no game, especially if it runs across the trail and has a fight with a polecat (which all dogs are in honor bound to do on every opportunity), there is afforded a most perfect picture of disgusted despair, and the hunters are the legitimate butt of the jokes and chaffing of the neighborhood until redeemed by a successful hunt.

The possum hunt is often varied by a "possum bake" in the woods, and this is one of its most pleasing features. The party take along a supply of salt, red pepper and bread, and occasionally a jug of cider. The possum is to be caught and the potatoes are to be foraged for in some convenient patch, and if an orchard is handy a few handfuls of apples and a late watermelon or two furnish an

excellent dessert. When the first good fat possum is caught, the chief cook immediately sets about dressing it, while the others dig a hole of suitable size in the ground and build a rousing fire in it. By the time the possum is dressed the hole is red hot and makes a first-class oven; and the carcass, after being well salted and peppered, together with the potatoes, is placed in the pit (in a pan usually brought for the purpose or on a thick bed of green leaves). It is covered with a flat stone, and a lot of live coals are heaped over and around it. The cook remains in "camp" to attend to the baking, and the others continue the hunt, returning in a couple of hours or so, by which time the meal is ready to be served. The keen appetites of the hunters, the rich juiciness of the game, the cheerful blaze of the fires and the wild surroundings give a zest and piquancy not to be found at more elaborate banquets, and never to be forgotten by one who has been so fortunate as to participate in a "possum bake" in the woods.

There is a charm and a fascination in the possum hunt which always brings sweet memories to the country-raised Southerner, and are not to be appreciated by others. Just say to one of these old white-haired veterans, "Let's go possum hunting," and immediately his face lights up with a smile, there is forgiveness in his heart for every enemy and he is at peace with all the world, while memory runs riot in the misty past, and the most pleasant recollections and reminiscences displace the carking cares and tiresome troubles of to-day, and it is only with a deep sigh of regret that the dream is broken. I have known grave Senators, astute lawyers, millionaire business men, professional men and foreign travelers, men from almost every grade and pursuit of life, to return in their sixties for brief visits to the old plantations, and despite their rheumatism they would go possum hunting and enjoy the sport in full as much as their accompanying grandsons, and each had a stock of marvelous tales to tell of his glorious hunts. "When I was a boy, before the war, you know." Well, well, possum hunting is the essence of broad, good-natured fun in sporting, and is free from many of the unpleasant drawbacks and dangers of other kinds of hunting, and will richly repay a stranger to its fascinations any trouble or inconvenience of a trial should he be sojourning in the land of possums in hunting season. Such an one would be repaid for a journey to the favored land for that special purpose, though tyros should by all means get some Uncle Sam, who is to be found on every plantation, to act as master of the hunt. P.

IN CARIBOU LAND.

IF you set out for a land well known to be flowing with milk and honey, bear in mind (lest disappointment follow) that you may strike the stream at a point where the milk has become sour and the honey has been infected with rank herbs. Perhaps the surest way to get these luxuries in their best state is to buy your milk in sealed bottles at the creamery and get your honey at first hands from the manufacturer of glucose.

These thoughts occurred to me some two weeks after I had begun to haunt a region known to be swarming with caribou. Two years before a sterling sort of a man, whom I know, had been over the same country, and his tales inflamed me with the hope that a moderately weak person could walk far enough and fast enough to catch all the caribou he wanted in a few days in that favored spot. My informant himself had been fairly besieged by the animals. Camp where he would, the oldest bulls with the biggest heads would come to look in on his domesticity. He would usually kill what specimens he needed for his museum before breakfast, and would meet the remainder of the herd when he went to round up the horses.

Oh! country of Cockagne. Oh! game preserves of Spanish castles, where are you now? While I had spent weeks of wheezing exertion in scaling the rocky homes of sheep and goat, this my informant and good friend had in a few days filled his platter and his game bag and loaded his pack animals with hides and horns and tenderloins. You can see the hides and horns to-day set up in such a fashion that you would think the great beasts could move, if you visited a certain museum in one of the chief cities of British Columbia, but the tenderloins are gone forever.

Age and experience, which ought to teach a man sense in any other relation in life, have little effect on the confirmed lover of woods and mountains. He will seek the stimulus of that dear society, though it cost him labor that might win a fortune if rightly applied. Like the whisky toper and the opium fiend he may suffer, yet he must have his accustomed tonic. Here then is a man, whose age and experience avail him nothing, listening to stories of the easy capture of splendid trophies. It is a combination of fire and tow, resulting often in smoke.

In caribou land it is best to have a guide. In most places where the features of the country are pronounced I prefer to have only a packer and a map, but it is different here. For mile after mile the surface presents the same general appearance. Low buttes, shallow lakes, swamps surrounded by wide tracts of evergreen timber, damp and mossy under foot, heaped and tangled with fallen logs and underbrush. For hours one can see nothing but the trees around, and little patches of sky above, while the turnings of the path take away all sense of direction, if the day be overcast, so that the sun gives no help. If you go far without knowing the lay of the land you will be lost sufficiently to spend the night in cold, wet discomfort. So I took a guide. The fact that the price of guides is rising is a good indication that the hunting is on the decline. And when guides band together, like cab drivers, to oppress their customers, it is clear that sport in that neighborhood is overdone. But my guide Inness was so good that I forgive his price.

Then I took a boy for cook. Really I meant that the guide should cook and the boy should look after the horses, for Donald was a half-breed fresh from the maternal wigwam, who made sad work of his few words of English and with savage bluntness proclaimed, "Guess I don't know much cook." However, he did cook, and by a little teaching he became a very decent camp cook; also he packed, also he tended the horses.

Inness was a half-breed too, but his command of English, though small, was larger and, besides the resources of the Smilkameen and the Chinook languages, he had a certain stock of trapper's French. Perhaps trappers' French is the same as Canadian French. Perhaps Inness spoke poor French anyhow. At all events

it was different from the French of Stratford atte Bowe, with which I am familiar. But as Inness was more comfortably at home in French than in English I chose that tongue rather than either Smiltakeen or Chinook.

My retinue were dark, slim, silent fellows, chatting, to be sure, in low tones in their mother tongue, with speaking gestures, at night after I had left them or when they were at other times isolated and unoccupied, but while at work they spoke hardly a dozen words a day. The packing was done by instinct, pieced out with an occasional sign. The horses were driven without a shout, without even a whisper. If some refractory animal left the line or tangled himself up in the brush Donald trotted out and herded him in, but not even a muttered oath passed the lips of either of the pair. At times I would be surprised to see the men dismount and creep 'round, catlike, picking up stones and firing them at some unseen target, but usually the proceeding was explained by the capture of a fool hen. Well does the bird deserve its name, and why it is not already as extinct as the dodo is a puzzle. One day Inness brought home eleven birds, that he had "rocked" to death, tied to his sash.

In one thing, and one thing only, the taciturn habit of the men was inconvenient. If I asked Inness a question I did not always know whether he had heard me or not. His dull, inscrutable, ruminative expression continued unchanged until he had selected the words for his answer. He was a modest fellow in his pretensions, too. His especial pride was a knowledge of the habits and haunts of caribou. Mountain sheep, for instance, lay in a different province. It seems, in this connection, that on one occasion he had accompanied a band of Pend D'Oreilles Indians across the range to the Piegan country in Montana. I fancy that he communicated with his companions chiefly by silence, for the Indians knew, he said, only a little English, which, considering his own incapacity in English, must have been inadequate. He related the incident as follows: "I go one time wid dem Injun to dat place. We see some sheep up dat mountain—five or six of it. I go a piece. I look down. I tink I fall down. I say to dem Injun, 'You go hunt dat sheep; I stay to de camp.'"

But now we are in the mountains, and it becomes evident, that caribou entertain truly cordial relations only with their fellow countrymen. Not merely do they abstain from intruding on our camp-fires, but they are not at home when we visit their peculiar quarters. Three Sabbath days' journeys, with other journeys on all the intervening week days, fail to develop anything more tangible than advancing or retiring tracks. Inness shows me where Sir Thomas Nonesuch killed five out of one band; where the same gentleman slew the hero of the herd, and, coming back after lunch to secure his trophy, found the rest of the stupid animals still standing around.

"Drette par icite," says Inness, "*je cr   qu'on peut ouer les os*—Right over here I think we can see the bones." And, sure enough, we did so. Yet interesting as were these tales and relics of another's prowess, they still left me as far as ever from the great antlers, the "beau panache," that I was seeking on my own account.

But the period of absent fortune was not without a lesson. For one thing, I had made a little progress in the art of walking. It seems like the first step in knowledge, yet in tagging around after Inness for a couple of weeks with nothing to do but to get weary in following and observing him, I began to be able to reproduce faintly his type and style of walking.

The Indian hunter has a distinctive gait. His toes, either straight before him or pointing inward, cover the center of gravity. His hips sway slightly to the stepping side, and his rear foot is not exactly lifted, but rather peeled off the ground just high enough to clear the surface and settled in its new place before the weight comes on it. He does not swing his shoulders, nor walk with a spring, nor plant his foot with a shock, as the white man does. If the Indian were turned to stone while in the act of stepping, the statue would probably stand balanced on one foot. This gait gives the limbs great control over his movements. He is always poised. If a stick cracks under him it is because of his weight, and not by reason of the impact. He goes silently and with great economy of force. The muscles have less strain on them and do not tire so soon. Sometimes it seems as if they never tired. He treads through woods and swamps and down timber with no noise except the rustling of the grass and leaves disturbed by his passage. His steady balance enables him to put his moving foot down as gently as you would lay an egg on the table. You could not hear the thud of a footfall if you listened a week. The gait is not elastic nor springy nor handsome, and it even makes the man seem bow-legged. Put the same person in leather boots on a floor, and you would truly say that he stumped along, but in moccasins on a hunt, he does not walk, he glides.

If my friend and adviser did not say that it never rained in caribou land, but that balsam-scented breezes breathed peacefully under a stainless sky, he at all events expressed that idea in less delicately chosen words. But in my experience he was mistaken. Indeed, I begin to think that I bring bad weather, like the dead albatross.

It sputtered, it rained, it lowered, it sleeted, it snowed and stormed with wind, and on one occasion snow fell to the depth of twelve level inches.

We kept on hunting, however, until we had pretty thoroughly scoured the district and until our food supply had run down to a little rice and a little cornmeal. Then we retreated with a single head only, and that the head of a little two-year-old bull, whose horns were so short and spindling that a self-respecting blacktail would blush to own them, not by any means what Inness would call a "beau panache." Inness took a modified comfort from the fact that while several parties hunting around us got nothing, we alone secured one trophy, but this, I confess, consoled me but little, and I recite our failure in order that others may start out with a more chastened hope and get less of a shock from poor success.

H. G. DULOG.

DE-WINGED ANTS.—When in Richibucto, New Brunswick, during last summer, I noticed swarms of winged ants covering the doorsteps of the houses; these ants were casting their wings. In one instance I saw one deliberately unwing itself, using its feet for such purpose; in this it succeeded only after much pulling and a good deal of labor.—EDWARD JACK.

SOUTH FLORIDA.

THERE are a great many of us who have the ardent love for rod and gun and who read articles in *FOREST AND STREAM*, and give up in despair of traveling in distant lands at the thought of expense. We are not all made of money, and would it not be well to tell each other how we may go here and there with the least necessary outlay?

I was very much interested in articles of last year in *FOREST AND STREAM*, telling how far persons might go from Chicago for \$5 and have good sport. This was a fond greeting to the eyes of many, and aroused the latent love once more for broad fields, quiet lakes and rippling brooks.

We left Wadsworth, Ohio, Jan. 6, Tom, John, the writer and wife, who remained with friends at Arcadia, Desoto county, Florida, our destination for the first sport. After a rest of a few days from the long journey we clean up our guns and get ammunition ready for a short hunt of three days on Tiger Bay slough. Fifteen miles from Arcadia we pitch our tent beneath spreading boughs of a clump of live oak trees on the banks of a small stream. Camp is hardly completed when John is after gray squirrels and Tom casting for bass. Many fine birds are flying past our pleasant camp. At break of day the writer is out at first gleam of light, the No. 10 loaded with double Bs for a stray gobbler that might stay on the roost too long; but I found none. The sun was about one hour high when I came out of the thicket along the stream upon a broad marsh. Here I saw a sight of water fowl that I shall never forget. Cranes big and little of almost all colors, singly and in flocks, were flying hither and thither, screeching and croaking, wading and feeding or standing as still as a sentinel basking in the warm sun.

Among the long-legged friends were the web-footed tribes, mostly ducks, making no less noise and many times the number of the former. They were mostly at work gathering their food among the roots of plants where the water was but a foot or so deep.

Along the shore of ponds, and where the water was not too deep, were an endless number of yellowleg plover, and as I crept slowly along in high grass a jack snipe would dart quickly up in the air, not to go far, but to drop quickly back to his favorite retreat. I gazed long on this lovely picture and then selected my position among some low bushes. I removed the BBs and replaced them with 5s. One loud report and then another and the sky was almost blackened with bewildered birds, and as a hurrying flock of teal would pass again the tempest would speak in tones that would still more frighten the bewildered birds. Not until the barrels were quite hot did they learn to steer clear of that one particular clump of bushes. Not having our four-footed friend Kiser with me I did my own retrieving. As the water was warm I did not mind getting wet above the knees. And the ducks all gathered in presented a fine sight. I now replace the 5s with 8s and start after the yellowlegs. They are not wild and allow a shot at close range. As they rise and fly past a fine rake shot from both barrels causes many birds to drop. Again and again they come back, until that remnant of a flock makes high and off. Having all the birds I can carry I wander back to camp, now and then taking in a snipe as he darts zig-zag over the marsh.

It is 10 A. M. I have not had my breakfast, but the appetite is not wanting. Tom the fisher has had good luck and so have the others. I cut a couple of palmetto fans, using the stems to broil the bacon and birds on. They are placed before the fire, the bacon above, to allow the drippings to fall on the birds below, salt and pepper, a raw onion, bread and butter, and hot coffee complete the meal. Who could ask for more? No pepsin is required to digest or aid the stomach, but good healthful exercise, fresh air, good water and a refreshing night's sleep soon rebuild the inner man. After breakfast we dress the birds and salt them.

After dinner, which came a little late, we cast for bass with a small live frog. A few small ones are landed, when presently Tom gets a hard strike by what promised to be a very large fish; but imagine his surprise when he lands a fine large catfish.

We wander home on the third day, with bright expectations for our great hunt to the Sand Hills, which is to come as soon as we can make ready.

Another short rest, and we have everything ready for our hunt. Teams and the necessary provisions are procured, which consisted of flour, bacon, sugar, butter, lard, rice, "grits," sweet potatoes, crackers, salt, baking powder and coffee. We also take several sacks of grain for our horses, for grass forage is short at this time of year. We travel east through a scattering pine forest, now and then stopping at some fine orange grove to sample its delicious golden fruit; or old Kiser would point a covey of quail, which would generally result in the addition of a few of those plump morsels to our larder.

We wend our way slowly along until we have gone ten miles, when we leave the pine woods for open prairie covered with thick saw palmetto, except where the fires have destroyed them. Over roots, along sloughs, through ponds, ever headed eastward. We camp at dusk beneath a tall clump of cabbage palmetto. A more beautiful camping spot could not be found. These clumps of trees look like islands upon the great prairie. Our cook William soon had all the utensils in use, which he handled skillfully on the log heap. Sweet potatoes were thrust bodily in hot ashes. At call for supper all are present. The principal conversation is "pass the coffee." Camp-fire tales were next in order, made lengthy by long pulls on the old pipe, until the logs were well burned up. We retire to the tent and roll snugly up in the blankets, some to sleep, others to roll and tumble, for campers do not all sleep well the first night. At first break of day, breakfast quickly dispatched, we again take up our line of march. Nothing of importance happened during the day until about 4 P. M., when one of the party shot two deer.

We pitched camp at dusk among some scattering pines on the bank of Lake Ann, two miles south of Lake Childs, both beautiful sheets of water. Here we remained two weeks, and during that time we killed deer, turkey, ducks, quail, squirrel and jack snipe, besides a great number of black bass that Tom caught. The mouth of one of them measured 6 in. when extended. We had no means of weighing him. These were all caught on a 9oz. rod.

The writer killed the only rattlesnake that was seen on the hunt, it measured 6 ft. in length. From the extent of country that we traveled over, it might be inferred that

snakes are few and far between in south Florida. There is plenty of game around these lakes, such as deer, bear, wolves, wildcat, etc. The cover along the low ground gives them the best and safest retreat. It will be many long years before the deer will be driven from here.

Reluctantly we break camp and return to Arcadia, where we rest a few days and have everything arranged, take the train for Punta Gorda. Here we charter a sloop and telegraph for the remaining party, which consists of six ladies and five men. Provisions are procured and everything held in readiness for their arrival. In the mean time we wander out upon the hotel wharf and make the acquaintance of Mr. Wm. C. Prince, of New York city, who was casting a fly with the greatest skill. Tom and I watched closely each move as he lifted it to let it drop quietly and naturally far out upon the clear water. How could the fish resist a morsel so natural and attractive?

The train arrives and we are soon all aboard, and as we have a strong aft wind we sail smoothly out of Peace River and into Charlotte Harbor: At 9 P. M. we are anchored off Gasparilla Island in 10 ft. of water. We make a landing and have the pleasure of forming the acquaintance of the breakers.

The next day is taken in making camp snug. We remain here two weeks, all enjoying the finest of fishing, bathing and boating. We took in all seventeen different varieties of fish, from the beautiful sea trout and Spanish mackerel to shark and jew fish.

We fished mostly with fly, while the ladies took the sheephead with bait line, and great sport it was for them.

It being a little early for tarpon we let good enough alone and fished for those prizes that took the hook more freely. We were learning our A, B, C, in salt-water fishing. As we advance in the art, we will tackle the silver king. It is no little sport to the amateur to take jewfish and shark that weigh from 100 lbs. to 500 lbs.

The trip as I have described from Wadsworth, O., and return, complete, did not exceed \$80. To those that are interested in such a trip I will be pleased to answer all questions through these columns or by letter.

J. F. DETWEILER, M.D.

WADSWORTH, Ohio.

FT. MYERS, Fla.—If you enjoy fishing come to Fort Myers. The Caloosahatchee, one and one-half miles wide, offers the angler a generous range of sport. If he be ambitious and stout of heart and mind he may bait with half a mullet and quietly lie in wait for that king of fishes, the silver king (tarpon), of which more are seen and caught in sight of our beautiful village than at any other point. If wishing quieter sport, withal lively, he may troll for the jack, and in him find a heroic fighter. Perchance while trolling for jack he will strike a channel bass or weakfish. If he wishes to still-fish he can anchor in the channel, bait with crab, and catch weakfish, channel bass, sheephead, snapper, sand perch, etc. If he is a black bass fisher, he may take a small skiff and pole up any of the creeks and catch black bass that will astonish any Northern fisher. The usual mode is with live bait, although they rise to fly and spoon.

I have fished in the Northern waters as well as in the West, but for real fishing in endless variety the Caloosahatchee and tributaries lead them all. Mrs. N. L. Langford, some time since, landed a 13 lb. black bass unaided. They have been caught upward of 18 lbs.

The shooting is excellent, deer, turkey and quail are very plenty. By going 15 to 20 miles back from town a dozen deer can be jumped any day; and often one gets within 20 to 30 ft. of a deer before he starts from his hidden bed in a bunch of saw palmetto. Taylor Frierson will guarantee to show a man 100 wild turkeys in a day, and I myself have seen as many, and within 15 miles of town. There is no end to quail. I have three coveys that feed on my place, within four blocks of my office. By going further and into the cypress, panther, wildcat, bear and wild hogs can be hunted. Taking it all around, south Florida offers the finest sporting of any section of the U. S. that I have seen.

WALTER F. MICKLE.

Natural History.

"THE FATE OF THE FUR SEAL."

Editor *Forest and Stream*:

In your issue of the 5th inst. appears a letter from Mr. Dall, who speaks of my estimate of the space required to accommodate the fur seals as they bred in 1872-74 on the Seal Islands "as a gross exaggeration."

This modest assertion of Mr. Dall encourages me to reply that the grossness of the statement rests wholly with his language and not on my figures.

I have demonstrated the fact that the adult mother seal (cow) requires but 3 sq. ft. of ground upon which to rest, as she does rest when out from the water, and that the "pup" seal when born and for two weeks later requires only 1 sq. ft. of ground; inasmuch as the pup seals and their mothers, during the height of the breeding season and when they are all there, and at the time to make this survey (July 10 to 20 inclusive), outnumber the big bulls thirty and forty to one, the ratio of 2 sq. ft. for each animal is nearer correct than any other figure, for the space required by the bulls, 8 sq. ft., is more than balanced by the virgin females, which do not bear young this year, but which leave soon after landing without giving any evidence of their having been on the islands, as the other cows do, by the birth and suckling of their offspring.

This is a fact which I am entirely able to satisfactorily demonstrate the truth of. I have heard of the matter many, many times before, and have patiently and willingly gone all over the ground with abler critics than Mr. Dall, who have never as yet been able to present a better hypothesis for arriving at an idea somewhere near the truth.

AN ALBINO PORCUPINE.—Mr. J. Henry Clarke sends us sample of hair and quill of a perfectly white porcupine killed near Unity, N. H., by Joseph Smith, of that town.

BIRDS OF THE CHEHALIS FORESTS.—Mr. Robt. H. Lawrence's notes of Washington birds, published in our issue of Oct. 15, related to observations made in 1890,

FEEDING HABITS OF SHARKS.

Editor Forest and Stream:

While quite ready to admit that a shark in taking a live bait does not pay much attention to the angle that he turns, I must still beg leave to differ from the statement of S. C. C. in FOREST AND STREAM, that a shark in taking a bait—that is, with hook and line attached—does not turn on his side. From personal observation in six or eight cases the shark seemed in no particular hurry to bite, but finally coming to the conclusion that he was hungry, turned slightly on his side before taking it. On five of these occasions I was on the Fish Commission steamer Albatross, in either the Caribbean Sea or near the Bahamas, where the clearness of the water and the height of the deck above its surface gave a splendid chance for observation. In all cases the shark turned on his side before biting. On one occasion the shark swam by the bait, within about two feet of it, as if he did not care a snap one way or the other: but after going three or four yards, apparently came to the conclusion that he had passed something and, turning around, took up a position within about a foot and a half of the bait, and after looking at it for at least fifteen seconds, turned well on his side and bit slowly so as almost to suck it in. Now, the conclusion I draw is, that in taking a baited hook the shark sees the line, and mistaking it for part of the bait, thinks his nose projecting as it does over his mouth will push the bait out of the way, turns on his side to get over the difficulty. At least this is the conclusion I have reached after careful observation. With his mouth where nature has placed it, it would be almost impossible for him to take a bait with line attached without turning on his side. The shark which I so foolishly played with evidently took me for live bait, in which he was entirely correct; in fact, I was very much alive for the next few minutes, as those present can testify.

WILLARD NYE, JR.

NEW BEDFORD, MASS.

Editor Forest and Stream:

Believing it desirable to place on record facts relating to the natural history of our fishes, and having had many opportunities in a sea experience of more than 30 years to note the feeding habits of sharks, I may perhaps be pardoned for continuing the interesting discussion relating thereto which has appeared in FOREST AND STREAM.

Several varieties of sharks occur in considerable abundance in the Gulf of Maine in summer and on the southern mackerel grounds in spring. Aside from the dog-fish, which will not be considered here, the mackerel shark (*Lamna cornubica*) is the most numerous, and this species in particular was the *bête noir* of the mackerel fisherman in the days when hook and line fishing was the most common method. Many a good day's fishing has been spoiled by these sea wolves, and a frequent experience was to see a fine school of biting fish disappear like magic, while a flash of blue and white glancing by fathoms down in the clear blue water showed the cause.

So frequently did this occur that on most vessels fishing in the Gulf of Maine it was the rule to have a baited shark line trailing from the stern while drifting for mackerel, or at least ready to throw out upon the first indication of the presence of a shark. The bait was almost invariably a freshly caught mackerel, mostly of small size. Only a few fathoms of line were played out, and the bait was kept in plain sight. It was therefore easy to see how the sharks bit at the lure.

I do not now recall a single instance, of the hundreds I have seen biting at mackerel in this way, where the shark failed to turn either on his side or back down. In most cases, where they came at the bait with a rush, they turned on their sides, with their mouths on edge, as one might say. But quite as often they would approach the bait in a leisurely manner and swim around it several times, as if suspicious or waiting for a favorable opportunity to attack. Generally this was followed by the shark turning almost completely belly up, to seize the bait.

It was not unusual to see them turn on their sides when in pursuit of living prey, so that the white of the lower part of their bodies could be seen. So far as my observation extends this habit is common to many, if not most sharks, though it is entirely possible there may be exceptions to it.

J. W. COLLINS.

A NEW "NUTTALL'S."—Little, Brown & Co. announce a new edition of Nuttall's Ornithology, prepared by Mr. Montague Chamberlain, of whose editorial work the publishers say: "Keeping fully in mind the need of a popular and untechnical book on American ornithology, Mr. Chamberlain has added to the merits the original work possessed in this respect by giving the names by which the birds are best known to the people, in addition to the vernacular names used by naturalists. The scientific names used are those recently adopted by the American Ornithological Union. Of the original work by Nuttall everything of value and interest has been retained, including all of Nuttall's delightful descriptions of bird-life, a feature of the original which has had much to do with its popularity. Only those portions which have been rendered valueless by recent discoveries and determinations are omitted. The present work will be found to be more fully illustrated than the original, and throughout its preparation everything possible has been done to thoroughly adapt it to the needs of time and to make it a convenient and useful manual for the household and for the student who can carry with him only a work of moderate size."

It is not generally realized that there are in this country literally millions of lakes which are available for water-farming; in size all the way from mere ponds to the great inland seas of fresh water. In Illinois alone there are tens of thousands of lakes, and hundreds of thousands more can be readily created. There are in Illinois many extinct lakes, which can easily be transformed into sheets of water by the simplest means. All the enormous "Lake Plan," as it is known to geologists, comprising Wisconsin, Minnesota, and Michigan, north of the Ohio River, is dotted with countless sheets of water, conditions being favorable for creating many more by such inexpensive artifices as the damming of streams. By damming at intervals, every creek and rivulet can be made to form artificial lakes. Even the vast arid region, the "Great Desert" of the West, is speckled all over with multitudes of extinct lakes which can be filled once more and made to teem with life, as they once did.—*Ex.*

MR. NYE AND THE SHARKS.—We have told the story of Mr. Nye's painful injury at Woods Holl, Mass., while feeding a shark. The sequel to the accident has come to us from Superintendent Maxwell, who has informed us that the injury was fully repaired in about a fortnight, and Mr. Nye evened up the account by harpooning a number of the sharks, in order to clear out the pool for cod and other breeding fish. Although poisoning was feared, no lasting bad effects followed the ugly lacerated wounds made by the serrated teeth.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

AN OLD WOOD ROAD.

WHETHER it is because I am growing older and think more of my ease, and am beginning to magnify the molehills of youth into mountains as the years slip by, I know not, but certain it is that now whenever I snatch a day's pleasure with my gun I leave the dense thickets and thorny brakes to younger men, and resort to some one of the many wood roads I have marked down during years of shooting in this vicinity, and along its sinuous trail take whatever of success the good Pan may send me and take it thankfully.

There is a charm about a wood road in October that is irresistible to me. I love to follow its erratic windings and revel in its sylvan surprises as I advance step by step along its leafy carpeted way.

It is early morning and I find myself on a favorite forest avenue, with the one idea of squirrels nerving me for a long quiet tramp over this well-known highway. My friend and shooting companion, a noisy editor with a noisier spaniel, bent on birds, is beating the woodcock grounds in the valley, and the whole woods are left to silence and to me.

There has been a succession of sharp frosts, and the chestnut burs are all agape, so with the bright sun rising and a soft south wind blowing and the dew-laden leaves along the path as noiseless as a Wilton carpet, I am sure of a delightful day at least, come what may in the way of success. I am not blood-thirsty. In fact, I have confessed in these columns to a change of heart in the matter of wantonly destroying God's creatures. Still there are times when the old Adam asserts itself, and when, as I stole along, the ventriloquial call of a squirrel came to my ear, I was like a newly converted cracker that the refractory mule kicked back into the beggarly elements of the world, and immediately set all my wits to work to get a shot at the black nutcracker. After infinite toil and patience, advancing while the call sounded and stopping when it ceased, I caught sight of my quarry in a distant chestnut, and an open space intervening, making further advance impossible, I drew a careful bead with my left barrel (which is a modified choke), fired and missed. But wait a minute. With the report of the gun another black squirrel appeared within easy shot upon the bough of a basswood tree, and without waiting to regret my first failure, I brought him down with the right barrel (open bore and was loaded with 8s for a possible grouse). Shall I confess that my triumph melted into regret as I picked up my game, but a moment before buoyant with life, and as I watched the glazing eye and—all that sort of thing? No, I won't say anything about it; it is enough to know that I put him in my game-bag and resumed my walk along the road.

What a lovely day it was. Just such as one reads a description of between the lines when Rip Van Winkle went squirrel hunting in the Kaatskills, when he heard the rolling of the nine-pin balls of the crew of the Half-moon, and the squirrels were out, too, and more than once that day I stifled my regret while my game pocket grew heavier with each stiff.

There are many things to see along an old wood road, if only one is a lover of the woods and keeps his eyes open. Every log alongside has a story to tell of drumming grouse or gnawing squirrel; there are the marks as plain as a thought written. Here is a hollow in the track where a grouse dusted not an hour ago, and a little beyond a handful of scattered feathers speak mutely of a woodland tragedy. In the moist mould, where a little spring crosses the track, Br'er Coon's plantigrades have left an impression; and the marks of the busy little chipmuck are every where. Speaking of the chipmuck, I believe that the little rascal plays a very important part in the economy of the woods in acting as a sentinel for the more noble game. Who has not, in squirrel hunting, had the song of the game he was following suddenly cease as one of those little stripped-backed watchmen sounded his shrill note of alarm? No use looking for the squirrel now, nothing is left but to sit down and wait or depart for fresh fields.

As I walked down a little incline in the road, with a stiff thicket on either side, I suddenly became aware that there were grouse about. How I knew it I cannot tell. There was no sound, no movement—nothing to indicate the presence of the birds. Still, I seemed to know that they were not far away, and instinctively cocked my right barrel and brought my gun to a ready. I have a friend who declares to me that on a damp, still day, when the grouse are lying well, he has more than once on approaching his dog that was pointing, detected the subtle game odor of the birds. I have told him that no matter how well the birds were lying, he was lying better; but he would not see the joke, and insisted that it was true. Be that as it may, I know, and every sportsman knows, that there is something about the presence of game that often manifests itself in an inexplicable way, so that one is almost certain the quarry is just before him, although he has seen or heard nothing to warrant it.

I was all ready, and the birds—one, two, three, four—got up all about me; and poking around to get a shot I never fired my gun. A little further on, however, a grouse jumped from a log, presenting a fine side shot, which I took and missed.

I ate my lunch and sat down and waited, but as the day wore on the leaves became dry and brittle, and it became utterly impossible to stalk a squirrel. I had enough, however; and as the walk home was a long one, I descended into the valley, found my editor and homeward we plodded, he enthusiastic over his day's sport and I quietly content at what my dear old wood road had yielded me.

H. W. D. L.

"ONE OF THE MISTAKES OF MOSES."

MOSE was my friend, and so one morn

We started off together,
Bound to explode or have some fun,
'Twas glorious winter weather.

Off to the woods with hurried strides;
Our swiftest pace was still too slow.
Earth seemed more fair than e'er a bride,
In its pure white dress of snow.

Our outing was in quest of game—
Bear, deer, partridge or quail;
Fur or feather, just the same,
Anything—crow to cottontail.

We hurried on, till very soon
We saw upon the snow a fresh-made track.
Mose called it rabbit, I a coon—
It proved to be a cat.

We followed it with anxious haste,
Till we could plainly see
It ended in a hole beneath
An old dead basswood tree.

Mose knelt down, and looking in
Saw something moving there;
He knew it was a cottontail
By the color of the hair.

With outstretched arm he made a grab,
And pulled from out that hole
A rabbit—no, alas! it was
The cat that's surnamed pole.

The thing itself was black and white,
The air around was blue;
A misty haze obscured the light—
'Twas not the falling dew.

He did not hold his captive long,
But with a mighty yell
He kicked the stuffin' out o' him,
And left him where he fell;

Then came toward me—or started to—
But looked straight down my gun,
And understood our friendship then
Must be a distant one.

I did not think that it could be
That trifles "light as air"
Could come between my friend and me:
But I just then became aware

That I no longer cared to have
His presence quite so near,
That strongest friendships could not live
In such an impure air.

How bright the start, how sad the end,
We hurried home without delay;
I walked to windward of my friend,
A hundred yards away.

Mose changed his boudoir to the barn,
He also changed his clothes
For those less pleasing to the eye
But more so to the nose.

The tailor makes the man, 'tis said;
If this is true—it's hard.
The tailor part of Mose is dead
And buried in the yard.

De mortuis nihil nisi bonum.
May serve to cloak men's evil habits;
But Moses says, and says it with a *dum*,
It don't apply to long-tailed rabbits. NORTON.

OREGON GAME GROUNDS.

PORTLAND, Ore., Nov. 2.—Our markets are well supplied with all kinds of birds. Deer, bear and an occasional elk adorn these places where game is used as merchandise.

The lakes around Portland are all leased to local sportsmen except those more fortunate who can afford to buy the lakes and the ground surrounding them. Last summer the famous Muckle place, containing about 900 acres, and one of the best shooting resorts in this part of the country, was sold for \$27,000 to four of our local sportsmen. The buyers were Messrs. Walter and Herman Burrell, C. C. Clark and Wm. Sibson. The place was formerly leased to a party for \$350 a year. Another party bought the Little Jewett for \$12,000, and still another bought a part of the Dead Willow Lake for \$3,000. This shows that the sportsmen of Oregon are not idle.

Some of the largest bags of ducks made this year were by Capt. W. J. Riley, Robt. Jennings and A. J. Johnson, who got 120 in eight hours. C. K. Marbaugh killed 51 mallards in seven hours. S. H. Green bagged 36 in three and a half hours. Many others have got good shooting here. A few canvasbacks have made their appearance, and the fact causes the hunters to expect very severe weather, as the canvasbacks are strictly cold weather birds. The late heavy rains have driven the snipe to other grounds. A great many of these gamey little rascals have been killed this year, one hunter bagging 137 in one day. The brant are with us yet in large numbers, and a great many have been killed this fall. One hunter reports having seen and killed a genuine woodcock at the lower end of Greer Lake. This may or may not have been a woodcock and as it is the first report of the highly-prized bird in this part little credence is given by the older sportsmen.

The Mongolian pheasants are rapidly increasing, and in some parts of the Willamette Valley the farmers are shooting them for self protection. They are grain destroyers of the first water, and will furnish great sport when the open season comes, as they are swift flyers and alight on the run and then keep running. If all reports concerning this beautiful bird are true, the most speedy of our dogs will come in second best in a foot race with them. We have no woodcock here, and some parts of the East have no Mongolian pheasants. Now, if any enterprising sportsman will exchange a few live woodcock for the same number of Mongolian pheasants, let him say so through the columns of the FOREST AND STREAM. SAND HILL.

OUR CAMP ON HORICON.

WITH two others I have recently returned from a short shooting trip to Horicon Marsh, and it is with much regret that I have to announce that that once famous old shooting ground is little like what it was a brief number of years ago. The water we found to be much lower than has ever been known before, and where in former years there was from two to four feet of water, to-day there lies a long stretch of mud flats upon which are busily engaged a vast army of snipe and plover, of every known variety and size, from the tiny sandpiper to the stately yellowleg. Here and there at irregular intervals is a stagnant pool of water, diminutive in size and literally alive with bull-heads, pickerel and suckers, a swarming wriggling mass of fish, which have been cut off from the main channels of water and penned up in these tiny ponds, they are dying by inches as the water daily settles and becomes less. It was a melancholy sight for me to witness such a complete change in this once magnificent ducking resort. All the sloughs and pond holes, once so plentifully found along the eastern shore, have disappeared, while in their places is found a succession of weed-grown beds dry as tinder, where one might safely walk with the thinnest soled shoes, so far as danger from wetting is concerned.

It was on the evening of Sept. 22 that, with wagon heavily laden, C., E. and the writer diverged from the main traveled road, and taking a well-defined hay track, struck off across the dry and waving sea of marsh grass toward the nearest body of water visible to the eye from the highway. The Horicon Shooting Club's buildings are just visible two miles to the northward, situated upon a timbered point of land which juts out into the lake some little distance. Between the point and the track we are slowly following floats a vast smoke cloud from the marsh fires, which have been fiercely burning on the west side of the lake for several days. The wind veering drives the smoke in our direction, but we have little to fear, as the wide expanse of mud flats precludes any possibility of the fire reaching our side of the marsh. This is not the shooting ground of which Mr. Hough so ably and pleasantly writes, in *FOREST AND STREAM* of Oct. 8, but is that portion of the marsh which lies to the north and above the Diana's preserve and extends over the north half of the lake.

We had left the little German town of Mayville early in the afternoon, after a conference with

Messrs. Clark and Butter, the president and secretary of the club, and it was decided, owing to the extreme low water on the marsh, that we had better not put up at the club house at all, but rather make our way out upon the low land a mile or two south of the club buildings, and driving as near the water as possible pitch camp there in preference to daily poling over waterless mud flats in order to reach the shooting ground, as the bulk of the birds remained south of the point. In anticipation of this course our tent and camping outfit had been brought from home, and as the sun smiled itself from sight on the evening of the 22d it left us comfortably settled and all in readiness for a few days shooting. One of Comstock's "protean" tents proved itself a treasure on this trip, adding very materially to our comfort and enjoyment. The canvas is unrolled, the single pole is jointed, and in less time than it takes to describe the performance our camp is made. With a sickle we cut two or three

armfuls of hay, which are carried inside and spread upon the ground; over this is stretched a square piece of sail cloth cut just the proper size and fastened at the four corners, forming a dry, smooth floor. During the warm portions of the day we made good use of the fly, which was converted into an awning, and we spent many hours under this during the blistering hot days which followed one after another, stretched out in the grateful shade afforded by the fly, that ingenious device for the camper's comfort. All old hunters know how insufferably hot an ordinary tent will get on a sultry day, and out on that

recollection of cautiously making a survey of the plates on at least two of the corners of our triangle as we sat cross-legged upon the canvas floor then transferring to my own plate the last scrap of bacon. For a brief space of time we sit staring at the empty pan like Nicholas Nickleby and the miller at the empty bread plate, then we pile the soiled dishes into the dish pan with a reckless disregard for neatness and order, and walk outside for a breath of fresh air and to admire the moon, which has stolen a march upon us and is now looking down triumphantly over the dark line of timber to the eastward.

Far to the southward there presently flashes into view a tongue of flame. Gradually it widens out until a narrow line reaches from east to west many yards in length. Higher and higher still it mounts, and now in the foreground thrown into bold relief against the ruddy sky there appears in view a cluster of stacks a mile or more distant. Poor old farmers, I thought, the result of your many hours of labor in the broiling July sun will soon be reduced to ashes by the fiery element. A few minutes later a tiny flame mounts to the peak of a stack; for a moment it flickers, seems to die down, regains strength, grows larger and larger, till until finally the whole mass is ablaze. Dense clouds of smoke mount skyward and the shower of sparks soon ignite stack number two. For an hour we are treated to quite a sight with the stacks roaring and blazing in plain view, then the conflagration gradually subsides, and at last naught but a mass of smouldering ashes remains to mark the spot. A pair of owls flit by noiselessly, wheel and circle back to see what great white object has invaded their nightly hunting grounds. A nighthawk wheels with querulous call overhead, high in the air one minute, but sweeping gracefully earthward the next, uttering that familiar grating call. Our watches indicate but 9:30, yet our eyes persist in blinking out their protest, so the blankets are spread inside, our lantern is extinguished, and with the gentle night wind rustling the field of waving grass around us, we fall into a restful slumber. The alarm clock hangs from the peak of our cosy little tent and ticks out its vigilant watch throughout the night, and as it gleefully whirrs out its summons to arise as the hour hand indicates 4 A. M., we awake, refreshed in mind and body by our long sleep.

The east is just commencing to turn pink, but over all the marsh land there hangs a huge fog bank, dense and white. It envelops our little camp with its moist and clinging grasp, and wherever it touches

the moisture forms. One by one we straggle outside. I draw a cup of water from our barrel, and as I swallow the cold liquid a shiver passes over me and I willingly withdraw to the tent and touch a match to our little stove, for the morning is chilly indeed. Gradually the fog clears away, and as we once more emerge from our tent, warmed through by our onslaught upon the coffee and buckwheats, the sun is just rising and we are admonished that it is very late for hunters to be on their way to the blinds. Our two boats have first to be carried out to the water's edge, and this proves to be no small task as the wet grass and reeds stand shoulder high and brush their loads of dew in our faces as we stagger through the rank growth. Nearly an hour is consumed ere we stand upon the shore. Only C.'s Parker has been brought out from the tent, and this is soon brought into requisition on the flocks of plover which circle temptingly within easy reach of the point which juts out westward

AMONG THE WILDFOWL.—X.

A DOUBLE ON MALLARDS.

toward the once famous Center Bog. Uttering their plaintive cries a bunch of fifteen or twenty yellowlegs are coming down wind. Without a waver in their flight they near us and as they pass over the open water directly opposite us the 10-gauge booms out. Pat, pat, pat, pat, and four of the mottled beauties are lying upon the surface of the shallow stagnant water, while a badly disconcerted flock of plover is scurrying away with accelerated speed. "Mark north," I hear a voice and three pairs of eyes soon espy a single pintail winging her way toward us. Unsuspecting of danger she draws near, and even as C. rises with the Parker at his shoulder she merely swerves a trifle to one side. At the report the game falls with a resounding splash. E. and I hold a conference, and not caring to make an extra trip back to the tent for our guns as the morning flight will soon be over, we conclude to watch C. The day turns out to be a very warm one and we are glad to return to camp and stretch ourselves in the shade thrown by the awning, and only retrace our steps to the water's edge at 4 o'clock to secure the evening shooting.

Wednesday, the heat not abating, most of our time is spent in camp. Thursday dawns upon another kind of day and with high hopes we make our way down to the boats shortly after daybreak to find a northwest wind blowing great guns. I am just preparing to pole northward along the narrow channel, when I see great numbers of birds have risen in a body from the big lake and are moving in our direction, so I make for the west side of the bog and hastily draw my boat from sight. I have just time to conceal myself from sight when a bunch of pintails passes between us. They are much nearer the boys than they are to my side of the shore, and presently I see dark barrels pointed upward with deadly effect, for three of the flock are killed outright, and in the panic which follows the flock swerves over to the west side of the channel upon which I am hiding, and though the distance is great, I manage to score one kill, and secure the victim by wading out in my long boots. I have just regained the cover when I see a long-necked bird approaching. He is high, but is directly over head and presents a shot in which I take no little pride. With my first I cause him to stagger, but under such headway as not to fall. A second barrel follows the first, and after a struggle to keep under motion there follows a long, slanting fall, and my duck, a spoonbill, lies dead upon the surface of the bay thirty rods distant. A single teal slips upon me, getting nearly by before I catch sight of him. The leaden hail patters around him but he seems to bear a charmed life, for even my second fails to bring anything except a tiny wing feather. Ah ha, you rascal, you are not yet safe, for from the further side of the channel your progress is being noted. Well may you dodge and waver in your rapid flight, as you at last catch sight of the form which has risen to cover with deadly barrels your tiny form. But it is too late, for long before the sound of the muffled report has reached my ears I have seen your fall, and I am revenged.

The flight slackens and I get into my light ducker and with long poling paddle in hand slowly make my way northward, where now and then huge bodies of wildfowl are seen to rise in the air for a moment, to settle in the water once more after making a short flight. It is very slow work and an hour has elapsed before I reach the open water. A ruddy duck bounces up from somewhere, although I did not see him until his plump little form is pattering by me. Down goes the poling paddle and I turn slightly and send a charge of 6s hustling around his devoted little head. What, a clean miss? Well, take that then, and down splashes my bird all in a heap. He is picked up and I continue on my way. I think I see a bunch of teal swim in behind that tiny island of reeds and cattails, but it might have been nothing but a flock of water hens, of which there are hundreds boldly feeding all around me. It was nothing but a glimpse and the distance was too great to make them out distinctly, but we will make the sneak at any rate; and the poling paddle is laid in the bottom of the boat and a short sneaking paddle is taken up in its place. Softly now, I gain the margin of grass and commence the circuit of the island. I am so busy planning how I will rake the unsuspecting teal upon the water with my first barrel and create a panic with my second as they rise that I am almost startled into falling overboard when with great fuss and splutter an old redhead duck mounts upward almost from under the bows of my boat. I forget about the teal in the excitement of the moment and not until I have retrieved my victim do I remember about the teal, and then too late I see a fine flock of some 30 birds scurrying away. But they are turning, are they not? Sure enough, and now they are fairly on the way back. Hastily I shove the boat into the shelter of the coarse grass and await their coming. Now I can catch the flicker of their wings, but, Great Scott! how they are traveling. There is a flash of blue and brown and they have passed by me. Bang, bang, slip in two more shells and knock over those two cripples and four birds are mine.

I draw the boat well in among the bogs and settle down for a little flight shooting. A few scattering birds afford an occasional shot, but I am getting discontented. I am just on the point of pushing out when I descry an old pintail duck making her way leisurely toward my place of concealment. Her long thin neck is stretched out to its fullest extent, as if suspicious of danger, but nevertheless she approaches, and when at last I rise to a sitting posture and draw down on her she is thrown into wild confusion. The report is followed by her fall. Two or three different blinds are experimented with with more or less success, but at last I turn the boat's bows toward camp. It is growing dusk as I pick my way along, and as I mark the distance between the point where I know the boys are waiting for me and the flat upon which I am leaving a glistening trail behind me, I see bright flashes; one, two, three four seconds pass, and at last there comes to my waiting ears that sound so musical to the hunter's ear—*ah-room, ah-room, room, room*. With a row of blisters upon the palm of one hand I finally push in beside them, and together we make our way toward camp along the now well-beaten path. Our birds are spread out to cool in the damp night wind, and we lie at length inside our tent discussing this good and that bad shot made during the day. Supper is finally disposed of and we prepare for the night, our last night in camp, too. Outside in the distance the fires are raging; now lying down leaving only a smoking heap of burning peat then leaping aloft as a gust of wind carries onward to a new stretch of marsh.

WORCESTER FUR COMPANY'S HUNT.

WORCESTER, Mass., Nov. 1.—Friday, Oct. 30, was the day selected for the fifth annual grand hunt of the Worcester Fur Company, and the success of the day's hunt proved the selection a most happy one. At 5 A. M. the clear notes of the hunter's horn rang melodiously through the Bay State House corridors and were wafted across Main street, awakening many a late riser who wondered what on earth could have struck the town, for the hunter's horn was something the lodgers in and about the Bay State had heard only in print. The hunters, most of whom had laid awake all night listening for the welcome sound, were soon astir and at 5:30 a party of twenty men or more gathered in the hotel dining room ready to lay in the foundation for an all day's tramp; and this same breakfast was one of the greatest features adopted for this year's hunt.

Six o'clock, the hour of starting, found a jolly and picturesquely dressed crowd of all sizes and ages and of all degrees of experience in fox hunting, from the veteran of 77 years, "Uncle Natie," to the representative of one of the morning dailies, who blushed through a week's growth of beard left on for the occasion, whenever the scornful eyes of an old timer chanced to fall on him. All sorts of vehicles were drawn up before the hotel to convey the party to the meeting place. First came the two barges, which took in about half of the party; then followed a long procession of single and double rigs, hunting carts, etc., with the famous "Mustang Gang" bringing up the rear. As the line moved up Lincoln street and out through Adams Square, it could be seen that the day would open with a blaze of splendor and all hopes were high. The sky was cloudless, not a breath of air was stirring, as could be seen by the lazily rising columns of smoke that bespoke an occasional early riser, mindful that only through the agency of a roaring fire could the morning cup of coffee be forthcoming.

At the Heywood farm, the usual place of meeting, all was excitement. Horses impatiently pawed the turf, men excitedly besought President Kinney to assign them a favored locality, hounds tugged at their chains, the aroma of choice "sun cured" filled the air with a delicious perfume, and before one could get through greeting friends from out of town the party was scattering in all directions and the hunt was on.

John M. White and party from Millbury with a pack of hounds were despatched to the cidar mill. There was a time when to hunt foxes with John White meant a day's sport such as seldom falls to a man, but something has "queered" John of late, and ever since he got harnessed up with Linfield's hammerless gun he can't seem to get quite in touch with the big hunts.

One of the first packs to start a red was that of the Northboro and Marlboro party, who were run in north of Straw Hollow. They took up a fox and drove him up toward Rocky Pond, where he met his death. Stationed at the fork of the road by the old burned house was a hunter, whose nerves have never played him false, whose eagle eye is never dimmed, at least not by 8 A. M. One barrel settled sly reynard, and, as "Denny" expressed it, "No red-headed fox need come fooling around unless he was bald-headed," pulling off his hat and exposing to the gaze of the astonished natives that noble head which has been the butt of so many of Denny's best jokes. But Denny never gave himself so hard a rap as Bardick did when he sold him the setter Dick. That is another story, however, and entirely outside of fox hunting. The Mustang Gang joined the Millbury party, and entertained any stray hunters who were so fortunate as to run across them at lunch.

Billy Dean and Uncle Nathan, Lisba and his party, with a large number of others, headed for the shoemakers, which is usually the center of the hunt. A dozen hounds were cast off, and, after some hard work, took up their fox on the north end of each ridge, and as he took a turn south every dog within a radius of three miles, which was not driving, swung to the pack. Down toward the Harlow place they went, in which direction a couple of foxes were heard, but the dogs kept on, and it was thought he had crossed to Sewell Hill. Soon they are heard coming back on the lower side of the ledges, the pack by this time increased to a perfect mob of barking, baying, howling, even squalling, dogs; and as they turn again and swing south, the hunters in that vicinity are treated to a drive that makes the day's hunt a success, however it may end.

More guns were heard to the south, but some hunters had so far forgotten the simplest ethics of sportsmanship as to bring along a setter and indulge in bird hunting, strictly against the rules of the club, and many of the shots were attributed to them. What became of the fox nobody knows, for the hounds came back, one by one, and soon took up another fox, which proved to be less fortunate. When jumped he led straight away, and the dogs went out of hearing. Soon Mr. Geo. Holbrook saw a fox coming toward him. When about 12 rods off he turned, and seeing he would come no nearer Mr. Holbrook gave him a barrel, which only served to increase his speed a trifle. Geo. Cutting driving along the road saw him coming, and stopping his team, jumped out, seized his gun, and had only time enough to insert one shell when the fox was within range. He shot, but only wounded him, and he disappeared from sight across the road. Mr. Cutting followed and came across him in an orchard. Two more barrels laid him out, and 15 minutes later the dogs came up, having apparently been bothered back in the swamp.

All this time old Railsplitter could be heard driving to the north, and some of the party who gathered about the successful hunter went to the old dog's assistance. Among them was A. W. Hunt, who had stumbled on to a fox near Randall Rocks, and stalked and killed him as he worked across a meadow listening to the hounds. No dogs were after him. By this time it was 10 o'clock, and over on Bond Hill, where Mr. Kinney put in his hounds, there had been a perfect cannonade since early morning. Many thought the Lake View Gun Club were holding a "tourney." Others thought the foxes had all congregated there, and were counting up how many had probably been killed. Some thought as many as fifteen sure, and the most skeptical and conservative gave them a half dozen. Imagine our surprise on learning that the entire fusillade had been directed at one poor little fox that weighed less than seven pounds, and that the dogs had been obliged to catch her to finish the chase. No one could tell who shot at her first, but Charlie Steel gave

her two barrels and claims to have hit her. Shot after shot was fired after her and every one hit her. Still she kept on. As one hunter expressed it, "The more they shot her the better she ran." Finally Frank Sweet, of Ashburnham, got a crack at her and gave her both barrels, later he shot two more, and claims to have hit her the fourth shot, though he admits missing clean with the first three. No hounds coming on her track, Sweet set out to get a dog; and finally ran across a couple, which he worked up to the trail, and was rewarded by seeing them take it the back way and whoop it up for more than it was worth. It was three-quarters of an hour before he could get hold of a dog again, and this time the fox was started and Mr. Sweet contributed another shell; and after a short run the dogs caught her. Another youthful fox hunter shot off his gun about this time and claimed the fox, but his claim was not allowed; in fact, the self-constituted governing board of the club declined to give Mr. Sweet the credit of killing the fox, claiming it was a clean catch for the hounds, an idea so ridiculous that it merits the severe criticism it is receiving at the hands of the majority of the club.

Early in the morning Mr. E. O. Conforth was so unfortunate as to break his gun. He walked back to the city, hired another gun and a little before noon was back at the Heywood farm. Finding the famous crossing "the old oak" uncovered he took up his station there and soon heard a dog driving on Burncoat Plain. The music drew nearer and in a few moments Mr. Conforth bowled over a fox.

Will Brigham, of Boylston, was out with his bounds and killed a fox, but as he was not present at the dinner the particulars of his run could not be learned. Charlie Howe, one of the club members, was putting in his vacation up in New Hampshire and killed a fox which was not counted, as he failed to produce him with the pelt on, as is required. Throwing out Howe's fox gives the hunt a total of six, which is the largest score made at an annual hunt since the club was formed.

The day opened up perfect, but about 9 o'clock the wind came up and interfered somewhat with hearing and also served quickly to dry off the leaves and grass, so that by noon the following was extremely dry and the hunt was practically over.

Hunters and dogs came straggling back to town during the afternoon; and at 7:30 a large party were gathered in the corridors of the Bay State House discussing the hunt, with an anxious eye on the dining-room door. The annual dinner was fair—to speak well of it. The serving of it was miserable—to let it down easy; and the post-prandial speaking was about half-way between. Still every one enjoyed the dinner, for appetite had been sharpened by the long day's outing and every one had had a good time. On such a day no one with blood in his veins could do otherwise than enjoy himself if he were but out in the woods.

The hunt on the whole was not so satisfactory as some preceding ones, in spite of the large number of foxes killed. The majority of hunters did not hear as much driving as usual. The runs were short, or the foxes led off and took the dogs out of hearing, and a number scarcely heard a pack with a running fox. But what driving there was was fast and furious and the number killed proved that on their old ground the Worcester Fur Co. have plenty of foxes for the most successful and enjoyable "grand hunt" held in New England. HAL.

WILD GOOSE SHOOTING IN DAKOTA.

"ONK! HONK! ONK! HONK!" the voice of the wild goose is heard in the land, and our sportsmen are putting aside their chicken shot and loading a supply of shells with B.B. The noble birds are just beginning their flight from their remote northern nesting grounds, and the Dakotas seem to be like a half-way house for them, where they can "rest and refresh themselves" before completing their long journey to the Sunny South; and they find plenty of the very best feeding grounds in our extensive wheat stubbles and cornfields.

In the State of New York I never saw wild geese light or act as if they were looking for a feeding place. They passed over in unbroken V-shaped flocks and at an altitude far above the reach of the best fowling piece. I once killed one there with a long-range rifle, but I considered it a mere chance shot, for I believe the flock was more than 200 yds. high. Here in Dakota they are usually seen in irregularly shaped flocks, not very high and apparently on the lookout for food and ready to light where there is any chance of getting something to eat, always provided the situation looks perfectly safe to them. In this respect they manifest a remarkable amount of cautious cunning, invariably selecting a place in an open field, where there are no sharp ridges nor other irregularities in the surface that might enable a sportsman to approach them unseen by their sentinels, several of which are always on the lookout while the others are feeding. I never knew them to trouble a cornfield where there was a good even stand of stalks, but if they discover a piece of scattering corn, where the seed has been mostly taken by gophers or worms they will not hesitate to go in and gobble up what corn has been permitted to mature. But their favorite feeding ground is on wheat stubble; in fact that is their only chance in the spring. For several years the autumns have been so dry here that the scattered wheat on the stubblefields has not sprouted, and in the spring the geese find it a little softened and just to their taste.

I am a practical sportsman, but I never go on "a wild goose chase," and I notice the amateurs who follow them and try by one device and another to creep up to them, seldom come back with any birds. My way is to get there first, and let the geese come to me. They are naturally quite regular in their movements and habits, and no one need expect much success in endeavoring to shoot them until he has familiarized himself with their ways. Most of the geese that pass here stop several weeks to feed up, before completing their long flight. During the night they stay in the many small lakes, at a safe distance from shore. Shortly after sunrise they fly out for food, returning about 10 A. M. They go out again in the middle of the afternoon and do not come back until after sundown. I have sometimes been quite successful by watching a fly-way at the shore of a lake, and shooting them by twilight as they came in. Looking upward, I could see a dim outline of the shape of the flock and would blaze away at the front ranks. With two barrels I have brought down as many as five in this way, from one flock,

It was often too dark for me to see where they fell, but my well trained retriever was sure to secure all that were disabled, and to put them in a pile at my side. A good dog is very essential, for he secures many geese that would otherwise escape. A goose is a very strong, energetic bird, and in proportion to his size it takes more lead to stop him than any other game bird I ever shot. I have often seen them fly over half a mile after being shot, and then drop dead. If a goose is only winged, it is often very difficult to get him without a dog.

In this vicinity the best goose shooting I find is in wheat stubbles. I select a field as remote as possible from buildings or roads. Near the center I dig a pit, 3ft. wide by 6ft. long, with a jog or shelf at one end to sit on, deep enough to leave my head below the surface when sitting. Then I put in some straw or hay to make it comfortable. In front of me at my feet is plenty of room for my dog, gun, shells, etc. I take great pains to scatter the loosened earth evenly in the stubble; if it were left in a pile the geese would notice it and avoid the place; but if they are flying low enough to shoot they cannot see the pit until they are nearly over it, and then it is too late for the discovery to be of any use to them, provided the sportsman does his part well. I take care to make all these preparations at a time of day when the geese are on the lakes, for should I wait until they commenced flying out for food every flock that saw me at work would be sure to give my field a wide berth.

After the pit is ready and I have made all its surroundings appear as natural as possible, I set out a lot of sheet iron decoys, shaped and painted to resemble a wild goose so closely that they will deceive the oldest leaders until they come very close to them. Everything is now in readiness, and I get into the pit with my dog. Sport understands as well as I do that it is essential to keep perfectly quiet. I take a book or newspaper, together with a large stock of patience, for sometimes I have to wait for hours without getting a shot. But if any geese come in my direction, they are quite sure to discover the decoys from a great distance and to shape their course with the intention of taking dinner with what appears to them to be another flock of geese already feeding. On they come, but they will not light; they swoop down quite near the decoys, and discovering the deception, start upward in disorder, with clamorous cries of alarm. Now is my time. I spring to my feet and fire two barrels in rapid succession, usually bringing down several of the noble birds, sometimes as many as eight. Sport is out as soon as the gun cracks, and the birds that fall furthest away and show the most activity are sure to receive his first attention. The dead geese make good decoys when set up in a natural position, the head being held up by a small stick set in the ground. A score of 33 in one afternoon is the best I have made. But it is not often they fly so good.

I have killed at least six different varieties since I came here. What is known as the Canadian goose is much the largest and best kind for food; when full grown they weigh from 12 to 16 lbs. One kind is quite beautiful, they are rather small, of very graceful form and perfectly white, with the exception of black tips on the ends of the wings of the ganders. This variety usually appears in very large flocks, and in the spring are the last to take their departure for the north.

A. N. ALWARD.

CROW LAKE, South Dakota.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 5.—The perils which may beset the hunter when afield are evidenced clearly to the minds of Chicago shooters this week. No man of the shooting fraternity here is better known than Mr. R. B. Organ. Without him we should be lost. Yet we came near missing him this week, and the Minnesota pleasure trip on which he started so blithely came to the point of being his ultimate disaster.

Once in a while a business man shows unconscious ability as a newspaper writer and describes a thing better than he would if it were his business to do so. Mr. Organ's story of his adventure came to his friends here in the shape of a letter to Mr. W. P. Mussey. This letter tells the facts in so straightforward a way that it is given in full:

MINNEAPOLIS, Minn., Nov. 3.—We broke camp near Pelican Rapids, Sunday, P. M. Had a splendid time. No big shooting, but killed quite a number of all kinds, from canvasback down to the merganser. Our party consisted of Mr. Whitcomb, J. C. Joylin, W. H. Jacoby and your humble servant.

Am sorry to say that our hunt came near terminating with a death, and it was my misfortune to be the one that came so near going down to a watery grave or being frozen to death. Will relate the circumstances and then you can draw your own conclusion as to how near I was to the door.

It happened as follows: On Thursday last Whitcomb and myself cut heavy poles about 20ft. long, went up about the center of Lake Lizzie, where there is about 9ft. of water and 8ft. of mud.

We put down six poles, three on each side, placed our decoys, made a nice blind by putting string around the poles and then weaving in rice and flags. Left the blind that night and intended going back Friday morning. Whitcomb and I started from the shore at 10 A. M. and only went a short distance when the wind commenced to blow very hard, and as our boat was very small, turned back, put him ashore, and went to the blind with the intention of shooting till noon, when we were to break camp and go home.

I had hard work to get to the blind as the wind was so strong and within five minutes after I was in and had the boat tied down on each side, it was blowing so hard that I could not get out without running in the trough of the sea, as the white caps were very high. I was sure the boat would ride the waves providing I could head her down the wind, which I could not do unless the wind changed.

I decided to not attempt getting out until the wind abated, which I thought it would surely do toward night, as the wind usually goes with the sun; but instead of going down it increased, and I hardly thought it possible for it to get worse than it was. I found out in my wait of twenty-six long hours that it was only fooling the first twelve hours compared with the last fourteen.

About 9 P. M. it got colder, blew harder, then rained, afterward changed to snow and then to sleet. The water washed over the side of the boat 325 to 350 ft. to the center of the lake and get me, which offer he most respectfully declined, and added that they could not get him to go on the lake in such a storm. After seeing the boat they knew it was perfectly safe, and they started for the blind, which they found empty, as I had left there at 6:20

A. M., about twenty minutes ahead of them. Coming to the blind and finding it empty they thought of course that I was drowned or frozen. They probed the bottom in search of me, then hunted the shore. Started for camp and when within half a mile of camp saw a white flag up, which was the signal that I had returned. I never expected to get out alive, as it was the roughest night I ever was out. The wind was so strong that it blew many trees down, and ice froze over an inch thick. At 6 A. M. the wind did not blow quite so hard, so I decided to make the attempt. As the wind had changed a little in my favor I cut the boat loose and she swung around on the top of the waves, and then I knew for the first time that I was O. K.

I expected to die, and you know there are some things about a fellow's business that his wife should know. I searched my pockets for a pencil but found none. Before I started I took off my vest, put my watch and money in it, made it fast under a brace, tied my gun to the boat, and made a rope with a slip noose fast to the rowlock, so that in case I had to go down my dead body would be with the boat, as I have heard that it is unpleasant to have to wait some days for a fellow to come up.

I was very weak a few minutes before I started, but after I had pulled twenty minutes it would have taken a Hanlon to beat me that mile and a half. I got into camp about a half hour ahead of the searchers, and was all right until I got into the tent, then I felt as weak to stand up. I am all right now with the exception of the foot braces and my hands.

Am glad to hear that Kleinman did Elliott up. With best regards to the boys,

R. B. ORGAN.

At last advices Mr. Organ was sick at Minneapolis. The shock which his system must have sustained is not shown by the above simple story. In August, 1884, Mr. Organ was nearly killed by a powder explosion while he was loading some shells at Grand Crossing. It is a question whether he has ever been the same man since. Now comes this awful night, in which, thinly clad, he spent 26 hours on the edge of life, the thermometer meantime dropping 69° and threatening death from sheer exposure. We shall feel that we have simply found Ror Organ when he gets back here, though very thankful therefor indeed.

Far worse than the above is the fate of another Chicago sportsman, killed by the hand of a friend. The dispatches cover that:

GLENWOOD SPRINGS, Colo., Nov. 3.—Last Saturday G. W. Price, son of Dr. Price, of Chicago, and a member of the firm of the Price Flavoring Extract Company; A. C. Fleischner, of the same company, of Chicago; and J. B. Cobb, of the Denver Omnibus and Carriage Company; with W. H. Hubbard, of Spring Valley, near Glenwood Springs, as guide, outfitted here and started for a two weeks' hunt on the Big Muddy. Last night they camped in Jerome Park at the head of Thompson Creek, in Pitkin county, in a place called Don's Dugout. Some time during the night Mr. Price, who, it is claimed, was a somnambulist, went outside of the dugout, leaving the others asleep. Upon his return, as he crawled into the room on all fours, Hubbard called out, "Who's there?" and called to the dog, but as the dog became frightened and no answer was given, Hubbard exclaimed: "Boys, I believe it's a ren! Give me a gun, quick!" Cobb hastily handed him a .45cal. Colt's revolver, and without further thought Hubbard fired two shots, one of which passed through the top of Price's head into his body, causing his death in about two hours. The party returned immediately to Marion, where an engine was procured, and all came to Glenwood Springs this afternoon. Coroner G. Clark immediately summoned a jury, and a verdict of accidental shooting was rendered.

Dr. V. C. Price, father of the victim in the above deplorable affair, denies that his son was a sleep-walker. George W. Price was twenty-six years old, recently married. He was a prominent young business man, much esteemed. Killed by his guide.

Yesterday, in West Virginia, occurred another fatal accident in the field, one of the sort which it is hard to understand as possible to a man gifted with fair possession of his faculties, but one which happens all too often. Several men were hunting near Wilsonburg, when a little seven-year-old child, being in the edge of the woods, became frightened at the firing and lay down behind a log. One of the hunters mistook the little head for some animal and fired, putting a bullet through the boy's brain. The father of the boy was one of the hunting party.

Nov. 6.—Some good duck shooting within the past week or so in the Illinois River country. Senachwine Lake reports some heavy bags, and at Hennepin Club, above there, the sport has been fine. On Oct. 16 W. W. McFarland, at Hennepin Club, killed 95 ducks in one day and C. D. Gammon 75. Last week Messrs. McFarland, Gammon and Eich bagged 271 ducks in 4 days down at the old reliable Hennepin Marsh. The Hennepin boys are all delighted with their new club boat—hot and cold water, washstands, and all that. Is it to this that Charlie Gammon attributes the attack of inflammatory rheumatism which has him now confined to his bed?

The buffalo is gone. Mr. Albert Bierstadt's sorrow at that should be mitigated. His painting, "The Last of the Buffaloes," has lately been sold for \$50,000.

Quail very plenty in Indiana and lower Illinois. Good bags are reported, notably one by Oscar Von Lengerke, of Von Lengerke & Antoine.

E. HOUGH.

LAKE WAUGHBUNSEY is about thirty miles south of Council Bluffs, as the crow flies, and two or three miles east of a small station (Bartlette), on the "R. C." The east shore of the lake is bordered by high bluffs, the margin being shaded by drooping willow, ash and oak, underneath whose shade there is a thick growth of rushes, sweet flag and red-stemmed smart weed, which makes splendid feeding ground early in the fall for wood duck and teal, but later when the shooting becomes general they leave the shore for new feeding places farther out in the lake among the bushes of smart weed, wild celery and other tender aquatic plants. At night the ever gregarious teal and wood duck will collect around some large rat house to partake of a rich supper of celery and other tender roots and plants brought to the surface by the industrious rats. Mallards, too, get their share of the edibles and keep up a continual quacking throughout the night. The west shore of this lake is bordered by prairie grass, slough, red-twigged maples and little silver-twigged willow. On these boggy bottoms is the home of those palatable and sprightly little gallinules known to gunners as jack snipe, tip-tail, yellow legs, etc. Farther over in the fields are quail in great abundance, but the tall grass and weeds are hard to pull through and make this kind of hunting rather laborious, however over there in the woods to the east the quail and squirrel shooting is very good, and one is now and then rewarded by bagging a pheasant. There is no trouble about securing boats at this lake, as several new ones have been launched this fall and rent for 10 cents an hour.—Omaha Bee.

TEXAS WILDFOWL.—Port Lavaca, Nov. 3.—Mr. John Dearlam of Long Mott brought the result of a day's shooting to town last week. It consisted of 200 ducks. Countless thousands are in the vicinity.

MAINE GAME.

THERE comes up a wail from Portland, Me., papers that partridges can hardly be had in that city at any price. Then the Portland Express attempts to explain the scarcity from the fact that the new game laws provide that a man shall kill only fifteen partridges, and then, if he wishes to sell them, he must take them to market himself. The express companies, on this account, have refused to take them, and have notified the hunters to that effect. This, that paper claims, reduces the supply, and makes the lover of partridges pay high prices if they will gratify their love for game. The same growl comes from the Lewiston and Bangor marketmen. They say that the stage drivers, who, in previous seasons, have done a good business buying partridges along their routes and then bringing them to town, are afraid to touch them this year.

Mr. D. H. Blanchard, of Boston, who has been almost every year into Maine for partridges for many years, says that he has found them unusually scarce this year. He has spent several weeks in that State this fall, in the upper Moosehead region and in the Nicasotus region, but he found not one-third the usual number of partridges. He believes that it is the excessive shooting of the young birds, while yet in broods, that has so greatly thinned out their numbers; and he believes that the open season begins altogether too early. Oct. 1 would be early enough. Then the young birds would be in full plumage and better able to take care of themselves.

The Boston marketmen are not getting partridges this year, and though they have little to say as to what prices the supply has ceased to come from, yet it is quite certain that it is Maine that they have chiefly in mind. Why, under the old law a man in Bangor by the name of Abbott, as I remember, built a refrigerator, and one fall he bought several thousand partridges at 10 cents, 15 cents and 20 cents apiece, just as he could get them. He put these in cold storage, and when they became worth \$1 a pair in New York, he sent them there by the carload, and realized thousands of dollars on his venture. Under the new law he could have had only fifteen birds on hand at once, or at least he can transport only that number, and that, too, openly. It is perfectly natural that such men should fight the new law. They are no worse than the generality of men if they do, but they must find some other means of profit. There is little doubt, however, but what a good many birds will be quietly shipped to Portland and Bangor and then stealthily out of the State. But the Commissioners have a better law to work with than ever before, and they will try to enforce it.

There is no doubt about the scarcity of moose in the Maine forests this year, compared with three or four seasons past, and there is little doubt about their being illegally killed in several instances. But when one is asked to believe all the stories that have been told about the slaughter of moose in the close season in the Moosehead Lake region, his good sense is reflected upon seriously, especially if the listener be at all acquainted with the Maine woods, and the extent in which moose have existed there during the past eight or ten years. Scores of city sportsmen go into the Maine woods every season, and their great desire is to kill a moose. To most of them it matters but little as to whether it be in the open or close season, if they can only slay their moose. They will take the chances of the fines, though using every precaution against being found out till well out of the State. But in spite of this lawlessness of feeling, that has existed for several years, the number of moose killed in Maine this year, up to date, has been unusually small. These men, when they reach their city homes, are very likely to brag of their exploits, but it is a curious fact that not the usual number of stories of moose slain are being told this season. If these fellows have killed their moose apiece this year, they are keeping unusually still about it. Some moose stories are told, to be sure. One young gentleman, who has hunted along almost the entire border of Maine and Canada, tells of killing a moose, while he was back in Boston previous to Oct. 1. But he claims that his moose was killed on Canadian soil.

Two other sportsmen mentioned the killing of a moose during the last days of September in the region of Spencer Lake. They were not intending to hunt large game till it was legal to do so. But about the 28th of September, on one of those beautiful days that the season has been remarkable for, they were sitting in camp, when the guide called out, "Look at that moose!" Just across the pond an enormous moose had come down into the shallow and nearly dried out marsh to feed. The guide rushed for the boat, and both hunters got in, with their Winchester repeating rifles. The guide paddled them very cautiously around a curve and into a bend of the pond in such a way that the moose did not see them. They were approaching close to an easy rifle shot.

But one of the hunters relented, and said that there was no moose for him till the open season. The guide sneered, in a whisper, and told the hunter that it was the chance of his life. The hunter still relented. The guide turned to the other hunter with the threat that if one of them was not going to shoot, he should shoot the moose himself. He requested them not to make a noise that would frighten the beast away. The hunters concluded that they might as well shoot as to have the guide do the killing. They came in sight of the monster just as he scented them and began to turn his head. The second hunter succeeded in putting a ball just back of the fore shoulder, when the moose, an enormous bull, staggered and toppled over. He came down with a great splash into the muddy water, and lay lifeless.

Then it was that the hunters regretted the work they had done. With all the force they could muster they could not pull the great beast out of the muddy water and get him where he would float. They finally gave up in despair. They did not like to go to other camps for assistance. The weather was hot, as everybody remembers, and nothing of the moose was saved but his head and antlers, and the few steaks that were cut from the quarters before the whole begun to spoil. They had no ice at their camp—only a temporary one—and there was none for miles. The moose was wasted. Those say they are done with moose that must be left to spoil.

The reports of deer killed in Maine, since the open season begun, are beginning to come in, though it is curious to note that not one has yet appeared in the Boston market. At the Eastern Railroad Station the other morning there were three fine deer tagged to a Mr. H. F. Bailey.

CHATHAM FISH AND GAME PROTECTIVE ASSOCIATION OF NEW JERSEY.—The results of restocking the territory covered by this Association were largely exhibited on Nov. 2 and 3, the first two days of the open season for quail. In every locality where quail had been turned out last spring they were found more abundant than for years, except in one instance. In this latter case lawless poachers went upon the ground and killed off probably the larger number of those that were turned out in the spring. Reports from members and their friends, as well as from the farmers, were of the most gratifying character. Not only were a large number of quail shot, but many partridges, woodcock, snipe, rabbits and a sprinkling of raccoons and other small animals. One trespasser was arrested and his gun confiscated by the game wardens. A few sportsmen who, ignorantly or otherwise, were upon the grounds, were met by game wardens, constables or members and prudently took their leave. The farmers and land owners are deeply gratified at the almost entire freedom from annoyance and the destruction of domestic fowls. The community is generally in favor of the action of this Association. The territory is being enlarged in a considerable measure by the voluntary requests of farmers and land owners for permission to sign the Association agreements. Arrangements are being made to have permanent covers erected as protection for quail and other game birds, and supply them with buckwheat and other food during the coming winter. The frame for the new club house opposite the Chatham Station is now being constructed.—R.

HOW TO TELL THE POINT OF COMPASS WITH A KNIFE AND A WATCH.—*Editor Forest and Stream:* Not long ago one of your correspondents told how to find the points of compass with a watch, but he said nothing about finding the sun on a dark day, and that is a very important part of the programme. My way of finding where I am when lost in the field or upon the water on a cloudy day, is to place the point of a knife blade upon the middle of my thumb nail—the blade in a line perpendicular to the plane of the nail. A shadow will then be seen upon the nail pointing at the knife point, and one can readily determine where the sun is. If the hour hand of a watch is then pointed at the sun, half of the distance between the hour hand and 12 o'clock is due south at any time between 6 A. M. and 6 P. M. Between the hours of 6 P. M. and 6 A. M. half of the distance between the hour hand and 12 o'clock is due north. In the woods one can be deceived by the nail shadow if he stands among trees and light comes through an opening in the forest. It is necessary to stand in an opening clear from the trees, and then it must be a very dark day indeed when the nail shadow is not sufficiently well defined to give the direction of the sun. I never bother to carry a compass on hunting trips.—ROBT. T. MORRIS, M.D.

NIGHT SHOOTING DUCKS ON THE POTOMAC.—On Sunday morning, Nov. 1, a little before daylight, two men were seen shooting ducks by the aid of a large headlight, such as may be seen on canal boats, at Four-Mile Run, near Washington. They fired a great many shots and seemed to be killing plenty of game, paddling up and down in the vicinity, and within easy reach of the police boat. Here was a double violation of the law—shooting on Sunday and using a light. Yet the paid protectors of our game slept serenely through the entire bombardment. Is it wonderful that law-abiding sportsmen seldom find a duck within rifle shot?

LONG ISLAND.—Oakdale, Nov. 4.—The whole of Suffolk county is a natural game preserve and we want our own laws. There should be a law against killing deer for five or ten years; law on rabbits to be the same as on quail (November and December); to snare rabbits unlawful, as the apple bait catches partridges; strict law on shooting on the Sabbath on the bay and upland; fines for snaring, trapping and trespassing should be heavy; a strict law against the netting of ducks. Quail are very scarce. After a deal of hard work my son and I got only eight on the first day.—ALFRED A. FRASER.

WEST VIRGINIA GAME.—Mr. T. B. Wilson writes from Capon Valley, Hardy county, that pheasants and turkeys are as plentiful as they were ten years ago, and we know from experience that they were abundant enough then to satisfy any reasonable hunter. Deer, however, appear to be growing scarcer, while signs of bear are unusually promising. There is a great quantity of chestnut mast, and Mr. Wilson believes the game will be likely to stay in the region.—T. H. B.

MISSISSIPPI.—Meridian, Oct. 26.—Weather here has been dryer than in any year of the eight or nine I have been in the South. A party of three went squirrel hunting about two weeks ago, getting 37 in two days. Had it not been for the wind and the extreme dryness of the fallen leaves the score would have been doubled or trebled. All reports indicate a fine season for quail, but we must have rain and cooler weather to make hunting pleasant.—G. W. S.

DROUGHT AND NO DUCKS.—Forgo, Nov. 1.—I searched the northern and central parts of Minnesota for duck shooting, and I can assure you it is not there, nor in South Dakota either. Small lakes all dry. I put out money, brains and time to find ten days' good shooting, and failed. Let the duck hunter be mighty certain that his particular spot is all right or he will get left this year.—PINK EDOE.

CURRITUCK DUCKS.—Mr. Charles Hallock, on board steamer Newbern, Currituck Sound, N. C., Nov. 9, reports a big bunch of geese off Buck Island, on the inshore side of the sound. A few black ducks, teal and mallards moving, and some new blinds out. Weather mild, and wind light from the southward and eastward.

GOING TO CALIFORNIA.—A person can take a seat in a palace car at Dearborn Station any afternoon and go over the Atchison, Topeka and Santa Fé Railroad to San Francisco, Los Angeles or San Diego without changing cars. The fast express on this line makes at least twenty-four hours quicker time to Los Angeles than any other line, and in fact the Santa Fé is the only thoroughly comfortable route to take. The office is at No. 212 Clark street, Chicago.—Advt.

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. *Fly-Rods and Fly-Tackle.* By H. P. Wells. Price \$2.50. *Fly-Fishing and Fly-Making for Trout.* By J. H. Keene. Price \$1.50. *American Angler's Book.* By Thad. Norris. Price \$5.50.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

VERMONT FISH AND GAME LEAGUE.

THE first annual meeting and banquet of the Vermont Fish and Game League was held at Burlington, Nov. 4, an excellent representation of the several sections of the State being in attendance. In the business meeting, President Dow in the chair, the following new members were added: Frank A. Dwinell, W. H. DuBois, Dr. Geo. L. Nichols, C. C. Bancroft, C. M. Wilds, Major A. B. Valentine, A. D. Farwell, Albert W. Ferrin, P. C. J. Cheney, E. P. Warner, O. E. Adams, Henry J. Hall, A. F. Lincoln, Col. U. A. Woodbury, John A. Barrett, Wm. S. Dewey, H. B. Ellis, Dr. D. A. Bisbee, A. T. Newman, H. S. Peck, O. J. Cain. Honorary members: Marshall McDonald, A. N. Cheney, Dr. Jas. A. Henshall, Col. E. B. Hodge, C. H. Wilson, E. H. Lathrop, Rowland E. Robinson, Samuel Wilmott, J. G. A. Creighton.

The officers elected for the year were: President—Henry R. Dorr, of Rutland. Vice-presidents—M. S. Colburn, of Manchester Center; Henry Ballard, of Burlington; Thad M. Chapman, of Middlebury; W. W. Miles, of Barton; Herbert Brainerd, of St. Albans; Hiram Atkins, of Montpelier; F. S. McKenzie, of Woodstock; James Ritchie, of St. Johnsbury; Nathan Hobson, of Island Pond; George W. Hooker, of Brattleboro. Secretary—John W. Titcomb, of Rutland. Treasurer—James W. Brock, of Montpelier. Executive Committee (one for each county)—Addison, W. R. Peake, of Bristol; Bennington, C. F. Orvis, of Manchester; Caledonia, James Ritchie, of St. Johnsbury; Chittenden, William W. Henry, of Burlington; Essex, Nathan Hobson, of East Brighton; Franklin, E. C. Smith, of St. Albans; Grand Isle, N. W. Fisk, of Isle La Motte; Lamoille, C. S. Page, of Hyde Park; Orange, R. J. Kimball, of West Randolph; Orleans, W. W. Miles, of Barton; Rutland, C. A. Gale, of Rutland; Washington, John E. Hubbard, of Montpelier; Windham, Walter H. Childs, of Brattleboro; Windsor, F. S. McKenzie, of Woodstock. Auditors—E. C. Orvis, George W. Wing, William Walker. Membership Committee—H. R. Dorr, M. S. Colburn, J. W. Titcomb.

The treasurer's report showed one life member, 108 members who had paid \$5 each and \$185.87 on hand.

A proposed amendment to the constitution changing the annual assessment from \$5 to \$3 was read and was opposed by Mr. Senter, of Montpelier. Mr. Atkins and Dr. Gale discussed the proposed amendment, both opposing any reduction, the president favoring the reduction. Ex-Gov. Stewart thought it desirable to get a large membership. He could see how many men of ordinary means, who desired the protection of fish and game, could not afford to pay \$5. Charles H. Sheldon, of Rutland, desired to popularize the league and advocated the reduction. John P. Hoskinson argued that the league could not be popularized. He considered fishing a luxury only to be enjoyed by men of wealth, arguing that a man had a right to fish on his own land. Mr. Atkins said the object of the association was the general public good. Gen. Henry favored the adoption of the amendment. The amendment was adopted.

Another amendment, proposing the admission to the league of branch clubs by the admission of one member was adopted.

In his opening address, after the excellent banquet had been discussed, President Dorr said:

"There were disturbances in neighboring States yesterday, and even from the seclusion of these blessed valleys of Vermont we could hear things drop. To-day there are mournings in the tabernacles of the mighty, and to change the metaphor a trifle, the hit bird flutters in other localities. But here to-night there are no parties and no partisans. The roaring beast of prey and that gentle domestic animal, so familiar in political mythology, here lie down together. For fear of causing a discussion as to which is which, I shall pursue this line of thought no longer.

"I want to say one serious word concerning the aim of the Vermont Fish and Game League. It was not incorporated for social recreation, nor for boys' play. It has for a serious and honorable purpose. We wish to protect and propagate the fish and game suited to our woods and waters, and render the Green Mountains so attractive to genuine sportsmen that they will come from less favorable places to join us; and I pray heaven that all sham sportsmen, however lavish of their money, may stay away. I think I voice the sentiment of this league in saying that we would rather stock the streams and woods of Vermont for the poacher who kills to eat out of season than for the wanton who destroys simply for the sake of killing, and thinks his skill is indicated by the great numbers of his slaughtered victims.

"Numberless schemes are devised for the development of Vermont, but I hope this grand old Commonwealth will never be developed and polished into the characterless conventionalism of the typical summer resort, and I believe that the stocking of our forests and streams will accomplish more for the State in a money way than all the other elaborate plans submitted to the intelligent judgment of our people. Maine and northern New York and New Hampshire gain millions of dollars every year from visiting lovers of the rod and gun. Here in Vermont we have everything but the fish and game. No purer lakes and streams for fish and water fowls, no lovelier cover for birds, no grander ranges for deer exist anywhere; and they are lonely to-night because the denizens of old days have gone from them these many years. The pursuit of manly sport with rod and gun and their wholesome outdoor life gave to the founders of the State the nerve, the brain, the sturdy frame, the splendid qualities of mind and heart which stamped each one of them a nobleman. The mountains, crags and hills lifted their thoughts to high and patriotic themes; the solitude of

forest places led them to serious meditation; and the song and sunshine of meadow and open gave jocund gladness and buoyancy of spirit—and all made sturdy, manly, generous men. Let their descendants, with luxury at hand or in sight, always remember this.

"We are just beginning to realize that the league means business and is accomplishing something. In the name of the league I want to thank the governor and legislature of Vermont for the appropriation to build a State hatchery and to render our grateful thanks to the national government for appropriating money to build a national hatchery within our borders. This is a splendid beginning, and Col. McDonald, United States Fish Commissioner, has given this matter generous personal attention, for which we are profoundly grateful. However, the stocking of lakes and streams will be worse than useless if laws are not furnished and enforced to take the place of the awful hodge-podge of uncertain and contradictory statutes governing this subject. I hope the action of the league this evening may end in the enactment of good and wholesome laws, calculated to curb unbridled audacity and protect the fish and game of the State."

Gov. Page, to whom had been assigned the toast, "Vermont," was detained in Boston, and Col. W. A. Woodbury responded, saying the present governor once prevented him responding to Vermont. Now his absence permitted it. Small in area, sparse in population, poor in numbers, Vermont yet claims prominence everywhere. She has a quality others do not possess—a storehouse for game and fish, beauties others may covet. It needs the poetic imagination of a Dorr to write her praises. The character of Vermont's citizens gives her prestige, in which she is unexcelled. Though we have lost an Edmunds, a noble son of Vermont will fill his place to the credit of both: they are men above reproach.

Secretary Proctor, responding to the toast, "The National Government," said he was in New York and the current news made him long for home, and he came. He was not a hunter, but he took the fishing disorder early with an alder stick. His tenth birthday was the start, and a free use of the slipper followed his return with one trout. A place in Pensacola Bay would hereafter be known as "Proctor's Snapper Bank." A prerequisite to membership in the league is speaking the requisite truth. Hence his recent sojourn to Mount Vernon and the cherry tree.

Gen. W. Y. W. Ripley, speaking on "With Gun and Rifle," said he stole a gun for his first hunt, aided by a chum. (Game in abundance prevailed, partridges and squirrels were plenty. Trout were plenty when he was young, foxes abundant, with occasional deer. Legal restraint to-day as to seasons is the only safety for the forests and streams. Game grows less abundant every year. Shorten the open season for all fish and game, he said. A trout 6 in. long in the fall is too young to propagate the next season. Such trout may have spawn, but it will not fertilize. The 6 in. law should be changed to 9 or 8 at the least. Nine inch trout are pretty sights, but they leave small streams for better food supply. Shorter open seasons, May 1 to Aug. 15, is sufficient—Oct. 1 to Dec. 1 is enough for game until supply equals demand. Match hunting is an abomination which true sportsmen abhor.

Speaking to the toast, "Our Abandoned Farms," ex-Gov. Stewart saw no sign of discouragement to Vermont farmers. Few farms are abandoned. Many houses are abandoned by small holdings passing to other hands. Vermont's soil is fertile, equal to any, few Vermonters would change for western land, where schools and civilization are unknown.

Gen. Wm. W. Henry, responding to the toast, "The Birth of the League," said the father and mother of the league was the Fish and Gun Club of Rutland. He read the objects of the league, urging all to join it.

President Ezra Brainerd illustrated his remarks on "Uses of Recreation" with stories of his summer outing, and although confessing to his inability to kill game, proved his ability to kill time.

In speaking on "Where We Are," Hon. Walter E. Howard admired the epigrammatic sentiment of the toast and paid a glowing tribute to Burlington, her beauties and industries, her scholars and soldiers.

In his response to the toast "Fish and Fishermen," Charles M. Wilds related his experience in going from Middlebury to Isle La Motte, keeping his auditors in good humor.

President Buckingham spoke of "The Future," fittingly closing the first annual dinner of a new but successful organization.

DRUID HILL PARK DUCKS AND BASS.—Loitering pedestrians, as well as persons behind fast horses spinning around the big lake in Druid Hill Park in the afternoon, stopped to admire the graceful movements of the wild ducks which had congregated on the bosom of the lake, near its centre. The ducks seemed to know they were in safety inside the limits of the park and fed and played in disregard of their human observers. Going down near the centre of the lake, they would occasionally come up near the iron railing which incloses the beautiful sheet of water. A little group of sporting men enjoyed the evolutions of the birds exceedingly, and one of the more experienced of the party told about the game in the lake swimming about under the ducks. He said no body of water of like size in the world contained more or larger black bass than Druid Lake. On a sunny day large bass, singly or in groups, float lazily in shoal water, sunning themselves. They do not take fright readily, feeling, like the ducks, secure inside the sacred precincts of Druid Hill Park, nor are they disposed to take notice of bait thrown in at such a time. Tempting bait thrown on the surface of the lake at other times almost always causes a rise of bass, and the sportsmen who try this diversion are rewarded by seeing some of the handsomest specimens of bass imaginable make the water fly as they disappear with the bait. The largest bass that ever came out of Druid Lake measured over 22 in. in length and was broad and thick in proportion. It was such a fish as would cause the pulse of any appreciative angler to quicken. A party of workmen were inside the rail repairing the riprapping, when this monster bass jumped out of the water and on the stones. One of the workmen struck it with a hoe which he had in his hand and captured the prize. It was sent in to one of the park commissioners, —*Baltimore Sun.*

BASS IN THE ADIRONDACKS.

Editor *Forest and Stream*:

The article entitled "Shall the Adirondacks be Stocked With Bass?" was read by me when it was published with sadness. I reflected upon what, from time to time, has come to my knowledge respecting the waning of excellent trout fishing that once existed in the Adirondacks. Gentlemen, sportsmen, who killed two, three and ten times the number of trout possible for use in camp; guides who caught all the big trout, through the ice, in early spring for market, continuing through May and June the nefarious practice of killing and carrying out all they could stagger under, to sell; the lumberman who now, through impatience, "dynamite the ice" in the spring, that the channel for floating logs may be more readily cleared—those are the three chief agencies of the "waning" spoken of. Further material for sad reflection arises when the subject of bettering the fishing in the Adirondacks comes up in combined thoughts of the guide—vandal—who threatens the introduction of pickerel into the headwaters of the Beaver River because Dr. Webb interferes with his predatory proclivities, and he who cuts nets set by Mr. Marks—Fulton Chain Hatchery—for the extermination, in a measure, of catfish or bullheads.

You ask for information on the subject of introducing black bass in the Adirondack waters. My information can but amount to an opinion. I should think that it would be well to introduce black bass into the waters of the Adirondacks where pickerel already exist, but not with the idea that the bass will exterminate the pickerel.

Your letter to me implies that bass were introduced into some of the waters at Blooming Grove Park with the result of exterminating the pickerel. Such was not the case. There were obtained from Greenwood Lake and the St. Lawrence River, large and small-mouth bass with the idea that they might improve the bass fishing in Lake Giles where, in previous years, had been placed many thousands of small-mouth bass, taken from Lake Laura on High Knob, without obtaining the desired results. The experiment of placing large-mouth bass in Giles has resulted in improvement to some extent in taking bass. I should judge that the pickerel are as numerous as before. At best the lake is not a bass lake; it is fed by springs entirely and is deep. And my opinion is that all such cold deep waters will not result in good sport fishing for bass. Such waters are well adapted for landlocked salmon and trout. For example, Lake Giles after three years stocking with adult brook trout, has afforded more sport than during the previous ten years. It has been my fortune to be cognizant of matters at Blooming Grove Park for thirteen years. It now has become the practice of our management to retain for two years about 5,000 brook trout for the purpose of obtaining spawn and stocking, then to release them in Giles, where there are pickerel, bass, lake trout and landlocked salmon, perch, bullheads, eels, sunfish and shiners. It is quite a common occurrence for members to bring in trout, bass and pickerel as the result of one excursion around the lake.

As regards information for the Commissioners, I would refer them to the result of stocking with bass the Raquette River section of the Adirondacks.

SPENCER M. NASH.

THE CASTALIA TROUT.

CHICAGO, Ill., Oct. 6.—Last April I visited the famous Castalia trout stream of Ohio, and wrote about it. Mr. Milton P. Peirce made comment on my article. He seemed to think that my statements as to the origin of the Castalia trout were wrong. I thought them right. Now I know they were right, and have proof for it. This comes through the courtesy of Judge Emery D. Potter, of Toledo, O., a member of the Ohio State Fish Commission, to whom I wrote last summer for further information. Under date of July 10 Judge Potter wrote me as follows:

"I am averse to entering into any controversy with Mr. M. P. Peirce, a man I never saw, nor heard of till within the last year or two. But as his statements to which you allude have been dignified by a column or more in the *FOREST AND STREAM*, a publication of acknowledged authority among sportsmen and scientists, I propose to dispel some of his theories and statements, that the public may not be led astray by letting them pass uncontradicted. To do this effectually it will require some little time to procure the data necessary to establish my position. When completed I will submit my paper to you to be used at your discretion.—EMERY D. POTTER."

On July 29 Judge Potter wrote again: "I have just returned from Sandusky and Castalia. I found half a dozen farmers who have lived on the banks of Cold Creek (Castalia) from thirty-five to fifty years, and who have fished in that stream up to the time John Hoyt introduced the trout into it, and they all declare that no trout were ever seen or caught there up to that time. The only fish taken was what they call 'horned dace.' I have been familiar with this stream for over half a century, and know from personal observation that there was never a trout in it till John Hoyt put it there. I am promised letters from the gentlemen interviewed to establish the transplanting theory. I will soon send you proofs.—EMERY D. POTTER."

Later on, at my request, Judge Potter kindly embodied the main facts of his position on this matter in a single statement, which he has just sent on to me. Nobody ever had any real question as to the fact that these trout were planted. Any question as to their origin was absurd, and after the following simple arrangement of the facts, by an authority like Judge Potter, who in interest of fact and truth purely has given his time to this matter, any such question would no longer be entertainable in any form. Judge Potter's final letter, for which *FOREST AND STREAM* will thank him, is as follows:

"OHIO STATE FISH AND GAME COMMISSION.—Some years ago John Hoyt built a dam across Castalia Creek, in Sandusky county, on his own ground, raising quite a large pond. The citizens of Castalia Village, believing it injurious to health, prosecuted the dam and pond as a nuisance. The trial was finally ended in the Supreme Court of Ohio in Hoyt's favor. The litigation was a long one. Chemists were employed to analyze the water of this spring or creek, and among others the water of Avon Spring, New York. The results of both were identical.

"Finding trout at Avon, Hoyt built a hatchery at his pond, introduced trout spawn, hatching a considerable number; these he placed in the stream below his mill,

where they prospered and where they are to-day in great abundance. I have lived within forty miles of Castalia for fifty-six years, have often visited that neighborhood on fishing expeditions, and never saw or heard of the trout there until within the last ten or twelve years. I have recently visited the stream from the spring where it rises to the lake, and inquired of old farmers whose lands were watered by it, many of them having lived there for over fifty years, and they all tell the same story, that there was never a trout there till John Hoyt put them there. The only native fish were chubs and small mud fish.

About four miles from Castalia is Rockwell's Spring, with sufficient water at the outlet to run a large grist mill. Trout from Castalia were introduced there a dozen years ago, the waters have been leased by a number of gentlemen from Bellevue, O., who now find good sport there.

"I have fished in every available fishing ground in Ohio, and I know that the only stream in the State where brook trout were found (natives) was the west branch of the Chagrin River in Granger county, where Dr. Garlick and I have captured many a good string, and from whence we took many dozens to supply the Doctor's hatchery near Cleveland. I can vouch for the fact that neither Drs. Garlick or Ackly ever saw Castalia Spring, and if they told Mr. Peirce that they got trout from there they were guying him. It is very strange that as many years as I knew Dr. Garlick, and the days we have spent together in fishing and in his experimental hatchery at Cleveland, where I spent two years, that I should never have heard him mention the name of Castalia or Milton P. Peirce.—EMERY D. POTTER."

This settles that.

E. HOUGH.

ADIRONDACK FISHING RIGHTS.

AT the request of people interested in knowing whether the public has a right or can be prosecuted successfully for fishing in the Fulton Chain waters, Attorney L. W. Fiske, of Boonville, has looked up the law in the case and gives facts and points below which will also apply to other similar sections of the Adirondacks. He has prepared a brief which is reported in the *Boonville Herald* as follows:

In the Matter of the Right of the Public to Fish, etc., in the Fulton Chain of Lakes.

GENERAL STATEMENT.—It asked whether individuals of the general public can be prosecuted for trespass for using for navigation, or for fishing in the Fulton Chain of lakes (so called), which are a part of the forest preserve, in the open season, by owners who have organized private parks under the statute.

The Fulton Chain of lakes consists of a series of inland lakes numbering from 1 to 8, through which runs one branch of the Moose River and all of them are navigable during the whole year except when frozen over. The State has built dams on outlets of the different lakes to raise the waters thereof for its canal system; has built a fish hatchery on said river to stock said lakes with trout fry, and for over twenty years has every year stocked said lakes with fry from said hatchery or from others which it owns; has also put the territory in which said lakes lie under the control of its fish and game wardens, and made rules and regulations for control of the same.

The public has used these lakes for navigation and fishing purposes from before and since 1840. The statute under which the right to exclude the public in so-called private parks was passed by the legislature of this State in 1879 (see chap. 534, thereof). This act repealed all other acts inconsistent with it (see sec. 40 thereof).

The sections of the said statute, giving the right to organize private parks may be found in sections 27 and 28 thereof as now amended.

Section 27 of said act among other things says: "Any owner having the exclusive right to shoot or hunt thereon, or fish therein, desiring to lay out, devote, etc., shall publish three months, etc., and post notice, and having so done, said territory becomes exclusive, etc., etc."

The constitution of this State (see Section 2 of Article 1) says: "That the people of the State in their right of sovereignty are deemed to possess the original, and ultimate property in, and to all lands within the jurisdiction of the State."

The letters patent for the land conveyed in Herkimer and Hamilton counties, convey by lots, as they are numbered and no specific grants have ever been made of these lakes or that under the waters of the lakes.

THE LAW OF THIS STATE.—The Court of Appeals of this State has settled the law in reference to what waters of the State are navigable therein, and as those lakes come within the definition, they must be deemed to be subject to the law prevailing, and riparian owners take their grants from the State with the implied easements and servitudes, that followed a grant by common law.

(A.) Navigable waters in this State are such as are capable of being used to float in boats or rafts or even in their natural state the products of our forests and fields to market, and it is not essential that this use will continue through the year, nor at all seasons, nor that they are navigable against the current. 35 N. Fishculture.

YEARLING SALMON FOR VERMONT.

IN accordance with his plan of making a prompt and lasting impression upon waters to be stocked, Commissioner McDonald will introduce large numbers of yearling fish of the salmon family into suitable streams. At the various stations adapted to the purpose rearing ponds have been established, and are being multiplied as rapidly as circumstances will permit. One of the cars of the Commission left Washington on Thursday last with carp for New York and New England, and received on Friday, in good condition, from Cold Spring Harbor, New York, 3,500 yearling California salmon, to be planted in the Battenkill, in Vermont, and certain of its tributaries. Mr. A. N. Cheney, of Glens Falls, N. Y., went to the Battenkill Valley recently to select streams favorable for the undertaking, and he reported favorably upon Green River, which is a fine trout brook, Benedict Brook and Mattison Brook, tributaries of the Battenkill River. The waters are clear, free from sawdust, and well supplied with fish food. The sentiment of the people is favorable to their protection. Mr. Cheney met the car at Troy and personally assisted in the distribution of the salmon in the waters above mentioned. The United States Commission has never distributed fry of the California salmon in New York, but simply furnished eggs for hatching and planting by the New York Commission. The successful, though mysterious, acclimation of the rainbow trout in the Battenkill gives ample assurance that the California salmon will find conditions favorable to their growth in the same waters, as these species do well together in their native streams in California.

Preliminary to the distribution of landlocked salmon from Maine, Governor Ripley, of Rutland, Vt., made a survey of the rivers of the State, tributary to Lake Champlain, to select proper localities for stocking with this species. It is the desire of the commissioner to hold the salmon in the streams until maturity, when they can go down to the lake to spawn, and need not reënter the rivers. In the selection of rearing waters, therefore, the return of the fish was not considered important, and the range of choice was wider. The following distribution, suggested by Gov. Ripley, has been made:

Winowsky (at Waterbury).....	6,000
Brown's River (for the Lamoille).....	5,000
Indian Brook.....	2,000
Mallett's Creek.....	1,000
Sunderland Hollow Brook.....	1,000
Lewis Creek.....	5,000
Total.....	20,000

The young fish were placed in waters as far removed as possible from the lake, in order to avoid the pickerel and other predatory fish which abound in the lower portion of all the rivers. Sunderland Brook is particularly promising for the protection of the salmon, as it carries a bountiful supply of pure water and runs for miles through an inaccessible alder swamp. Lewis Creek, although small, is considered as the best stream for the purpose. The commission had the co-operation of State Commissioner Atherton, Gen. W. W. Henry and Mr. S. C. Caines in the safe accomplishment of this important work. The results already obtained from experiments with landlocked salmon in Lake Champlain prove the wisdom and desirability of the undertaking.

NEW YORK FISH COMMISSION.—At the meeting last Tuesday Commissioner Blackford reported that a supply of carp received from the United States Commission was now ready for distribution. They are given out free, 20 to each applicant, the only charge being 25 cents for a can and shipping. The Fulton Chain (Adirondacks) hatchery reported the collection of 500,000 trout eggs. A petition was received from residents on the Long Island Sound asking the Commission to undertake the cultivation of salt-water fish, particularly striped bass and weakfish, to restock the Sound. This was referred to Mr. Huntington, who is specially interested in the subject, and who has been investigating the possibilities of salt-water work. Reports from the fish and game protectors for the month of October showed activity on the part of the force. In reply to a communication from Capt. J. W. Collins asking if New York would be represented by a live fish display at the World's Fair, it was stated that such a display could be made only if provided for by the next Legislature.

YOUNG SHAD have come down the Delaware this fall in remarkable numbers. Commissioner Ford has informed the U. S. Commissioner that they began the journey seaward on Aug. 1, and on Oct. 20 the run still continued without diminution. The natural spawning in the upper waters was without precedent in recent years, and was due partly to the unfavorable conditions in the lower river during the spawning season, but chiefly to the removal of obstructions by means of fishways and dams. The effect of this enormous production of fry should be evident in a greatly increased fishery several years later.

FIXTURES.

DOG SHOWS.

Dec. 4 to 8.—Sixth Annual Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill.
Dec. 10 to 14.—Inaugural Dog Show of the Freeport Poultry and Pet Stock Association, at Freeport, Ill. T. E. Taylor, Sec'y.
Dec. 30 to Jan. 2.—Fourth Annual Dog Show of the Mohawk Valley Poultry and Kennel Club, at Gloversville, N. Y. F. B. Zimmer, Sec'y.
1892.
Jan. 5 to 8.—The New York and New England Poultry and Kennel Club's Dog Show, at Albany, N. Y. W. C. House, Fort Plain, N. Y., Sec'y.
Jan. 5 to 9.—Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Sec'y.
Jan. 13 to 16.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.
Jan. 21 to 25.—Second Annual Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. C. A. Bowman, Sec'y.
Feb. 9 to 12.—Fourth Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Sec'y.
Feb. 16 to 19.—Second Annual Dog Show of the Central City Kennel, Jackson, Mich. D. E. L. Kimball, Sec'y.
Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.
March 1 to 4.—Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. F. S. Brown, Sec'y.
March 5 to 11.—Washington City Kennel Club, Washington, D. C. Fred S. Webster, Sec'y, 738 Broadway, New York.
March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.
April 7 to 10.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.
May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

FIELD TRIALS.

Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.
Nov. 23.—Irish Setter Club's Field Trials, at High Point, N. C. G. G. Davis, Secretary, Philadelphia, Pa.
Nov. 23.—Gordon Setter Club's Field Trials, at High Point, N. C. L. A. Van Zandt, Secretary, Yonkers, N. Y.
Nov. 23.—Second Annual Trials of the National Beagle Club, at Nantux, Rockland county, N. Y. F. W. Chapman, Sec'y.
Nov. 30.—Central Field Trials Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York.
Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.
1892.
Jan. 10.—Second Annual Trials of the Bexar Field Trial Club, at San Antonio, Texas. G. A. Chabot, Sec'y. Amateurs only.
Jan. 18.—Trials of the Pacific Field Trial Club, at Bakersfield, Cal. J. M. Kilgariff, Sec'y.
—.—Fourth Annual Field Trials of the Southern Field Trials Club, at New Albany, Miss. T. M. Brumby, Sec'y.

UNITED STATES FIELD TRIALS.

THE inaugural trials held by this club at Bicknell, Ind., may be said to have been a great success. Commencing Nov. 2, they concluded Nov. 9. During the week numerous sportsmen visited the little village to view the work done by the "bird" dogs, and the hotel and houses in the village that would take visitors were full to the roofs. On Thursday, in addition to the spectators on foot, there were 43 horsemen out, and the need of a field marshal that knew his business was obviously apparent. At times the spectators were riding with the judges, and the reporters had to do the best they could. Judges complained and made several little speeches, but they had little effect. The tramping of so many horses near the dogs seriously affected the work done at times, and spectators spread out over ground that should have been hunted. Another year some good man should be appointed who, while acknowledging the rights of the Hoosier in his own country, still should make it thoroughly understood that the club leases the land on which they hunt, and that spectators are there only by courtesy of the club.

The extreme dryness of the ground had a good deal to do with the scarcity of game, to what is usually found on these farms. Game, as a rule, is very plentiful in this section, and the first day in one field four good bevers were found. The judges, Colonels Merriman and Sloo and Dr. Rowe, did their work in an exceptionally able manner. Plenty of time and opportunity was given the dogs to show what they had in them, and the dogs were a happy medium between the racing speed of the Eastern and the slowness of the Central. Among those who visited the trials during the week were: O. J. Winston, C. C. Weaver, John Hensenberg, St. Louis, Mo.; R. S. McKeever, Spencer, Ind.; G. T. Kerson, Indianapolis, Ind.; J. W. Doyle, E. A. Crossen, Washington, Ind.; E. D. Garr, Louisville, Ky.; E. G. Elliott, Providence, R. I.; H. T. Thus, Vincennes, Ind.; P. F. Marick, Princeton, Ind.; J. W. Good, Bruceville, Ind.; H. C. Hairbank, Indianapolis, Ind.; Abner T. Hittfield, Saybrook, Ill.; J. R. Hayes, Detroit; Jno. A. Sann, Jr., Olney, Ill.; B. F. Kramer, Evansville, Ind.; Dr. Alexander; Jas. D. Poston, Columbus, O.; C. W. Muller, Jas. Board, J. W. Paterson, Indianapolis, Ind.; O. P. Irvin, Cincinnati, O.; H. A. Lamara, Columbus, O.; H. M. Pollock, Cincinnati, O.; A. Lisman, Carlisle, Ind.; A. Jewett, Lon Calto, J. M. Hart, Oaktown, Ind.; J. L. Merfield, Emerson, Ind.; Chas. Polk, Isaac Polk, Oaktown, Ind.; Jas. Bowes, Evansville, Ind.; R. L. Shannar, Louisville, Ky.; D. C. McDonald, La Grange, Ky.; Dr. H. G. Thomas, Winston, N. C.; C. H. Roberts, Washington, Ind., and C. M. Munhall, Cleveland, O.

As space does not permit any extended notice, I will proceed at once to a description of the running.

POINTER DERBY.

BICKNELL, Ind., Monday, Nov. 2.—After the draw for the Pointer Derby at 8 A. M. no time was wasted, and a short ride, just out of the village, brought us to the Philippi farm. The morning was quite frosty, but a warm sun soon dispelled all dampness from the ground and left it dry and dusty. No rain except a slight shower has fallen in these parts for nearly five weeks, and clouds of dust were raised by the large crowd of mounted spectators, upward of forty horsemen assembling at the start. At 8:37 the first brace were put down in a large stubblefield.

FOREST LASSIE—DONOVAN.—Frank Richards handled Forest Lassie, and D. E. Rose, Donovan. Both dogs are liver and white. Neither dog started off very fast, keeping near their handlers. Soon after starting handlers flushed bevy. Donovan soon after pointed to the right, and Lassie catching sight of him came to a standstill, nothing found, however; then Donovan pointed again, evidently on scent of birds that had flushed. After ranging some time, Donovan showing better speed and range, we passed into a cornfield, then on to oak woods, where, at the further end, Donovan made game but could not locate. Then Lassie, coming down wind to her handler, nearly walked over a single that flushed at Richards's feet. Nothing more was done and dogs were called up at 9:20. Both are stylish workers, Forest Lassie showing most speed, but neither ranging very wide. Retracing our steps, the next brace

MY LADY—DUDE N.—were put down in stubble at 9:31. My Lady was handled by Frank Richards and J. H. Johnson looked after Dude N. Getting off well and ranging wide at edge of some corn a large bevy flushed in front of Dude, then again when galloping through wheat stubble Dude went right into a large bevy across wind. Passing into an orchard Lady came to a point at foot of an apple tree, then rounded over; then Dude drew to a beautiful point which Lady honored in good style, Johnson flushing, Dude made a jump for the game but stopped to order, Lady was also a bit careless. My Lady looked too much to her handler, who seemed to do most of the hunting at first, improving afterward. Dude made game in weeds but could not locate, and then in fence row Lady dropped to a single which flushed wild. At the edge of some woods Lady pointed and was held some time till Dude was brought up to back; when coming he failed to honor and put up the bird, both steady to the rise. Going into woods several birds got up at approach of dogs and nothing further being done they were called up at 10:42. The dryness of leaves and grass made it difficult for dogs to catch scent. My Lady proved herself the best, though not a free ranger.

PROMOTION—BLACK CHLOE.—These two started off well at 10:50. Charles Barker handled Promotion and W. B. Stafford Black Chloe. Working into standing corn Promotion came to a nice point, but birds flushed wild. Then Chloe pointed at edge of a ditch but nothing found there, but judges afterward raised a single. Then getting into a sort of lane Chloe pointed a bevy which her handler flushed and fired at, both dogs steady. Then Promotion showed some good work along a fence, getting several singles, some of which Chloe had passed. Down in the lane again Chloe pointed a brace which handler flushed; birds were scattered all round here and flushed wild in several directions. Further on in rag weed Promotion pointed a bevy. This dog, though a lanky, loosely put-together sort, did some good work, ranged out well, quartering as if he knew what he was doing, and was much the best of the two. At 11:40 Chloe was allowed to have the fields to herself, but beyond pointing a single at edge of a ditch did not improve the op-

portunity, and dogs were called up at 11:50, when luncheon was in order. This was a scrambling rough and ready sort of affair and had little charms for stomachs fresh from civilization, hungry as we were. After lunch

PHANTOM—MANITOU were put down at 12:55. Phantom had the services of John Good and Manitou was handled by Stafford. These two dogs ranged off in fine style and soon put two or three big fields behind them. Going into oak woods Manitou made a point, and was held on it some time till Phantom could back, when Stafford walked up the bevy and fired, Manitou steady but Phantom broke in a bit. Out of woods into rag weed, along the fence Manitou pointed, but nothing found. Birds were running, and Manitou roared on till a single got up in the ditch; then further on Manitou was found pointing, and Phantom brought up to back, had to be cautioned, when Stafford going up flushed a single right from under the dog's nose, which stood as staunch as a rock to rise. Then down in swamp Manitou pointed fur, it was supposed, as a hare ran out of the briars, but Stafford passing, a single got up behind him. A few yards further on Manitou pointed again, but Phantom did not seem to understand his duty and failed to honor promptly; Stafford walked up a single just in front of the dog. This close work shows the dryness of the grass and earth. Manitou showing herself a tireless worker, but in galloping at speed through an open field nearly ran into a bevy, just stopping as they flushed. Some more ground was traversed and dogs called up at 2 o'clock. Manitou showed very much better work, and is sure of being in second series. The other acting very puppyish.

BLACK WONDER—ABBESS OF KENT.—J. A. Hunter handled his own dog and Frank Richards, who piloted Spotted Boy to victory last year, handled Abbess. Sent off at 2:10 in rough grass, they ranged at good speed into an orchard, when in the fence Abbess scored first blood, getting a bevy which flushed wild. Then Black Wonder, down in a hollow, pointed a bevy, which also failed to stay for the handler to come up. Then in running down a ditch Wonder stopped on a single, which Hunter put up, shot at and killed; Wonder inclined to break in, stopped to word. Then further on Wonder pointed a brace, but was not very steady at the rise. Abbess then did a false point in a hollow. Wonder meanwhile going along a fence winded birds in the other field, pointed, but they flushed wild and dog was inclined to chase. On down the hill Wonder pointed another bevy, which Hunter put up and shot at, dogs steady. Following them up, Wonder picked up a brace, then Black Wonder was taken up at 2:35, and Abbess worked for five minutes more alone, but with no result. This finished the first series, and, after some consultation, judges decided that in

Second Series.

DONOVAN—FOREST LASSIE should have another trial. After going some time Lassie, by the main road, flushed a single; then crossing a field she redeemed herself in good style, Don backing nicely, when birds got up some distance away. Then Donovan thought he had something and Lassie honored him, but Rose could find nothing. Then dogs were held up and we moved on some distance when dogs were put down in a corn patch, and after dogs had passed a single got up. Then Lassie pointed a single in the fence, which flushed before Richard could get up. Then Rose held up his hand, which meant a point for Donovan, he proving to have the rest of the bevy. A no result point by Donovan, who was nicely backed by Lassie and the dogs were called up at 4 o'clock. A little more consultation by the judges resulted in

BLACK WONDER—PROMOTION being put down at 4:03 in wheat stubble. Soon after starting Wonder, near some corn, pointed a single, and going on into open field got another bird, but when flushed was not quite steady to wing. Alongside a fence Wonder made game, then roared on; crossing the fence, Promotion came to a stop but Barker could not find. A few minutes after, down in a hollow, Wonder pointed a bevy nicely and Promotion honored the point. On into thick briar bushes Promotion pointed a brace, Barker fired and killed, dog steady; some nice work on singles by both dogs followed this, when they were called up at 4:45. It is a near thing between these two, but Black Wonder has had a little the best of it on birds. A move was now made for home, which proved, we were glad to find, not far away, as the end of the first day found us all pretty sore and tired from our unusual exercise. One more heat is to be run before the judges decide on the winners to-morrow. In the evening the draw for the Setter Derby took place at 9 P. M.

TUESDAY.

If yesterday was an ideal Indian summer day, this morning was just as much the other way. Cold, bleak and raw, our warmest clothing was in order, and we were painfully warned that winter is coming on apace by several slight snow flurries till toward evening, when it became a little warmer. The start was at the Methodist chapel, almost in the village, and continuing the second series the first brace down were

MANITOU—MY LADY at 8:02. Soon after starting, in wheat stubble at edge of woods, Manitou pointed and My Lady backed but nothing found. Then a lot of ground was traversed but nothing of importance done, dogs false pointing several times till across the railroad they each flushed a bevy in high stubble. Then Stafford in thick cover claimed a point for Manitou which could not be seen. After this Lady flushed a bevy, and it did not seem worth while wasting further time on those two, but going on in bottom in high weeds Lady pointed a single unsteadily, then she passed a single that rose after she went by, followed by others that she should have secured. Another flush of a single in a fence followed this; birds were all round her and she had a good opportunity to do good work. Dogs were called up at 10, and the judges announced the result of the Pointer Derby. Black Wonder, first; Promotion, second; Manitou and Forest Lassie to divide third.

SUMMARY—First Series.

G. A. Maclin's (agt.) Donovan with H. F. Wood's Forest Lassie.
H. F. Wood's My Lady with Ong & Thuttleworth's Dude N.
Dr. J. R. Daniels's Promotion with Scudder & Munson's Black Chloe.
St. M. M. Mundy's Phantom with Scudder & Munson's Manitou.
J. H. & J. A. Hunter's Black Wonder with Frederick Joy's Abbess of Kent.

Second Series.

Donovan with Forest Lassie.
Black Wonder with Promotion.
Manitou with My Lady.
Black Wonder first money, \$200.
Promotion second money, \$175.
Manitou and Forest Lassie divide third prize, \$125.
Black Wonder, as his name denotes, is a solid black dog, having a little white on chest, and is by like out of Bang Bang's Pride. Without being a brilliant performer he has a good nose, but is inclined to hunt for himself and not for his handler. He knows the ways of the game in this part of the country, as his home is only twelve miles from here. Promotion is a lemon and white dog, a son of Lord Graphic out of Belle. He is a bit leggy and loosely put together and can lope along.

SETTER DERBY.

The draw for the Setter Derby took place Monday night, and resulted in the order that they are reported. The first brace,

DOC QUINN—HOOSIER GIRL, were put down at 10:22. G.

W. Richards had Doc Quinn in charge, and J. A. Hunter handled Hoosier Girl. The start was in weeds and stubble, and both ranged out merrily. After some time in a corner of oak woods Doc should have placed a brace of birds to his credit, but passed on, birds flushing; then she pointed a robin. At edge of woods she varied the proceedings by pointing fur. After going over some more fields very thoroughly with no result, dogs were called up at 11:05. Doc Quinn seemed to be the better of the two, but neither showed good work by any means.

HOPE'S MARK—RUBY GLADSTONE.—The former was under D. E. Rose's care, and Ruby Gladstone was piloted by J. H. Poindexter. They were sent off in a large field at 11:13, and went out well. At edge of ditch Ruby pointed false, Mark backing. Then Mark pointed without result. Over the railroad dogs flushed a bevy and dropped to wing, and two more birds flew over them. Then Mark began to road, pointed, but birds evidently running; going on into orchard Mark came to a stop again in ragweed in corner, but Rose could find nothing. Birds were running, and Ruby coming up on one side put up a single and another got up off almost bare ground. Striking across into other fields, Mark made a beautiful point on a bevy, Ruby being held some distance away. Rose fired, dog steady. They were taken up at 12:02. Hope's Mark showed himself much superior in style, range and nose; the day was, however, a bad one for good work.

BOY—BELLE OF ALMA.—J. H. Johnson handled Boy, and A. J. Gleason the other one. To work toward luncheon place, they were sent down in stubble at 12:08. A flush in a hollow was soon scored by Boy, but he redeemed himself in pointing a bevy, losing some of the credit in the break in when Johnson put up the birds: Belle honored Boy's point. Belle then flushed one and pointed one, and roading on carefully in orchard a rooster flushed a bird that she had passed. Then she pointed a bevy, steady to wing. Roading carefully, she pointed a single in the open which staid down till Gleason ordered the dog on, when it flushed. Boy had backed prettily. Dogs were ordered up then at 1:45. Both stylish workers, but Belle had the best of it. A move for lunch and this had been more or less discussed, according to the strength of the hungry one's stomach, the food being cooked and set with a very rough and ready style, when

BRUCE M.—WUN LUNG'S SISTER were put down at 1:27. Bruce M. handled by R. B. Morgan, and Wun Lung's Sister by D. E. Rose. Soon in a thicket Sister flushed a single excusable. After a flush and then Sister pointed higher up a single and Rose fired, dogs steady to shot and wing. Bruce having honored the point. Crossing some open fields, in one of which, in high rag weed, Sister pointed a single of a small bevy that had flushed wild; the bitch was steady to wing. Across a ditch Sister pointed, and the other dog coming in ahead of her the bird flushed. Nothing of importance was done further and the dogs were called up at 2:18. Wun Lung's Sister showed work of good order, and is a tireless ranger. She will be seen out again. Bruce M. worked indifferently, not getting out enough.

DOX—BOB COOPER.—Down in stubble and soon after starting Don pointed a large bevy and Bob, handled by D. E. Rose, honored his opponent's point; when birds flushed Don was not very steady. Bob then got in a point and was steady to flush. Going on some distance Bob picked up a single in high grass in bottoms; Rose put it up, fired, and dog steady. Bob followed this good work up by getting another single which Rose put up. Bob continued his run with a point by a fallen tree, on a bevy which Don, in trotting round in front, flushed. This practically ended the heat and dogs were called up at 3:45. Bob Cooper showed himself immensely superior to the other in speed, style, range and nose. Next brace were

FLYAWAY—GLORIANA.—E. W. House handled Flyaway and A. J. Gleason had another try for honors with Gloriana. After being down a quarter of an hour Gloriana pointed at edge of a ravine, and Flyaway refusing to back, put up two birds, and ten yards further on raised the balance of the bevy. A bad piece of work, as she paid no attention to the other dog. She followed this up by another flush, but soon after, by the side of a road in the woods, pointed a single nicely and was steady to shot and wing. Then, in following round a thicket Flyaway whirled to a point as a single flushed wild. Then dogs were held up for a while to go through a farm. Starting at 3:55, Flyaway, in galloping through rag weed, wheeled to a point and Gloriana backed, when a single rose between them. Then followed some poor work that will go hard against their chances in the stake, flushing by both being the cause. Up at 3:48, neither having showed much merit.

BOOTH—REEL.—Chas. Barker handled Booth and Frank Richards. Reel. Down at 3:53 in grass and stubble, their heat was productive of little meritorious work. After going fast and wide, but with no purpose, seemingly, except to gallop, Booth started by flushing a bevy and then a single. Then Reel tried the same tactics and soon passed right by a bevy that flushed afterward. Very poor work. Then a point for Reel, and the heat closed. Both fast, but puppyish yet. Neither will do for the stake. The last brace down was

KING IREX—LATONIA II.—It was getting dark when Geo. A. Maclin slipped King Irex and Frank Richards did the same for Latonia II. Both ranged off pretty well, but went some time before finding game. Latonia II. pointed a bevy, and King backed and afterward dropped to some birds at side of fence and was steady to wing. King, further on, dropped to a small bevy, Latonia, being in front, had galloped and flushed two outlying birds. It was nearly dark now, and we galloped off home, cold, stiff and hungry.

WEDNESDAY.

We started in good time this morning. The day was one of those dull, cold, gray ones when there seems to be little animation in anything. At 7:54 King Irex and Latonia II. were put down again. King started off with a bevy flushed, steady to wing. Latonia, not to be outdone, also flushed a bevy. This bad work was redeemed later by King Irex pointing a bevy, Latonia honoring the point, Maclin shot, both steady. Working into corn stubble, Latonia soon pointed a single, another getting up to one side; dog not very steady to shot and wing. Dogs were taken up at 8:38. There was little choice between them to-day, but yesterday Latonia had the best of it.

MONNIE—ERIC ELCHO.—Chas. Barker handled Monnie and the Irishman had the services of G. A. Maclin, and he needed them, or did not need them, one of the two, for he seemed to have no heart in him but a consuming desire not to offend his handler, a more cowed Irish dog I never saw. They were put down in rags at 8:40. Crossing a field and in a patch of weeds Monnie pointed a small bevy very nicely. Barker flushed and shot, dogs were steady. Dogs were held up 15 minutes to change ground. A false point or two was made by Monnie and then the heat closed at 9:58, Eric doing practically nothing to help along the Irish cause—just galloped and pattered round.

TOUGH—MAID OF ALMA.—This was another pair that showed but indifferent work. Tough had the services of Johnson and A. J. Gleason handled his own setter. They were put down in large grass field at 10:10 and we tramped along with not a sign of game till 10:55, when in a hollow in oak woods two birds flushed when dogs were moving round. Poor work. A little further up Tough roared to a point on a bevy, Maid doing her duty nicely, some birds got up and sent on; the balance of bevy rose as Tough stopped. A point for each on brace followed and then as a single got up Maid stopped and the balance of bevy raised, when she was steady to wing. There was little to choose between them, but neither got out to hunt in proper manner.

WUN LUNG—FRANK DONCASTER.—This heat showed us some vigor on the part of the dogs. Down at 11:23. Wun Lung was handled by D. E. Rose, and Frank Doncaster by Milton Wiles. Wun started off fast and ranged wide, but nothing was found when lunch time brought a welcome rest. Little time was wasted in the cold, and at 12:20 the dogs got to work again. Two beves were flushed near the farm on approach of horsemen. Then down in a hollow Wun picked a single out which Rose shot at, dog steady, Frank, a yard or two away, dropped slovenly to the balance of bevy. Higher up he got a single, steady to shot and wing. Wun backing some distance away. Frank got another single in brier thicket, Wun really earning it by careful roading. Some distance from her in hollow a large bevy was passed by the dogs, and then Wun pointed foot scent. Then some pretty work down a fence concluded the heat at 1:20, with the advantage in Wun Lung's favor in style, speed and range. Frank, however, was an honest, careful worker, though not so snappy as his rival.

FIRENZI—LADY EVELINE.—These two were put down in same place at 1:35. G. A. Maclin handled Firenzi, and D. E. Rose Lady Eveline. We worked through oaks, crossed some big fields and then in hollow, dogs flushed a bevy, and Firenzi afterward pointed a single, and Lady, in weeds, flushed one. Then she pointed, but Firenzi coming up would not honor it; nothing found. After working some distance Lady, in a hollow, pointed a bevy, and Rose shot and dog was steady. Dogs ordered up and judges consulted as to which should stay in second series. It was announced at 2:40 that Hope's Mark, Wun Lung's Sister, Bob Cooper and Wun Lung should stay in.

Second Series.

HOPE'S MARK—WUN LUNG'S SISTER.—This proved the banner heat of the meeting so far, and was marked by brilliant work by both dogs, Hope's Mark especially. True, they had a bit of luck in birds, but they knew what to do with them when they had the opportunity. Down at 2:54. Soon after Sister made a pretty point and Mark dropped to back when a single flushed. Rose fired, both steady as rocks. Mark then in hollow made a pretty point, and further on Sister scored likewise, Mark honoring it in his usual way. Sister then got two singles, and Mark at same time pointed the rest of the bevy, Sister coming up backed unsteadily. This was hot work as little time was wasted. Then Mark to the right where other birds had flown pointed a single, Rose putting it up, Sister backing. Further on through woods and in the fence Mark closed this brilliant heat by a point on a brace, Sister doing her duty well too. Dogs then ordered up at 3:16. The way these two worked to each other was very pretty to see, and no better work could be done. Rose had to handle both of them and did it well. I must say a word here about the way this well-known handler trains his dogs. In excellent condition his dogs are not in that half-starved looking shape some of the others are, and his dogs seem to look upon him as a friend and not a task master. There is not that shrinking into the ground at the least movement of the hand that we see with some of the dogs at the meeting.

Complaints had been continually made by the judges about the big crowd encroaching too near the dogs, and here Judge Merriam laid down the law and appointed Mr. O'Bannon field marshal. There was better order after this.

WUN LUNG—BOB COOPER.—These were also in Rose's lot, and it may be surmised that he had his hands full. Down at 3:24, both started off fast. Bob, across a field, flushed birds, then a minute after Bob pointed a bevy, and Wun backed. Then Wun pointed body scent. Then both pointed at edge of oaks and swamp, Rose put up fur, both beautifully steady. Bob drew on to a single, further down, very prettily, and both pointed singles very stylishly coming out of bottoms. In clover field Bob pointed and Wun backed, but nothing found, body scent most likely. Dogs were soon after called up at 3:50. Both did good work, but Bob had the best of it. Then for the final test between

HOPE'S MARK—BOB COOPER.—It was getting exciting now, and each had their champions, but Hope's Mark was the favorite. It soon became too dusky to see what was done, and for such an important heat as this clear light was needed. In bottom Mark pointed a single, and Bob was off on his own hook somewhere. Rose had some difficulty in keeping them both in hand. Bob was found eventually on a point, and birds were flushed. Dogs were then called up at 5 o'clock, to be put down to-morrow.

THURSDAY.

The undecided heat of the previous evening had now to be run, and at 7:55, at the Methodist chapel, the dogs were put down in stubble. The morning was simply delightful, and fully appreciated after the bleak weather of the last two days. A large crowd was out, including several ladies. Mark pointed, and Bob coming up would not honor it, ignoring Mark altogether, although repeatedly ordered to stop; no birds found. Then both pointed a bevy, and when birds arose started on, but Mark stopped to caution instantly. Bob not so obedient. Several points followed but nothing came of them. Both ranged out fast and wide, and were difficult for one man to handle properly. Called up at 8:35. It took one minute's consultation and judges decided that Hope's Mark wins first, Bob Cooper second, Wun Lung third. Wun Lung's Sister might also have had a taste of third money, as she did very creditable work. Mr. Rose, in taking the three prizes and having four of his dogs left in the finish of the stakes, has certainly broken the record, and none begrudged him the honor. The Blue Ridge Kennel, by purchasing Hope's Mark before the running, owned first and second winners.

SUMMARY.—First Series.

C. A. Travis's Doc Quinn with J. H. & J. A. Hunter's Hoosier Girl.
Blue Ridge Kennels' Hope's Mark with H. J. Smith's Ruby Gladstone.

T. J. Widrig's Boy with A. J. Gleason's Belle of Alma.
R. B. Morgan's Bruce M. with — Wun Lung's Sister.
J. M. Vaughan's Don with Blue Ridge Kennels' Bob Cooper.

N. T. Harris's Flyaway with A. J. Gleason's Gloriana.
B. Ridgeway's Booth with Blue Ridge Kennels' Reel.
A. Corradi and C. S. Greer's King Irex with Poston & Burdell's Latonia II.

J. I. Case, Jr.'s Monnie with — Eric Elcho.
T. J. Widrig's Tough with A. J. Gleason's Maid of Alma.

D. E. Rose's (agt.) Wun Lung with M. C. Wile's Frank Doncaster.
H. J. Smith's Firenzi with Blue Ridge Kennels' Lady Eveline.

Second Series.

Hope's Mark with Wun Lung's Sister.
Wun Lung with Bob Cooper.

Final.

Hope's Mark with Bob Cooper.
Hope's Mark first money, \$200.
Bob Cooper second money, \$175.
Wun Lung third money, \$125.
Hope's Mark is a good-looking blue belton, and is by Gath's Hope out of Lady May. Bob Cooper is by Roi d'Or out of Miss Nelly Y. Wun Lung is by Captain Bethel out of Euclid.

ALL-AGED POINTER STAKE.

The draw for this stake had taken place last night and resulted in the order of heats reported below. As soon as congratulations were over on the result of the Setter Derby, the first brace in the All-Aged Pointer Stake,

ROSALINE WILKES—PROMOTION, were put down in rag weed; both ranged off well and independently. After ranging some time Promotion winded and pointed a single which Barker, her handler, shot and the dog was inclined to break in, but stopped to caution. Then Rosaline got a point on a single; to the left she got another single and qualified this by walking nearly on top of a bird in high weeds; she was steady to wing, however. Dogs were then called up at 9:30. Promotion did not do so well as in the earlier part of week, but was better than the other. Judges then ordered out

BOUNCE—JOE II. K. at 9:35. Poindexter handled Bounce and G. A. Maclin did the same for Joe H. K. Put down in wheat stubble they ranged through this nicely, through woods and then into corn stubble, and Bounce afterward in some high rag weed pointed a single very nicely which Poindexter killed, dog steady to shot and wing, but did not retrieve, and while trying to find dead bird another single got up in the thicket, to which he dropped. It was now getting very warm for dogs and all concerned. Nothing further being done, dogs were called up at 10:27. Joe seemed to be slightly the better dog.

LA GRIPPE—REX.—G. W. Maclin was out again taking care of La Grippe this time and J. B. Johnson handled Rex. Put down at 10:48 in wheat stubble both dogs started fast and ranged out, quartering their ground thoroughly. Then into an orchard, where La Grippe flushed a single the other side of hedge, excusable, and others flushed wild on the other side of fence. On through the orchard in briers and oaks La Grippe flushed another single by the side of a dry ditch; then over ditch La Grippe pointed again, when a single rose. Drawing on she roared some distance. Then Rex pointed, drew on and pointed again, but nothing found. Getting into a sort of land between fields, La Grippe did some nice work on scattered birds, which got up in every direction. Dogs steady and Rex backing. Then Rex pointed a single which Johnson fired at and dog broke in a little, La Grippe backed steadily. Up at 11:48. La Grippe did best work and showed more "get up and get" than the other. Rex did not do well in this heat.

BEN A.—NUTWOOD.—In rags again at 11:54. Ed. Garr handled Ben A., and well too, and Nutwood had the services of Frank Richards. A minute or two after starting Ben A. dropped to a bevy and Nutwood brought up to back did so, Garr fired and both dogs steady. On toward some woods in a patch of briers in corner both dogs pointed, both handlers claimed, but Nutwood had the preference, when Richards put up a bevy, fired and both dogs were steady. Turning back into the big field after scattered birds Ben A. at edge of a dry ditch pointed a single, which flushed before Garr could handle his gun. Dogs held up for water. Some more hunting was done through open fields and orchard, but nothing found and dogs taken up and a move made for lunch near by. Ben A. was much the best dog, going with more snap and vigor. After lunch, at 1:47.

DON FISCHEL—BLACK WONDER were put down in rag weed. Don Fischel handled by Geo. A. Maclin, and Black Wonder by owner. Both dogs went off fast and ranged wide. It was difficult to tell one from the other, as both are solid black. Black Wonder had an idea he knew where the birds were, and would pay no attention to his handler, and was lost some time. He was found after a while in high ragweed, pointing a bevy which flushed as Judge Merriam came up. Then after going off again Don had to be held up till Black Wonder could be brought round again. The heat was very trying to the dogs, which were taken up at 3:37. Black Wonder, if he could have been kept to the gun, was much the best.

PAXICO—PEARL'S FAN came next and were slipped at 2:46 in wheat stubble. Neither went off very well, kept near handlers. A. J. Gleason handled Paxico, and Pearl's Fan was handled by Geo. A. Maclin, who seems to have a majority of dogs here. Crossing a field in edge of woods some uncertain work was done by Pearl's Fan drawing on, pointing and at last holding the birds which Maclin flushed. Paxico had also pointed from the other side of bevy; both steady to wing. Then in woods both pointed a single in brier thicket, Maclin had the advantage and put up the bird; then edge of woods in wheat field Paxico pointed a single and was steady to shot and wing. Sent on in corn and woods Fan pointed a single, and afterward in getting over a fence hurt her stifle joint, but got round all right again in short time. A good deal of ground was gone over, but nothing came of it, and dogs called up at 3:25. Pearl's Fan had the best of it, the other pointing false several times.

BERTRALDO—NASO BOW OF THE ELMS.—Put down at 3:50. Bertraldo was handled by A. J. Gleason and he-of-the-long-name by Geo. W. Richards. Starting off, Naso pointed fur. Then in corn by the fence he pointed a bevy and in the same corn patch Bertraldo nailed two birds at which Gleason fired, dog steady to shot and wing. Naso then dropped to a single which flushed wild on other side of corn. Then Bertraldo pointed a bevy in wheatfield and Naso honored; Gleason fired and both dogs acted well. This was very pretty, being right in the open. Down in woods Bertraldo pointed again; nothing found. Naso further on nailed the bird very nicely; bird flushed wild. Then Bertraldo in wheat-field pointed, but no feather raised. Up at 4:40 and home early this time. Bertraldo was much the best of the two.

FRIDAY.

A lovely day and the ground the first hour wet enough to dampen our boots, something not experienced before, but the warm sun soon dried this up again, leaving us duster than ever. The first brace down at 8:07 A. M. was

PICKWICK—DON FISHEL, the former running off his bye, and handled by R. M. Riley. They were put down in wheat stubble near Methodist Chapel. Don started off with a flush. A great deal of ground was worked over, but though there must have been birds, these two could not find them. A single and balance of bevy were flushed by horsemen after dogs had passed; there was no excuse for this poor work. Dogs called up at 9:32 and Pickwick will retire for a long rest.

Second Series.

Judges then consulted, and decided after quite a lengthy chat that Ben A. and La Grippe, Rex and Paxico, Black Wonder and Pearl's Fan should run in this order again. Bertraldo might also have been given another chance, as he had done work equally as good as Rex and Paxico.

BEN A.—LA GRIPPE.—Put down at 9:48 in wheat stubble, but having to be held up and a move made to another farm it was 10:17 before they started again. When in middle of field Ben came to a beautiful point, and La Grippe, wheeling round by his side, honored his work nicely and a bevy flushed wild ahead. La Grippe then made game side of fence near house, but did not stop, and several birds got up. Both dogs ranged out well and showed marked superiority to some of the others. Then Ben pointed in a fence bottom, and over the fence a roost was found in a thicket. Ben A. had done the best work, and dogs were called up at 10:44.

REX—PAXICO.—Down at 10:50. Rex started with a point, but birds were running, and going on to be pointed again; Paxico backed and birds flushed wild. Into scrub oaks, then into open fields, where both dogs pointed from each side and then bird got up in front of Paxico. Rex pointed two more of same bevy a yard or two further on. Rex got in ahead of Paxico again, who seemed content to follow on, and his handler took him away to strike out a new route, as the other was getting game all the time with careful work that would have afforded the sportsman some pretty shooting. Several false points were now made and nothing of interest occurred. While Rex was roading carefully on running birds, Paxico came across and pointed them when a large

bevy flushed wild; Richards shot, dogs steady. Then after a while Rex pointed fur in a thicket, breaking cover, Richards fired and hit but bunny carried his load to other parts. A good deal of ground was gone over and then Paxico pointed in high grass but nothing put up, but horsemen in passing flushed a single. Dogs were called up at 11:38 and lunch was the welcome order. After a cigar and a little dog chat.

BLACK WONDER—PEARL'S FAN were put down in the concluding heat of this series, about a mile from the farm in a clover field at 1:11. Some way in woods Wonder pointed, then drew on and roared nicely to point on a single by a fallen tree. This was pretty work, but he was not quite steady to wing; further on he roared to a point just as several birds flushed. Wonder hunted these woods alone, Fan being with one of the judges down below in hollow where she pointed fur. Fan, when dogs came together, pointed, drew on but failed to locate. Birds were there, however, as three flushed which she should have nailed. Black Wonder as well. Then passing out of woods Fan nailed a single. Then each got a single in rag weed. Maclin fired, dogs steady. Then dogs were called up at 2:07 after covering a good deal of woodland.

Judges consulted some time and handlers and everyone were on the anxious seat, Ben A. and Black Wonder being the favorites. Judges soon announced that.

BLACK WONDER—BEN A. should have a try together to decide first place. They were sent off at 2:24 in stubble, and Wonder started off in great shape, though his previous heat was a tiring one. Going down the woods in shade Wonder made game, pointed, drew on, pointed again, but Ben A. passed him and took little notice of the work being done, when Hunter kicked the rail fence and up got two birds which flew into oak. This decided it and the dogs were called up at once at 2:31, and Black Wonder had won the All-Aged Setter Derby in addition to the Pointer Derby; Ben A., second; Pearl's Fan, La Grippe, Paxico and Rex to divide third prize.

SUMMARY.

ALL-AGED POINTER STAKE.—First Series.

J. E. Guinotte's Rosaline Wilkes with Dr. J. R. Daniels's Promotion.

G. W. Amory's Bounce with J. H. Kerr's Joe H. K.

C. C. Weaver's La Grippe with Mrs. Geo. A. Castleman's Rex.

Dr. D. W. Yandel's Ben A. with Jas. Beard's Nutwood.

W. R. Fishel's Don Fishel with J. H. & J. A. Hunter's Black Wonder.

A. J. Gleason's (agt.) Paxico with Louis Stuchmer's Pearl's Fan.

J. E. Guinotte's Bertraldo with P. H. Gotzian's Naso Bow of the Elms.

McGuffin & Madison's Pickwick a bye.

Second Series.

Ben A. with La Grippe.

Rex with Paxico.

Black Wonder with Pearl's Fan.

Final.

Black Wonder with Ben A.

Black Wonder first money, \$200.

Ben A. second money, \$175.

La Grippe, Paxico, Pearl's Fan and Rex divide third money, \$125.

Black Wonder is also entered at the Eastern field trials, and we shall see how he fares in a strange country and under different conditions. I have already described him. Ben A. is a heavily-marked black and white dog, well built and pretty fast. He is by Stoddard out of Jet II.

ALL-AGED SETTER STAKE.

The draw for this stake having taken place last night, resulted as reported by heats below. Names of owners will be found in summary. No time was wasted, after the winners in the Pointer All-Aged had been announced, in starting the first brace.

NOBLE COUNT—THE COBSAIR.—Geo. A. Martin handled Noble Count, and D. E. Rose had a confident look on his face when he loosened The Corsair's collar. They were put down at 2:46 in a dry, bare looking wheat stubble field, and Corsair at once showed his superiority in speed and range. Noble Count just dawdling along till he stumbled right into a bevy. This was a bad beginning. To redeem himself he stopped stiff at a tree stump, but he was mistaken and he passed on the other side. Then Corsair pointed a single in a clever manner in some grass. Rose fired, killed, and Corsair retrieved in an exceptionally fine way from a deep ditch. This showed his quality, and the question arose, is Rose going to give them the double cross again, for Corsair a few yards further pointed a single again, which Rose put up from under the dog's nose. Corsair nailed a brace in a swamp, birds flushing wild, dog steady to wing. A long tramp through several fields without result, and dogs were ordered up at 3:24. As may be surmised, the best of the other dog is his name, though I am told he is a good dog when at home. The Corsair will not be far off when the numbers are up in this stake.

COUNTRESS RUSH—PAUL BOO.—If Rose had a good one in the first heat he evened matters a little with Countess Rush, and Frank Richards may pull some money out of the meeting yet with Paul Boo. Off at 2:33 in a bare, dry clover field, both ranged out fast and wide, quartering their ground nicely. Countess started in ragweed with a point, drew on and a bevy flushed wild; then over the fence Paul pointed, but persistent tramping round on Richards's part revealed nothing, Countess backing nicely. Paul next nailed a single, Countess honoring; the latter afterward pointing false, and then going at a gallop through ragweed flushed a single, but dropped to wing; then galloped over another. Poor work, and Rose looked daggers at her. I thought her aptly named. She followed this by just stepping over another as it rose. She did not seem under good control. Paul was here getting out well to his work, though he passed a single he should have secured. In woods Countess flushed some more birds. Paul then pointed, drew on, but failed to locate exactly; but getting into woods got a bevy which rose over the treetops. The dogs brought together, and in ragweed Paul pointed a single which Richards shot; dog steady. Dogs called up at 4:10. Paul Boo much the best. It was getting dusk as

JOE R.—DAISY HUNTER were put down at 4:17. J. B. Johnson handled Joe R. and J. A. Hunter took care of the well-known Daisy Hunter. Soon after starting Joe R. pointed a bevy by a fence; dog steady to wing. Daisy had ranged far ahead in her usual style, pointed a bevy and Hunter shot; dog steady. Then a wait for Daisy ensued, and soon after coming together both pointed a single in a ditch. Retracing our steps, Daisy pointed a bevy and Joe honored her work; birds flushed wild. Both dogs then made game and roared carefully, till further on Daisy pointed in scrub oaks and five birds got up to one side of her; Hunter fired and missed; Daisy steady to shot and wing. A point directly after by Joe R. in some brush and briars, Richards firing at birds, concluded the day's work at 4:55, with the heat considerably in Daisy Hunter's favor. Home!

SATURDAY.

A lovely hunting morning with more breeze than any day this week. The meet was at Bunting farm in the open stubble field. The first brace down at 8:10 was

FINGAL—BONNIE BONDHU.—D. E. Rose handled Fingal and Maclin had a good one at last in Bonnie Bondhu. Fin-

gal started off badly, making several flushes at commencement of heat. Working on through several fields Fingal in oaks made a "Roderigo" point, affording one of the prettiest pictures of the meeting. Bonnie coming up to one side, backed, both very stylish; nothing, however, came of it. Then Bonnie pointed, and being jealous of the other, drew on but failed to locate. Going over some more varied ground both pointed a bevy and handlers fired, both dogs steady. On into high weeds Bonnie pointed a single which Maclin fired at. Bonnie steady to shot and wing. In briars Fingal pointed, Bonnie honoring the point, nothing found, but afterward judges flushed a bird. Two more points on singles for Bonnie were scored, Fingal backing nicely; then dogs were called up at 9:05. Bonnie Bondhu had clearly the best of it and will stand a good chance in the stake. Fingal is one of Rose's off dogs this time. Both are stylish workers and range out well.

SIMONIDES—LON NOBLE.—Weather was now getting quite warm, and a lot of tramping was done in this heat with little result. D. E. Rose had Simonides and Chas. Barker handled Lon Noble. Put down in ragweed and stubble at 9:14, both started off well. Soon Simonides pointed a bevy near a fence, and Lon backed; Rose shot and killed, both dogs steady. The dogs were taken up to get on to other ground about a mile away, and this was the order all through the heat, making it quite a tiresome one. Down again at 9:46, when soon after Lon flushed a bevy. Then in a ditch she made a bad flush. Dogs up at 10:30. An unsatisfactory heat, and Simonides had little chance to show his quality, though doing much better than Lon Noble. The ground was very dry and dusty and work very hard on dogs.

NANNIE G.—DON'S NELLIE.—A. J. Gleason handled Nannie G. and E. W. House looked after Don's Nellie. They started off at 10:34 in very dry, bare stubble field. Both ranged out well. A good deal of ground was covered, then Nannie pointed, Nellie backing. This may have been on bird that rose before coming to fence. Then we were stopped by one of the feudal lords of the district and the dogs had to be taken to another farm. At 11:37 down again. In a ditch Nellie got a single. House shot, dog steady. In briars Nannie got a point. Nellie also pointing; Gleason fired, dogs steady. Along this ditch and into ragweed, when Nannie nailed a single nicely and Gleason grassed it in good style, dog steady. After this Nannie picked up another single and another followed this; pretty good work. Dogs ordered up at 11:55. Nannie G. did much the best work and should stand a chance in second series, and Nellie made no mistakes. It was now lunch time and plenty of time was taken over it, as we could not finish the trials to-day anyhow.

MINNESOTA—BLUE DICK.—Frank Richards handled Minnesota, and Blue Dick was in charge of Fred Erb, the famous pigeon shot. In thicket Minnesota pointed, but Dick refused to back. Minnesota then in open pointed fur twice in a thicket. Then Minnesota brought to other dog; in gully she pointed a woodcock, which Erb tried his skill on successfully, dog steady. Birds were scattered here and Blue Dick picked up several singles, and Minnesota nailed another bunny. Edge of woods Blue Dick scored another point, and then two false points for each followed, and dogs were ordered up at 2:12. Neither was fast, but Blue Dick had the best nose and did better work.

Cigarette then ran off her bye, handled by Chas. Barker. She showed fair range and speed, and in about thirty minutes' work scored two points on bevs, and was ordered up at 2:50. She showed very fair work and handled well.

This finished the first series and the brace to decide absolute winner of Derby.

HOPE'S MARK—BLACK WONDER, was put down at 3:20, after going some distance to other ground. In open both pointed a bevy, birds flushed wild. Then they both came on another bevy about same time; Rose flushed the birds. Rose taking his dog into a lane, Mark nailed a single, steady to shot and wing. Meanwhile Black Wonder was lost in cover and Mark was held up. In stubble Mark pointed a bevy and was backed by Wonder. Rose flushed a number of birds, which unsteadied both dogs, needing caution from handlers. Mark scored another point further on. Wonder pointing to Mark drew on and birds flushed wild. Wonder then passed some birds that Hunter flushed. Wonder deemed this by another point, and was steady to shot. Little else was done, and they were called up at 4:27 and the heat and title of absolute winner of Derby given to Hope's Mark, who showed better speed, range, style, and was more obedient to handler than Black Wonder, who was better in this last respect to-day than yesterday. Nothing more was done, and the order was home for a welcome Sunday's rest.

SUMMARY—ALL-AGED SETTER STAKE.

S. A. Elliott's Noble Count with E. O. Damon's The Corsair.

Blue Ridge Kennels' Countess Rush with Richard Merrill's Paul Boo.

H. T. Smith's Joe R. with J. H. and J. A. Hunter's Daisy Hunter.

E. H. Osthaus's Fingal with Geo. A. Maclin's Bonnie Bondhu.

N. T. Harris's Simonides with B. Ridgeway's Lon Noble.

F. E. Gregory and Bros.'s Nannie G. and H. J. Gleason's Don's Nellie.

Paul H. Gotzian's Minnesota with George W. Earhart's Blue Duke.

J. I. Case, Jr.'s Cigarette a bye.

MONDAY, NOV. 9.

Second Series.

Rain fell Sunday night and on Monday it came down in torrents. Nevertheless a start was made at 8:29 at the Methodist chapel. Very few spectators out to-day.

DAISY HUNTER—THE COBSAIR.—Dogs ranged off finely and did not seem to mind the rain, but birds were scarce, and those out were running all the time. In woods Daisy got two bevs, but judges did not see the points before flushes. Then she pointed a possum which Hunter put his foot on, possum playing dead. Hunter had possum by the neck when we arrived on the spot. The Corsair did nothing except ranged out finely and at speed.

Then Bonnie Bondhu and Paul Boo were put down a short time, Bonnie getting a point in woods.

Rain coming down cats and dogs, we galloped into town and waited till afternoon, when weather clearing another start was made on Bunting farm with

BONNIE BONDHU—PAUL BOO.—Down at 2:11, they ranged through ragweed and corn, then in weeds again. Bonnie began to road, pointed a single, pointed again, drew on. Birds were running ahead, and carefully she roared the weeds out for ten minutes, scoring a couple of singles, and then at edge of weed patch birds flushed as she pointed again. Paul Boo backed this last move, but was off nose the other part of time altogether, ranging back and forth, taking no notice of Bonnie's work. Dogs up at 2:45, and judges decided that Daisy Hunter wins first, The Corsair second, and Bonnie Bondhu third. This ended the United States Field Trials for 1891. The heat to decide absolute winner will be run off at High Point, N. C., this week.

Summary Second Series.

Daisy Hunter with The Corsair.

Bonnie Bondhu with Paul Boo.

Final.

Daisy Hunter, first money, \$200.

The Corsair, second money, \$175.

Bonnie Bondhu, third money, \$125.

Daisy Hunter's victory makes a great record for the Hunter Bros., who have thus won the Pointer Derby, All-Aged

Pointer Stake and All-Aged Setter Stake; thus they also own the absolute winner of All-Aged Stake, whichever it may be. This is a record to be proud of, and besides winning \$800 during the week, their kennel gains considerable prestige. Daisy Hunter is a lemon and white, well made bitch and is by Gath's Hope out of Daisy F. H. W. L.

NEW ENGLAND FIELD TRIALS.

ASSONET, Mass., Tuesday, Nov. 3.—The New England Field Trial Derby was started this morning. The weather was favorable for field trial work and the grounds are well adapted for the purposes, there being large sedge fields with woods and thicket here and there, which afford good cover for birds. There are hollows and gentle slopes, thus affording opportunities for working out his grounds. I doubt if there are better grounds in New England. Birds were quite plenty, and before another season the grounds will be well stocked. The judging was well conducted and satisfactory to all. The meeting was a successful one, and everything passed off very pleasantly. The spectators were allowed a little too much liberty by going too close to handlers and judges. Prominent sportsmen from all parts of New England were present. At the meeting of the Board of Governors the thanks of the N. E. F. T. Club were tendered to the judges, Messrs. C. Fred Crawford and N. Wallace for their courteous, kind and just decisions.

THE DERBY.

The quality of the work done was not of a high order. Kit Carson, the winner of first, is a good-looking blue belton dog, ranged well when at his best. He is by Hair's Belton out of Lillian Bondhu and was bred by E. K. Sperry.

First Series.

COUNTRESS and **BECKY NOBLE**.—Mr. J. L. Wells's black and white setter bitch Countess (Kent II.—Jessie Noble), handled by Chaffee, and Mr. E. O. Damon's black and white bitch Becky Noble (Count Noble—Gladstone's Girl), handled by C. F. Waterhouse, were cast off in the open field at 7:30 on grounds called the Market Garden. A number of fields were drawn blank, when Becky flushed a bevy a short distance from the starting point, and the dogs ordered on, failed to locate. Chaffee flushed a single. Dogs ordered up at 8:19. Becky was superior in range and speed.

KIT CARSON—SNIPE.—E. K. Sperry's blue belton setter dog Kit Carson (Belton—Lillian Bondhu), handled by L. A. Pearle, and D. A. Goodwin, Jr.'s orange and white setter dog Snipe (Edge Mark—Nellie G.), handled by S. A. Ellis, were started at 8:20 in the open. A single was flushed by handlers, both dogs steady to wing. One of the judges flushed a single. A large bevy flushed wild and in open side of the road near the river at 9:27, and put down in the thicket. Snipe and Kit both roared. Three birds flushed in front of handlers. Dogs ordered up at 9:35, the heat a close one. Snipe had a shade better range and speed.

ALL-AGE STAKE.

BESSIE—BERKSHIRE.—Dr. H. A. Baker's black, white and tan setter bitch Bessie (pedigree unknown), handled by owner, and Mr. F. W. Whitlock's black, white and tan setter dog Berkshire, handled by owner, were cast off in a large sedge field at 9:40, and worked to the cover where the birds had put down. Bessie roared and pointed, but failed to find. Hunted through a large thicket of scrub oaks. Dogs failed to find game. Ordered up at 10:10; no birds found. Both were very slow working dogs, and did not show the spirit and hunt of the Derby dogs. Bessie had the best style.

DERBY STAKES.

KIT CARSON—COUNTRESS at 10:17 were cast off in the thicket, Kit having the best of it from the start; Countess pointed a rabbit, went on and Countess again pointed; a bird flushed wild. Kit made a good point; was well backed by Countess; bird was flushed, both dogs steady to wing. Soon after a bird was flushed by the judges. Countess pointed, backed by Kit, but nothing found. Judges flushed another bird. Dogs ordered up at 11 A. M. This was a very good heat, both dogs doing some pretty work. Countess is a nice little dog, and with a little more age and experience will make a crack one.

ALL-AGE.

ROD'S WHIM—NAHME PHILIP.—Mr. E. O. Damon's black, white and tan setter Rod's Whim handled by C. F. Waterhouse, and Mr. E. W. Durkee's orange and white dog Nahme Philip were put down at 11:19. Three large fields were drawn. Whim pointed; went on; nothing found. In a swamp of alders and small oaks Philip found a grouse and pointed it in good shape. Aldrich flushed the bird, both dogs steady to wing. Later both dogs made several false points; dogs ordered up at 12:30. Philip was a wider ranger, has more speed, kept up a good gait through the heat. Whim hunted more to the gun, has good style and action, a more suitable dog for New England shooting and under good control. Both hunt with extra high head.

DERBY STAKE.

SNIPE—BECKY NOBLE were cast off at 1:25 after dinner in a stubble in rear of Carnos' barn. After drawing two large fields blank Becky pointed a woodcock in some alders. Bird flushed, dogs steady to wing. Moving on both dogs pointed; nothing found. Crossing to a large stubble Snipe made a stylish point, well backed by Becky, where birds were seen to get up from. Dogs taken up at 3 P. M. Both dogs under good control, Becky showing the best nose.

ALL-AGED STAKE.

SPOT R.—MISS MONARCH.—Mr. Geo. W. Lovell's liver and white pointer dog Spot R. (Coronet—Clover) and Mr. C. C. Gray's Miss Monarch (Roy Monarch—Flossy) were cast off at 3:08. Spot R. handled by owner, Miss by T. M. Aldrich. In the briars on side of the hill a bevy flushed wild in front of dogs. Going on Spot pointed, Miss backed; birds were running, dogs failed to locate. Working to a sedge field Miss flushed a bevy, which went to deep cover. Going through, same birds flushed wild again. A bird flushed by the judges was marked down and Miss pointed. Aldrich flushed and shot and Miss retrieved to order. Soon after another bird was flushed. Spot R. false-pointed several times and dogs ordered up at 4:45. Miss Monarch was best in ranging.

WEDNESDAY.

The morning opened bright and pleasant, a gentle wind blew from the northwest. A start was made at the Market Garden.

DERBY STAKE.

KIT CARSON—BECKY NOBLE were cast off at 7:55, both dogs going a better gait than yesterday. A large bevy was flushed by handlers and put down in a sedge field; dogs failed to find game. Waterhouse flushed a single. Becky flushed a bird and dogs ordered up at 8:45, and the winners of the Derby were then decided as follows:

First, Kit Carson; second, Becky Noble; third, Countess and Snipe divide.

ALL-AGE STAKE.

SNIPE—FORMAN'S LASS.—D. A. Goodwin, Jr.'s orange and white English setter Snipe (Edge Mark—Nellie G.), handled by S. A. Ellis, and H. A. Waldron's black and white bitch Forman's Lass (Forman—Grace B.), were cast off at 9 o'clock, near the corner. Lass flushed a single, Snipe pointed, failed to locate. A bird flushed wild in front of Lass. Crossing the road Lass flushed an outlying bird, then pointed a bevy; as Snipe came up Lass roared on and flushed the bevy; Snipe steady to wing. Crossing the railroad track Snipe pointed a partridge, which was flushed by

spectators. Dogs taken up at 10:22. In speed, range and style Snipe was superior to Lass.

KIT CARSON—WARD'S SPOT.—E. K. Sperry's blue belton English setter dog Kit Carson, handled by L. A. Pearle, and Matt Ward's black, white and tan English setter dog Ward's Spot (Glossier II.—Ward's Mada), handled by T. M. Aldrich, were cast off at 10:45, near Market Garden. After hunting thirty minutes Kit flushed a bevy on side of the road. Moving on Spot nailed a single; Kit refused to back; Aldrich flushed, shot and missed; both dogs steady to shot and wing. Spot again pointed. While waiting for Kit to come up and back the bird flushed. Dogs taken up at 11:40. Kit under best control.

ROD'S WHIM—MISS MONARCH.—After lunch a start was made at Assonet Neck, called the Quaker place. Whim handled by Waterhouse, Monarch by Aldrich, were cast off at 1:55 in a swale covered with brush. Monarch found and flushed a bevy. Moving a short distance Whim pointed a single; backed by Monarch; Waterhouse flushed, shot and killed; dogs steady; bird retrieved by Whim. Whim again pointed, backed by Monarch. Waterhouse shot and killed; bird retrieved by Monarch. Soon Whim got another point; bird flushed by Waterhouse. Dogs ordered up at 2:23. This was the best heat seen so far, both dogs doing some good work. Harry Tallman had a chance to snap his Kodak on them a number of times.

NAHKE PHILIP—SNIPE.—Nahmke Philip, handled by Aldrich, and Snipe, handled by Ellis, were cast off at 2:42 in an open field. This was a long, tiresome heat. After hunting large stubble fields, meadows, peach orchards, etc., for two hours without making game, the dogs were ordered up at 4:40. Philip was a much wider ranger; both dogs worked well and quartered their ground in good style. For range, speed and style they outclassed any dogs in the trials. This ended the heats for the day.

THURSDAY.

SPOT R.—WARD'S SPOT.—It was a bright, cool morning, and frosty. A start was made at the cemetery grounds, near Market Garden. Spot R. handled by Lovell, Ward's Spot by Aldrich, were cast off at 7:50. Working out a large sedge field, Spot R. false pointed, backed by Ward's Spot. Soon after Ward's Spot pointed on the side of the hill backed by Spot R. No game found. Moving on Spot R. roared to a bevy and pointed. Lovell flushed, shot and missed; Spot R. was steady to shot and wing. Ward's Spot false pointed, then Spot R. flushed a single and was steady to wing. Ward's Spot then pointed again, backed by Spot R. Aldrich flushed and killed; Ward's Spot unsteady, went in and retrieved the bird. After working out a corn and wheat stubble without results, dogs ordered up at 9:10. Spot R. having the best of the heat.

ROD'S WHIM—NAHKE PHILIP were cast off in the open at 9:20. In a few minutes a bevy flushed wild in the open field. Crossing the road Whim pointed near a stone mill; Phil came down on the other side and also pointed; both challenged; roared on; Phil pointed staunch at the left, Whim the same at the right of the field, but nothing found; evidently the birds had been running there. Going on to the thicket, Whim pointed a single in fine style. Phil called up to back refused, went in between Whim and the bird; did not catch the scent; Waterhouse flushed the bird, shot and missed. Going on to an alder swamp Phil pointed a bevy; Aldrich flushed, shot and killed; both dogs steady. Phil ordered to retrieve did so. Then Phil false pointed, backed by Whim. Dogs ordered up at 10:20. Without a doubt, this was the best brace in the stake. The winners were: First, Rod's Whim; second, Nahmke Philip; third, divided by Spot R. and Miss Monarch.

Rod's Whim, the winner of the All-Age Stake, is a good-looking, evenly-marked, black, white and tan English setter dog, by Roderigo out of Florence Gladstone, and was broken by Mr. C. F. Waterhouse. He is good on all game, and his owner may well feel proud of him, BLUE RIDGE.

CENTRAL FIELD TRIAL CLUB ENTRIES.

ALL-AGED STAKE.

SETTERS.

ORLANDO (Roderigo—Bo Peep), J. M. Avent and Bayard Thayer.
RUPERT (Roderigo—Bo Peep), J. M. Avent and Bayard Thayer.
ANDY (Jean Val Jean—Shem Van), J. M. Avent and Bayard Thayer.
FOLLY (Roderigo—Countess House), J. M. Avent and Bayard Thayer.
ROBESPIERRE (Roderigo—Ollie S.), J. M. Avent and Royal Carroll.
ROANOK (Bush—Lottie B.), Arthur Burt.
EDGE MARK (Skidmore—Flo MacIn), Francis S. Brown.
PEG WOFFINGTON (Ben Hill—Nora), Francis S. Brown.
GUENN (Paul Gladstone—Belle Ward), Blue Ridge Kennels.
COUNTESS RUSH (Count Noble—Belle of Piedmont), Blue Ridge Kennels.
GOSSIP (Roderigo—Belle of Piedmont), Blue Ridge Kennels.
NATALIE II. (King Noble—Natalie), Bert Crane.
COMO STE MADRE (Roderigo—Maud), Bert Crane.
THE CORSAIR (Dan Gladstone—Haidee), E. O. Damon.
COUNT GLADSTONE (Count Noble—Ruby's Girl), Adolph Dill.
JOE LEWIS (Count Noble—Fannie), J. O'H. & F. H. Denny.
WAGTAIL (Roi d'Or—Belle of Piedmont), O. W. Donner.
NAHKE PHILIP (Roy Monarch—Saddlebags), P. W. Durkee.
COUNT ERIC (Count Noble—Fannie W.), Edward Gray.
HARRY C. (Roderigo—Countess House), Greenfield Hill Kennels.
REVELER (Gath's Mark—Esther), W. B. Hill.
DAD WILSON, JR. (Dad Wilson—Lit), J. Shelley Hudson.
DOLLY HILL (Ben Hill—Dolly S.), J. Shelley Hudson.
DAISY HUNTER (Gath's Hope—Daisy F.), Jos. H. and J. A. Hunter.
TORY LIEUTENANT (Jean Val Jean—Princess Helen), F. R. Hitchcock.
TORY PETRONELLA (Roderigo—Belle of Bridgeport), F. R. Hitchcock.
ANTEVOLO (Count Noble—Trinket II.), P. Lorillard, Jr.
BLADE (Toledo Blade—Sula C.), P. Lorillard, Jr.
FLIGHT (Paul Gladstone—Belle Ward), Wm. McKinnan, Jr.
PAUL BO (Paul Gladstone—Bohemian Girl), Richard Merrill.
BONNIE BONDHU (Count Wakefield—Pearl Bondhu), Geo. A. McLin.
EVF (Paul Gladstone—Bohemian Girl), Herbert Merriam.
RANDOLPH ROY (Ned—Bett's Belle), Randolph Kennels.
LON NOBLE (Count Noble—Alphonse), R. Ridgway.
TOP MARK (Gath's Mark—Burd Helen), B. M. Stephenson.
SAM R. (Dash Bryson—Daisy Hope), W. W. Titus.
JOY (Paul Gladstone—Gipsy H.), W. W. Titus.
DONOVAN (Bob Gates—Nannie Gladstone), W. W. Titus.

POINTERS.

NICK OF NASO (Naso II.—Pettigo), H. R. Baldwin.
ROD (Phil T.—Rose), E. C. Cornell.
ROCK II. (Graphic—Lady Belle), C. E. Connell.
MAID OF KENT (King of Kent—Hops), Charlottesville Field Trial Kennels.

EXILE (King of Kent—Hops), Charlottesville Field Trial Kennels.

WILD DAMON (Damon—Flora), Charlottesville Field Trial Kennels.

CROXIE WISE (Croxeth—Young Beulah), Charlottesville Field Trial Kennels.

MONTEREY (Tory White—Lafford Pearl), Charlottesville Field Trial Kennels.

PROMOTION (Lord Graphic—Belle), John R. Daniels.

DON FIS-HEL (Devonshire Sam—Nellie Bang), U. R. Fisel.

BLACK WONDER (Cowell's Jike—Bang Bang's Pride), Jos. H. and J. A. Hunter.

BACKER'S GROUSE (Mainspring—Swain's Fly), C. C. M. Hunt.

DUKE OF HESSEN (Luck of Hessen—Blarney), Hempstead Farm Kennels.

ROCKFORD BANG (Trinket's Bang—Nellie Bow), W. T. Irwin.

ABBESS OF KENT (King of Kent—Lannie Bijou), Frederick Joy.

GROUSEDALE (Underwriter—Trix), R. R. Moore.

DASH (Marko—Sappho), Watkins L. Moorman.

GRAPHIC VI. (champion Graphic—Daisy II.), Wm. Mahone, Jr.

FRANK W. (Duke of Vernon—Royal Cute), A. L. Sanford.

MARQUIS, W. W. Titus.

DEVONSHIRE DON (Molten Baron—Village Star), Dr. H. J. Thomas.

BOB WHITE (Luck of the Goat—Meteor's Trinket), Chas. Whealen and Gustav Sander.

TRINKET'S DILL (Bracket—Robert's Trinket), Charles Whealen and Gustav Sander.

FREE-FOR-ALL STAKE.

ANTONIO (Roderigo—Bo-Peep), J. M. Avent and N. T. Harris.

CHANCE (Roderigo—Bo-Peep), J. M. Avent and Bayard Thayer Kennels.

RIP RAP* (King of Kent—Hops), Charlottesville Field Trial Kennels.

MAID OF KENT* (King of Kent—Hops), Charlottesville Field Trial Kennels.

NATALIE II. (King Noble—Natalie), Bert Crane.

COUNT ERIC (Count Noble—Fannie W.), Edward Gray.

BETTY S. (Roderigo—Bo-Peep), Highland Kennels.

PAUL BO (Paul Gladstone—Bohemian Girl), Richard Merrill.

KING'S MARK (King Noble—Belle Belton), B. Ridgway and Francis S. Brown.

FRANK W.* (Duke of Vernon—Royal Cute), A. L. Sanford.

TRIBUTATION* (Beppo III.—Lass of Bow), B. M. Stephenson.

* Pointers. All others setters.

BEAGLE TRIAL ENTRIES.

Editor Forest and Stream:

Following are the entries for the National Beagle Club's second annual beagle trials, to be held at Nanuet, Rockland county, N. Y., Nov. 23. Classes A and B for dogs and bitches 15 in. and under in height. Classes C and D for those 13 in. and under:

CLASS A.

TRICOTRIM, w b t, May 23, 1889 (champion Royal Krueger—Midge), Hornell-Harmony Kennels.

SEDEGWICK, b w t, June 27, 1889 (champion Royal Krueger—Lillie), Hornell-Harmony Kennels.

HUNTER, w b t, June, 1890 (Forest Boy—Lady Lee), Forest Beagle Kennels.

CHAMPION RACER, JR., b w t, April 4, 1885 (Racer—Vickey), Rockland Kennels.

ROY K., b w t, Dec. 23, 1889 (champion Rattler III.—Dora), Rockland Kennels.

BILL NYE, b w t, June 30, 1890 (Rip Van Winkle—Queen Nellie), Wm. H. Hyland.

STORMY, w b t, May 30, 1888 (champion Royal Krueger—Pussie), Pocantico Kennels.

FLEETWOOD, b w t, May, 1888 (Prince—Doty), F. F. Ogier.

TONY WELER, w b t, March 24, 1885 (Keno—Fly), Wm. H. Child.

RING, w b t, Feb. 22, 1889 (Victor G.—Try R.), Glenrose Beagle Kennels.

CLASS B.

MIDGE, w b t, April 12, 1886 (Bounce—Jessie), Hornell-Harmony Kennels.

NELLIE, b w t, July 15, 1886 (Rattler—Rosebud), Hornell-Harmony Kennels.

LADY LEE, w b t, May, 1889 (Fitz Hugh Lee—Reed's Nell), Forest Beagle Kennels.

GYSEY FOREST, w b t, April, 1889 (Frank Forest—Sue Forest), Forest Beagle Kennels.

JUNE ROSE, w b t, June, 1889 (Frank Forest—Juno II.), Forest Beagle Kennels.

TONE, w b t, December, 1885 (Flute M.—Skip), Glenrose Beagle Kennels.

BELLE OF ROCKLAND, b w t, April 16, 1890 (Clunier—Countess), Rockland Kennels.

FANNY RACER, b w t, July 10, 1890 (champion Racer, Jr.—Nellie), Rockland Kennels.

FLORA K., b w t, April 18, 1887 (Lee—Topsey), Rockland Kennels.

DORA, w b t, March 26, 1885 (Ringwood—Birdie), Pocantico Kennels.

COUNTESS JUNO, b w t, September, 1889 (Boston—Countess), F. F. Ogier.

CLASS C.

ROYAL KRUEGER, w b t, March 23, 1887 (Bannerman—Cora), Hornell-Harmony Kennels.

CLYDE, w b t, April, 1889 (Frank Forest—Sue Forest), Bradford S. Turpin.

FAIRY LEE, b w t, July 6, 1889 (Lee II.—Fairy), Edwin Field, M.D.

CLASS D.

JUDY, b w t, February, 1890 (Spelo—Nell), W. H. Ashburner.

AVA W., w b t, May 23, 1889 (Royal Krueger—Midge), Hornell-Harmony Kennels.

NIBS, w b t, May 23, 1889 (Royal Krueger—Midge), Hornell-Harmony Kennels.

BELLE ROSS, w b t, June, 1889 (Ross W.—Cricket), Bradford S. Turpin.

TOXT, b w t, Feb. 1, 1890 (Flute M.—Skip), Glenrose Beagle Kennels.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

CLASS E.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—Virginia), Paul C. F. Hoffman.

ROMP C., b w t, Dec. 18, 1890 (Tony—Skippy), Glenrose Beagle Kennels.

THE CZAR, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

THE PASHA, b w t, April 6, 1891 (Mac—Fanny K.), Rockland Kennels.

JUMBO, w b t, April 19, 1891 (Bannerman—

THE DOG IS PROPERTY IN TEXAS.

SAN ANGELO, Tex., Nov. 3.—*Editor Forest and Stream:* I send you an important decision just rendered by our Court of Appeals (which is here the final court in all criminal cases), establishing the principle that the dog is property and a subject of larceny. All Texas sportsmen indorse and feel a just pride in this decision, and hereby extend to our brethren elsewhere an invitation to come and hunt with us, assuring them of full protection to themselves and their dogs.

MILTON MAYES.

Henry Hurley vs. State: appeal from Bexar.

Conviction for the theft of a dog with the punishment fixed at two years in the penitentiary. Whether a dog is the subject of larceny under our statute is a point not raised by counsel either in the court *a quo* or in this court. So far as the court is advised, this is the first conviction in this State of a felony for stealing a dog. Mr. Justice Wheeler said in State vs. Marshall that by the common law the stealing of a dog does not amount to larceny (18 Tex. 58). But by statute in England severe penalties are inflicted for stealing them. In Cooper vs. State (3 Ct. App. 489) this court held that dogs are not recognized as other property and are not subject to an ad valorem tax. Mr. Bishop says: "Of those animals of which there can be no larceny, though reclaimed, are dogs, cats, polecats, coons, etc. These animals may when reclaimed have a recognized value and the right of property in them be protected in civil jurisprudence, it is otherwise in criminal." In Texas civil actions for negligently and willfully killing them have been sustained (78 Tex. 300).

Our statute provides that "within the meaning of personal property which may be the subject of theft are included all domesticated animals or birds when they are proved to be of any specific value." By another statute it is made an offense to wound, poison or disfigure any horse, mule, swine, dog or other domesticated animal. In Maine it was held that dogs are not domestic animals, but there was a dissenting opinion which the court quotes with approval. "A dog is the subject of ownership. Trespass will lie for an injury to him. Trover is maintainable for his conversion. Replevin will lie. An action may be had for his price. He is a domestic animal. From the time of the pyramids to the present day, from the frozen pole to the torrid zone, wherever man has been, there has been his dog. Cuvier has asserted that the dog was perhaps necessary for the establishment of civil society. He is the friend and companion of his master, accompanying him in his walks, his servant aiding him in hunting, the playmate of his children, an inmate of his house, protecting it from all assailants." In New York it was held that the term "personal property" included dogs, and that the stealing of a dog was therefore larceny. The court in that case said: "The reason generally assigned by common law writers for the rule is the baseness of their nature and the fact that they were kept for whim or pleasure. When we call to mind the small spaniel that saved the life of William of Orange and thus probably changed the current of modern history, and the faithful St. Bernards, which, after a storm has swept the crests and sides of the Alps, start out in search of lost travelers, the claim that the nature of the dog is essentially base and that he should be left a prey to every vagabond who chooses to steal him will not now receive ready assent. Under our statute there can be no question but that the dog comes in with the term domesticated animals, and as such is the subject of theft. The dog stolen was a fine pointer and was worth at least \$50. Bills of exception present no error. Affirmed. Opinion by White, P. J."

DOG CHAT.

NO better country than that around Bicknell, Ind., could be chosen to hold field trials on. Game is very plentiful, a bag of 50 quail being an ordinary day's occurrence. Beries are large and strong on the wing, and as for hares they are as plentiful as the most industrious pot-hunter could wish. The land is well tilled, the farms all looking thrifty, in wide contrast to the deserted wilds of North Carolina round High Point and Lexington. The United States Field Trial Club have leased about 4,000 acres for five years and the land is posted. Most of the fields are from 30 to 50 acres in extent.

Bicknell is a pretty village of about 700 inhabitants and essentially a farming community, though a couple of coal mines near give employment to about 50 men. The villagers and farmers take a great interest in the trials and are sociably inclined, unlike the High Point and Lexington people, who seem to hold aloof from all association with the field trial element.

The winning of the Pointer Derby and All-Aged Stake must be very gratifying to the Hunter Brothers, in their own State, J. H. Hunter living only about 12 miles from Bicknell, at Sanborn, Ind. We heard that during the week, on the field, Mr. Hunter was offered \$200 for Black Wonder, and having won \$400 with him they would have realized, had he accepted, a neat sum out of a dog that, while not by any means a brilliant performer, is an honest worker, but not much to look at.

The Blue Ridge Kennel victory in the Setter Derby was a popular one and the presence of Mr. Pabst would have made the joy of the other owners, Hulmar and O'Bannon complete. As there is no photographer here, our "Hawkeye" snaps off the winning dogs must wait till next week for publication. The above kennel purchased Hope's Mark from Mr. Janan the first day of the meeting, and thus with Bob Cooper were able to take first and second prizes. Hope's Mark was bred and raised by Mr. D. E. Rose, who handled him, selling him about three months since to Mr. Janan, consequently Mr. Rose is very proud of the pup and hopes in the East to do just as well. There is no reason why he should not, as the dog is excellently trained, has lots of bird sense and is quite fast enough. This is Rose's year evidently, and he has a good string, for at this writing it looks as if the All-Aged Setter Stake would come very near his kennel. The Blue Ridge Kennel gave an oyster supper with champagne fixings at the hotel, Thursday night, to commemorate their victory. Some waggyish hander wrote on the blackboard in the office: "We Hoped to win, but the dogs Bobbed round so that they left us with but Wun Lung." This was a little rustic wit that elicited rounds of applause. Hope's Mark, Bob Cooper and Wun Lung, the three winners in Setter Derby, were handled by D. E. Rose, and this winning certainly beat the handlers' record, capped as it is by Hope's Mark absolute win of Derby. No one begrudges him his good luck for he is gentlemanly and quiet in manner, and very evidently a kind trainer with his dogs.

Mrs. Smyth, owner of the Swiss Mountain Kennels, has purchased the St. Bernard bitches Lady Blanca (Kastlehorn—Topsy) and Geraldine (Kastlehorn—Qda II.) from Mr. James Watson, who lately imported them. They are said to be pretty good specimens, Geraldine especially, she standing 31½ in., and is a big-boned animal. With the bitches already in this kennel, Mrs. Smyth has now a very nice, even team.

We were pleased to meet Col. Sloo, one of the judges, down at the trials at Bicknell. He is County Clerk of Knox county, Ind., and a general favorite. Ever ready to volunteer information as to the work of the dogs while running, we take this occasion to acknowledge his kind aid, which

helped us materially in our report, his six feet four of solid humanity enabling him to see several little points which we otherwise would have missed.

Spratts Co. informs us that they have received the news that their London house is sending over the St. Bernard dog Keeper, Jr. (?) for Mr. W. C. Reick, and also two more Barzois, a dog and bitch, from Russia, for Mr. Paul H. Hacke.

Inclosed find draft to pay my subscription for another year to the best dog paper in America. You always manage to get the latest and best news, and, better than all, it is always reliable.—A. W. SMITH (Buffalo, N. Y.). This seems to be the opinion shared by many others.

Mr. R. M. Isherwood, publisher of the *Times* at Delphi, Ind., has probably the largest puppy of its age ever raised in America. It is a rough-coated St. Bernard, bred by John W. Farnof, at the Illinois St. Bernard Kennels, and weighed 123½ lbs. at six months of age.

Champion Elcho, Jr., died last Monday at Harry Goodman's kennels, Auburn, Ill. The death of the dog takes from us the most typical Irish setter in America during the past decade. He was by Elcho out of Noreen, and was about ten years old.

Among the new kennel advertisements this week are the following offers for sale: A. Youngdolph, greyhound pup; Walter J. Comstock, Irish terrier pups; W. S. G. Baker, great Danes; A. S. Weeks, setters; F. L. Cheney, Irish setters; 938 Prospect avenue, Gordon setters; Migouon Kennels, cocker spaniel; D. A. Goodwin, Jr., English setter; W. H. Pierce, pointer dog. The Oak Grove Kennels offer Kildare in the stud.

The second annual dog show of the Central City Kennel Club will be held at Jackson, Mich., Feb. 16, 17, 18 and 19. Dr. Edwin L. Kimball is secretary.

We note the following from the *Shooting Times* (London) of Oct. 24: "The Barzoi Zerry arrived in London in excellent condition and a credit to the butcher of the National liner who looked after her. Zerry is an exceptionally fine bitch, fawn in color, with a lovely body, shoulders, legs and feet. I think she is the best I have seen, bar Pagooba." As the writer of the above is the owner of the noted Barzoi Whirlwind, such comment of the bitch must be very gratifying to Mr. H. W. Huntington, who owns her. Zerry was sent over to be bred to the best Barzoi dog in England, and considering she is criticised as being next best to Pagooba (the best in England), her pups ought to be exceptionally fine.

Mr. H. W. Wilson, of Ballardvale, Mass., has purchased of the Anglo-American Terrier Kennels a little bitch puppy four months old, by Toon's Royal from Tipsy, which is less than a pound in weight and as smart as a cricket. This little one bids fair to give other American-bred ones a severe rub, as it has a grand body on the best of legs, showing much quality.

A meeting of the executive committee of the Irish Setter Club is called for Thursday, Nov. 19, at 5 P. M., at the residence of Mr. Child, 634 Race street, Philadelphia; also one to meet at High Point during the progress of the same.

We have received \$10 from Mr. A. H. Moore for the St. Bernard Hospice Fund.

The Washington City Kennel Club will hold a show on the dates March 8, 9, 10 and 11, 1892. It has been arranged so that Washington can have the dates previously given the Maryland Club, they having abandoned their intention of holding a show next year.

THE CANADIAN TRIALS.

CHATHAM, Ont., Nov. 11.—*Special to Forest and Stream:* Rain all day. No running attempted. Drawings for All-Age resulted: Westminster Drake against Matane Lady. Patch vs. Axtel's King Don. Manitoba Pet vs. Lady Gay Spanker. Canadian Jester vs. Count Graphic. Dart vs. Luke. Cambriana vs. Ightfield Blithe. Ightfield Seton vs. Rose Rapid II. Lady Spot vs. Dan O'Connell. Still raining. Looks bad for to-morrow. F. HOUGH.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Lock. By W. H. Ellsworth, Manchester, Conn., for red Irish setter dog, whelped Nov. 1, 1890, by Ned Roy (Dock—Flag) out of Bridget D. (Beat—Aggie).

Chrysa and Isabella. By H. L. Littlefield, Worcester, Mass., for black and tan collie bitches, whelped July 15, 1890, by Gildero (champion Charlemagne—Hasty) out of Zillah (Rutland Jock—Spot).

Satan, Ben Hur, Hindoo and Niola. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pups, three dogs and one bitch, whelped Aug. 30, 1891, by Spokane (champion Kash—Lady Thor) out of Sara Bernhardt (Lord Roseberry—Cara).

BRED.

Prepared Blanks sent free on application.

Beulo—Guy. H. F. Littlefield's (Worcester, Mass.) St. Bernard bitch Beulo (Barnard—Beulia) to Guy (Grimsell—Dell), April 22.

Nina—Guy. H. F. Littlefield's (Worcester, Mass.) St. Bernard bitch Nina (Knight—Roxie) to Guy (Grimsell—Dell), Aug. 19.

Golden Rod—Bismark. H. F. Littlefield's (Worcester, Mass.) collie bitch Golden Rod (Scots Guard—Lothian Maid II.) to his Bismark (Lothian Chief—Edgewood Beauty), May 14.

Lady Ruby. J. W. Dunlop, (Clare, Mich.) St. Bernard bitch Beulo (Barnard—Beulia) to Guy (Grimsell—Dell), Oct. 5.

Lake View Spot—Rutland Jock. H. F. Littlefield's (Worcester, Mass.) collie bitch Lake View Spot (Victor Hugo—Minnie) to his Rutland Jock (champion Rutland—Penelope), Sept. 4.

Altonetta—Lord Bute. F. E. Lamb's (Baltimore, Md.) St. Bernard bitch Altonetta (Alton—) to Menthon Kennels' Lord Bute (Save—Sabrina), Oct. 7.

Toon's Royal. Anglo-American Terrier Kennels' (Salem, Mass.) Yorkshire terrier bitch Flo (Bright—Fan) to their Toon's Royal (Dreadnaught—Fille), Nov. 2.

Lotta—Prince Regent. Davis & Winter's (Pittsburgh, Pa.) black and tan bitch Lotta to Anglo-American Terrier Kennels' Prince Regent (Sir Henry—Lund's Rose), Oct. 17.

Meersbrook Empress—Prince Raglan. Anglo-American Terrier Kennels' (Salem, Mass.) black and tan bitch Meersbrook Empress (General III—Empress) to their Prince Raglan (Beaconsfield—Minnie), Sept. 20.

Sissey—Valley Boxer. Anglo-American Terrier Kennels' (Salem, Mass.) Irish terrier bitch Sissey (Apprentice Boy—Nelly) to their Valley Boxer (Bob—Liffey), Sept. 17.

Lady Rosebud—Lord Bute. Jos. Stiner's (New York) St. Bernard bitch Lady Rosebud (champion Beauchamp—Queen of Scotland) to Menthon Kennels' Lord Bute (Save—Sabrina), Sept. 22.

Lady Hopeful—Lord Bute. A. H. Moore's (Colmar, Pa.) St. Bernard bitch Lady Hopeful to Menthon Kennels' Lord Bute (Save—Sabrina), Oct. 13.

June—Lord Bute. D. E. Hirsch's (Lancaster, Pa.) St. Bernard bitch June to Menthon Kennels' Lord Bute (Save—Sabrina), Sept. 24.

Sunray—Lord Bute. Swiss Mountain Kennels' (Germantown,

Pa.) St. Bernard bitch Sunray to Menthon Kennels' Lord Bute (Save—Sabrina), Sept. 9.

Lalla Rookh—Bradford Ruby II. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lalla Rookh to their Bradford Ruby II. (champion Bradford Ruby—Pass B), Oct. 25.

WHELPS.

Prepared Blanks sent free on application.

Lake View Spot. H. F. Littlefield's (Worcester, Mass.) collie bitch Lake View Spot (Victor Hugo—Minnie), Nov. 6, nine (four dogs), by his Rutland Jock (champion Rutland—Penelope).

Golden Rod. H. F. Littlefield's (Worcester, Mass.) collie bitch Golden Rod (Scots Guard—Lothian Maid II.), July 12, seven (four dogs), by his Bismark (Lothian Chief—Edgewood Beauty).

Nina. H. F. Littlefield's (Worcester, Mass.) St. Bernard bitch Nina (Knight—Roxie), Oct. 19, fourteen (seven dogs), by Guy (Grimsell—Dell).

Beulo. H. F. Littlefield's (Worcester, Mass.) St. Bernard bitch Beulo (Barnard—Beulia), June 19, nine (five dogs), by Guy (Grimsell—Dell).

Florence Gladstone. Poston & Burdell's (Columbus, O.) English setter bitch Florence Gladstone (Gladstone—Florence), Nov. 1, eleven (three dogs), by Advent's Iroderigo (Count Noble—Twin Maid).

Warren Tease. Morey Kennels' (Fairfield, Conn.) fox-terrier bitch Warren Tease (champion Splauser—Warren Tease), Nov. 4, four (one dog), by their Ruby Trigger (Brosey Trigger—Pearline).

SALES.

Prepared Blanks sent free on application.

Beulo. Orange and white St. Bernard bitch, whelped January, 1890, by Barnard out of Beulia, by H. F. Littlefield, Worcester, Mass., to Dr. J. W. Dunlop, Clare, Mich.

Blanchey Ward. White and orange St. Bernard bitch, whelped May 12, 1891, by Scotch Bonivard out of Hecla, by H. F. Littlefield, Worcester, Mass., to C. G. Oliver, Canton, O.

Scotch Bonivard—Hecla whelp. White and orange St. Bernard dog, whelped May 12, 1891, by H. F. Littlefield, Worcester, Mass., to G. T. Lord, Turnerville, Conn.

Duke Leslie. Liver and white ticked pointer dog, whelped Aug. 3, 1891, by Rex Morgan out of Mack's Juno, by W. B. McClelland, Hyattsville, to John Thomas, same place.

Prince Cleve and Alice. Orange and white St. Bernard dog and bitch, whelped June 19, 1891, by Guy out of Beulo, by H. F. Littlefield, Worcester, Mass., to Dr. J. W. Dunlop, Clare, Mich.

King C. and Queen C. Orange and white St. Bernard dog and bitch, whelped June 19, 1891, by Guy out of Beulo, by H. F. Littlefield, Worcester, Mass., to T. W. Clelland, McAlester, Ind. Ter.

Guy—Beith whelps. Orange and white St. Bernards, whelped June 19, 1891, by H. F. Littlefield, Worcester, Mass., a dog each to C. M. Smith, Jacksonville, Fla., and Judge H. C. Fox, Richmond, Ind., and a bitch to F. E. Prentiss, Auburn, Mass.

Spot Noso—Rose Graphic whelp. Liver and white pointer dog, whelped Aug. 16, 1891, by C. D. Roberts, Dexter, Me., to C. A. Holden, Sedgewick, Me.

Graphic III—Meteor's Flirt whelp. Lemon and white pointer dog, whelped Aug. 3, 1891, by C. D. Roberts, Dexter, Me., to J. P. De Saussure, Charleston, S. C.

Altonessa. Orange and white St. Bernard bitch, whelped Nov. 17, 1890, by Alton out of Alaric II., by Menthon Kennels, Phoenixville, Pa., to A. A. Cobb, Wilmington, Del.

Tobey's Princess. Rough-coated St. Bernard bitch, by Mascot Bernard out of Merchant Princess, by A. H. Moore, Philadelphia, Pa., to a gentleman of Doylestown, Pa.

Sibyl. Rough-coated St. Bernard bitch, by Bausmond out of Queenie, by A. H. Moore, Philadelphia, Pa., to Paul Garber.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

C. M., Brooklyn, N. Y.—For the last week my setter's back between his hindquarters has curved up, he cannot reach to the floor to pick anything up; he cannot sit up straight; as continually lies down and every few minutes begins to squeal and moan as if in great pain. Ans. Give 1 desertspoonful of the following mixture three times a day: Sodii salicylas 2drs. to 5oz. of water. Apply this liniment to back twice a day: Menthol 1½ doz., chloroform 2oz., olive oil add 8oz.

R. W., Boston.—I have two Irish terriers about 14 weeks old. When I received them, about four weeks ago, one had its coat full of dry skin, like dandruff, and it had a number of spots over its body where the hair had come off, leaving skin bare, but no signs of soreness; I have treated him with carbolic vaseline, but he is no better. The other broke out with a number of sores about a week ago; the puppy scratches these until they bleed, they then heal up with a hard scale and cease to trouble him; he has not been troubled long enough to have any scabs fall off, but has some new sores every morning. Both puppies are very lively, eat well, and appear in the best of health. Ans. Treat for worms, and apply the following ointment all over twice or three times a week: Precipitated sulphur, 4 drachms; oil of tar, 5 drachms; vaseline, 4 ounces. Give a little meat in addition to the food mentioned.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE ORDNANCE REPORT.

WASHINGTON, D. C.—The annual report of the Chief of Ordnance, U. S. A., ready for transmission to Congress, describes at length the exhaustive experiments made by the department with magazine rifle arms, including the latest European models. On this subject the report says: "The rifle change from a caliber of .45 in. (our present service standard), to the much smaller one of .30, the use of the long and narrow cartridge thereby necessitated, and the introduction of the smokeless powder for imparting a greatly increased velocity to the bullet without subjecting the barrel and breech system to undue augmented strain, have all operated to render the efforts of American inventors to perfect their guns, and the result is that but few magazine guns of American design have yet been brought before the board. To assist inventors the department has sold at cost price caliber .30 barrels and smokeless powder cartridges for such preliminary experiments as they might desire to make. A number have availed themselves of these opportunities, and will probably soon have their inventions ready for trial by the board. The elaboration of a magazine system suitable for the military service is an operation requiring not only ingenuity, but both time and patience to bring it to perfection.

"Experience has demonstrated the ability of American inventors to produce the best small arms in the world adapted to the conditions which formerly existed. This department is doing all in its power to afford the inventors an opportunity to meet the requirements of new existing conditions. Reports of foreign service indicate that continuous rapid firing may not be expected in the use of the magazine gun, as it is limited by the endurance of the soldier and the heating of the gun. Reports from our army show that an expert soldier can fire the present service Springfield single loader with the accuracy generally required in action about twenty times per minute. So far as rapidity of fire alone is concerned, these reports reduce somewhat the almost universally estimated necessity for an immediate change to a magazine system. It is important to state that up to the present time the investigations made and knowledge gained by this department have not demonstrated so much excellence in the magazine arms which have been adopted by foreign nations as was expected, and have not shown such perfection in any one of them as could warrant its adoption for our service. It is hoped that this country can produce a better arm, and until it can, or certainly until it has been demonstrated that it cannot, it would be wise to defer a change from the excellent single loader now in service to a magazine system. No efforts will be spared to arrive at a satisfactory magazine arm."

The new caliber .30 Springfield is said to have been very successful with smokeless powder.

YOUNGSTOWN, O., Nov. 5.—The third shoot of the Logan Rifles to-day on their grounds in the south-eastern part of the city resulted as follows, out of a possible 25: Captain Logan 18, Sergeant Snyder 18, Lieutenant Montgomery 18, Corporal Allen 15, Lewis 20, Steiner 20, White 16, Thomas 17, Williams 17, Cook 13, Reed 10.

THE A. C. A. EXECUTIVE COMMITTEE.—On Oct. 1 Com. Walter U. Lawson and Sec. Treas. Ralph F. Brazer ended their terms of office, their places being taken by Vice-Com. C. V. Winne, of the Central Division, and the new Secretary-Treasurer, W. B. Wackerhagen. On Saturday next the terms of all the division officers will end, the new board, which constitutes with the Commodore and Secretary-Treasurer the executive committee, being as follows:

Central Division.—Vice-Com. E. L. French, Buffalo, N. Y.; Rear Com. T. H. Stryker, Rome, N. Y.; Purser C. D. Mead, Dayton, O.; Ex. Com., T. J. Kirkpatrick, Springfield, O.; C. F. Wolters, Rochester, N. Y.; C. G. Belman, Amsterdam, N. Y.

Eastern Division.—Vice-Com. J. W. Cartwright, Boston; Rear Com. E. C. Knapp, Springfield; Purser R. Appollonio; Ex. Com., Paul Butler, Lowell; W. U. Lawson, Newton; S. R. Upham, Providence, R. I.; T. H. Metcalf, Holyoke.

Northern Division.—Vice-Com. D. B. Jaques, Toronto; Rear Com. W. F. Sweny, Kingston; Purser W. H. P. Weston, Toronto; Ex. Com., R. Easton Burns, Kingston; D'Arcy Strickland, Lakefield.

Atlantic Division.—Vice-Com. L. W. Seavey, New York; Rear Com. Richard Hobart, Newark, N. J.; Purser J. K. Hand, New York; Ex. Com., W. S. Elliott, New York; J. R. Lake, New York; C. V. Schuyler, Arlington, N. J.

DIVISION REPRESENTATION.—If we are not mistaken, several Divisions have provided themselves with members at large far in excess of the number allowed by the constitution. A Division of 100 members is entitled to the three flag officers, but no member at large; a Division of 200 members is entitled to but one member at large; a Division of 300 members to two; and in order to have three a Division must show at least 301 names on the roll. It looks as though this was only another instance of that carelessness in reading and applying the rules, which is becoming entirely too common in the Association, and which usually arises from the hasty manner in which business meetings are conducted. As we have remarked before, there is no use in enacting and printing rules which are not to be observed. Last year, taking the A. C. A. book as authority, there were two Divisions each with one more member on the committee than they were legally entitled to, but the matter passed unnoticed.

CHANGES IN THE RACING RULES.

Editor Forest and Stream:
I wish to protest against the proposed rule prohibiting rudders in paddling races. I cannot see any reason for it except to help those too lazy to rig foot steering gear or who stand while paddling, for under many conditions it is certainly a great help. If it were not a benefit, there is certainly no use of ruling it out. Also, this affects more than the races at the A. C. A. meet, as the majority of the clubs in the A. C. A. have a turn in the paddling races at their club regattas, when unquestionably the rudder is a great help. As these races are almost invariably under A. C. A. rules, this question is quite serious, and the rudder is certainly a legitimate device. Nearly every cruiser uses a rudder when paddling, and if the rules are to be drawn so very fine, I propose, as an offset, a rule to prohibit carrying or using a baler in sailing races. There is as much sense in one as the other.

Editor Forest and Stream:
The proposed changes in the racing rules, as offered by the regatta committee and others in FOREST AND STREAM, will no doubt be the cause of much discussion. I think that to add to Rule X, "No rudder shall be used in paddling races," is rather unjust, as the rudder is as much a part of the canoe as the keelboard, and in the record paddling race centerboards must be carried, and why should a man be compelled to discard his rudder when it may be of some assistance to him, which, like the centerboard, is simply extra dead weight? In the record sailing and combined canoe must carry the same rig and ballast, and why should a man in the record paddling take off his rudder? and if it can be carried in that race, why not in all paddling races?
I also cannot see anything to be gained in starting all paddling and combined races by the stern of the canoes, as it gives the 16ft. canoe an advantage of 1½ ft. over the 14ft. 6in. canoe, and the race is not the whole distance between the start and finish lines.
I am glad to see that some notice has been taken by the addition to Rule XII to stop the jockeying that was witnessed at the A. C. A. meet this year in two races.
A. C. A. 1254.

STEAM YACHT RACING.—The fast river steamers having laid up, the amusement of beating time is over for the season, and steam yachtsmen who must race have found a new way of doing it without the danger of defeat. A course is laid out on the water by stretching a copper wire between two buoys, over which distance a record run is made. The repairs to the Norwood having been completed, it was announced that she would make a run of this kind on Saturday last, and a number of spectators were present at Winttingham's Basin, Bay Ridge. The elections being over, and news proportionately scarce, it is needless to say that a large portion of the audience consisted of reporters. As it happens, it was very fortunate that the run did not take place a week sooner, as at that time it would have been unnoticed in the daily papers, or have been disposed of in five lines instead of being pulled out to a column length.

The distance was laid off by a copper wire floated by corks a few inches apart, the whole being paid out from a tug and two buoys set, after which the run began. There was some talk of 1.50, the conditions being favorable, but the first run showed only 2.12. A start was made on a second run, but something went wrong with the safety valve, and the yacht ran into the Basin, the wire was coiled away and the spectators went home greatly enlightened, though some were sufficiently censorious to remark that the slight damage might easily have been repaired and a second run made.

CONSTELLATION.—It is reported, on very good authority, that Mr. Bayard Thayer has given up all idea of visiting England with Constellation, and will race her next season against Volunteer. As the two are not in the same class, Constellation being 100ft. l.w.l. and Volunteer under 80ft., they will only come together in a few races in the East, in which all schooners are classed together, and in the Golet Cup race. In the races of the New York cruise, which bring out the best entries of the year, Constellation will have nothing modern to sail against.

"GEOFFREY HAMSTEAD," A YACHTING NOVEL.—We have received from the publishers, Messrs. D. Appleton & Co., New York, a very bright and clever novel which cannot fail to interest yachtsmen, especially those familiar with the lakes, the scene of the story being on or about Lake Ontario. The author, Mr. Thomas S. Jarvis, is an old lake yachtsman, formerly a Toronto lawyer, who, during the past season, has become known to New York yachtsmen through some excellent work in the New York papers, and is now yachting editor of the *Trek's Sport*. The yachting portion of the story is particularly bright and fresh, and two or three very exciting incidents are well worked up. While the plot is always interesting and often exciting, the chief merit of the book is in the character studies, the principals and their friends being admirably drawn.

YACHT RACING IN 1891.

III.—THE 40FT. AND 40FT. CLASSES.

AFTER the meagre records of the larger classes last week, it is a pleasure to turn to the long and interesting record of the 40ft. class, as shown in the accompanying table. The first striking fact is the altered position of the 40 and 40ft. classes as compared with the previous year. In 1890 the 40ft. class was the mainstay of the month, with several old ones, but none specially built for racing. In 1891 the 40ft. class had practically disappeared, but one boat racing through the whole season, and the starting generally in the 40ft. class. At the same time, the 40ft. class has grown into a fleet of a dozen boats, all specially built for racing.

Out of the large fleet of forties built between 1888 and 1890, only Gossoon was fitted out for racing, the majority of the others being sold for cruising. Minerva was laid up all the season at Bay, by her young owner having given up yachting. Pappoose was sold and towed to Lake Erie; Ochoctaw, Mocassin and X-ra were sold up the Hudson, Awa came to New York to a new owner, Verena and Baboon were also sold and Ventura as well. Mariquita, still owned by Mr. Belmont, was fitted out for cruising use only, looking better in coat of black than she ever did as a white boat. Liris was fitted up for cruising, with a cockpit and wheel, and has been in constant service all the season.

The growth of the 40ft. class was deliberate and progressive, the first boat, Pappoose, was built in 1887 and the last, Gossoon, in 1890. The 40ft. class, however, sprung into existence in a single winter, being the first instance of a large class practically built to order at short notice, for racing. Of the eleven yachts which made up the class, nine were built last winter for a new other two being but one year old and to all intents new boats. The class had its origin in an agitation which began in Boston after the success of Minerva in 1889, and of Minerva and Gossoon on the many suggestions for a new boat for Mr. August Belmont, owner of the Mariquita, who ordered early last fall a 40-footer from Mr. Burgess. Closely following him came Mr. Bayard Thayer, owner of Pappoose, who ordered Sayonara, and Mr. A. B. Turner, owner of Millicete, who ordered Oweene, with Mr. Cornelius Vanderbilt, owner of the 30ft. Gladys, a new comer in the class to be designed by Mr. Burgess, and all were keel craft, their beam being little wider than the Burgess 40-footers, such as Chispa and Mariquita.

With the existence of the class well assured by these orders, other yachtsmen soon came in. Mr. Foster, owner of Ventura, placed an order with Fife; Mr. John B. Paine, son of Gen. Paine, after two successful attempts at designing in the smaller classes, turned his hand to a forty, which was later enlarged to the fashionable size. The greatest surprise of the winter, however, was the announcement that the Herreshoffs were at work on a new yacht for the class, designed by Mr. N. G. Herreshoff, and later that this boat was by Vice-Com. Morgan, who had built twice for the 40ft. class with but poor success. All of these were keel craft and it looked at one time as though the centerboard would not have a representative, but late in the winter Messrs. Bryant and Prince set to work to get a centerboard racer of the latest type from Mr. Burgess.

In addition to these new yachts, there was already the 40ft. Jessica, built by Fife the previous year and sailed across. After a little unsuccessful racing in the previous fall, she was refitted with a new rig and sailed the winter. Another Fife boat was also added to the class before the racing began, the 40ft. Lwila, l.w.l., somewhat similar to Minerva, built for a Halifax yachtsman in 1890 and sailed across. Early last spring she was purchased by Mr. F. P. Sands, of Newport. Thus far the class was very much a Boston affair, the yachts being owned or built in the East, but just before the building season was over a keel was laid in New York, for the yacht Minerva, designed and built by H. C. Winttingham for Mr. J. Roger Maxwell, owner of Shamrock.

The work of building was begun so early, in many cases, the spars for some of the Burgess boats being worked out in the fall, while the hulls were started at the same time; that the general expectation was that the fleet would be complete by the time of the first races. Such, however, was very far from being the case, and the racing season was delayed and attendant expense and disappointment fell to the lot of most of the owners. The experiment made with Liris, in 1889, or part composite construction with the evident necessity for a lighter hull and more ballast below, led to the adoption by Mr. Burgess of some very radical changes in construction in Ventura, Mocassin and Gossoon; and when the new class took definite shape it followed, as a matter of course, that the construction of Minerva, X-ra, Verena, Millicete, and the older Burgess boats must be materially modified.

In all of the new boats then, the effort was made to reduce weight, though but with poor success in the end, as the boats began a course of leaking and breaking down as soon as they were launched, which has been kept up throughout the season. In the first place a serious delay was met with in finding the large number of keels logs required, and all of the later boats were delayed on this account. Spars too were scarce by the time that all were ready for them, and some were glad to get even poor sticks rather than none at all. Seasoned material for planking was also scarce, the result being that a number of the boats leaked very badly. In readiness for the new class a number of early events had been arranged, especially in the East, but when the time came none of the boats were completed. Minerva, when completed sailed at once for New York to get in trim for the races there; but the folding up of her channels sent her to the smithshop at Bay Ridge, where she stayed until much of her ironwork was replaced, thus losing valuable time. Sayonara also started for New York, but was compelled to put back to Boston with her channels gone, through which mishap, and a good deal of trouble in repairs, she only made time to sail in the principal regattas that had been sailed. Ilderim, after being on the first completed, was laid up for the whole season at Lawley's, her owner deciding to spend the summer abroad. Oweene, Bearix and Alborak were all late in getting out, and then there was much work to do before they were fit for racing, all showing weakness and especially leaking considerably at first.

So far as construction went, the New York boats were, on the whole, far ahead of the Eastern ones, having proved amply strong in use, while her hull is quite light. She, too, was late in fitting out, and not fully ready for the first races. The best construction of all the American boats was that of the Herreshoff craft, Gloria, with steel frames and straps and a part double skin, the hull being very tight. Although a weakness of the deck developed on the first trial, it was soon remedied, and the yacht has sailed through the season without a breakdown.

The Fife boat, Barbara, was by far the most thoroughly constructed of the fleet, having, at the expense of some weight, a complete system of steel straps and ties inside the planking; but she, on launching, had trouble with her ballast, going down by the head and being over the class limit, so that she had to haul out for the removal of some of the ballast.

Although the shortcomings of some of the boats were in a measure due to a consideration of expense, the designer and owners not deeming it necessary to go to the additional cost of a double skin, as in Liris and Gloria, the fleet throughout was an expensive one, and supposed to be fitted out in the best possible manner in spars, gear and sails, as well as in hull. In a number of cases the best available men were secured to sail them; Captain Nat Watson naturally took charge of Sayonara, having sailed Pappoose for two seasons; Captain Charles Barr, of Minerva, a stapper who has made a reputation for himself in but two seasons, was in command of Beatrix; Captain Harry Haff went from Mariquita into Minerva. Alborak had the benefit of the elder Captain Hank Hall's experience, but had no skipper in charge, her owner sailing her, and Liris and Nautlius were also sailed by their owners. Gloria was sailed in part by her designer, and too by her owner, and as her home port was Newport, not far from the Herreshoffs' yard, with plenty of clear water for sailing, Mr. Herreshoff had unusual opportunities for getting the boat into trim before the opening races; the splendid shops at Bristol, with facilities for the finest wood and metal work, contributing their share to the yacht's success.

The Eastern Y. C. had prepared to open the season with a handicap regatta in which the new class should play an important part, sailing its first race, but as the day approached it became evident that the new boats would not be ready for at least a month, and the regatta dwindled down to a race of the 30-footers. The first race about New York was little more successful for the reasons before mentioned, only Jessica coming to the line at Bay, and the old sloop Madcap started against her to make a race, but not finishing, however.

The New York Y. C. regatta, a day later, was sailed in a N.E. storm, a strong breeze and quite a tumble of sea. It had been foretold by many that when Gloria once struck rough water she

would stop; but so far from this being the case, she started with a No. 2 clubtopsail and carried it all day, doing her best work when outside the Hook. Mineola made very poor weather outside, finally springing her mast when only three miles off shore, and towing home. Jessica and Nautilus sailed well together, Jessica finally winning. Those two races, in light and heavy weather, went far to indicate that Gloriaana had things her own way, at least for a time until the other boats were worked up; and this opinion was confirmed in the three following regattas of the Seawanhaka Corinthian, New York Corinthian and Atlantic, the latter a special race for the 46ft. class. The weather was light on each day, and the water smooth, but whether in a mere air or an occasional scupper breeze, Gloriaana kept far ahead of the fleet. Sayonara, after many mishaps, finally reached New York in time for the Corinthian regatta, but failed to save her time from Jessica. Uvira was also present, but classed with Liris and Mariquita, defeating both. In the Atlantic special, Sayonara defeated Mineola, while Jessica again led Nautilus. The result of all this racing was to show that Gloriaana was far and away faster than any of the boats which raced with her, and moreover, that she would probably be so through the whole season.

There still remained the four Eastern boats—Oweene, Beatrix, Alborak and Barbara. The latter two were never considered as winners, but Oweene was looked upon from the first as a fast boat, as she has proved to be; while the majority of Eastern yachtsmen were confident that Beatrix, the Burgess center-boarder, was destined to lower Gloriaana's colors. It was expected that several of these boats would start in the annual regatta of the Massachusetts Y. C., on June 17; but none were ready, and the day was so bad that only a few of the smaller boats completed their course, the larger ones, sailing outside all giving up. The sweepstakes of the Eastern Y. C., on June 19, fared no better, there being no large yachts present, and the annual regatta ten days later was flat and inconclusive, though Beatrix sailed her first race. She had against her only the old Thelma and the 40-footer Gossoon, which latter has been through the season in the 46ft. class. The race was a fluke, Gossoon winning by 25 minutes, even time from Beatrix. Two days later a better race was sailed by the Corinthian Y. C., of Marblehead, but unfortunately Beatrix was disabled and did not start. Oweene and Alborak sailed their first race, Gossoon being with them. Oweene defeated Alborak very easily, the Paine boat proving defective in many points.

Returning now to the Sound, the special race of the Larchmont Y. C. on June 30 had but three starters—Sayonara, Mineola and Jessica; this being the order at the finish. There was a strong breeze and moderate sea, the two larger boats starting with one reef in, though this was mainly on account of the weakness of

their rigging. The finish was very close, Sayonara winning, though the corrected time was not calculated for the usual reason, neither boat being measured. The special race of the Seawanhaka C. Y. C. at Oyster Bay, on July 2, found the same trio, but this time Mineola won by a minute. Her victory was the more creditable from the fact that her owner, who was obliged to steer her, having no Corinthian substitute, was suffering from a serious mishap in the shape of several broken ribs, and steered all day sewn up in a heavy canvas jacket. Jessica was also handicapped in the matter of a helmsman, having no Corinthian to steer. Mr. A. P. Montant was finally persuaded to take the stick, and though entirely new to the yacht, and accustomed to sailing smaller and different craft, he sailed a very fine race, beating Sayonara and being but a minute astern of Mineola.

The Larchmont regatta of July 4 was a novelty, the yachts being handicapped according to the generous allowance of 8m. from Mineola and Sayonara. At the same time in this class another prize was offered under the regular club allowance, while the Connor cup was also open, under the regular allowance, to all yachts enrolled in the club. This time Nautilus was ready with the other three, Gloriaana having returned to Newport immediately after the Bay regattas, with the intention of doing no more racing until the New York cruise. Jessica was given the generous allowance of 8m. each from Mineola and Sayonara, to the surprise of all she beat both very handsily on even time, thus taking the two club prizes, and only missing the Connor cup through not being enrolled as a club boat. The wind was moderate all day, a mild breeze, varying in spots, but giving no special advantage to any one boat. Jessica sailed well on all points, but made her greatest gain to windward, beating home from Captain's Island to the Hempstead mark, gaining over 8m. on her leg. A part of the credit for her fine showing on this occasion must be given to the steering and pilotage of her Corinthian helmsman, but even with this she should not have outsailed the two larger boats in such weather. Nautilus again made a poor showing to windward, though reaching and running very fast. The ownership of the Connor cup was left undecided between Sayonara and Mineola, neither having been measured, while there was but one second between them in elapsed time. As Mineola shortly afterward lost her mast and replaced it, her exact measurement in this race was never determined and the cup went to Sayonara.

The same quartette was on hand early Monday morning for the sailing regatta of the American Y. C., off Milton Point, a few miles from Larchmont. The wind was strong north-west, Jessica and Sayonara each setting a jibheader over a single-reefed mainsail, and a very fine race was promised. Mineola had a good lead

at the outer mark, but her impetuous skipper ran into the mark-boat, nearly turning it over. Though out of the race after this maneuver, Mineola kept on in the lead all the way home; but when within a couple of miles of the finish Capt. Haft undertook to set his jib header, though there was still a strong breeze, and took the mast out of her. This made Sayonara the winner, with Jessica again ahead of Nautilus. Only Sayonara and Jessica came to the line next day in the New Rochelle Y. C. regatta, the former taking the prize. On the first leg a foul occurred as Sayonara was passing Jessica, and both yachts protested, but the regatta committee declined to give a hearing to the case.

A DANGEROUS VOYAGE.—The Golden Eagle, ss., owned by Lady Scott and commanded by Captain A. Paterson, arrived at Cowes on October 18 from Stromferry, after a very perilous voyage. The yacht left Stromferry on the 2d inst., but on account of bad weather had to put into several ports, and only reached Kingston on the night of the 12th, and remained until the 15th, and rode out the hurricane of the 13th and 14th. On the 15th another move was made for Cowes, and when the yacht was off the Smalls the same night a southerly gale of great violence sprang up that no canvas could stand, and the yacht was hove to in a mountainous sea, and so bad was the weather that great fears were entertained as to the capability of the vessel living out the gale. The weather moderated somewhat on the 16th, and the yacht was put on her course, and from then until the 18th a series of moderate gales were experienced, and on the morning of this day, when the yacht was within five miles of the Needles, the main shaft broke and slipped out until the after stern post stopped it, taking all the packing out with it, and allowing the sea to rush into the vessel in such great quantity that it would have caused the yacht to founder in a short time. The boats were ordered to be in readiness, but happily were not required, as, by great perseverance, the hole was sufficiently stopped, and by the aid of the ship's pumps and bailing the yacht reached Cowes safely. The master reports that he has been fifty years at sea, but has never experienced such awful weather. The yacht has since come into the harbor and is being dismantled, and will go on the patent slip for survey, as, besides receiving the damages named, she is considerably strained.—*Land and Water.*

UTOWANA.—Steam yacht, W. W. Durant, has been laid up at Cowes, her crew being sent home. The abandonment of the long cruise for which the yacht was built is due to the illness of the owner's wife at sea.

SULTANA.—Steam yacht, T. L. Park, has recently left England for the Mediterranean.

AMERICAN MODEL Y. C.

THE notice to attend in force to decide the measurement question resulted in filling up the pleasant rooms of Mr. Townley, showing the great interest felt in the matter. After considerable discussion on the merits of taxing sail area, the question was put to a vote and carried with only two dissenting votes. The present rule for measurement is by the l.w.l. alone. The new rule will be $\frac{S.A.+L.W.L.}{2}$ = sailing length; yachts to be classified by l.w.l. as heretofore.

A motion was then made to introduce a new class, namely 42 to 48m, this being a part of the old Second C class, and to discard the present First Class, making it Class A; this class to run up to 63m. There will probably be very little if any racing in this class. The motion was seconded and carried to make new classes as follows: Class A, 53 to 63m.; First Class, 48 to 53m.; Second Class, 42 to 48m.; Third Class, 35 to 42m.

A motion was made to do away with sailing to windward and towing back to starting line—by making all classes sail over a triangular course. After some discussion it was thought impracticable to sail the larger class over such a course, as with a beam wind they were apt to get away from their skippers and be wrecked on shore, or to run down row boats some, it being no joke to be punched in the ribs by the nose of a runaway model yacht of 63m. w.l. It was finally decided to sail Class A and First Class yachts to windward only. The Second and Third Classes to sail over a triangular course, the triangle to be one-half mile, over which the above named classes will sail to windward the distance sailed one mile. The windward races to be sailed in heats, best two out of three. The amendments to take effect next season.

The result of these new rules has decided owners to build new yachts to fit them. Mr. Michales will build a 46m, J. Pfeiffer, owner of Electra, has ordered a 40 from Capt. N. Avedson, of New York; H. Fisher has received an order to build a 46m, A. Strong; G. Sheridan has accepted a design and plans for a 46m from the board of F. Nichols; Mr. Rogers is negotiating for plans for a 40 from same designer. So model yachting has taken a new lease of life.

The fourth and last regatta of the season was sailed on Nov. 3, the wind being W. and proving very satisfactory. It gave the regatta committee considerable trouble to build a satisfactory course. Finally, after an hour's shifting about, a $\frac{1}{4}$ mile course was staked off.

The first heat of the third class was called at 12 M., all yachts crossing the line 6m. later, Mr. Lyons' Jennetta winning this heat by 1m. 58 $\frac{1}{2}$ s, corrected time from Mr. Townley's Star.

The second and third heats were won by Mr. Pfeiffer's Electra by 30 $\frac{1}{2}$ s, and 23 $\frac{1}{2}$ s, corrected time respectively from the Star.

First heat of second class was called at 1:45 P. M. This proved the prettiest race of the day. Kate and the schooner Normandie coming for the finish line on starboard tack with the schooner on the cutter's lee beam and Marguerite well to windward of both, but somewhat astern. The cutter not having established an overlap was hailed to give room for schooner to clear leeward stake, the cutter's skipper complying, at once went about, the schooner tacking at the same time, both getting their port tacks aboard as they crossed the finish almost together. Marguerite in the meantime had gained by this, she holding her starboard tack until she crossed the line with the others. This was a very pretty picture for the spectators, but one of the committee who held the clock suffered untold agony, and it is a question whether he can tell which is the clock and which is the second hand as yet. Kate C., Mr. Sheridan, winning by 31s, corrected time from Marguerite. H. Fisher this yacht having carried away bowsprit and bowsprit shrouds, Kate C. winning second heat and race by 29s, corrected time from Marguerite. Three hearty cheers being given for the A. M. Y. C., the season being at hand, the yachts went out of commission.

THE FUTURE OF YACHT RACING.—We have heretofore said there is a vague, hazy sort of feeling afloat that the Y. R. A. can do something to cause a "good type of boat to be built," although the good type is not very clearly delineated; also that any variations from this conjectural good type shall be barred by the Y. R. A. The Y. R. A. might be even asked to go a little further, and pass a rule that only the type of a boat produced by one particular designer should be allowed to compete. This sounds like an absurdity, but practically it is no more than a regulation to cause a particular type would amount to. As we have already said, the recent do nothing in the present manner they did a few years ago for endeavoring to make the racing yacht a good type to copy for cruising yachts. The cruising sailing yacht is being rapidly displaced by the steam yacht, and as racing steam yachts has not, and is not likely to become a fashion, they cannot suffer in form by the exigencies of racing. Thus the main thing we have to consider now is the development of the small racing yacht, although no doubt there will be 40-raters and 63-raters built for some years to come yet; but so far the boats of that size which have been built under the present rule are better for either racing or cruising than the last narrow yachts which were built for racing under the old tonnage rule.—Field.

KATYDID.—Mr. H. L. Willoughby has laid up his steam yacht Wampagoag at Newport and will spend the winter in Florida, as usual, taking with him the 26-foot Herreshoff launch Katydid, which he recently purchased from Vice-Com. Morgan. Katydid left Newport on November 2, with her owner at the tiller in the after cockpit and the engineer in the forward cockpit. She reached St. Augustine that night, continuing her voyage next day, and arrived at Bay Ridge on Saturday afternoon. Her owner and crew lived on board through the entire trip. A bed was made up aft, the salon or canopy was closed, and with both feet near the boiler there was no discomfort from cold. The engineer made up a bed in his compartment, and the cooking was done over a single burner naphtha stove, the furnace being used for an occasional broil. The launch has a two-cylinder compound engine of light construction, but which has proved very satisfactory, and a Herreshoff coil boiler. Only the regular bunker supply, half a ton was used on the trip, an extra sack of coal carried being unopened. The launch will be shipped from New York to St. Augustine by steamer.

CENTERBOARDS.—There are, we hear, some additional experiments to be made with heavy center plates; but it is very premature, to say the least, to assume that the Dora, Ormsay and Elfin settled the matter as against lead keel yachts this season. In their case there was a good deal besides the metal center plate which brought about their success; and if the taste for fixed keels still exists, there is no reason, so far as we can at present see, why it should not be gratified. But supposing it is proved that a vessel with a center plate, well and smoothly fitted in its case, is a superior yacht for racing to the yacht with a fixed lead fin, is it not also likely to be proved that she will be also a better yacht for cruising on most parts of the coast?—Field.

A NEW WINTER BASIN.—The large works of the Gas Engine and Power Co., at Morris Docks, have lately been improved by the construction of a basin with 12ft. of water at low tide, in which are now laid up the steam yachts Tillie, Com. Starbuck; Onelda, E. C. Benedict; Oriana, J. H. Lader; Puzzle, A. B. Clavin; the schooner Republic, T. H. Hall; the new auxiliary cutter Half Moon, James Roosevelt; and other craft. The shops offer every facility for repairs and alterations of all sorts, a regular force of ship carpenters, boiler makers, machinists, joiners, cabinet makers, painters and upholsterers being constantly employed. Separate storage rooms are provided for yachts laying up.

A NARROW ESCAPE.—Capt. Wm. O. Cutter, of the steam yacht Grace, of Wareham, narrowly escaped drowning on Oct. 30. He had started for New Bedford from Onset with his small summer excursion steamer, the Satan, and had the Edward Bangs, a large steam yacht, of Boston, in tow astern, which was being taken to New Bedford for repairs. Off Wing's Neck, in Buzzard's Bay, a rough sea was encountered. Capt. Cutter attempted to clear the towlines, which fouled, and was drawn overboard. His head struck the side of the vessel, rendering him unconscious, and he sank and passed under the steamer. His assistant, Wm. Burgess, rescued him with difficulty. He was revived and will probably recover.—Boston Herald.

STEBBINS' COAST PILOT.—Mr. N. G. Stebbins, of Boston, has recently made several trips along the coast on the tenders of the Lighthouse Board, for the purpose of securing additional views of lighthouses and beacons for a new volume of the "Coast Pilot." This book, which will be ready by March 1, will include all lighthouses, lightships and prominent marks between Montauk Point and Cape Henry, as well as New York Harbor, Delaware and Chesapeake Bays. The first volume, from New York to Eastport, Me., has proved very successful.

STEAMERS AND YACHTS.—We take pleasure in reprinting the following from the *American Shipbuilder*: "The Astoria Ferry Company has voluntarily paid for repairing Fred. M. Smith's sloop yacht Manette, which was damaged by collision with the ferryboat Harlem on Sept. 20. The company also made a gift of money to Boatkeeper Fitzgerald, who picked Mr. Smith and his friend out of the East River when they were knocked overboard by the shock."

G. M. W. H., Baltimore.—Will you inform me what breed dog Clidie is, also Samco? Ans. Your data too meagre.

F. B., Boston.—I am told that the common wildcat still inhabits the woods of western Massachusetts. Is this true? Ans. We do not know of its existence there.

B. R. H., Chicago.—Which will kill furthest, a 10-bore loaded with 4 $\frac{1}{2}$ drs. powder and 1 $\frac{1}{2}$ oz. No. 6 shot, or a 12-bore loaded with 3 $\frac{1}{2}$ drs. powder and 1 $\frac{1}{2}$ oz. No. 6 shot? Ans. The 10-bore if each gun is properly choked.

R. T. M.—Is it true that we cannot ship game from one county to another in New York State? If so, please give reference to the law? Ans. It is forbidden by the State law to transport more than one carcass of deer in any part of the State except Long Island; to transport game or woodcock from the forest preserve unless accompanied by owner. County ordinances forbid exportation from Cattaraugus, Chautauqua, Chenango, Monroe, Oneida and Rockland counties. See *Book of the Game Laws* for full text of these several laws.

CAMPER.—The trout and venison preserved by "J. H. D." were treated in this manner, as stated in our second Adirondack number: "Our trusty and active guides, who understood the business, built a stone smoke-house of small but sufficient dimensions, laid sticks across the top, and on these the meat, cut into strips, with the trout properly dressed, and slightly salted, were laid, and the whole covered with thick bark. A slow fire was kindled in the pit and kept burning till all were partly cooked and well dried. In this condition either will keep for months, and when eaten at home is a pleasant reminder of camp scenes and life."

A. H. P., Lawrenceville, N. J.—Wanting to purchase some unmounted heads of elk and moose from Canada, can you tell me if there is any tariff on such things, and if so, what the amount or per cent. may be? Ans. Paragraph 712 of the Act of October 1, 1890, reads as follows under the free list: "Specimens of natural history, botany, and mineralogy, when imported for cabinets or as objects of science, and not for sale." If the heads of the moose and elk referred to by you are imported "for cabinets or as objects of science and not for sale," they would be entitled to free entry. If undressed or unmounted and imported for sale, they would be dutiable at ten per cent. ad valorem, as an unenumerated unmanufactured article.

BLUEFISH, WEAKFISH and STRIPED BASS

Can be caught in any of the waters around New York City. Big bluefish are in large numbers along the coast. We can supply the tackle. You can do the rest.

Call and examine our stock, or send us 10 cts. to cover postage, and we will mail you our 136 folio page illustrated catalogue.

ABBEY & IMBRIE,
Manufacturers of All Grades of Fishing Tackle,
18 Vesey Street, New York.

"Fine sense and exalted sense are not half so useful as common sense. There are a score of men of wit for one man of good sense. He that carries nothing about with him but gold, is every day at a loss for readier change."—Addison.

There are more men of sense now than in Addison's time. By men of sense we mean men who can comprehend the theory and advantages of a business that places the man or woman buying for his or her own wants, in contact with the makers of the goods. Practicing as we preach, we buy this way ourselves, cheaper and better. We know you can do the same.

Montgomery Ward & Co.

111 to 116 Michigan Ave., Chicago

CHARLES DALY HAMMERLESS SHOTGUN

WITH OR WITHOUT
AUTOMATIC SHELL EJECTORS.

Important Notice!

Instead of giving the dealer larger discounts we have decided to give the sportsmen the benefit of a reduction, and have concluded to make extraordinary low **Net Prices** on the **Charles Daly Guns**.

While making this reduction we might mention that the high standard of workmanship for which the Daly gun has always been renowned shall be retained. We have expert testimony that these guns are equal in workmanship to the celebrated Purdey guns, and far superior to all other SO-CALLED London makes, such as Greener, Scott and Westley Richards. An examination will soon convince the unprejudiced customer. They are more conscientiously made, more beautifully finished, handsomer in appearance, with shooting qualities unsurpassed, in fact far ahead of guns costing \$100 more.

Should you live in or near New York, we would invite you to call and examine our stock and be convinced.

If you live anywhere else in the United States and your dealer has none in stock, insist upon his ordering one, or order one direct from us. **Send for Catalogue.**

NEW PRICES:

No. 55. Fine Hammer Gun, Damascus Barrels, nicely engraved.....\$85.00 Net | No. 155. Same as No. 55, but featherweight, 5½ to 6lbs.....\$100.00 Net

Scientific Education of Dogs FOR THE GUN.

A new work by an English writer,
"H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

Price \$2.50, postpaid, by the

NOVEMBER DAYS.

IN a midsummer sleep one dreams of winter, its cold, its silence and desolation all surrounding him; then awakes, glad to find himself in the reality of the light and warmth of summer.

Were we dreaming yesterday of woods more gorgeous in their leafage than a flower garden in the flush of profusest bloom, so bright with innumerable tints that autumnal blossoms paled beside them as stars at sunrise? Were we dreaming of air soft as in springtime, of the gentle babble of brooks, the carol of bluebirds, the lazy chirp of crickets, and have we suddenly awakened to be confronted by the desolation of naked forests, the more forlorn for the few tattered remnants of gay apparel that flutter in the bleak wind? To hear but the sullen roar of the chill blast and the clash of stripped boughs, the fitful scurry of wind-swept leaves and the raving of swollen streams, swelling and falling as in changing stress of passion, and the heavy leaden patter of rain on roof and sodden leaves and earth?

Verily, the swift transition is like a pleasant dream with an unhappy awakening.

Yet not all November days are dreary. Now the sun shines warm from the steel-blue sky, its eager rays devour the rime close on the heels of the retreating shadows, and the north wind sleeps.

The voice of the brimming stream falls to an even softer cadence, like the murmur of pine forests swept by the light touch of a steady breeze.

Then the wind breathes softly from the south, and there drifts with it from warmer realms, or arises at its touch from the earth about us, or falls from the atmosphere of heaven itself, not smoke, nor haze, but some-

thing more ethereal than these, a visible air, balmy with odors of ripeness as the breath of June with perfume of flowers; and pervading earth and sky, that melt together in it, till the bounds of neither are discernible, and blending all objects in the landscape beyond the near foreground, till nothing is distinct but some golden gleam of sunlit water, bright as the orb that shines upon it.

Flocks of migrating geese linger on the stubble fields, and some laggard crows flap lazily athwart the sky or perch contentedly upon the naked treetops as if they cared to seek no clime more genial.

The brief heavenly beauty of Indian summer has fallen upon the earth, a few tranquil days of ethereal mildness dropped into the sullen or turbulent border of winter.

In November days, as in all others, the woods are beautiful to the lover of nature and to the sportsman who in their love finds the finer flavor of his pastime. Every marking of the gray trunks, each moss-patch and scale of lichen on them, is shown more distinctly now in the intercepted light, and the delicate tracery of the bare branches and their netted shadows on the rumpled carpet of the forest floor, have a beauty as distinctive as the fullness of green or frost-tinted leafage and its silhouette of shade.

No blossom is left in woods or fields, save where in the one the witch-hazel unfolds its unseasonable flowers yellow beneath cold skies, or a pink blossom of herb Robert holds out with modest bravery in a sheltered cranny of the rocks; and where in the other, the ghostly bloom of everlasting rustles above the leafless stalks in the wind-swept pastures. And there are brighter flashes of color in the somber woods where the red winter-berries shine on their leafless stems and the orange and scarlet clusters of the twining bitter-sweet light up the gray trellis of the vagrant climber.

No sense of loss or sadness oppresses the soul of the ardent sportsman as he ranges the unroofed aisles alert for the wary grouse, the skulking woodcock, full-grown and strong of wing and keen-eyed for every enemy, or the hare flashing his half-donned winter coat among the gray underbrush as he bounds away before the merry chiding of the beagles. The brown monotony of the marshes is pleasant to him as green fields, while the wild duck tarries in the dark pools and the snipe probes the unfrozen patches of ooze. To him all seasons are kind, all days pleasant, wherein he may pursue his sport, though the rain pelt him, chill winds assail him or the summer sun shower upon him its most fervent rays, and in these changeable days of November he finds his full measure of content.

MINNOWS IN PONDS.

MANY persons have noticed the remarkable changes which often occur in the life of ponds and streams. In some cases these are readily explained by the influence of settlement, with its necessities and caprices, and their demands upon water-courses and reservoirs. But again there is an element of mystery about some of the transformations during a generation. As an illustration, we may refer to a recent conversation with a FOREST AND STREAM correspondent, Mr. S. F. Denton. Near this gentleman's home at Wellesley, Mass., there is a small sink hole about 100 feet in diameter, known as School House Pond. During Mr. Denton's boyhood this was full of catfish or horn pouts and contained no other fish. About eight or ten years ago a fishing party, on their return from a trip, had a pair of bait minnows left over. One of them said: "Boys, it's too bad to throw these minnows away; let's put them in School House Pond." Into the pond they went, and to-day the water is filled with them; they can be caught in enormous numbers and are just the size for bait; but not a single horn pout nor any other fish except the minnow is to be found there. Water plants are plentiful and frogs too, but the minnow fills the category of fishes and supplies the neighborhood with bait. These little fish resemble the shad in shape. The same fish abounds in Wabash Lake, near Wellesley, and keeps the bass and pickerel so well supplied that it is difficult to catch them with live minnows. As an illustration of their abundance, Mr. Denton remarked that on one occasion, when he and his friends had exhausted their supply of bait, they took up all the captured fish lying in the bottom of the boat, turned them head downward, shook them, and obtained minnows enough in this way to continue fishing half the afternoon.

ARTIFICIALLY REARED TROUT.

THE Massachusetts law, as most others, forbids the sale of trout in close season. There are in the waters of that State, according to an estimate by Mr. W. S. Gilbert, the successful trout culturist of Plymouth, from 15,000 to 20,000 lbs. of artificially reared trout; and persons engaged in the business regard it as a hardship that they are not permitted to market these fish whenever they might do so to advantage. At the meeting of the Massachusetts Association last week Mr. Gilbert presented the claim of the trout culturists and asked the Association's aid in securing a modification of the law in their favor.

When the law was enacted, artificially reared trout were an unknown factor. The law was not intended to apply to them. But experience has demonstrated that to protect any species of fish or game its sale in close time must be stopped; and the one point for the board of managers of the Association to consider is whether or not the desired permission to sell cultivated trout may open the way to the sale of wild trout. While the raising of trout for market is an industry which should be given every reasonable encouragement, because of its contribution to the food fish supply, the primary purpose of the statute is to protect the wild fish, and this must be effected, even at the expense of private enterprises.

Minnesota allows possession and transportation of trout reared in private waters, and prescribes that they must be accompanied with a written statement, signed by the proprietor of the hatchery or waters from which they have been taken.

SNAP SHOTS.

THE horse show which is now in progress at the Madison Square Garden, in this city, and which is proving a great success both financially and otherwise, will continue to the end of the week. The weather for the first two days was unfavorable, but notwithstanding this the attendance was large even on these days. The quality of the exhibits is remarkably good, but it is to be noticed that most of the exhibits are those of pleasure horses, and that work horses do not appear in any numbers. The arrangement of the show is far better than it has ever been before, and it is easy to get about and examine the animals. Never has this show been so fashionable as it is this year, and never has it been so difficult to obtain seats for the most interesting events. Among the exhibitors and prize winners may be seen more than one name which is well known in the dog world.

In response to the Chatham Association's communication respecting spring shooting President Harrison returns a rather non-committal reply; and even if he felt strongly on the subject, we fail to see just what the President could do about it. Game legislation is distinctly within the province of the several States; Congress has no jurisdiction, and recommendations on the subject would not come within the scope of a message. Another fact is that the tendency of game and fish legislation is in the line of local and special laws, and too many of them; witness the county game laws of the State of Maryland, where President Harrison is just now duck shooting in company with ex-Senator Sewall of New Jersey.

The latest device in photography is the happy thought of a Vienna genius, who has invented a camera which is attached to a rifle and takes an instantaneous picture when the trigger is pulled. This would be a great thing for the Massachusetts man who had his Maine guides stall a big moose in the deep snow while he first photographed and then deliberately shot it.

And now it looks as if the proposed stocking of Alaska with reindeer might be accomplished. Dr. Sheldon Jackson, the Government Agent of Education in that Territory, has already imported sixteen reindeer from Siberia, and Capt. M. A. Healy, of the revenue cutter Bear, reports to the Treasury Department that the project is one worthy of every encouragement.

This is the season of field trials of pointers and setters on quail, beagles on hares and hounds on foxes run in the good old-fashioned New England style. Every indication points to a growing interest in these events. Our full and able reports cause the Kennel to encroach somewhat upon the space usually devoted to other departments.

The Sportsman Tourist.

SONG OF A GOAT HUNTER.

The white goat, *Mazama montana*, often described in these columns, is allied to the chamois of Europe, and inhabits the highest and most difficult peaks of the Rocky Mountains. The "Song" is from the pen of a hunter who has killed many goats, and its truth will be appreciated by any one who has ever hunted these sturdy rock climbers.

It was a goat, a goat of two—
Ever sing pantingly, pantingly—
Who climbed a peak to take a view,
Hunters live enchantingly.

'Twas there he met his snowy mate—
Ever sing pantingly, pantingly—
Who graceful on her haunches sat,
Hunters live enchantingly.

The hunter climbed that ridge so tall—
Pantingly, oh so pantingly—
In deadly fear to get a fall
Adown the slide rock slantingly.

The hunter got within a mile—
Pantingly, oh so pantingly—
The placid goats above him smile,
Hunters live enchantingly.

The hunter bled him weary home—
Pantingly, oh so pantingly—
The mild-eyed goats uninjured roam,
The mountains rise enchantingly.

H. G. DULON.

WINTER SPORTS IN NORTH CAROLINA.

I.

BY CHARLES HALLOCK.

A COUPLE of successive visits to the eastern counties of North Carolina within the past three years, together with some previous acquaintance with the game resorts of other portions of the State, including the mountain region, has prompted me to pitch my tent here at Newbern for the winter, where the climate is sufficiently warm without being enervating, and where there is plenty of game and fish at hand in great variety. The sounding ocean is but twelve miles distant as the crow flies, but the penetrating salt sea breeze is tempered by its passage over the land. The piny woods country lies directly back of us; the wire grass and saw grass prairies are below us, and the sweeping buzzards in the air are above and all around us. Morehead City and Beaufort are within an hour's ride by rail, and the Neuse and Trent rivers, which inclose the city, run up into the homes of the Tar Heels and Crackers. Surely such a happy combination of seashore and upland, of river, lake and brackish sound, of meadow, marsh and forests, of rank lagoons and barren sandy points, of sunken ledge and broken reef, of blue sky and genial, bracing atmosphere, can seldom be found in the winter season anywhere. Of course there are raw bleak days at intervals; but this is the weather that hardy sportsmen want, for it brings in the ducks and geese, and there is no field sport that can compare with it. Yet the average day is as nearly perfect as capricious man could desire, and happy is he, I say, whose lines may happen to fall in such pleasant places.

Friends and followers of Nimrod and Izaak Walton can find an abundance of diversion all over North Carolina from coast to mountain, but when it comes to the "best sport in the world," a local writer says the eastern counties bear off the palm, and I am not disposed to question his testimony, though I intend to prove it by personal tests forthwith. Faith I have. It is not the grain of salt, but the grain of mustard seed which enters into this equation. This gentleman says:

Our fall and winter hunting is pretty near perfection. In the first place, our weather during those seasons is nearly perfect. This, of course, is of the utmost importance to those who desire to leave the frosts and snows of the North, with its accompaniment of lowering skies and icy winds behind them, and are in search of a country where they can revel in balmy sunshine, and whose soft winds bear upon them the breath of eternal spring.

The climate of eastern Carolina compares with that of southern France. There are comparatively few cold and wet days, the winter weather being for the most part bright and crisp. It is claimed that there are several years along our coast where frost has never been known. On the mainland, on our coast and the islands adjacent, the climate is nearly perfection on account of the proximity of the Gulf Stream, which tempers the cold winds coming from the North.

The lovers of the rod and gun can find no more delightful spot, neither can they find one where they will meet with greater success. They will find the waters teeming with game fish, and on the main land and islands plenty of game. It seems incredible, but it is nevertheless true, that within less than a day's journey from New York, and a few hours from Washington, bear, deer, wild turkeys, wild cattle, wild hogs, etc., are to be found in great abundance, while during the fall and winter months the lakes, rivers and sounds swarm with all kinds of water fowl. Swan, geese, brant, wild ducks of all kinds, shore birds and in fact all kinds of water fowl to be found in this country. The woods and meadows are full of small game, squirrel, partridge, snipe, woodcock, quail, opossum, raccoon and many other kinds, plentiful enough to delight the heart of the hunter.

Then as to fishing, whether in the ocean or the landlocked waters near the coast, the fisherman has but to drop his line to pull out a plentiful supply of the gamiest kind of fish, such as bluefish, mackerel, bass, trout, chub, pike, etc.

To give an idea of the variety of the sport we give the result of a hunting and fishing trip made by a party of gentlemen to the country near the Albemarle Sound. They brought home the skins of three wildcats, two otters, the antlers of three large stags, and a wagon load of fish and turtles. They also killed a large number of minks, squirrels, raccoons and opossums, besides a large amount of small game.

Deer, bear and wild turkey are very plentiful, and along our eastern streams an occasional shot may be had at an alligator, and if a fisherman gets tired of the famous sport of inland fishing he can take a sail out upon the broad Atlantic, fitted out with the proper tackle, and after catching a shark or two he will have all the excitement and exercise he will need for some time.

There is certainly an encouraging outlook for the amateur sportsman with an ample field for prowess; and the best of it is that the statements put forward are fully substantiated by intelligent correspondents of FOREST AND STREAM who have hunted the State over. Just at present there is captivating sport at Morehead catching sea trout or weakfish, and the fish very large and fine; but as it is altogether deep sea fishing with handline in ten fathoms of water, I soon tire of it myself, though others like it fresh every hour. The best of the run will be over by December, but it is no trick at all at present to catch 200 lbs. per day.

A week ago I came in from a tour of the landlocked sounds which lie between Norfolk and Newbern, and I candidly declare that I never enjoyed a short salt water

cruise more heartily. This is saying a good deal for an old barnacle like myself, who has coasted almost the entire Atlantic and Pacific coasts from Labrador to Alaska, "as I sailed;" but in fact the whole voyage is so novel, and so cheap and comfortable withal, that I am constrained to press the like enjoyment upon any one who requires a week's or three months' relaxation and change of climate at this season of the year, or at any other season for that matter. One can run out of the latitude of snowfalls and sleet in twenty-four hours, and tie up at Newbern with bright-leaved perennial plants, good friends, and no end of oysters all around him. He can curl himself up in the sunshine like an old house dog on a south verandah, with rosebush and wistaria climbing over it, and enjoy contentment until his heart is full. If he be from the East he will find lots of folks here whom he has long missed from home and wondered where they have been these many years. Here he can contemplate the "New South" in its changing aspects, with the African penguin gradually passing off and giving place to the bright effulgence of a better day, and a community of elements, once discordant, but now so intimately blended that politics cannot split them. And when he has chewed his clover cud of fancy for two days and a half, until the return steamer sails back to Norfolk, and been the recipient of unvoiced hospitality from the energetic residents, and visited the oyster canneries, the pulp and lumber mills, the ginny, and miscellaneous factories, and inspected the fair grounds, the coquina sea wall, and the cemetery inclosed by the same quaint shell rock dug from the river bed, he will go away with new impressions and advanced ideas of this peninsular section and its capabilities.

For my own part, I am here to stay until the end of spring. This is a restful place. Before me is a lawn bespangled with roses and cape jasmies, and shaded by the glossy-leaved magnolia and the dark-hued cedar. The sweet gum, the catalpa, the china berry and the mimosa are just passing out of leaf and baring their limbs for the winter tussle; but there is left a great profusion of clambering vines and bright-leaved plants, ever green, to grace the halcyon season. From a broad verandah which flanks my sitting room I have an unobstructed view of the noble Neuse River, here a full mile wide, with wooded bluffs of autumn foliage along the opposite shore. Near by a yacht club has its cosy quarters, where jaunty crafts ride at anchor, or spread their white wings betimes and speed away. A ghostly revenue cutter lies in midstream, one of the milk white squadron. In the distance a vista opens down river toward Pamlico Sound, twelve miles off, in the blue. The outlook is very charming. Our steamer came up this river at sun-up one still, bright morning, when the reflections of the wooded banks were distinct upon the surface of the water; and during all this week the silvery moon has been casting its silvery sheen upon the ripples at night, and at the full bridging it with a lambent zone which stretches from shore to shore. One evening I fancied that I saw a young water sprite or naiad diving off from the edge of it, but it was only the splash of a sturgeon in the moonbeams.

These sounds of eastern North Carolina are a great deal larger than they look on the map. Pamlico Sound is forty miles wide at its broadest. Vessels in mid channel are always out of sight of land, or would be were the bottom not so near the surface. Land is often visible alongside over the rail. On the shoalest spots small cabins are built on iron piles to serve as beacons for mariners by day and night. Being far from land and apart from intercourse with men, the isolated keepers are apt to discover in due course of time that solitude and inaction are not rest, and peace. Such men have abundant opportunity to imagine what existence might be if it only were. Gulls would become lonesome in such places. Of course agriculture does not enter into their industrial economy, though it is a current joke among the "combers" and beach men that they raise [from below] all that they eat. Quiddities like this, however, are tolerated only on the fore-castle deck on a cold day.

Besides Pamlico Sound, there are the Albemarle, Currituck, Roanoke and Croatan sounds, all of which the regular packets traverse on their watery routes. These constitute a pleasant alternation from the navigation of the canals through which they have to pass on the way from Norfolk or Elizabeth City. The whole hydrographic system is much like a chain of lakes with slack water connections. Altogether the voyage is a novel experience, and well worth a description in my next letter, I think.

It is very easy and comfortable to get one's luggage snugly stowed aboard one of the elegant steamers of the Old Dominion Steamship Line, at New York, say the Guyandotte or the Roanoke, and have no more care of it until it is put ashore on the company's dock at Newbern. You simply change at Norfolk from a sea-going vessel to a smaller light draft craft, that will carry no more than 7 ft. through the canal. There is satisfaction in traveling in this way. You are at home all the time; you are the guest of the steamer. You lounge, play cribbage, eat and smoke; you are not hustled, your rest is sweet and unbroken, if the weather be fair, and I have never happened to strike bad weather yet. You need not, in these days, if you take pains to consult the weather forecast of the U. S. office. This is a marvelous age!

The supplementary steamers of the Old Dominion Line leave Norfolk for Newbern every Monday and Thursday. The duration of the round trip is three days, and the cost \$2 per day and all found, if one sticks to the ship. I left New York on a Wednesday at 3 o'clock P. M., arriving at Norfolk at 5 o'clock in the evening of Thursday, and so had three days in that city and Richmond before leaving for the south on Monday, with lots of time to visit the clubs and the markets, and to inspect the Navy Yard and Naval Hospital, the North End improvement, the docks and warehouses, the peanut factories and all points historical from way back, besides attending service at Christ Church, and visiting the ancient churchyard of St. Paul's, with its collection of rare plants and trees, its tombstones 250 years old, and a round shot imbedded in its walls of imported bricks.

Norfolk is a sort of nursery for sportsmen, market gunners and fishermen. Many of its resident gentlemen are members of the Currituck gun clubs, the Ideal, Rugged Island, Martin's Point, Deal's Island, Knots Island, and others. Steamers run regularly from Norfolk to Knot's Island, which is three miles from the grounds of the Currituck Shooting and Fishing Club. Trains run daily over the Norfolk & Southern R. R. to Virginia Beach and

thence there are stages to Martin's Point, twenty-five miles, and to other points along Currituck Sound. Martin's Point is a new venture, started last spring. Its officers are Capt. Geo. W. Taylor, President, and Mr. J. B. White, Secretary. It has a membership of thirty-eight now, and there are twenty-two shares for sale at \$500 each. The point boasts the finest beach and bay bird shooting in the country. Last August Mr. A. B. Simmons, of 49 Wall street, New York, shot 1,600 yellow legs, graybacks and plover in thirteen days, just to see what could be done. It was cruel slaughter, I vow, but it demonstrated the abundance of that sort of game. There are also English snipe and bay snipe. In the season there are swans, geese, canvasbacks, widgeons, sprigtails and black ducks.

On my way south, Nov. 9, I saw a bunch of geese afloat in Currituck Sound off Buck's Island, with a few blinds already up, and the wind blowing light from the east. In a few more days, if the weather be rough, the shooting will be good. Any gentleman who has not the entree to the clubs can get what he wants at Mrs. Midget's, at Coin-jock, which is on the direct route of the sound steamers. She controls several excellent points and is accustomed to accommodate sportsmen. I'd advise any reader who is willing to be advised to take this in, and if possible to take passage with Capt. Southgate on the Newbern. This boat can accommodate two dozen comfortably.

Natural History.

SOME IDAHO FIELD NOTES.

AUTUMN in its annual return brings to our people this year unusual measure of plenty and sources of happiness. Here in Idaho the October just past brought only days of sunshine, with cool and occasional frosty nights. This perhaps should be limited to the valley portions west of the mountains. At the close of October no rains had fallen since early in July. Even now the hunter or prospector may go far toward the summit of our high mountains without need of care for cold beyond his camp-fire and blanket. Soon, however, the higher ranges will be covered with deep snow and the big game, elk and deer, then come down to the foothills and about the thickets bordering the rivers running through the valley. With such autumn weather the sportsman and all who love the forest and mountains should be fully satisfied.

The October numbers of FOREST AND STREAM, containing so many descriptions of rambles for game in these autumn days, have given me unusual pleasure. I used to wonder from whence the hunting stories would come when the old-time race of hunters had passed away. I need wonder no longer. The stories of grand hunting trips, "great killings," and narrow escapes are plenty yet.

During two months of our warmest weather I was, with one companion, camped high enough in the hills for comfort, and on a good trout stream—one of the tributaries of the Payette River. An hour's fishing each day furnished us with all the trout we could use. Beyond that we sought to kill no trout, and so of other game. Three varieties of grouse were to be had in almost any ravine about our camp.

The first and second nights of our camping on the creek I received uncommon visits from a very common animal. On the first night I was aroused from sleep by a loud scratching at my provision box. The moon was shining on the front of the tent and the box just inside, and I saw a large skunk busy at the box. I made a noise in rising, and he left. Assuming there would be a second visit the next night I made preparation, and when he came I shot at him with fine shot when only about twenty-five feet away. Instead of being killed or driven off by my shot, he came towards me as fast as such vermin can run, evidently meaning to bite. When he had nearly reached the muzzle of my gun I fired again, missing him. He came on until I was obliged to push him away with my gun until I could throw down the flap of the tent between us. Evidently he meant to bite and discarded the use of the usual skunk weapon. After waiting inside the tent for a minute, I found he had left. It is said that their bite is fatally poisonous. However that may be, I was glad he was gone, leaving no unpleasant reminder of his visits. Perhaps it did not fare so well with him, but I saw him no more. The small spotted skunk of the coast is not found here. In southern California one of the small sort came into the house and took up his abode in the lower one of the drawers of my bureau, entering the drawer through the bottom, where the boards had shrunk, leaving a space scarce more than an inch wide.

The trout in the creek we were on and in all the other creeks, I believe, which empty into the Snake and Columbia rivers, are of the rainbow variety, the larger of them from six to nine inches long, and thousands of them from two to six inches. I frequently put back into the stream five or six, as too small for use, for one saved. The size does not vary, whether taken from a large or small stream, only so its waters flow to the ocean.

In the spring it annually occurs that great salmon work their way up these creeks in pairs (the female being much the larger) and deposit spawn as they work their way up as far as the depth of water will permit. I have watched the female salmon, when only a few feet away, come to a gravelly riffle, and with nose root away a little of the sand and deposit eggs. The male comes up quick alongside, turns partly over, and sometimes when a foot of water is running between them, throws his milt like a streak of lightning to the spot where the eggs have been deposited. Both then make their way up the stream until another satisfactory place is found, when the process is repeated. The number of salmon running up one of these creeks is so considerable that if only a small fraction of the eggs hatched the stream should be filled with fish, as it is; and at the proper age they should find their way to the sea. Is the rainbow trout a distinct species? Is he found anywhere (unless transplanted) except in streams flowing into the sea from the Sacramento River, north? One gentleman writes that rainbow trout have, transplanted, attained to several pounds weight. If fed well, I think he may expect they will get to weigh some 15 to 20 lbs.

In October I made a second trip into the hills, and interested myself mostly with ruffed grouse. Their habits vary, of course, in different latitudes. Here we expect to find them in the thick willows which line the water

courses. On their being disturbed they run swiftly behind some thick clump of bushes and take their flight from these, giving the sportsman a chance to exercise his best skill in shooting. Contrary to their usual habit I saw one standing in an open place perfectly still, and about ten steps from me. Its tail was spread, standing straight up, making a semi-circle. Its ruff was brought close up to its eyes. It was looking at me intently. I thought it, in that attitude, the most beautiful bird I ever saw. No turkey cock could be prouder. I looked at him in wonder until, without any warning, he started in flight. But it was too late. My gun had been ready and a moment later he lay fluttering on the ground.

The ruffed grouse, from that place, at least, were unusually fat, and I noticed their crops were filled with what appeared to be a light green colored berry. I saw the same at the bottom of the creek and floating on the water, and further search showed some fastened to the leaves not yet fallen from the willows. The apparent berry, as I cut through several, had a firm, rich pulp, and in the center a well-formed grub, then about ready to eat its way out. Some insect stings the main rib of the willow leaf in May and lays its egg. The juices from the leaf form this berry-like appearance, and thus food is furnished the ruffed grouse in place of the beech nuts and berries of other latitudes.

About this time blue grouse collect in great flocks and go to some place where the pine trees are plenty and make that their winter home, living mainly on pine buds. When fairly settled in a thick grove, they are very reluctant to leave, and a sportsman may shoot all day on a few acres without driving the flock away. No one here hunts for market, and but few grouse are killed in winter quarters, but a large share of them die in winter from cold and hunger.

The quail, which are now very plenty in the valley, have this year raised an unusual number of second broods. The younger are almost too small to shoot, but they go with older broods and share their fate before the sportsman. Some peculiarity of the season may account for it. I notice some fruit trees in town, after maturing one large crop, blossomed again. GEO. H. WYMAN.

BOISE CITY, NOV. 5.

THE FATE OF THE FUR SEAL.

Editor Forest and Stream:

In your issue of the 5th inst. appears a characteristic letter from Wm. H. Dall, who, among other things touching upon the status of the fur seal rookeries of the Pribilof Islands, declares that my estimates of the numbers of the fur seals on the Pribilof rookeries in 1872-'74 is "a gross exaggeration;" that my figure of two square feet for each seal thereon is too small; that the physical conditions make it so, etc.

In the first, let me say that he who writes for the information of his fellow men that which will not stand the test of unlimited criticism is a failure; and he is equally a failure if he keeps quiet and allows dogmatic and superficial denials of his work to be made and not answered.

What Mr. Dall now asserts was said to me in 1881 by an associate of mine in the Smithsonian Institution, who is a far abler and better known zoologist than Mr. Dall; he was promptly challenged by me at the time to bring the question before the Biological Society of Washington, and when he declined, I made the matter entirely clear to him, and he was satisfied.

The following statements of fact as to this matter of the numbers of the breeding seals, as introductory, are pertinent:

First—No fur seals except the females (nubiles, primipares and multipares) and their young, and the full-grown males, are found upon the breeding grounds during the rutting season; emphatically none at the height of this season in July every year.

Second—The proportion of females to males in 1872-'74 was an average of fifteen bearing females and their fifteen young, newly born; and of nubiles, or virgin females (or those coming into heat for the first time), an indefinite number, because they leave no evidence of their being on the ground by pupping. I believe that four or five of these young females to each male in 1872-'74 was a fair average.

If the reader will bear these two leading statements steadily in mind, as he follows my explanation below, he will not get my argument mixed up with the size and weight of the bachelor seals, or non-breeding males that never came upon these rookeries in 1872-'74, during the breeding season aforesaid.

Now for the physical fur seal data:

A nubile female.....average length 45in.*; weight 53 to 60lbs. An old female.....average length 48 in.; weight 75 to 100lbs. A newly-born (2wks. old) average length 14in.; weight 10 to 11lbs. Full-grown bull or male, average length 75in.; weight 500 to 400lbs.

These figures are from a large series of measurements which I made on the killing grounds of the Pribilof Islands in 1872-'74, inclusive, and they cannot be impeached.

Therefore your readers will observe that a female seal is not quite 4ft. in length, her greatest diameter is at her shoulders (where her girth is from 28 to 32in.), from 10 to 12in., the body then tapering rapidly from thence to both ends, anterior and posterior.

That a puppy seal, from one to three weeks old (and when my estimates were made), is a scant foot in length, with its greater body diameter not more than 5in.—really not more than a full 4in. in most cases.

That a full-grown bull fur seal is between 6 and 7ft. in length; with an average of 6ft. for the entire rookery; that its greatest body diameter, through its shoulders and under its "wig," is an average of 2ft.; tapering rapidly from here to the tip of nose and root of tail.

These statements of fact being understood, now I ask the reader to note the following:

No fur seal, young or old, when resting on the breeding grounds, stretches itself out at full length on the rocks or earth unless injured in the lumbar regions, or deathly sick, and the number you can see in this condition you can count on your fingers at the end of every day's close observation of hundreds of thousands.

The female fur seals and their young take three typical positions when hauled out on the breeding grounds, as shown in Figs. 1, 2 and 3; while the pups add a fourth position assumed by curling themselves up so as to form

a round ball as in Fig. 4; and the adult males take relatively the same positions of the females above indicated, but owing to the great fatigue that ensues from fighting among themselves and serving the females, they sprawl out at intervals in almost every conceivable form except that of stretching themselves out at full length. All fur seals when at rest invariably throw their hindquarters up under their loins, just as a dog or cat does; in the case of the hair seals it is the reverse.

Now, understanding these points, the reader will please take a survey of the following diagrams, which show a female seal outlined as she rests on 4sq. ft. of ground, and her pup as it lies by her.

The following diagram shows the superficial area

Dorsal profile of adult male fur seal, occupying 6sq. ft. of ground.

Dorsal profile of female fur seal and young (three weeks old), as they rest on 4sq. ft. of ground (or an average of 2sq. ft. for each when applied to the whole field).

covered by a "bull" as it rests so as to cover the greatest space in any one posture that it naturally assumes.

Now, is it not entirely plain that the females as they rest on the breeding grounds require but 3 sq. ft. of surface; that their pups require a trifle less than 1 sq. ft. each, and that the bulls or adult males occupy little more than 8 or 10 sq. ft.? But, right at this point you may

ORIGINAL FIELD DIAGRAM.

Diagram of a section of exactly 100 sq. ft. of breeding ground, showing the relative area and numbers of fur seals thereon as they appear massed uniformly all over the entire breeding area of the Pribilof Islands, between July 10 and 20, at the height of the breeding season. There are shown 13 breeding females (primipares, C, multipares, D), 4 virgin females (nubiles, B), 24 newly-born pups (E), and one old bull, or "sea catch" (A); a total of 47 seals big and little on this area.

reasonably ask, "while it is clear that 4 sq. ft. of area will embrace a female fur seal and her offspring, yet why do you ignore that larger space which you admit the bull occupies?"

For this reason: I have not been able to fix upon the number of virgin females which have been upon this breeding ground during the rutting season, for the reason that these females naturally leave no mark behind them of their being here, as the other classes of females do, and they do not remain themselves long on the field after being served, but it was reasonable to give each bull an average of at least four of these nubiles at the lowest calculation, this would cover the ground which he occupies, and reduces the whole basis of calculation to the simplest form, viz., 2 sq. ft. for each animal, big and little, ♂, ♀ and o, that existed on those breeding grounds as these animals hauled out and bred in 1872-'74.

Everybody admitted in 1872-'74 who was on the islands and especially charged with observing the seals, that I was right in then saying that the seals obeyed a natural law of distribution over a given area of ground when

breeding; that they never crowded here or thinned out there; that the ground was densely occupied and uniformly, no matter whether only a belt under the cliffs or where the rookery ground extended for hundreds of feet away back from the sea margin.

The dense massing of these seals on the rookery ground was made then evident to the most careless observer when his attention was fixed on the subject; it was made by the appearance of the pups themselves, which between the 10th and 20th of July, every year, lay in so solidly together that the ground itself seemed fairly covered by them alone, since not more than one-third of the mothers are on shore among the pups at any one time.

In conclusion I desire to commend to the dogmatic Mr. Dall the following opinions of Lt. Washburn Maynard, U. S. N., who in 1874 gave the entire breeding season of these animals his careful studious attention; this, Mr. Dall never has done, and the "gross exaggeration" of my work he finally arises to a consciousness of, after sleeping over the publication of it, full sixteen years—in the meantime, never seeing anything of the life itself that was, or is worthy of itemizing! Lt. Maynard says in his report to the Secretary of the Navy, made in 1875 (43d Congress, 1st Sess. Ex. Doc. No. 43):

IMPORTANCE OF KNOWING THE NUMBER OF SEALS.—It is of very great significance in this connection to know how many seals come annually to the islands, or rather to understand how many may be killed for their skins annually, without causing less to come hereafter than do at the present time. To determine how many there are with accuracy is a task almost on a par with that of numbering the stars. The singular action of the animals when on shore, the great variety in size, color and position, the extent of surface over which they are spread, and the fact that it cannot be determined exactly what proportion of them, of their several classes, are on shore at any given time; all these desiderata for comprehension make it simply impossible to get more than an approximation of their numbers. They have been variously estimated at from one to fifteen millions.

METHODS OF ENUMERATION OF THE FUR SEAL.—I think the most accurate enumeration yet made is that by Mr. H. W. Elliott, special agent of the Treasury Department, in 1872. This calculation is based upon the hypothesis that the breeding seals are governed in hauling by a common and invariable law of distribution, which is, that the area of the rookery ground is directly proportional to the number of seals occupying it. He estimates that there is one seal to every two square feet of rookery surface. Hence the problem is reduced to the simple operation of obtaining half the sum of the superficial area of all the rookeries in square feet. He surveyed these breeding grounds of both islands in 1872 and 1873, when at their greatest limit of expansion, and obtained the following results: Upon St. Paul Island there were 6,069,000ft. of ground occupied by 3,034,500 breeding seals and their young. On St. George Island he announced 326,540sq. ft. of superficial rookery area occupied by 163,270 breeding seals and their young. The number of non-breeding seals cannot be determined in the foregoing manner, as they haul most irregularly, but it seems to me probable that they are nearly as numerous as the other class is. If so, it would give not far from 6,000,000 as the stated number of seals of all kinds which visited the Pribilof Islands during the season of 1872.

GENERAL ACCURACY OF THESE RESULTS.—It is likely that these figures are not far from the truth, but I do not think it necessary myself to take into consideration the actual number of seals in order to decide the question of how many can be taken each year without injury to the fishery. The law that the size of the rookeries varies directly as the number of seals increases or diminishes seems to me, after close and repeated observation, to be correct. All the rookeries, whether large or small, are uniform in appearance, alike compact, without waste of space and never crowded. Such being the case, it is unimportant to know the actual number of seals upon the rookeries. For any change in the number of seals, which is the point at issue, increases or decreases in size, and the rookeries, taken collectively, will show a corresponding increase or decrease in the number of breeding seals; consequently changes in the aggregate of pups born annually, upon which the extent and safety of the fisheries depend, can be observed accurately from year to year by following these lines of survey.

SURVEYED PLATS OF THE ROOKERIES.—If, then, a plan or map of each rookery be made every year, showing accurately its size and form, when at its greatest expansion, which is between the 10th and 25th of July annually, a comparison of this map will give the relative number of the breeding seals as they increase or diminish from year to year. I submit with this report maps of St. Paul and St. George islands, showing the extended location of breeding rookeries and hauling grounds upon them. These maps are from surveys made in July, 1874, by Mr. Elliott and myself, and a map of each rookery on both islands drawn from careful surveys made by Mr. Elliott in 1872, show them now as they were in the season of 1874 as compared with that of 1872. I respectfully recommend that enlarged copies of these latter maps be furnished to the government agents in charge of the islands, and that they be required to compare them each year with the respective rook-

* From tip of nose to root of tail; tail very short, never more than 2 to 4in. in length.

eries, and note what change in size and form, if any, exists upon them. This, if carefully done, will afford data, after a time, by which the seal fisheries can be regulated with comparative certainty, so as to produce the greatest revenue to the government, without injury to this valuable interest.

NUMBER OF SEALS KILLED.—Since 1870 there have been killed, on both islands, 112,000 young male seals each year. Whether this slaughter has prevented the seals from increasing in numbers or not, and, if so, to what extent, can only be deduced from their past history, which unfortunately is very imperfectly given. In 1836 to 1839 there were fewer seals upon the islands than had ever been seen before since their first discovery in 1786. On St. Paul Island, then, there were not more than twelve or fifteen thousand of all kinds. The killing of them was then stopped, and not resumed until 1845, when it was done gradually, and, as had never been the case before, only the young males were killed. The rookeries continued to increase in size until 1857, since which time they have remained in about the same aggregate, although a less number of bachelor seals were killed yearly between 1857 and 1868 than have been slaughtered since.

One word more: Mr. Dall speaks of buying Alaska fur seal skins in 1865-'67 for 12½ cents each—these skins, as sold in the fur markets then, brought from \$2 50 to \$5 each.

HENRY W. ELLIOTT.

ROCKPORT COTTAGE, Cleveland, O., Nov. 9.

P. S.—Since writing the foregoing I have found and send you one of my original field diagrams, made by me July 12, 1874, on St. Paul's Island. This particular spot measured was right under a vertical bluff 16 ft. high, which enabled me to have a perfect bird's-eye view of several thousand square feet of the breeding area.—H. W. E.

AMERICAN ORNITHOLOGISTS' UNION.

THE ninth annual meeting of the American Ornithologists' Union is now being held at the Museum of Natural History in this city. It opened on Tuesday, Nov. 17, and is to continue for three days, closing this evening.

The session of Tuesday was devoted to the business of the Union, and was not open to the public, being mainly devoted to the reception of reports of committees and the election of officers, and other routine work. The report of the treasurer showed that the assets of the Union amounted to over \$4 000.

The election of officers resulted in the choice of the old officers with the exception of the vice-president, Mr. Ridgway, who resigned. Mr. H. W. Henshaw, of the Bureau of Ethnology, was elected in Mr. Ridgway's place. Mr. Ridgway was chosen a member of the Council in Mr. Henshaw's place. To supply the vacancy left by the death of Col. Goss, Mr. C. F. Batchelder, of Cambridge, was elected a member of the Council.

It was voted to elect no new active members this year. Nearly 100 associate members were elected, one honorary member and two corresponding members.

After the business meeting was concluded two papers were read, one by Rev. Samuel Lockwood, "Why the Mockingbird Left New Jersey—a Geological Reason," the other "A Probable Occurrence of the European Curlew (*Numenius arquatus*) on Long Island, N. Y.," by Wm. Dutcher.

On Tuesday other papers on the list were read, the president, Mr. Elliott, leading off. His subject, "The Inheritance of Acquired Characters," while it has received much attention from biologists generally, has been neglected by ornithologists. In his interesting address Mr. Elliott devoted special attention to the evidence on this point which birds furnish.

The following is a complete list of the papers presented and to be read during this session:

"The Inheritance of Acquired Characters," (President's Address), D. G. Elliot. "The American Scoter," Gurdon Trumbull. "The Migrations in Chester County, South Carolina," Leverett M. Loomis. "Summer Birds of the Crest of the Pennsylvanian Alleghenies," Jonathan Dwight, Jr. "Birds Attracted by the Rays of Liberty's Torch," Jonathan Dwight, Jr. "The Genus *Peucaea* as represented in Cooke County, Texas," George H. Ragsdale. "A Preliminary Study of the Grackles of the Subgenus *Quiscalus*," Frank M. Chapman. "Geographical Variation in the North American Forms of the Genus *Colaptes*," J. A. Allen. "The Intergradation of *Colaptes auratus* with *C. cafer*," J. A. Allen. "Suggestions regarding the Genesis of the North American Forms of *Colaptes*," J. A. Allen. "List of Birds Observed at Talamasca, Costa Rica, from March 15 to April 12, 1890," George K. Cherrie. "Why the Mockingbird left New Jersey—a Geological Reason," Samuel Lockwood. "Habits of the Black-bellied Plover in Massachusetts," George H. Mackay. "Habits of the Eskimo Curlew in New England," George H. Mackay. "The Birds of the Pribilof Islands, Alaska," illustrated by lantern slides, William Palmer. Exhibition of lantern slides, representing birds in life, contributed by members. "Cause of the late Breeding of the American Goldfinch," Henry Hales. "Former Occurrence of the Carolina Parakeet in the Ohio Valley," Amos W. Butler. "A List of Warblers Found in Raleigh, North Carolina," C. S. Brimley. "A Probable Occurrence of the European Curlew (*Numenius arquatus*) on Long Island, N. Y.," William Dutcher. "Some of the Results of the Death Valley Expedition," Dr. C. Hart Merriam.

The paper on the birds of the Pribilof Islands and the exhibition of lantern slides will be given in the Lecture Hall of the Museum, at 4 P. M. Thursday, Nov. 19. The other papers will be given in the Reading Room of the Library.

The following is a list of the officers and Council of the American Ornithologists' Union, 1891-92: President, D. G. Elliot; Vice-Presidents, H. W. Henshaw, William Brewster; Secretary, John H. Sage; Treasurer, William Dutcher. Additional Members of the Council: J. A. Allen, Charles B. Cory, R. Ridgway, Elliott Coues, C. F. Batchelder, C. Hart Merriam, Leonhard Stejneger.

WOLVES IN FLORIDA.—New York City, Nov. 12.—*Editor Forest and Stream:* In your issue of to-day, under the title of "South Florida," I note that Dr. J. F. Detweiler mentions wolves as occurring in De Soto county. The wolf is now so near the verge of extinction in Florida that a more detailed account of the information obtained by Dr. Detweiler will be a welcome contribution to the last pages of its history; indeed any Florida records of this animal will be of value.—FRANK M. CHAPMAN (American Museum of Natural History).

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price \$2.50. *Wing and Glass Ball Shooting with the Rifle.* By W. C. Bliss. Price 50 cents. *Rifle, Rod and Gun in California.* By T. S. Van Dyke. Price \$1.50. *Shore Birds.* Price 15 cents. *Woodcraft.* By "Nessmuk." Price \$1. *Trajectories of Hunting Rifles.* Price 50 cents. *Wild Fowl Shooting; see advertisement.*

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

MR. OLDMAN AND THE YOUNG MEN.

BUZZ-Z-Z! "A splendid covey," soliloquized a sportsman, as he emerged from the bushes, through which he was making his way to the open fields thick with brown cover, in which some twenty quail had settled and so beautifully scattered as to make the face of an enthusiastic sportsman glow with delight.

"Hold on there, old man, them's our birds!" was the imperative and impertinent expression of one of three young men, who, with a dog, were coming up with rapid strides.

"Pardon me, I didn't see you, or I wouldn't have intruded," said the man. "But I like to shoot once in a while, and if you will allow me to take a few chances you may have all the game I shoot."

"There's three of us now, and that's too many; I don't like so much bangin'," said the principal spokesman and owner of the dog. But as you are here and will give us the game, come along."

This was addressed to a rather queer-looking individual, somewhat tall, stoop-shouldered, with but one eye and a lame leg, and bearing the weight of about 65 years. As they walked toward the place where the birds lay, the man said, "I'll step off to one side so we won't be bunched together too much. I'll pick up the stragglers if they chance to come my way." So saying, he moved a considerable distance from the eager, expectant young men.

"To-ho, Bob."

The dog had scented the birds.

"Come up," said the foremost of his companions.

"Every one get a shot."

Whiz! Whirr!

Crack! Crack! Bang!

Away went the birds unharmed, and every barrel empty. Bob ran furiously after the fleeing birds, and in his impetuosity ran upon one which flew directly toward the old man. Cyclops saw it coming and instantly turned his back to the approaching bird.

"There he comes, old man; down him!" vociferously shouted one of the boys.

With the rapidity of lightning the bird whizzed past the old man's head. The next moment the gun of Cyclops was at his shoulder, and the quail fell dead.

"Bully for you, old man!"

Before the old man could pick up the bird the dog pitched in and proceeded to make mince meat of the beautifully shot quail. With some difficulty Cyclops succeeded in snatching it from the murderous jaws of the ill-trained or spoiled Bob and shoved it into his pocket.

"Two bad faults, boys."

"How so?"

"Running in when you shoot and crouching a dead bird."

"Did you ever own a dog?"

"I should say I did."

"Come, old man, load up," said one, as all proceeded to "unlock" their barrels. But almost as soon as they had their cartridges in place, Cyclops had the empty barrel of his muzzleloader charged for another trial of skill.

After a few sound lashes on the dog as a wholesome check to his over-eagerness, he was bidden to "hie on."

"There, he's found 'em!"

A moment later and three birds rose. All the youngsters blazed away at one bird, which escaped. The other two flew in good range of Cyclops, and both fell at the touch of his triggers.

"You beat the dickens, old man; you've shot quail before," exclaimed one of the young men in a tone that savored more of chagrin than of admiration for the old man's skill.

Cyclops answered not a word, but picked up the quail and put them into his pocket.

"I wonder if he means to keep them birds," said one.

"We'll choke him if he does," says another.

"Just wait and see," said the third, "if he makes off with them we'll stop him or dose him with bird shot."

All had again loaded up and struck out for the timber among which the birds had flown.

"Ho, Bob!"

"Where on earth is the dog?"

"Here he is," shouted the old man.

Crack!

Down came another bird to the aim of Cyclops.

"Hang us if he didn't kill that bird!"

A rush was now made toward the man and dog, when a bird almost trodden upon sent the dry leaves whirling as it rose and sped away like an arrow. A volley was poured in, and a few breeze-wafted feathers showed that the bird had, at least, been grazed. On he went, however. Cyclops took a long shot and brought the bird to earth.

"See here, old man, it's about time you was counted out."

"Why so?"

"Because that gun of yours shoots better than ours do, and gets all the game."

"I'll let you shoot it and I'll take yours if you say so."

"No, I won't bother with a muzzleloader, wouldn't have one about me."

"Well, I'll withdraw if you say so," said Cyclops.

So saying he took the birds from his pocket and handed them to the boys.

"Maybe it's too bad, old man, to take 'em after you've shot 'em."

"Oh, no it ain't, what I say I stick too. I don't go back on my word—not for a few quail; besides, I can come out here any day and shoot a good mess for dinner even if my old dog Dyke is dead."

"Who may you be, old man?"

"The same you have called me. My name is Oldman, but you have emphasized the last syllable pretty strong, but it's the way of the rising generation. I hear my dinner horn blowin'. Good day, and better luck."

"Confound it! why can't we shoot like that old fellow?" "Don't know; suppose we try some court plaster over the left eye?"

N. D. E.

"MUD HEN" SHOOTING.

THE mud hen, or clapper rail, is a game bird three times as large as a rail bird, with like habits; and when cooked, without the skin and after being soaked in salt water over night, a well-browned and broiled "marsh hen" surpasses an ordinary beefsteak. The close season ends Aug. 31. The Philadelphia gunners leave standing orders along shore to be called by wire when the heavy tides are imminent, and rush off for the shore with their hammerless guns, ready for the mud hen fray.

J. J. Sturmer, of Angelsea, has a dog trained for mud hen shooting, which will stand to a clapper rail as quickly as to a quail. But it is dry work, with the marsh mud 2 ft. deep, and the best gunner is only sure of an occasional bird, either put up by the dog or caught running down the beds of the sloughs or creeks when the sea tide runs out of the meadows.

Two brothers, Frank and Harry Swayne, who live near Townsend's Inlet, Cape May county (Harry Swayne being the best wing shot in Cape May county) promised us one good day among the mud hens. For this I had waited two years, for a mud hen tide waits not on the gunners coming or going.

My first born, Henry Sydney, who possesses a \$125 hammerless, has grown to be a crack shot, who can down 25 pigeons out of 26 in a trap. He had never had a day among the mud hens, and he was prompt to wager a big pile of ammunition that he could "wipe my eye" on the count of mud hens killed and brought in on a single tide. Albeit I have long passed the fifty mile post and was educated in Indiana with a \$10 muzzleloader in my hand, I am not a bad shot with a \$25 breechloader, which is good enough for me.

When the telegram came to Henry Sydney, "The tide is on to us," we hastened by the West Jersey Railroad to Swayne's Station, where we found our two friends, "Hal" and Frank Swayne, waiting at the station, both stalwart specimens of Cape May boys, born almost with a shotgun in their hands; as ready with the blade of an oar or at the top of a mast as in chasing a covey of quail with two of the best dogs in West Jersey. These boys live on the family homestead of 160 acres and always give their gunning friends a warm and generous welcome.

We arrived at 6:30 P. M. At 7:30 Mrs. Swayne, the mother of the boys, gave us a supper of fried eels, broiled mud hens, scrambled eggs and waffles. It nearly put me in my grave, for I saw all my grandfathers 200 years back, and in pale and ghostly array rose before me, while digesting the eels and mud hens in my sleep, all the defendants I had defended in homicide cases in a quarter of a century last past! The next night I begged Mrs. Swayne not to get us quite so elaborate a supper, with the net result that we had a better meal; but a good day's shooting in the marsh drove the spectres away, while good digestion waited on appetite.

Henry Sydney and J. M. S. looked over their guns at 4 o'clock in the morning, when Frank's heavy knock was heard at our bedroom door announcing breakfast. It was not yet light, when after the matutinal meal, good enough for a king, "us four" took up our march for the marsh. Henry Sydney arranged to go with Frank and I with Hal Swayne as pushers. The tide was so high that our walk was brief. Each in a little boat, we pushed down the creek for the open marsh. It was not yet light when we started, but as the stalwart Hal poled my skiff toward the open country the far-off cloud peaks in the east were delicately tinged with crimson and gold; and slowly, but seemingly with human tenderness, as *avant courriers* of the sun, the red, red blush of the modest dawn ran lightly up the sky, leaving a faint visible flush on the young clouds like the warm kisses of an ardent lover on the lips of a maiden fair.

Though all unused to shooting sitting down in the bottom of a small boat, I managed to kill two out of three birds. We were soon in sight of six mud hens slowly crawling out of their roost of the night before, and I speedily "bagged" four out of the six, leaving to Hal Swayne to knock over a distant flying bird, so only one escaped out of the first six. It looked as if I would become "high boat," as Henry Sydney and Frank were sailing across the meadows putting up never a bird. Presently I heard two rapid shots from the \$125 hammerless, and looking across the "marsh" (as the natives call the marsh) I saw two birds fall to Sydney's gun, and the halliards cut in two at the second shot, much to Frank's amusement. Not two minutes slipped away ere Sydney killed three at one shot in a cozy nest among the reeds, where he only saw the glittering eye of one bird on guard and ready to fly. We were now even, both with five birds, and both eager to win that wager. May be we didn't scour that meadow of 500 acres of submerged marsh, including every nook and hiding corner where reluctant mud hen could find cover. The shooting was nearly even, as we were within sight of each other and almost within gun shot. Finally, at 9 o'clock in the morning, we called a halt, and our pushers turned the prows of our little boats shoreward and homeward.

I had almost forgotten to say that a flock of bay-birds flying over my head yielded to my right-hand barrel three English snipe to my count of twenty-two birds. I had high hopes of being "high boat" among the October mud hens on that morning tide.

Frank pulled hastily to the long wharf and we began to count. Henry Sydney had twenty-two birds. J. M. S. had twenty-two birds. But, alas! Frank, the referee, decided that as three of mine were bay birds, Sydney was "high boat," and my little birds didn't count.

We were all well satisfied with the morning's sport, for we were back at Swayne's at 9:30 A. M., and we had missed the high tide of the afternoon before, on which Gaffney and Platt, two officers of the West Jersey Game Protective Society, had killed fifty-four birds in one hour. Ours was the last high tide of the week.

The birds stay around Cape May county till the thin ice begins to form over the meadows; then they make their begira, like the red drum or channel bass, and about the same time, for the softer skies and milder temperature of Florida marsh and sea.

There must have been over 1,000 marsh, or mud, hens

shot from the Anglesea lighthouse up to Townsend's Inlet, a distance of 8 miles.

English snipe, killdeer and many other bay birds are fairly abundant in Cape May county, and, thanks to the West Jersey Game Protective Society, the quail which have been planted here for two years are fairly abundant.

I rather rejoiced that Henry Sydney, with his \$125 hammerless, had "flattened me out at the polls" at our first hunting bout. But when I catch him in the Cape May woods, after gray squirrels, I will "wipe his eye" in such sportsmanlike fashion that he will become "weary" and want to go back to his quail, mud hen, killdeer and English snipe. For me my \$25 gun is quite good enough; the "pesky" pheasants and woodcock fly too fast for me. I am content with an occasional mud hen and can still knock a squirrel's eye out with a rifle at 100 yds. And a handline is good enough for me, though on occasion I can take a red drum with rod and reel in the most approved æsthetic fashion. When I fished for trout the red worm was always eminently satisfactory; and some of the "heavy swells" of the Philadelphia Club, twenty years ago, with their book (worth \$100) of grizzly-king and Jock-Scott flies, were quite willing to acknowledge me as "high hook" among the Tobyhanna trout: albeit they assumed to curl their noses at my bait *au naturel*.

J. M. S.

WESTERN MASSACHUSETTS FOX HUNT

THE fourth annual fox hunt of the Western Massachusetts Fox Club was held Wednesday and Thursday, Nov. 11 and 12.

The evening of the 10th the officers of the association, with a goodly number of the members, collected in the

weather, came to Westfield in a tally-ho coach, arriving about 7:30, and learning that the Westfield party had left they immediately gave orders to the driver to proceed at once after the Westfield men, whom they soon overtook, and with them joined in the hunt. But the storm soon assumed such proportions that the hunters were glad to find protection in barns or other outbuildings so they might protect themselves from the deluge of water that was falling; and many is the joke that is told at the expense of officers and members, of the means that was resorted to, to occupy the time during the late hours of the morning, especially those who occupied the leaky old barn near the ponds. All were more or less wet, and many disheartened returned to the hotel at Westfield to await the return of clearer skies.

At about three in the afternoon a decided change for the better occurred and the hunters who had the pluck and nerve to withstand the storm of the earlier portion of the day began to return, and as the result Mr. Lyons, of Southampton, scored one, the Owen Bros., of East Granby, scored two, Burt R. Holcomb one, Charlie Merritt a beautiful silver gray, shot near the Montgomery line; Hon. R. B. Crane one, shot near his Wolf Pit Stock Farm; P. B. Rumrill one, concerning which there is a question. In all seven pelts were upon exhibition at the hotel, and the fortunate hunters were of a necessity the heroes of the hour. A beautiful and clear sunset indicated for the morrow a rare day.

Thursday morning, the 12th, an early start was made for West Parish, the "fox district," and the Southwick Road, where last season a good showing was made; and it proved this season to be the same, for with a much smaller number of hunters four foxes were secured and

There is no question but that with favorable weather the club would have increased its membership to 300, but even with the unfavorable conditions it is to-day probably the largest club in the country in point of numbers. Some 250 names appear upon the roll of members, including men from all walks of life.

WORONOCO.

WESTFIELD, MASS., NOV. 14.

NIGHT SHOTS AT A "BOCK."

I WAS in camp this fall with Dr. Houston, near the Au Train River, in the Upper Peninsula of Michigan. As a rule, game is fairly plentiful there, though this fall the cold weather came very late, the leaves hanging to the smaller trees and brush to the close of the hunting season, which made still-hunting very difficult. Nearly all the hunters with whom we talked were dissatisfied with the change of the open season, saying that it closes much too early; however, notwithstanding a poor season to hunt, neither the Doctor nor I were "skunked."

Our nearest neighbors were a party of four from Pittsburg and Windsor, Ohio, one of whom is a famous hunter and fisherman, who has hunted the woods and fished every stream there for some eight or ten years; in fact, S. visited the region before any roads were opened, the rivers, lakes and trails which bear his name all testifying to the fact that he is a veteran woodsman.

S. worked hard to get a shot at a deer, tramping miles by day, and shining late into the night when the weather permitted, but all in vain; but he did not get discouraged. Often when he passed our camp in the evening, on his way to the river, he would announce his firm determin-

AMONG THE WILDFOWL.—XI.

WILL THEY COME?

parlors of the Park Square Hotel and established their headquarters there, giving the house and its surroundings the appearance of a frontier post, instead of the leading hotel of a quiet New England village. The scene was one long to be remembered, and one to please and delight a true hunter's heart. The officers of the club were busy in enrolling new members for the association and greeting the old ones whom they had not seen since the meet of a year ago. Many of the arrivals sought an early couch so as to be prepared to join in the early morning, providing the storm should subside during the night.

At an early hour the huntsman's horn was sounded, and the shrill note of the bugle was heard up our principal streets indicating to hunters that despite the drizzling rain the hunt was on, and that let it blow high or blow low, the hunters who composed the Western Massachusetts Fox Club were up and prepared for an early start.

The start was made from the Park Square Hotel about 6:30 amid the baying of hounds, shouts of bus drivers, firing of red fire and the best wishes of the hosts of friends, and of more than one of the many members of the club who were obliged to remain behind owing to the severity of the storm, which at the time foreshadowed the day's sport and cast a gloom upon all.

When President Rorabock gave the order to start some thirty hunters with a dozen or fifteen hounds set out for the East Mountain district, where the Westfield division had territory assigned them. In the meantime a squad of hunters from Northampton, Easthampton and Southampton were to occupy the territory at Rock Valley, adjoining the East Mountain district, while a third party of Springfield and Holyoke hunters was to begin the chase at Bears Hole upon the opposite side of the East Mountain chain. All the divisions were to rendezvous at or near the Hampden Ponds, four miles from Westfield, and from thence in a body to return to Westfield in time for the supper which was to be served in the Gem Opera House. The Westfield division was divided into two sections, one under the leadership of C. D. Allen and the other headed by Burt R. Holcomb, the veteran fox hunter of this section, who, by the way, showed twenty-eight fox pelts for last season's score.

A portion of the Holyoke party, owing to the rainy

several were driven into rocky hedges, showing that this is a most favorable resort for reynard; and the club made no mistake in selecting Westfield as its objective point in this direction.

At the business meeting of the club the following officers were unanimously reelected to serve another year: Geo. W. Rorabock, President; F. S. Gross, Vice-President; N. A. Harwood, Treasurer; Dr. O. J. Shepardson, Secretary. Probably most of the other officers will be retained. It is still further to be hoped that Westfield, with its many advantages, will be selected for next season's hunt.

Three young foxes were upon exhibition at the Opera House during the banquet, and attracted much notice as they paced about the cage with large red ribbons about their necks. They were captured a few days previous to the hunt in Southwick, being dug out of one hole, and the Southwick hunters say "the woods are full of them." Considerable of a laugh is occasioned when the names of two nimrods are mentioned, and all from the following fact: About a week previous to the hunt these two noble and valiant hunters had hired the sons of a well-known farmer to secure for them two foxes and to keep them caged until the fox hunt, for which service they were to pay \$10 a head. The offer was too tempting to be overlooked, so the two foxes were secured and the hunters were so informed on the second day of the hunt.

The crafty sportsmen departed for the home of the farmer in high glee with the prospect of two pelts before them. Arriving they proceeded to tie the two foxes to trees, and then proceeded to blaze away at the poor helpless victims, with the proud hope in their noble breasts of carrying home the pelts. But alas for the fickleness of a hunter's fortune and the unsteady aim of the hunter. One poor fox was slightly hurt and was afterward killed by the farmer's son, while the other was liberated, the shot cutting the string with which he was tied; and when Phil, after the smoke had cleared away, looked for his fox, it was seen making long and rapid strides for the adjacent woods. It is said that at the hotel at Southwick these two nimrods were trying to hush up the farmer and his sons by tempting bribes of double fees for services rendered.

ation to "kill a bock" that night; this occurred so often that the phrase "kill a bock" passed into a byword with us.

For the benefit of the uninitiated, I will explain that "shining" consists in strapping a bullseye lantern to the head, which will on a dark night show a pair of deer's eyes seventy-five yards or more away. Sometimes you can get near enough to see their bodies, but often you can see nothing but their eyes, which shine like two bullseyes, and you shoot at them. There is an uncertainty and sometimes danger attending this mode of hunting, as one cannot always tell what he is shooting at. I heard of one homesteader who shot his own cow; a gentleman from Chicago killed a neighboring camp's pet cat; and on our return to Au Train we heard of a more serious accident that had happened the night before, a man shining had been shot in the neck, though not killed, by another hunter who was inexperienced and mistook his bullseye for an eye. Shining is unlawful, but the game laws cannot be enforced ten or twenty miles back in the woods.

But to return to S. and his "bock." He started out with a companion one dark night and ere long I heard a report and hoped he had been successful, so when I came in an hour later, I dropped in and inquired, "what luck?" At first he replied that he had missed, but afterward, on my pledge of secrecy, he told his experience. He was cautiously following a trail near by; getting an eye, he nudged his companion to keep quiet, waited until he got the second eye, and then fired. He assured his friend it was "bock," as the eyes were big ones, but hearing nothing he looked again, and found he had been shooting at the moon, which was just rising and shining through the trees.

MANNING FISH.

MISSISSIPPI VALLEY DROUGHT.—Alexandria, Mo.—The entire valley of the great Mississippi has had an unbroken drought of four years. The snows and rainfall have been so light that there was scarcely any drainage to support the rivers. The Mississippi has been lower than it was ever known, and the historic low water mark of 1894 has to yield to the record of 1891. These successive dry seasons and low water account in a measure for the small number of water fowl that have frequented these regions.

—J. P.

HAD A GOOD TIME.

THE party from Perth Amboy and Woodbridge, N. J., recently in camp on the Grand River, Indian Territory, have returned, and seem to have had a good time in spite of the drought and its consequences. They started from Baxter Springs, Kan., it may be remembered, in a house boat, on which they expected to float down to Fort Gibson, hunting and fishing on the way. At intervals of half a mile all hands (eight) had to get overboard and yank the boat by main strength over a shallow riffle—but they had a good time. At a point eight miles from Baxter they had to give up the ship, and took to wagons. The roads were pretty rough and rocky (they were nearly disemboweled, and one of the party was thrown violently to the ground and hurt)—but they had a splendid time. On the prairie road they were nearly smothered with dust, their quail and chickens spoiled on their hands in twelve hours, and water was mighty scarce—but they had a perfectly elegant time. However, their camp tent was very comfortable; they heard selections from "Trovatore" beautifully played by an Indian girl at the Cherokee Orphan Asylum; they saw some curious rocks and curious people, and managed to kill some deer, turkeys, chickens, ducks and squirrels, which the law prohibited them from sending out of the Territory. And on the journey back to Baxter Springs (75 miles by wagons with no springs) they were not annoyed by dust, for it rained steadily the whole two days and nights. Moreover, their total expenses, per capita, fell within the estimated amount (\$200). So that, all things considered, they must have had an altogether gorgeous and utterly hyperskyruginous kind of a time, and traveled only about 1,700 miles and back to have it.

J. L. K.

PERTH AMBOY, N. J., Nov. 16.

MISADVENTURES.

A YOUNG man last summer essayed to descend from the red mountain crag which rears its umber head above the little station of Wagon Wheel Gap, Col., and does not care to risk the chaffing that that poor fellow got. He had climbed up to the top of the cliff as adventurous and sight-loving youth will sometimes do, and about 4 o'clock in the evening essayed to come down, and in about half an hour, after a rough experience in rolling, slipping and struggling downward, found himself clinging to the face of the cliff at a point where he could neither go up nor down. He was fairly treed, and perforce began to wake the echoes calling for help.

A mile away, to the hot springs hotel, one came riding in hot haste. A man had fallen from the cliff and broken his leg, and the doctor should come at once; and there was a hurrying to and fro, and a chorus of exclamations and a great stir among the guests, and the doctor was off like the wind, and numerous lights could be seen afar climbing the mountain, and when the help reached him he was neither dead nor dying, had no broken limb nor strained arm or ankle, but was simply rock-bound, entirely unable to help himself. Above him was the perpendicular cliff, below a narrow overhanging shelf of rock and a fall of 30ft. to the broken stones below, with a possible roll all the way to the bottom of the mountain.

Those mountain folk are rough jesters; when they found that he was unhurt they began to chaff him unmercifully. They told him they had brought candles to have a wake; that he should have a first-class funeral; that they didn't see what he could do but just to drop off over the shelf and take his chances and be done with it. But kind hearted, as they always are, one of their number climbed up under the projecting shelf of rock, got a firm hold with one hand, and outstretched his other arm to give what aid he could, and the others stood below to catch him as he fell, and thus, if possible, save his life; and he was directed to back over the cliff crawfish fashion, face downward, swing off, and then hang on like grim death. This done, the nearest man, with his outstretched arm, grabbed his feet and placed them upon his shoulders, and the poor fellow let go to find himself the next moment convulsively grabbing the neck and shoulders of his rescuer, and somehow he slid down to the others without broken bones. But how he was chaffed and ridiculed! He fled away in the darkness and was not seen again for days.

TEXAS.

Mr. F. M. Gilbert, of the Evansville (Ind.) *Tribune*, tells this:

"Camp life is all very nice in its way, but there are some bad points about it, as our friend W. B. Lacy, who is just back from Arkansas, can testify.

"On Tuesday last the day became cloudy at noon, and it looked as if a shower was pending, and Lacy left camp alone, intending to go to what is known as 'Over Cup Flat' and watch for a deer. By some means he neglected to take his compass (which, by the way, is never needed on a sunny day, as all hunters go by the sun). Just before dark he got a shot at a fine little buck, shooting it just back of the heart, too far back to kill it at once. It ran about a quarter of a mile, and Lacy trailed it by the blood and finally overtook it and cut its throat. He then decided that he would drag it into camp himself rather than hang it up and take chances on the wolves getting it.

"On starting back, however, he found that in his pursuit of the deer he had failed to take his bearings, and it took but a few moments to show him that he was hopelessly lost (and that in a great 'bottoms' that is 70 miles long and the nearest settlement 27 miles away). He at once built a fire and hung up his deer as best he could, but his trouble had only just begun. The wolves had struck the trail of the blood made by his deer and rapidly following it up soon appeared around him, snapping and howling as only a gray wolf can. While there was really little danger, as they very seldom attack a man, they were anything but pleasant companions and would strike a nameless terror to the heart of the bravest man living. Hoping to kill or frighten some of them and at the same time bring aid from the camp, Lacy fired every shot he had in his Marlin and then emptied his revolver at them.

"Relief came at last, in the shape of men from his own camp, and the camp of the Hinkleville Gun Club, both of which had started out searching parties for him as soon as he failed to appear at dark. Some idea of those dense swamps may be gained from the fact that both of the searching parties got lost also, and were only guided back to camp by the continued blowing of horns and

firing of guns by parties stationed some quarter of a mile apart.

"Lacy says he was not the least bit worried, but he will have to tell that story to somebody who has never been lost at night in Black River bottoms. Those wolves would cause the hair to stand up straight on the head of the bravest man on earth."

OHIO GAME.

MILLERSBURG, Ohio, Nov. 10.—The opening of the quail season in this section of the Buckeye State was ushered in in true sportsmanlike manner, and many gunners were in the field ready for work before the sun had shown above the eastern horizon. The State game law allows the shooting of quail only from Nov. 10 to Dec. 15 inclusive, and every farmer being a self-constituted officer, in no State is a better observance of the law had than here. S. M. Hanna, the efficient game warden, enforced the law to the letter at the beginning of his term of office, two years ago, and gave a few illegal shooters at that time to understand that a fine of \$25 and costs was bad medicine to take every few days. Hence, shooting out of season was entirely broken up, and there has not been an arrest made this year. The great fight now is between the gunner and the farmer, and nearly every farm is decorated with the familiar sign, "No shooting or hunting allowed on these premises without permission," and the tiller of the soil takes good care to see that his rights are not infringed upon. However, go to a farmer in the right way, ask permission to hunt, and agree not to load his stock down with lead through careless shooting, and as a general thing he will give you permission to shoot, frequently going with you and pointing out the best game haunts. The horny-handed pumpkin husker has all the law on his side, and even the county squire, and about all that a cranky hunter can do is to keep moving on from one farm to another, greeted every fifteen minutes with "git out of thar."

Quail are plentiful this season, owing to the last two winters being open and the seasons very favorable to their breeding, and they are well-grown, fat and plump. There were but few late broods hatched, as we find from inquiring among the numerous sportsmen who were out on the opening day.

This section of Ohio is generally hilly and broken, with plenty of underbrush and covers, yet pheasant shooting has not been as good as in past years, the birds being scattered and very wild and do not lie well to the dog. Fair bags have been made, however, since the opening of the season on Sept. 1.

JOE PUSH.

Editor Forest and Stream:

Opening day was ushered in with a perfect gale, the wind blowing tremendous all day, with a slight sprinkle of rain; in fact, it was the most disagreeable day we have had this fall. Notwithstanding the inclemency of the weather, several of our sportsmen could not withstand the temptation, as due preparation had been made to open the season on a grand scale, and they braved the storm for a day's sport. Owing to the conditions no big bags were reported; the writer bagged eight cottontails and one gray squirrel, having grand runs with the merry little beagles. Rabbits and quail are very plenty. We have also had more gray squirrels this fall than for years. I was out this afternoon and bagged two cottontails and four quail, all shot either running or on the wing, no pot shots. I almost forgot to tell you how many misses I scored; well, not less than one.

MUZZLE LOADER.

CADIZ, Ohio, Nov. 11.

Editor Forest and Stream:

The annual meeting of the Central Ohio Fox Hunters' Club was held at this place to-day, and it was a gala day for lovers of the chase. The district is composed of the counties of Holmes, Coshocton, Tuscarawas and Wayne, and this is the only organized club in the State. Every county was well represented by ardent sportsmen, and a number of visitors from other counties were present and well entertained. Seventy-two handsome foxhounds were shown in the parade during the afternoon. A wild fox had been caught a few days before, and on the day of the meeting was turned loose. After giving reynard a half hour's start the hounds were put on his trail, and he led them a merry chase lasting two hours, when he went to earth in a rocky ledge two miles east of town, where he was perfectly safe from both hounds and hunters. The club adopted the following resolutions:

Resolved, That the members of this club use all honorable means to protect the property of the farmers of the district, which includes stock, fences and other farm property, and that we will lend our assistance in looking after all outside parties who may infringe upon the rights of farmers or the rules of this club.

Resolved, That we will do no fox-hunting during the months of June, July and August of each year.

Resolved, That it is the duty of all members of the club to look after and return to the owners all stray foxhounds found in their locality, with a description of the same, to the secretary; and any member losing a dog shall at once notify the secretary, who will report the same to the chairman of each sub-committee in the district.

Speeches were made by Hon. E. L. Lybarger, of Spring Mountain, O., and Col. Lake E. Jones, of Wooster, after which the following officers were elected for the ensuing year: President, E. L. Lybarger; Vice-President, Elias Mast; Secretary, L. G. Barton; Treasurer, Chas. M. Williams.

The following committees were also appointed: Coshocton county—Wm. Reed, John A. Buckley, John Chubb, W. W. McNeal, C. M. Williams. Holmes—Frank P. Anderson, A. B. Cutter, John S. Duncan, R. Winbiger, M. C. Lisle, Josiah Snyder. Tuscarawas—Wm. Zinkon, Wm. Woodruff, Ira Miser, Jonas Bair, George Steis. Wayne—Dr. Grenamire, David Adkins, Lake F. Jones, John Brandt, J. M. Shafer, David Stinson.

Col. Lake F. Jones was selected as a delegate to attend the December meeting of the Tennessee "Wild Goose" Fox Hunting Club.

After finishing the general business brought before the club all members partook of an excellent banquet that had been prepared for the occasion, and we assure you that fox-hunters are in every way capable of disposing of all edibles that may be set before them. There are many fine dogs in this section, and that great sire Red Dan is at the head of nearly the entire family. All communications should be addressed to L. G. Barton, Sec'y, Millersburg, O.

JOE PUSH.

MILLERSBURG, O., Nov. 13.

A COMPASS IN THE WOODS.

Editor Forest and Stream:

A correspondent in to-day's issue explains how to supply the want of a compass by a watch, in connection with the shadow of a knife blade on the thumb nail. In an emergency this may answer. But without intentional disrespect to Dr. Morris, I trust that no uninitiated will hastily become converted to the Doctor's views, as expressed in his closing remark, that he "never bothers to carry a compass on his hunting trips." For the initiated no warning is needed. I have just returned from a Maine trip, with a veteran hunter and trapper of 45 years experience. I noticed that this experienced woodsman invariably carried two compasses. Let us see where the knife-watch-thumb-nail substitute might leave a man on a "hunting trip."

The camp is in meat and you do not want anything but "an old big one with horns." You have accordingly been searching far and wide, when suddenly you come upon the track of a bull caribou. It is about noon, the track is fresh, fairly smoking—and with high hopes for a speedy shot you are off. You forget that in order to have a short race with a caribou it is not enough that the track is "fairly smoking;" it must be actually "on fire," and after you have whipped up and down three or four mountains, and through one or two old slashings and half a dozen swamps, you conclude that your bull has sworn off feeding and lying down until Mr. Fasset is elected. Your watch indicates half-past four; it has come on to snow a little, is dark and windy. You are perhaps three miles from the old Indian line, four miles from camp, with three-quarters of an hour before dark. A northeast course will strike the line, and with a few birch curls you can follow the line to camp after dark. You put your knife on your thumb-nail and get your watch in position. No shadow—the trees are too thick; you must find "an opening in the forest." But the heavy spruce and balsam flat has no opening, and when you finally reach hard timber ten minutes of precious time is gone. No use for a shadow now; you have not the legs of a caribou and you cannot reach the line before dark. So a scramble for fire-wood and a slanting tree where you can keep body and soul together until morning, because—you "did not bother to carry a compass." And only an hour's journey away there is a comfortable log camp, where three good fellows are burning tobacco on stomachs full of sirloin, coffee and cakes.

Young men, I know those who have been there. Don't go to the woods without a knife, a full match-box and a compass. And learn how to use the latter before you go. And if you are hunting caribou and have grit to hang, add a small hatchet (easily carried in a double loop on the back of your coat) and a slice of fat pork. Then, if your game insists upon visiting New Brunswick before he lurches or makes a bed, you can, at least, go with him part way.

SEYMOUR VAN SANTVOORD.

TROX, N. Y., Nov. 12.

BOSTON AND MAINE.

GOVERNOR WILLIAM E. RUSSELL, of Massachusetts, returned on Thursday from a short visit to the home of the Commodore Club, at Hartland, Me. The Governor is a member of the club, along with ex-Governor Brackett and the Hon. Benjamin F. Butler. Governor Russell evidently understands just how to obtain the best sort of rest after the worry of a most brilliant campaign, and the winning of a victory of which any Governor of one term might be proud. He slips quietly away on a shooting and fishing trip, and has his outing and is back again almost before the public are aware that he has stepped down from the executive chair. This time Mr. John E. Thayer, of the Governor's staff, with his brother, Mr. Bayard Thayer, were with him. Mr. Bayard Thayer, it will be remembered, is the owner of the beautiful Birch Lodge, at the head of Richardson Lake, in Maine. Governor Russell was the guest of the Messrs. Thayer on both their fall and spring fishing trips to Birch Lodge this year. These gentlemen, young and genial, seem to be companions almost inseparable in their hunting and fishing excursions. This time they are charmed with the beautiful home of the Commodore Club on Moose Lake. They were down there for duck shooting, for which sport that lake has long been noted. The Governor is a good shot, and is winning laurels, to say nothing of the prowess of the Thayers in that direction.

Ducks have not come on to the marshes at the head of the lake in the usual abundance this fall. There is a very good reason. The weather has been so terribly dry that the marshes are shrunken to the smallest space imaginable. Here blinds have been erected and here the Governor tried his hand, morning and evening. One morning he was at the blind waiting for the darkness to lift and for the black ducks to come down to feed. Now this black duck, as all sportsmen are aware, is about as swift as a cannon ball, but the Governor took them "right and left." Sam Furbish, the keeper at the home of the Commodore Club, says that the "Governor went right in for business every time," killing four ducks in succession with right and left barrels.

The next day Sam Furbish and Harry Williams, a young local hunter, offered to put the Governor and Adjutant-General Dalton, who was a member of the party, on to a fox trail, with some good hounds to do the work. The Governor and the General accepted gladly, but fox hunting amounted to nothing that day, as it frequently does in Maine, as well as any other State in the Union. But the courage and sturdiness with which the gentlemen followed the hounds won the admiration of the local fox hunters.

Mr. L. W. DePass, Asst. Sec'y of the Boston Chamber of Commerce, and C. W. Hodgkins, of the Boston & Albany freight office, have been on a gunning trip in to the edge of Andover, Mass. They got no partridges, though having a couple of good dogs. They started four, but each one started from high trees and flew a long distance, doubtless lighting again into high trees, for the dogs could not find the scent. But the exceedingly dry weather is another feature and the birds may have left very little scent, even if on the ground. Though quail were put out in that section last spring, by the efforts of the Massachusetts Fish and Game Protective Association, yet these hunters found no quail. They made inquiries of the residents and found that no quail had been seen or heard since early in summer. One old gentleman, well informed in such matters, suggests that partridges have been troubled a great deal this year with

ticks. He has seen but one or two birds that have been taken in that section this season, and these were covered with ticks.

The Cunard steamer, which arrived in Boston on Monday, had, among other items in her cargo, a box with eleven live English partridges. The box was directed to Mr. Henry J. Thayer, of the Massachusetts Association, and the birds will go to Oregon.

Mr. Cone, a grocer of Waltham, Mass., with his friend, Mr. Bull, have just returned from a most successful deer hunt in Maine. They went to Bangor, and from there to Penobscot headwaters. They evidently struck a section where deer were plenty, for they were gone but about two weeks and brought home five deer and one deerskin. They report that they could have obtained more, but that the law permits only three deer to a sportsman in a season. The deer were on exhibition at Mr. Cone's store in Waltham.

Two deer were received by a well-known Boston commission dealer the other day, the saddles alone of which weighed over 275lbs. They were remarkably fat and heavy, and the hunters, a couple of Boston men who have been known to Maine, realized almost \$50 for the saddles, these saddles selling for 18 cents per pound. The boys do not care to be styled market-hunters, and yet the \$50 comes handy to them.

J. P. Longley, of Lewiston, Me., has just returned from a trip to the Machias River. He says that bears have never before been as plenty in that part of the country. A bear has recently killed a cow and two-year-old bull in a pasture in that vicinity. The farmers have been greatly troubled this summer by bears, and many sheep have been lost. Mr. Longley brought home an elegant bear skin.

A moose weighing over 700lbs. has recently been killed at the Ten-Mile Shanty, near Milo, Me. The cook at the shanty went to the spring a few rods away for water just at nightfall, when he saw five moose at the spring drinking. He ran back to the shanty and alarmed Mr. A. D. Bumpus, who had just come in from the Katahdin Iron Works. Mr. Daggett yelled that there were moose at the brook, when guns were grabbed they succeeded in killing the big bull of the herd.

Arthur Bounce, of Milo, has killed the first moose of the season in that vicinity this year. It was a monster, and Mr. Bounce sold the head for \$50 and meat enough to come to \$60 more. Mr. Bounce is an old man, with one of his legs so badly crippled as to be almost useless, and yet he manages to get around in the woods some way. The moose and the money it brought come very acceptable to him.

SPECIAL.

THREE TURKEYS AT A SHOT.

EVANSVILLE, Ind., Nov. 10.—*Editor Forest and Stream*: I wish to call your attention to an incident which happened in Clay county, Ark., during our recent hunt, from which we have just returned. It is straight goods and I can make oath to it.

One of the party, Mr. Lacy, made the most wonderful shot ever made. He was seated at a stand on Big Cache waiting for deer. In front of him was one of those little weed prairies, so frequent in Arkansas. While on the watch he saw the outlines of a wild turkey, which seemed to be pecking in the weeds. Holding at the butt of its wing he fired, and had the satisfaction of seeing it flutter a few yards and fall. But on going to pick it up what was his surprise to find two more turkeys shot through the neck. Such a thing as three wild turkeys killed with one rifle ball was probably never heard of before. The writer was not over 100yds. from him, and can swear that only one shot was fired. Mr. Sam Blackshare was at the next stand, the same distance away, and can testify to the same—that is if Mr. Lacy's word was not amply sufficient. The supposition is that the two turkeys shot through the neck were squatting in the weeds, and seeing Lacy raise his rifle to aim, raised up their heads just in time to receive the fatal ball. This will go on record as one of the most wonderful shots ever made in the whole history of hunting.

We got four deer, thirty turkeys and small game in countless numbers and variety. Lost nearly all by hot weather, and came out through forest fires on all sides.

F. M. GILBERT.

WISCONSIN DUCKING.

MILWAUKEE, Nov. 9.—The long deferred rain has come at last, but alas too late to insure good snipe shooting. Last Tuesday morning all the shallow ponds and small bodies of water were found to be frozen over, ice having formed in many places half an inch in thickness. A few scattering snipe may still be found in low springy ground, but the bulk of the birds have made a parting bill-thrust into Wisconsin mud and silently departed for a warmer clime. Wildfowl, however, are here in great abundance, and every known means is being employed for their destruction. Parties are daily leaving the city bound for the various ducking resorts of the State. Large bags are being reported from Fox Lake. Puck-away Lake comes in for a front seat in the list of choice places. Mr. H. Bosworth, who spent a few days of last week at the Cav Cav club house, has lately returned with a fine lot of ducks—bluebills, redheads, and canvasbacks. Of the latter I believe he had four or five.

Messrs. Fitch, Mariner, Pierce, and Moses left late last week for Winneconne Lake, where they will remain a few days on board their finely equipped yacht, The Idle Hour. The shooting was reported very good at that place, and it is expected that the Northwestern road will be called upon to furnish an extra large box car in which to convey their ducks back to the Cream City.

GREENHEAD.

FREAK OF THE GRAY SQUIRREL.—Wm. Raines, of Huntington, W. Va., relates a novel experience. He claims to have been a good shot with the rifle and seldom failed to drop his squirrel. At one time, however, he deliberately fired twelve shots at one without success, and then ceased firing through utter discouragement. The strangest part of the circumstance is that the squirrel barked constantly under fire. Mr. Raines says his grandfather had a similar experience, with some variation. In the latter case the squirrel not only kept barking under fire, but at length ran down the tree and scampered off, barking as it ran.—*

SLEEPING BAGS.

Editor Forest and Stream:

I would like to say a few words about sleeping bags. Last fall I spent about three weeks in the Provinces moose hunting. My companion on this trip had a sleeping bag which he had purchased from Mr. Squires in your city, while I had a rubber blanket and three quite heavy woolen ones. On this trip we had eight days and nights of almost continuous rain, and I confess that I rather envied my friend in his sleeping bag. I would lie at night under our lean-to completely saturated, while he in his bag would be as dry and comfortable as he could wish. On my return I ordered a bag at once and used it last winter sleeping on frozen ground in an open camp with the mercury at times below zero.

This season I spent some three weeks hunting moose and I advised my companion to take a sleeping bag, which he did, and is loud in his praises of it, saying he does not know how he could have got along without it.

The bags are made with different thicknesses of lining, and I would advise getting a bag with fairly heavy lining, and also to have an extra lining to be put in or taken out as desired. I have arranged my bag so that I can remove one thickness of blankets, and when replacing tie the two lower corners with tape. With a bag so arranged you can use the extra lining when sleeping in a close, warm camp, the original bag making a good mattress, and when you wish to spend the night out of camp the extra lining will be needed.

The bags are put up in a very portable form, and are much easier to carry than blankets. The outside covering is very durable, and perfectly waterproof. I spent a good many nights this season, when moose calling, lying out on boggy ground, without a fire of any kind, and was far more comfortable than with twice the amount of ordinary blankets.

I think any sportsman who roughs it to any extent will find such a bag very serviceable.

C. M. STARK.

DUNBARTON, N. H., Oct. 29.

MASSACHUSETTS ASSOCIATION.

BOSTON, Nov. 16.—One hundred and seventy-five members of the Massachusetts Fish and Game Protective Association attended the regular monthly dinner and meeting at the United States Hotel Thursday evening, Nov. 12. Messrs. Wm. A. Browne, Geo. A. Clay, G. Arthur Swan, Geo. H. Richards, Jr., A. M. Leavitt, Chas. H. Smith, Arthur A. Glines, Chas. E. Willard, Arthur B. Curtis, Moses Bamber, Herbert C. Brooks, Noble H. Hill, John Hillis and Jos. H. Woodford were elected members.

Fourteen applications for membership were presented. Messrs. H. H. Kimball, Chas. F. Munroe, Chas. Stewart, Ivers W. Adams, Waldron Bates, Geo. B. Appleton and Heber Bishop were appointed a nominating committee to present at the December meeting a list of candidates for officers for 1892.

Messrs. Ivers W. Adams, Benj. C. Clark, M. A. Morris, W. M. Brackett and Geo. W. Wiggins were appointed as a committee on arranging for the annual dinner.

Mr. W. L. Gilbert, of Plymouth, Mass., addressed the meeting, asking that domestic raised trout be allowed to be sold during the months of January, February and March, as well as in the open season. After general discussion, in which the members objected to any such law, the matter was referred to the board of management.

RICHARD O. HARDING, Secretary.

FLORIDA BIRDS OF PLUME.

Editor Forest and Stream:

Now that the Legislature of Florida has passed an act to protect the birds of plumage and song from destruction, the tourist and pleasure seeker can do much to aid in the enforcement of the law by suggestions in all localities they may visit, as to the organization of local societies, to see to the proper enforcement of the law. A united effort on the part of the citizens of Florida and tourists will put a stop at once to the wholesale destruction now going on by those who hunt the birds to supply the dealers in plumes.

A healthy public sentiment once established, the enforcement of the law will not be difficult, and the birds which now add so much to the beauty of the Florida landscape will be preserved.

Chummie, so long the writer's constant companion in rambles and travels, died a week ago in southern Maryland from distemper. He was a dog of great intelligence and many virtues, with a personality almost human. He will be long and sadly missed.

D. W. W.

A NOVEL FOX HUNT.—Plain Hill, Conn.—While our farmer S. was returning from a neighboring town early in the afternoon one day last month, he saw something that made him rub his eyes at first. A bunch of a dozen sheep, woolly with fright, were galloping up and down and across a pasture near the road, closely followed by a full grown fox. The fox apparently was only chasing the sheep in play, and he circled them around the lots, headed them off and turned them back about as his fancy pleased. Now S. is considerable of a sportsman, and generally carries a shotgun with him under the wagon seat against just such chances, and in about three winks of the eye he had inserted a couple of cartridges in the gun, jumped from the wagon, climbed the fence, and waited for the sheep and fox to pass. This latter gentleman, generally so cunning, had dropped off his eyeglasses, and his only thought was the pleasure of the chase. On came the fast panting sheep, followed closely by the fox, and alas! by the whang of the gun. Reynard was gathered in. Moral: Free wool may prove itself not always a blessing.—F. LIN.

WOODCOCK AT BAY RIDGE.—From Bay Ridge, on New York Bay, comes a photograph with this note: "Bay Ridge, Nov. 11.—I enclose you, with my compliments, a scene from life, or rather from my vine-clad piazza. It all happened in prosaic Bay Ridge. You will remember what a perfect day we had for election, and I was wishing in the morning that I were far away over the hills after woodcock, when the thought came into my head that just for the sake of 'Auld Lang Syne' I would stroll over the old spots where the gallant woodcock used to stop on their autumn migration. Well, here you see the result of one short half hour's fun—as fine a brace of

brown-backed fellows as I ever downed. Found within 500yds. of the house, in a cosy little sunlit brier tangle, where I have flushed many in past years, and within a stone's throw of the screeching steam dummy tracks. You know what 'Frank Forrester' said about autumn woodcock shooting. He's right; I found it all true; just where I least expected it, as new streets, gas and water pipes, real estate agents and town lots, are hardly proper accessories when afield after these lively birds. Pardon my enthusiasm, but I have not quite recovered from my surprise party yet. I may add that the only dog that accompanied me was an English bulldog (Piper). I shot the woodcock and my brother's Hawkeye did the rest.—W. TOWNSEND."

ST. LOUIS NOTES.—Nov. 14.—There was a general rain over the State this week, the first for nearly three months. The season has been too dry for hunting birds, a condition removed by the late rains. A 110-pound catfish was the attraction at Union Market on Monday. The weather has turned cold and blustery, and the ducks are coming down. A decree for incorporation has been issued to the St. Francis Literary, Hunting and Fishing Club. Congressman Seth Cobb is president of the club.—ABERDEEN.

PENNSYLVANIA DUCKS.—Erie, Nov. 13.—Clarence C. Converse writes: "This is an uncommonly good ducking season here, the ducks rivaling the grain crops in abundance. Though all fair shots are daily bagging nice lots of ducks along our peninsula and bay shore, yet they have to play second fiddle to the nets of Erie fish companies placed off the lake shore from Erie to Dunkirk, some nets yielding of a morning several hundred ducks each."

SPRING SHOOTING.

Editor Forest and Stream:

The following correspondence between William Elder, our Secretary, and the President of the United States will be read with interest. We are very glad to know that your widely circulated and most valuable paper has always been favorable to the legislation proposed. Energetic action at this time ought speedily to result in the necessary legislation in the respective States. Would it not be quite in line with the good work already accomplished in various directions by *FOREST AND STREAM*, that you should initiate this movement?

GEO. SHEPARD PAGE.

CHATHAM, N. J., Nov. 12.

CHATHAM FISH AND GAME PROTECTIVE ASSOCIATION.

CHATHAM, N. J., Oct. 22, 1891.

Mr. President:

DEAR SIR:—With the knowledge of your great interest in field sports, I take the liberty of addressing you on a subject which is of vital importance to the propagation and protection of game birds. We are using our strength towards the abolishment of sport wildfowl and snipe shooting and also of shooting woodcock in summer. As a sportsman, you can readily perceive the short-sighted policy of killing and disturbing birds on their way to breeding haunts, the result of which has been to steadily diminish the class of game mentioned, and you will at once recognize the great benefit which would surely follow united action on the part of the different States.

To bring this question of a close season during the spring and early summer to a successful settlement, it should be placed prominently before the sportsmen of the country and by them taken to their respective legislatures. We know the problem is a difficult one and it may take years to accomplish the results we are seeking, but I feel that we are acting rightly in asking your approval and coöperation. Your recommendation of the change would have great influence and be most effective in crystallizing the efforts of the sportsmen of the various States.

I trust this matter will receive your favorable consideration. Any suggestions you may make will be heartily appreciated. We have a membership numbering 125 and control the lands in the valley of the Passaic, which 'Frank Forrester' so often mentions in his writings.

Your obedient servant,

WM. ELDER, Secretary.

To His Excellency, Benjamin Harrison, President.

EXECUTIVE MANSION,

WASHINGTON, Oct. 23, 1891.

William Elder, Esq., Secretary, Chatham, N. J.:

MY DEAR SIR:—I have your letter of the 22d, in which you discuss the necessity of a closed season for migratory game birds. I do not doubt that the adoption of legislation by the States, prohibiting spring shooting of these classes of game birds, would greatly tend to increase their numbers, and I have sometimes thought that it was essential to the preservation of some of these species.

Very truly yours,

(Autograph signature.) BENJAMIN HARRISON.

A BOOK ABOUT INDIANS.—The *FOREST AND STREAM* will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—Adm.

A MICHIGAN BASS WATER.

IONIA, Mich., Nov. 12.—On Nov. 1, 1891, myself with a friend left home at 8 A. M. and drove eighteen miles to the Maple River, in Clinton county, one mile east of Matherton, and there met Mr. E. Shattuck, a fisherman and hunter by profession, and he took us in his boat and rowed about one mile, and we jointed our rods and commenced to fish, for what we did not know. Had been told that there were plenty of pickerel in the Maple River. Shattuck only had about forty-five minnows, and those very small ones. We fished 3½ hours and caught forty-nine black bass, small-mouth, and one pickerel. The whole of them weighed 103½lbs.; fourteen of them weighed 49lbs. This catch was made on Nov. 1. On Nov. 7 I made the same drive with two men besides myself, and caught seventeen bass and twelve pickerel, and on the following Sunday another party of four gentlemen caught out of the same place thirty-four bass and seven pickerel.

Maple River is a small, slow, sluggish stream with deep bays in it, the water in places being 30 to 40ft. deep, and run that way for about half a mile. At this particular place where we caught these fish the water was very deep. We used about 75 to 100ft. of line. They were not very voracious biters, but pretty gamy when hooked. This seems like a big fish story, but is nevertheless true. I do dislike so much to give it up, but I have to quit on account of cold weather.

H. L. BAILEY.

"GENESIS."

IT was in the spring of '71 that I first essayed the trout in Maine waters—or for that matter, in any waters. From early childhood, with an instinctive love of nature, I had roamed the woods within a radius of a dozen miles around my home, and made pot shots with the old muzzleloader or bobbed for eels or skittered for pickerel in the sluggish streams and muddy ponds within my ken; but only from hearsay had I any knowledge of the wary trout, with his penchant for clear, cold, running waters, and his lordly beauty of form and color. An opportunity unexpectedly offered me to visit the Rangelys, with a friend better posted than I, was hailed with the wildest delight, and phantom shapes, spotted with crimson and gold, haunted my dreams for many days while I was planning and saving to accumulate the wherewithal to cover the expenses of the trip.

Suffice it to say that on the 8th day of June my companion, John —, and myself embarked on the Portland steamer from Boston en route to Andover, Me., via Bryant's Pond, loaded to the muzzle with a complete camp kit and dunnage enough to swamp a whaleboat.

I must have been completely dazed when we reached the hotel at Andover, for time seemed to slip by on the wings of the wind, till John and I found ourselves alone in an enormous chamber over the office, gloomy with the deep shadows hardly illumined by the small oil lamp left with us.

We were younger then, John and I, than now; and the courage born of innocence and inexperience began to ooze away as we listened to the moaning of the wind around the gables, and realized that we were indeed "strangers in a strange land."

Why was it, too, our room possessed so many doors, leading whence we knew not? A consultation of war was held, and our first move was to barricade the entrance door to our room, which was only fastened by a rusty, time-worn lock, by wedging a chair under the knob. Then producing an antique pistol from our satchel we began to examine our quarters.

Opening one door after another, we discovered only closets; but with the opening of the last door, we felt our doom was indeed sealed. Only a mass of impenetrable darkness stared us in the face. Bang went the door, and down we sat in fear and trembling. What was this dreadful space of Stygian darkness?

Another consultation resulted in John's determination to "do or die," and once more advancing, John ahead, holding the lamp high aloft, I following, pistol cocked, we opened up the door. All was still, and listening breathlessly, we heard no sound. Getting bolder, John took two steps forward, stopped, listened, and then, with a "Come on, I'm not afraid," took a step one crash!—enable our "battery" to move up! Slam! bang! crash!—John gone—utter darkness—a pistol shot—oblivion.

It seems, as after investigation proved, that we were encroaching on the large hall used for dancing, with an entrance from the kitchen by a stairway, at the head of which was a trap door, open at the time, and as John stepped to one side, he fell down the hole in the floor, and the trap promptly responding to the unexpected call, dropped sharply into place, shutting out all traces of poor John, who, clinging to the lamp, sliding like lightning on his back down the stairway, came to anchor with his feet sticking through the panels of the kitchen door below. No bones broken.

Next morning, arranging for our boat at the "arm of the lake," we piled up our belongings on the conventional "buckboard" and started. That same buckboard was a revelation to me, and if I remember aright I felt like Jonah before our exodus. Such thumping and banging I had never before experienced, for with my ignorance of horseback riding I didn't "rise to the trot," but keeping everything taut and rigid and hanging on for dear life, I nearly lost it. At last, sore and wretched, we came to a halt at the arm of the lake; and its picturesque location and the glimpse of the fair water, with a cool breeze coming down from above, did much to relieve us of the *ennui* we felt. But the boat. We had pictured in our minds an airy-fairy giddy thing with white wings that would fly over the foam-crested wave and bear us hither and thither *ad lib.* Alas, our hopes were dashed, for half out of water, like a stranded whaler, lay our boat, a weather-stained, battered nondescript, one end rotting in the sun, the other completely water-logged, only one whole oar, the other little better than a raft pole.

In the meantime the team had sneaked away; and left to our own resources and with no alternative we sadly hauled the thing out of water, allowed the sun's rays to partially absorb some of the moisture in the water-logged end, and then daubing on the seams inside and out a quantity of pitch and tar—fortunately left, perchance, by old Noah—we launched and loaded her.

I can never describe how we strained and tugged with our puny muscles till against a strong head wind we finally found ourselves ashore in the cove above the middle dam completely exhausted. We didn't wait for supper, but turned into the blankets instantly, forgetting that we had a tent, or too tired to pitch it.

Next day we fished about the dam, and there I caught my first trout. Reader, have you "been there?" I suppose I made a fool of myself, but then, I can console myself with the reflection that better men and older men than I have lost their heads and given expression to most extravagant antics on such occasions. The following day, the wind shifting, we had a comparatively easy row up the Lower Richardson, past Rich's Camp and Metallic Point, at the mouth of the Narrows, through the Upper Richardson, skirting the western shore part way, and finally crossing to the foot of the carry at Upper Dam. We camped near there on the south side of the dam. During our stay at this spot, where we for the first time set up our tent and unpacked our truck, we had remarkable fishing for greenhorns. Initiated with the mysteries of fly-fishing by such a notable example as that of Judge Webster, who was stopping at the Upper Dam, we became *blase* in a short while, and subsequent arrivals undoubtedly admired the *sang froid* with which we struck, played and (sometimes) netted two and three fish at a time. Why is it that the novice always catches at least one tremendous fish on his first outing? I have now an outline on birch bark of a trout I took that spring below the Upper Dam, whose size is far in excess of any I have ever taken since, he measured 27in. in length. I often look at this outline sketch with pride, and I still strive to

go one better, but while I have caught many a heavier trout I have never landed another so large.

From this trip my love of trout fishing has developed into a passion, and every opportunity offered finds me with rod and reel "where the trout hide."

I have caught black bass, wall-eyed pike and muskallonge in Michigan, and fish of other species in places less remote, but the memory of my first trip to the Pine Tree State in quest of trout has indelibly impressed itself upon my brain, and I love to think of that honest, whole-souled delight I felt when I landed my first trout.

A. T. BOND.

WHITE BASS FISHING.

Editor Forest and Stream:

I have had a chance at different times to see your paper and I never see anything from this locality. Now, I think we have here a class of sport not to be had anywhere else on the ball, and that is catching white bass. This city is on the Sandusky River, at the head of navigation, and in the spring the white bass come up to spawn, and then the fun begins. We use a small minnow with a red head; by the way, the minnow comes with the advent of the bass and is called by us natives a "red head." Two hooks, a small one about a foot above the other, are employed, and it is an ordinary thing to make a double catch. The white bass is of the trout disposi-

THE WHITE BASS.

tion, quicker than double-greased lightning. You either fish from a boat or use a pair of long boots and wade, and when you get a strike you either get him or you don't—it is like a flash. If you get him, don't land him too soon, for his size he is "a good 'un." They don't grow very large, 1lb. being a good average. I think we had the best run this spring we ever had, that is, the largest; a few were caught that weighed 2lbs. and a great many of 1 to 1½lbs. About the middle of August they go back to the lake, which is about 30 miles distant; in the fall we fish between here and the lake for what I call the king of American waters, the black bass, and we do get some daisies; 5lbs. 9oz. is the largest up to date.

FREMONT, O.

J. C. CARR.

[The white bass referred to is the *Roccus chrysops*, of the "Fishery Industries," plate 171. The "red head" minnow is hard to identify, as the males of several species have the head more or less rosy in spring. The yellow bass of the Ohio and Mississippi valleys and the white perch of the East are the nearest relatives of the white bass.]

FISHWAYS.

Editor Forest and Stream:

Your term of "a continental failure" is a new one, but fits the fishway at Holyoke very well. It is a monumental failure certainly, for as your correspondent Mr. Waters says, it is reported to have cost \$80,000, and there is no record of any fish except a few eels ever going up it. During the five years I was on the New Hampshire Fish Commission I visited it frequently, and never saw a fish of any sort in it.

The trouble with it is that like many of the early fishways it was built from a wrong "point of view," or as the boys say, "hind end first." The Lawrence fishway was built in the same manner, or with the mouth of it far down stream out of the main current, up which the fish always go until they meet an obstruction, when they try to get around it.

The Lawrence fishway was utterly useless for the first few years, until in 1877 or '78 the Commissioners cut it in two in the middle and turned the lower end backward, so as to bring it into the pool at the foot of the dam where the fish could find it. The New Hampshire Commission have always protested against both of these fishways as first built, and my colleague, the late A. H. Powers, went to Massachusetts to urge the change in the one at Lawrence.

The instant it was changed fish of all kinds (except shad) began to come up it, and the number of salmon has been increasing yearly. I do not know how many Commissioner Hodge took in all this year at the hatchery at Plymouth, N. H., 100 miles up the river, but he had taken 76 the last time I heard from him, and a number had been caught on their way up, about Garrins Falls, above three fishways. The New Hampshire Commissioners have begged those of Massachusetts again and again to bend back the fishway at Holyoke. They plead off at first on the excuse of great expense, but have had a better one since in the fact that the Connecticut fishermen caught every fish that attempted to ascend the river in their weirs and pounds at the mouth, and the Connecticut Legislature refused to correct the evil. The result was that the salmon, with which New Hampshire and Vermont stocked the river in 1874, were all caught before they could get up as far as Hartford, but a large number were taken below there for two or three years, I think in '78 and '79.

So as New Hampshire cannot move Massachusetts, nor Massachusetts start Connecticut, the river remains unfruitful. I have never heard of shad going up any fishway, without it be the McDonald, and that is impracticable in our Northern rivers, on account of the heavy ice brought down in the freshets in the spring, which would smash any timber construction to splinters, unless protected behind a heavy stone abutment.

It is easy enough to build a practicable fishway, if the builders will only look at it in the right way, and remember that the fish are going up the river, and not down. That, except eels and small fish, they are usually out in mid current, and not being up in the air like birds, they

cannot look down and see the ingenious ladders which men have built for them, far down the stream, but go on against the current till they run against a dam or rock, and then try to get around it to the right or left. It makes no difference where the upper end is, so long as it is in the water of the upper level.

I built the Manchester fishway from the pool below the dam, leading up to the canal, also below the dam horizontally, or down stream, but on the upper level. Let the fish once surmount the fall, and they will find their way up through the headgates of any canal fast enough. The Manchester fishway has been a perfect success, although some ignorant busy-bodies found fault because the fish stopped to rest for a day in the pool at the foot of the dam, after climbing the natural "chute" below, before they attempted the second climb of the fishway. Let me repeat, it is no matter where the upper end of the fishway is, if on the upper level, if the lower end is in the pool, as near the fall as possible. You may build a loop round the end of the dam, you may run down, and come back, as at Lawrence, or lead into the canal as at Manchester, but have the lower end where the fish can find it without "going up in a balloon" to look for it. They will find their way down any fall, "tail first," fast enough. The Holyoke fishway needs only to be cut in the middle and bent back to the dam.

I did not mention the one at Lowell, and it should not be omitted, but it simply consists in leaving off one flash-board at the north end of the dam, opposite the city, where the ledge rises to the surface, so that the dam is only 2ft. high. When the fish meet this fall they simply "turn to the right and find their way round the corner!"

A series of "log cabins," 12ft. square or so, was first built at Lowell, against the center of the dam, each one about 3ft. lower than the one above, expecting the fish to jump up from one to the other, but it was worthless. The point seems to me to be here, the fish do not go up stream by sight, but by feeling, and go against the most favorable current.

I do not think a fish can see very far in the broken water of a fall, and I do not think from my experience as an angler that they see objects out of water, through it, under such conditions. I always prefer to fish a pool from the upper end, where the broken water serves to hide me.

I forget how far down stream the Holyoke Fishway debouched, and have lost my record, but think it was about 400ft. and away off at one side, where no fish would think of either looking or feeling for a passage.

CHARLESTOWN, N. H.

VON W.

A LARVAL CONGER EEL.

Editor Forest and Stream:

A very interesting fish has recently been sent to me by Commissioner Blackford, and as it was found at Rockaway doubtless some of your New York readers will be glad to hear about it. The gentleman who found the specimen was fishing off the shore at Rockaway last spring. "He noticed something in the water that shone very brightly, and after watching it a few minutes it was washed ashore. He noticed it moving on the sand and picked it up, thinking it might be a curiosity." The captive was put into a vial of alcohol and afterward given to Mr. Blackford, through whose kindness I am enabled to describe the specimen.

The eel is about 4in. long, whitish in color, and with two rows of minute black spots, one along the middle of the body and the other on its lower edge. The jaws are much like those of an adult eel. The fins are not developed, and the body is deep and ribbon-shaped. In life the animal is translucent and is almost invisible in sea water. Very few specimens of this kind have been taken on our shores, and the whole number caught at the surface by towing nets from vessels of the Fish Commission is comparatively small. The variations among the forms, on the other hand, are numerous. None of them are exactly like this Rockaway example, and so I am at a loss to know what is the adult form of this larva. It may be a young Conger; it is certainly one of this type of eels, but there is no adequate guide to the study of these curious fishes. Dr. Jordan's "Manual of the Vertebrates" (page 90) mentions a single species (*Leptocephalus morrisi*) as occurring on our coasts. The collections of the Fish Commission, however, contain many species of widely differing characters. These larvae have been considered to represent a stage of arrested development of young eel-like fishes which increases in size, but never attains the characters of the perfect animal. The generative organs are undeveloped and the skeleton is cartilaginous; even the skull is composed mainly of cartilages. *Leptocephali* are pelagic and abundant, but, on account of their transparency, seldom discoverable in the water. They move slowly and feebly, and but for their protective coloration would have little chance to escape from predaceous fishes. The largest specimen recorded is 10in. long. Dr. Gill now regards these larvae as young stages which will develop, in a shorter or longer period, into the perfect animal.

T. H. BEAN.

FISHWAYS IN THE SUSQUEHANNA.—In 1886 two of the Rogers fishways were put in the dam at Columbia, Pa., and the fact that shad will pass through it was established by setting a gill net around the upper exit and catching in it several of these fish. There was at this time a good stage of water and the entrances were easily found by the shad. Since that time, however, the shoaling of the water has made the openings less accessible and shad have not been able to find them until the difficulty was remedied. At the best, however, the fishery above the dam amounts to very little except when breaks occur, and this unfortunate state of affairs is undoubtedly due to lack of proper adjustment of the entrances to the ways. About two years ago there was a break in the dam and between 2,000 and 3,000 shad were caught above the obstruction.

WE SHOULD SAY So.—"John Smith" writes to the *Evening Post*: I find the following in your paper of this evening: "The Rev. Wm. H. Ryder preached in a Gloucester, Mass., church last Sunday on the topic, 'Can a man be a fish dealer and a Christian?'" I would respectfully ask if this is not rather hard on the Apostle, several of whom are understood to have been in that business?

THE INTERNATIONAL FISHERIES CONVENTION.

THE committee named at the meeting of Oct. 23 in this city convened in Rochester last week, Nov. 10, 11 and 12. There were present of the committee: Messrs. R. U. Sherman, of the New York Codification Commission; A. D. Stewart, Canadian Fish Commission; Henry C. Ford, Pennsylvania Fish Commission; George F. Danforth and F. J. Amsden, Fish Food Association of New York State; Hoyt Post, Detroit, Michigan Fish Commission; H. N. Smith, Washington, United States Fish Commission; George H. Welsch and Louis Struebler, Pennsylvania Fish Commission. The Anglers' Association of St. Lawrence River, including R. P. Grant, treasurer; W. H. Thompson, secretary; G. W. Skinner, of executive committee; Hon. E. B. Buckley, H. S. Folger. Members of the local Cheaper Fish Food Association, including Senator McNaughton, ex Congressman Baker, Postmaster Reynolds, W. F. Cogswell, W. F. Balkam, Geo. Darling, L. P. Ross, Monroe Green and James Annin of Caledonia. Senator McNaughton spoke in appreciation of the purposes of the meeting. It was decided to prepare a resolution asking Congress to provide for a complete examination of the Great Lakes with respect to their fish supply; a resolution was adopted favoring laws in the several States forbidding the taking of salmon trout under 2lbs., bass under 1lb., and blue pike under 4lb. weight. Another resolution was adopted as follows:

Resolved, That the members of this committee from the Dominion and the States be requested to examine the text of the Game and Fish Code prepared by the New York Commission and consider the same in regard to the applicability of the same to their purposes, and to indicate what provisions may be acceptable and what changes they may deem advisable to meet their particular wants, so that at the final meeting it may be found what final changes may be desired.

A meeting will be held in Hamilton.

SALMON TROUT OF THE YELLOWSTONE.—Livingston, Montana, Nov. 9.—The largest salmon trout ever captured in the Yellowstone River was caught this week two miles below this city with hook and line. The specimen weighs 8 lbs. 5 ozs., and is 35 in. long. It will be sent by Mr. Weitzstein, of this place, to Rochester, N. Y., for mounting. —LIVINGSTON.

"HOW LONG WILL TROUT LIVE?" we asked Mr. Thomas Andrews, the well-known fish breeder, who says: "I knew a man whose father put a trout 14 lbs. into a well; after twenty-five years the fish was taken out weighing less than 1lb." —*Fishing Gazette, London.*

Fishculture.

TROUT AND SALMON IN MEXICO.

UNDER the supervision of Señor E. Cházari the Mexican Government has three fishcultural establishments, which have received from time to time since 1855 supplies of eggs and fish from the U. S. Fish Commission. The most important of these hatcheries, located in the District of Lerma, has a capacity of 40,000 liters of water a minute with a temperature of 50deg. Fahrenheit in winter, and sometimes reaching 60deg. at mid-day in summer. Here are to be found 7,000 rainbow trout, 1,000 brook trout (*fontinalis*), 500 lake trout (*namaycush*), 9,000 quinnat or California salmon, a few Von Behr trout or brown trout (*Salmo fario*), and 15,000 carp.

A second establishment in the hacienda of La Condesa, Federal District, with a supply of 150 gallons of spring water per minute, at a temperature of 60 to 68deg. Fahrenheit, contains 20,000 carp, about 20,000 goldfish, and a few red-eye perch, all of which were obtained from the United States.

The third hatchery, in the hacienda of Asencion, is supplied with river water, highly oxygenated, cold at night and warmer at mid-day. This is devoted to carp which yielded about 10,000 young in 1890, and these when seven months old weighed from 4 to 6oz., a slow growth on account of the low temperature of the water.

Carp have proved rather delicate in the cold spring water of the region, but some of the breeding fish now weigh 9 or 10lbs. The fish have been fed on earthworms and crushed boiled corn. The first public distribution will be made during the coming winter.

Lake trout eggs received in 1890 yielded 500 fry, which have not grown rapidly, averaging now only 6oz. in weight. The species is very difficult to rear in Mexico.

Rainbow trout eggs were obtained from California in the winter of 1888. From these 5,000 young were reared, among the product are fish measuring 28lb. and weighing 9lbs., while the average weight is fully 2lbs. In December, 1890, some of the fish spawned and furnished 50,000 eggs, which yielded 25,000 healthy fry. The young were fed on cooked flesh and blood, and their development was wonderfully rapid. Their natural reproduction in large numbers shows that the species is well adapted to certain Mexican waters.

Brook trout forwarded in March, 1889, did not thrive very well, but some examples reared in the establishment now weigh 2lbs. In December, 1890, some females were heavy with eggs, but no males entered the spawning races, and the attempt to cross fertilize with milt of the rainbow was unsuccessful. Some eggs obtained in January, 1891, suffered less during the critical periods, and about 2,000 young are now developing from them.

Quinnat salmon seem better adapted to the region than any other of the family. The eggs received in October, 1890, produced healthy fry, of which 9,000 now remain. Their average weight is 3oz. They are fed on flesh mixed with cooked blood.

Red-eye perch received in 1889 have not grown much, weighing only 5 to 6oz. each, and they have not spawned. The food given them is earth worms.

Tench obtained in 1887 and 1889 have merely held their own, some of them now weighing 2lbs., others not more than ½lb., and no spawning has occurred.

Goldfish have done reasonably well, some of them spawning at the age of 7mos.

The most gratifying results have been obtained with the rainbow trout, and Señor Cházari is highly pleased also with the growth and condition of the California salmon.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Syllene" and other competent authorities to be the best treatise on the subject extant.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points. —Adn.

INTERNATIONAL FIELD TRIALS CLUB.

THIRD ANNUAL.

CHATHAM, Ont., Nov. 10.—It is probably correct enough to speak of the Chatham meeting of this fall as the third annual meeting of the International Field Trials Club, for although the latter has held but one trial previous to this, it is the surviving spirit of the meeting held first under the then existing trials branch of the Canadian Kennel Club. The International Club, *née* Canadian, changed and widened its purpose with its name. The widening of the name entitles it to about a two-column head from a printer's standpoint. In the significance of its fame, now growing, this noble little club calls for far more room than that. In the short term of its existence it has pushed quite into the place of notice, and must be remembered fully by all sportsmen of this continent who have an interest in the trials circuit. In the two meetings which it has conducted to successful close it has certainly developed strong showing of good pointers and setters, as witness the remarkable quality of last year's entry, and it has at once established one fact at least, namely, that it is far from easy to win at Chatham trials. Beyond this lie the further facts of good officers, clear membership, unselfish enthusiasm in spirit, a town furnishing abundant and comfortable accommodations, and ground well stocked enough and pleasant for the running. It is hard to conceive of any but a flattering future for this trials club. Just now the gentlemen who own field dogs are asked to go to the remote South if they care to enter them in competition for the most considerable stakes. The reason for this is not obvious. The South does not furnish a central meeting ground for those who enter dogs there—at High Point, for instance. In point of accommodations, character of country and abundance of birds, it is a grave question whether Ohio could not furnish better and more desirable qualities of attraction, to say nothing of its being altogether more convenient and central. Some day the big meetings of the setters and pointers will shift northward. In that day the International Club will have an additional prominence and interest. This year it can offer only \$75 to the winner of the All-Aged and \$40 to the Derby first, but purse and entry are bound to grow, and the time will come when the States dogs will make a far larger showing than the two or three which make the total showing for the country below and west of the narrow Detroit River.

Mr. Thos. Johnson, all the way down from Winnipeg again, has only three with him, but these should be good. In the setter bitch Manitoba Patti he has what he believes to be the fastest dog in the Dominion. That popular favorite, the pointer bitch Ightfield Blithe, is also here. Two years ago I stated Mr. Johnson's intention of making a gift of this beautiful little bitch to Mr. Amory R. Starr, of Texas. Mr. Johnson never so presented her, for the simple reason that Mr. Starr would not accept so valuable a gift. Ightfield Upton, Mr. Johnson's third, is a grand big pointer, fit to go through a cover of rail fences and carpet tacks.

Mr. W. B. Wells, of Chatham, the secretary of the club, would scarcely enter poor ones, and should offer hot company. He has three in the All-Aged, Malone, Luke of Cambrian, and in the Derby will stand upon his Toledo Blade—Cambrian stock, of which he thinks rightly well.

Mr. T. J. Davey, of London, is standing a great lot of quizzing about his Gothic black pointer Lucky Deal, which should prove a good courser, at least, and trained dog enough for that; but he picks the winner in Canadian Jester, and shows also two pointers, Lady Gay Spanker and Axtel King Don, which seem genuine good ones at this writing. Yet another excellent pointer, in many regards, is Count Graphic, but of training for which Mr. Milkins is not over sanguine.

Only one Irish setter comes to notice, Dan O'Connell, entered by Mr. Louis N. Hilsendegen, of Detroit. The working of this dog is awaited with interest. He is confidently called far better than his sire, Sarsfield, though what that may imply is something wide. Dan is much of a specimen. There are, I believe, but two Gordons in the lot, Mr. J. L. Campbell's Pendennis, in the Derby, and his Gordo, in the All-Aged.

The drawings were sent in for last week's issue, and it was then stated that the judges of the meeting would be Mr. John Davidson and Mr. L. H. Smith. Lately Mr. Davidson had an accident with a horse which he was leading, and hurt his arm, stiffening it badly, and since then has had the further misfortune to jar or strain his leg in jumping over a fence, so that he is more nearly crippled than any one ever saw him before, though still able, he protests, to go.

The intention is to take the boat up the river daily five or six miles, working not over two or three miles from the river. This was the plan last year, and it obviates long and muddy rides over the country roads. To-day, however, the rain, heavy and continuous, put an end to all thought of going afield, and no start was made by boat or team. The downfall continued throughout the day, and all were obliged to seek amusement indoors. To this Mr. Wells' little negro stable boy, "Oleander," has contributed largely. Oleander is a genuine lover of a dog, and shows strong proclivities toward being an all-around "sport." He is helping

Mr. Johnson about his dogs, and the latter has made quite friends with him.

"Now, Olie," said Mr. Johnson to him to-day, "you're growing up, and you'll be looking for a calling before long to follow. Tell me, what sort of profession would you rather have?"

Olie cast one enraptured look on Mr. Johnson's well-filled cords and leggings, and replied, unhesitatingly:

"Spot'sman, sah!" Indeed, he might have chosen worse. Canada and the States are practically one country, in sportsmanship at least, all along this region, but I noticed one peculiarity of the land this morning. In Chicago hotels they call you briefly by electricity or gruffly by a negro. The latter will jar a panel in your door and say in a harsh tone of voice, "S' glock! g' up!" This morning I heard far down the hall the plaintive voice of the old porter at the Rankin House, where most of the attendants are stopping. His call was not authoritative, but beseeching, "Six o'clock, please sir," he called, distant and close; "six o'clock, please sir." The very novelty of this woke me up, and I met him at my door, or on the other side of it.

"Say," said I.

"Yes, sir," said he.

"What's that you said?"

"Six o'clock, please sir."

"Is there any choice about it?"

"I beg pardon, sir."

"Why, I mean if it doesn't make any difference to you, it would be just as well, and would please me better, if it wasn't 6 o'clock at all."

"H'oh no, h'oh yes, sir!" (This struck me as being diplomacy in pure form; but through the dark and the door I could see the puzzled look on his face.)

"Moreover," said I, looking at my watch, "by Chicago time," which is good enough for anybody, it is only 5 o'clock."

A moment of thought followed, and then his face brightened. I could feel. "You'r a'nour further h' east, sir," said he. "It's 6 o'clock, please sir."

I like this way of being called. It is so much gentler and easier than the electricity or the Chicago negro, and starts one on the day with so much less of wrath and revenge in his heart. I wish they could learn politeness in Chicago.

To-morrow, if this rain keeps up, we will not get up till 10 o'clock, please sir.

At the club's annual meeting to-night little was done beyond routine work and the drawings in the All-Aged. It was pointed out that under the rules of running, no credit should be given a dog for retrieving.

The following were the officers chosen for the ensuing year: President, Sheriff Mercer, of Chatham, the present incumbent; First Vice-President, Thomas Johnson, of Winnipeg; Second Vice-President, Dr. Totter, of Forest; Secretary and Treasurer, W. B. Wells, of Chatham, the present incumbent. Committee, L. H. Smith, London; John Davidson, Monroe, Mich.; Montague Smith, Forest; L. Hilsendegen, Detroit; H. C. Eddy, Detroit; T. J. Davey, London; J. Nicholls, S. Holmes. Jos. Kime and C. R. Atkinson, of Chatham.

The rules, as revised into the spotting system, may be briefly outlined by the following, taken from Rule 9: "Dogs shall be drawn by lot and numbered in the order drawn. Each dog shall run in the first series as a brace with the next available dog in that order. After the first series has been run through, the judges shall announce which dogs they wish to see run again, and order of running them. Discretion is given the judges to run the dogs as often and in what order they think best, until they are satisfied which are the best dogs; but they may announce the winners any time after the second series, provided the first and second prize winners shall have run together."

WEDNESDAY, NOV. 11.

The day dawned clear and cool. The going was bad from yesterday's rain. In the afternoon it became cloudy and rain fell, with a raw wind. The day was not a good one for field work. The average of the performance was not high at all.

Yesterday Mr. Johnson got in from Indiana his second setter bitch, Manitou Pet, and so made good his provisional entry of her.

Mr. Davidson had trouble with his injured leg all day and found the walking difficult, but was ably supplemented by the other two judges, Mr. Smith and Dr. Nichols.

The trip up the river was made on the tugboat Vick, a craft not noted for speed. It was 8:50 when the first brace went down in the Derby.

Derby, First Series.

PENDENNIS—DAPHNE.

Pendennis is a Gordon, the property of Mr. J. L. Campbell, and was handled by J. McGregor. Daphne was handled by Mr. W. B. Wells, her owner. Neither showed much field quality. Daphne made game, Pendennis ran by and flushed. On scattered birds both were irresolute, Daphne under good control. Down 35m., and when ordered up it seemed plain that neither would get a further look in at the Derby.

SAM B.—LOU DIDO.

Mr. W. J. Bennett's pointer dog, handled by J. McGregor, and Mr. Jos. Kime's setter bitch, handled by owner. These worked on stubble brush. Barring a rather low head, Dido showed fair style, and was more independent than Sam. Sam made a bad flush on a bevy, up wind. On the scattered birds Sam pointed. Later he flushed, down wind, however. Dido backed his roading stop later. Dido flushed also. Sam flushed a bevy in a swale, sheer up wind, Dido backing his stop. Both under fair control. Down 45m.

LUKE—MAY I.

Two setters, Mr. Wells owns and handled Luke, May I. is owned by E. H. Gilman, of Detroit, and was handled by Huddleston. A merry brace enough. Luke carried a very high head and showed considerable ranging quality. The dogs were worked to a bevy started by the crowd, but were unfortunate on the scattered birds, getting little work, though many birds were started from the brush heaps. Down 35m.

RHWLAS—R. K.

Rhwlas is Mr. Davey's setter just over from England and was handled by his trainer, Hallam. J. McGregor handled the pointer R. K. for Mr. Tighe. The able training of Rhwlas was soon manifest. He quartered admirably, and was very businesslike, going a steady and machine-like, but not headlong gait. After leaving the stubble for the woods, Rhwlas roaded and pointed a bevy, R. K. passed to steal the point and flushed. Both steady to wing and under control. The scattered birds were wild, but crossing a log Rhwlas doubtless made a flush, though very steady to wing. Down 31m.

LUCKY DEAL—CARRIE.

Mr. Davey now came in for some more chaffing about his black pointer Lucky Deal, which he handled, Huddleston handling the setter bitch Carrie for Mr. Williamson. Lucky Deal showed fast, which led the unkind ones to point out to Mr. Davey that he had a good combined courser and pointer, invaluable for hares. Leaving the stubble for the slashings, Lucky pointed the lunch basket and later on was near by when a wild bevy went up, neither pointed nor flushed. Carrie pointed, standing high on a log over a brush heap, Lucky backing nicely. Carrie again made out a single, but flushed it clearly. Lucky flushed a single later, and again flushed unmistakably in a clump of briars by a log. Lucky ranged wide, but was obedient. Carrie seemed industrious,

and was under good control. Carried pointed and dropped to wing at order, and the brace were taken up. Down 31m.

ROGER—ROMNEY.

Mr. H. M. Kiff owns and handled the pointer Roger. Mr. Wells owns and handled Romney, another of his Toledo Blade-Cambriana puppies, said to be his best one. Romney seemed a good, independent and fearless worker, not so high in head carriage as his brother Luke. Roger failed to back Romney's roading stop, but Romney backed a similar short stop for Roger later. In a starting Roger made a grand point, staunch and decided, on a bevy at least thirty-five yards distant. Romney ran past and flushed in bad style indeed. Across a blank cornfield both dogs pointed a bevy. This was put up and again located, both dogs again pointing nicely. Romney a bit the steadier. Down 35m.

CENTRAL BANG—MANITOBA PATTI.

McGregor handled Central Bang, pointer, the setter being handled by Mr. Johnson, owner. The predictions of the latter as to the speed of his bitch appeared verified. Patti is the fastest one entered in the Derby, and a merrier and more independent ranger would be hard to find. She had been worked on quail only about a week, and the down stuff of the slashings proved new country for her and not of the best. Two bevs were put up, and the dogs worked to the scattered birds, where Patti established a point; Bang coming up, pointed also. Mr. Johnson fired and missed, both dogs steady to wing and shot at order. Bang pointed at side of bitch, and Patti backed. This was not worked out very well, but no bird was put up. Down 30m.

TICKY-TOCK—MANITOBA PET.

Both setters, Mr. Wells owns and handled Ticky-Tock. Mr. Johnson Manitoba Pet, the latter hardly acquainted with her handler, who has only had her on for one day. A bevy was put up and marked. Both dogs drew and pointed staunch at a brush heap. When the bevy rose, Tock sprang up on a log, but stopped at order. Pet seemed to need a sharp word or so at wing. Tock false pointed later. At a fence row a bird sprang ahead of the dogs. Pet broke in chasing, Tock following. Both stopped at command. Down 35m.

This closed the series. The judges now retired, and after consultation announced that the dogs wanted for the next series would be five brace, viz.: Sam H. and Roger, Lou Dido and May I., Rhwlas and Carrie, Romney and Manitoba Patti, Luke and Central Bang. This threw out Pendermis, Daphne, R. K., Lucky Deal, Ticky-Tock and Manitoba Pet. The owners could certainly not complain at this very liberal allowance, for under rigid comparisons, two or three more would have gone out also.

Derby, Second Series.

SAM H.—ROGER.

Much alike in range, but both lacking decision in locating their birds. Roger flushed a bevy at a fence, and later did something very like the same thing over the brow of the hill. Sam pattered along the footscent, Roger backing his pauses three times. A third bevy was found in a weedy swale, Sam flushing; Roger pointing a single, but unsteady to wing. Working up the swale, Roger pointed the footscent, giving Sam a great chance on the bevy, which had lit close by. The latter could make little of it. Roger was brought up, and here went ahead, and finally pointed the bevy, none too snappily or decisively. He was not very steady to wing, but stopped at order. Down 13m.

LOU DIDO—MAY I.

A pretty heat. Dido not so good as in her first heat, and May I. better. Dido at times carried a very low nose in making out her game. May was brilliant at times in picking out her birds. May flushed a bevy and later a single. May pointed handsomely, dropping flat on her belly in her peculiar style. Dido backed nicely. Huddleston killed, dogs steady to word. May pointed running birds, Dido backing. May pointed again, sharply, falling flat as before, and soon dropped elegantly to get another point, and was steady to wing. Dido was not in this, and indeed perhaps put up a bird beyond a log, just as May pointed it. Dido pointed very irresolutely, probably a running bird, May backing, turned half double. Dido did not show much disposition to back during the heat, and was not what was expected of her. Down 25m.

RHWLAS—CARRIE.

Rhwlas kept up his steady, old-fashioned way of going, not brilliant, but desirable. Both dogs obedient. Both stood irresolute on a footscent. Could not make out a bird. Carrie flushed and chased 50ft., stopping at command. They passed into a weedy edge of a field, and here Rhwlas roaded. Carrie was 25yds. to the right. Rhwlas straitened on a point of questionable merit just as the bevy rose. The birds got up about half way between the dogs, and it could not be said that Carrie flushed. Hallam shot, Rhwlas remaining in place steady as a rock. Rhwlas handles well, and needs small admonishing. Down 30m.

ROMNEY—MANITOBA PATTI.

Patti went off with her inimitable dash. In vim, range and the natural disposition of the hunting dog, she appeared the superior of any dog in the stake, though not broken well to this work. On the stubble she was so fast that she kept Romney apparently trailing, though the latter is a good free ranger. The dogs got no bevy, but on singles Romney made two flushes, and Patti also probably one, she needing considerable admonishment at wing. Romney back Patti's brief pause on foot scent. This was about all the work they got, and both dogs did a lot of running about, apparently with no idea of what they were there for. At dusk, having been down 45m., they were taken up and the party repaired to the boat, and had a very cold and slow ride down the river Thames, with the additional delay of going aground in midstream—an accident which might have become serious, or laughable, as the tug carried no small boat.

To-day the work was very largely over heavy slashings, ground covered with logs, stumps and dense brambles or the like. The dogs could not work well. Range was something not to be tested. Much of the time it was difficult to see the dogs unless right upon them. It can not be said that the country used to day is adapted to field trial purposes. The birds were abundant enough.

THURSDAY, NOV. 12.

Weather cloudy and raw, the birds not moving much. Running was continued in the Derby, the first brace going down at 9:15.

ROMNEY—MANITOBA PATTI.

Patti held her gait, Romney trailing after her speed. No birds found. Down 17m.

LUKE—CENTRAL BANG.

For some reason the judges seemed to wish to see Central Bang perform again. He showed small quality, was not positive, and showed a disposition to keep his nose in close communion with the earth. Luke was high-headed and rangier, showing the effect of the breast-high cover on which he was first broken in Manitoba. Down 10m.

ROMNEY—MANITOBA PATTI.

In ordering this brace down again Mr. Davidson explained that they had not yet been seen sufficiently on birds. They were down 12m. more. Romney false pointed, Patti backing uncertainly. Patti had before covered the ground where Romney made his point. No further work was had.

It now appeared that the running was to be conducted

practically upon the heat system. The fact of the total of previous work seemed lost sight of in this brace, and it further seemed that what should be the spirit of puppy trials, namely, the search for natural quality rather than for a few points here or there, had been also overlooked. No hardship, however, was worked beyond a slight loss of time, for Romney never came up again. Doubtless the judges found some reason for wishing him down so long. Others could not.

This closed the series. The announcement for the third series showed that the judges had determined to give everybody a run for their money. They called up May I. and Rhwlas, Lou Dido and Luke, Carrie and Manitoba Patti.

Derby, Third Series.

MAY I.—RHWLAS.

Rhwlas kept up his methodical quartering. He is not brilliant, but well trained. May was also industrious. May false pointed, Rhwlas called up refused glancingly to back. Further on in the slashing there was some work which caused discussion. The dogs made game crossing the open flat, Rhwlas establishing game first. May was the first to point, but Rhwlas nearly as quick. Rhwlas drew by May, but on his own nose and a little to one side. He then pointed, drew up and made his bevy handsomely. Many thought he stole May's point, but this was not thought the case by the judges, who were closer up, and who credited Rhwlas with first making game. Both dogs steady to wing. Down 20m.

LOU DIDO—LUKE.

Dido still with head too low. Luke ranging well in his peculiar high-headed style and showing some quality. Luke false pointed. Dido lay meantime on the grass, and a bird went up not five feet from her nose. Dido flushed, and her work on the scattered birds was not good, she losing three opportunities. Down 13m.

CARRIE—MANITOBA PATTI.

Carrie flushed a single. Patti pointed a bevy and Carrie pointed a single at the same time. Huddleston killed the bird, both dogs steady. Moving on, Carrie pointed a bevy. Patti was called up to back, but was found pointing a single. Down 17m.

Derby, Fourth Series.

Only one brace ordered down.

MAY I.—LUKE.

May pointed at brush heap, Luke going by her direct, much to blame. Down 6m.

Derby, Final.

LUKE—MANITOBA PATTI.

Only one brace here also, and why they were ever put down at all must probably remain a mystery. A bevy was flushed wide of the dogs, but no work whatever was done. Patti simply further proved what she had already proved much earlier, that she was the superior in ranging quality. Down 13m.

The judges now made known their decision for the Derby. They placed Rhwlas first, May I. second, Luke third, Manitoba Patti fourth.

It may look ill for one to differ from three such able judges, but it certainly did seem that, laying aside all scale of points and following the spirit and intention of these rules, the proper order of these puppies should have been Rhwlas first, Manitoba Patti second, May I. third and Luke fourth. The question really lay between Rhwlas and Patti as to the best puppy in the stake. Rhwlas has worked a season before this, and his place on his total work here belonged to him rightly, Patti's one week or less on quail not having given her enough insight into this style of hunting, though her quality as a field dog is unquestionably high class.

In many ways the country over which the running has been conducted is an unfortunate one for field trials, and this impression becomes confirmed the more as the week passes. The birds are generally found or go to slashings, full of logs and brush heaps. The wide, confident ranging which most sportsmen prefer is out of place here. The killing dog must be one which will work out the brush heaps like a spaniel. It is easy to let a lot of points thus acquired outweigh qualities which would roll up far more points in a proper country for trial work. It is doubtful whether the trials will be held on these grounds next year. In fact a movement is now on foot to secure a good strip of territory elsewhere, and this has a prospect of success.

All-Ages Stake, First Series.

WESTMINSTER DRAKE—MATANE.

Drake, a pointer, handled by Hallan; Mr. Wells, owner, handling the setter Matane. Drake showed a slashing, confident gait, was fearless of cover, and displayed a very good style in covering his ground. Drake pointed at a fence by the roadside, Matane coming around and trying to commit highway on his point, and making an ugly flush in the attempt. After 18m. of work the dogs were taken up while the party took lunch, going down again at 12:30. Matane false pointed. Drake did not back. Matane's tail was going. Some dogs will not back under such circumstances. Drake seemed independent and cast off for the bevy, making game in the swale near by. Birds were flushed in the brush across the swale. Matane false pointed, wagging his tail. Drake passed in ahead, not backing. Matane pointed a bevy, and Drake, brought around to back, went in ahead, doing some work far from creditable, as he got no point, though several birds got up near by. Down 16m., or 34m. in all.

LADY PATCH—AXTEL KING DON.

Mr. Jos. Kime handled Lady Patch, setter, Hallan handling the pointer Don for Mr. Darby. Much alike in range, though Patch faced the cover more honestly. Both industrious and obedient. Don showed a rather better carriage and style in covering a stubble on which they were turned down. Patch pointed a bevy on the stubble handsomely. Don making a long back, or, more properly, a drop to order, as he was not allowed to go up and back standing. Kime shot and missed. Both dogs steady. On the scattered birds some pretty work was done. Don pointed a bird just as a spewer flushed it. On the green wheat Don crouched to a flyish point, Patch backing none too well, and Don not perfectly steady to shot. Don again nalled a bird on the wheat, but got too close and flushed. Both dogs now pointed beautifully, both steady to wing. All this was in the open. A merry brace, though Patch impressed one as not having steam enough to stay with a real good one. Down 33m.

MANITOBA PET—LADY GAY SPANKER.

Mr. Johnson owns and handled Pet, setter, the same puppy he had in the Derby. Mr. Davey owns and handled Lady Gay Spanker. Pet poked up a bird and ran around the thicket to see which way it was going. Mr. Johnson was disgusted. "She doesn't belong in here," said he, and forthwith took her up himself. Down 18m.

CANADIAN JESTER—COUNT GRAPHIC.

Mr. Davey, owner, handled the setter Jester. Mr. Milkins, owner, handling the pointer Count Graphic. They were down for 10m., finding nothing, and then followed a wearisome walk of nearly an hour, the dogs most of the time on chain. Finally a bevy was marked. Jester showed himself a very useful quail dog, was under perfect control and very confident and snappy on singles. He whirled to a point on a single, and then nalled another, Count backing when brought up, both steady to wing. Count ran right into a flush, putting up five birds. Jester false pointed, Count not backing, but going in ahead. Count pointed false and Jester made a very elegant back. Mr. Milkins now

declared that his dog was not sufficiently trained for the work and took him up. Down 30m. in all.

DART—LUKE.

Mr. A. Mathers, owner, handled Dart, pointer, Mr. W. B. Wells, owner, handling Luke. The latter won third in the Derby, but should hardly go down again in the All-Ages. Both pointed a bevy, Dart a bit unsteady to Mr. Mathers' shot. Dart then worked two points out of a brush heap, Luke not doing much at it. Dart flushed a single on grass, jumped up at it as it flew over and tried to catch it. Luke flushed at a brush pile, and later pointed false. Down 30m.

CAMBRIANA—IGHTFIELD BLITHE.

Mr. Wells handled his own setter bitch, and Mr. Johnson, owner, handling the pointer Blithe. The latter is simply a professional beauty of a pointer, and a merrier, pleasanter little worker never went down. She showed a lot of pace and a model style. Mr. Wells' brood bitch Cambriana also reminded observers that we were now come down to dogs which would show some ability. She had a head of her own, and cut out her own work cleverly. In the bush Blithe made a very fetching point, but, unfortunately, there was nothing in it. Cambriana backed when she came up on one side. Blithe stopped again and Cambriana backed, but Blithe went on, no bird being located. Mr. Davidson marked a bird, and both dogs worked within 20ft. of it. Mr. Wells flushing it when Blithe was not 10ft. from it. In a log pile Blithe pointed staunch, Cambriana backing beautifully the instant she caught sight. Both steady to Mr. Johnson's shot. On a slashing Blithe pointed, but though no bird was found, not much time was given for that. A squirrel ran not far off. Mr. Johnson hardly spoke to Blithe throughout her work, her obedience being perfect. Cambriana had more handling, but Mr. Wells seemed far more confident in his old bit than he had been with her puppies. Down 50m.

IGHTFIELD UPTON—ROSE RAPID II.

Mr. Johnson, owner, handled the pointer Upton, Mr. Geo. Kine, owner, handling Rose, a setter. They made a very fair showing. Upton, like all of Mr. Johnson's stock, seemed a smashing goer in the open, and was admirably broke. Rose also was capable and obedient. Both pointed at brush, side by side. As the party came up, Rose left her point to go around closer. Kine shot and killed, both dogs steady. Upton later pointing dead nicely. Rose pointed. Rose then flushed and dropped. Rose false pointed at a brush heap, Upton backing, but leaving soon. Upton flushed three birds in some ragweeds, few seeing this. Rose roaded along the railway track, and a bevy was walked up. Down 40m. The day's runnings closed.

FRIDAY, NOV. 13.

A light wind and hazy sky, temperature falling toward noon. The birds seemed uneasy and restless all day, so that, although it was not a good scenting day, plenty of them were found.

Dr. Nicholls, one of the judges, was absent. Mr. Davidson and Mr. Smith, by consent of owners, continued without a third judge.

As a day of sport in the field, and one of high class work, to-day was a memorable one. It is much a question whether a better was ever seen at any of the larger meetings. All predictions as to the excellent quality of the dogs entered this year were fully justified. The Derby of the International this year was dull, but the All-Aged was brilliant in the extreme. It ended in the development of two dogs which will stand favorably any company, and of these one is fit to go into any field competition with the odds much in her favor. To-night no one in Chatham will have anything but Blithe, and Mr. Johnson is justly a very happy man indeed. Of this engaging little bitch Mr. Davidson, who should know a field dog if any one, said to-night: "She is the best pointer in America. I have never seen her work surpassed, and if I owned her money could not buy her." This is high and valuable praise. The result of to-day fully confirms the high opinions which the writer formed of Ightfield Blithe two years ago when reporting these trials. Last year she was only beaten by the best of the Lonsdale dogs, and beat one (Juice) which later beat the best in the lower trials of the States. This year her work is brilliant almost to the point of absolute faultlessness, showing, therefore, the extreme consistency of her performance. This is all the more worthy of notice when it is stated that Oct. 15 she had a litter of puppies, and was suckling on the 22d. Mr. Johnson destroyed the litter in order to bring Blithe here to the trials, which neck-or-nothing act lost him probably \$500 worth of property, but afforded us all the pleasure of seeing some field work for whose equal we may have to wait very long.

Canadian Jester, second, is Mr. Davey's stud dog. He is a clever and very safe performer, finely broken and also a killing game dog. At close work he is quick, confident and sure, and though his performance is not so stirring and brilliant as that of Blithe, he shows an equal bird sense and is a field dog of the utmost value and usefulness.

As to first in the All-Aged, there could be no question; as to second there was no question. As to third it became more difficult, but there was no doubt that Westminster Drake deserved it as he got it. As to fourth, there were half a dozen to choose from. Lady Patch and Cambriana were given a divided fourth. I can not think that the former belonged there, and violently bad as was Ightfield Upton's work to-day, should prefer him for the marked dash and field efficiency from which he only incidentally departed. Mr. Davidson holds Cambriana very much of a setter, and liked her work exceedingly. She is a good middle class game dog, and at this close brush and log work is quite at home. She backs beautifully, and is staunch and steady, but is not a very bold and clever ranger. With deference to those more able to pronounce, it would still seem that in these field trials we should be reaching out after the high class actual type of field dog, such as we should like in the stud, and not for the few artificial points of a scale, gained by a circumscribed experience in a certain style of country.

If we may criticise the judges—and if we may not, then for what purpose are judges given us? it would seem that here they kept too close to the old scale of points and to the heat system, looking at one dog as against its running mate and not at one dog as against them all. It took nineteen heats to decide the All-Aged, where it would have taken only fifteen under the heat system. This is not against the record, but had the initial heats been longer than the usual limit, the remaining ones could have been fewer, and we should not be obliged to feel, as was unavoidable in the final runnings for the lower places, that one dog was running directly against the other, and that a point one way or the other on the artificial scale would decide the matter as soon as it was made. This was the individual against the type, the meat dog against the dog which even the meat dog's owner would rather breed from. I do not believe that this was what the spotting system contemplated. As was stated above, there were several to choose from at the bottom round, and all judging or criticism, no matter on what point, is after all only a matter of human opinion, the differences in which make the basis of all trials, and indeed of all sport in any form, yet it seems to me that on a general look at the lot, as evidenced by their total work, would place Ightfield Blithe first, Canadian Jester second, Westminster Drake third, Axtel King Don fourth. The latter dog, even in the roughest country, covered more territory in better style and gait, and showed as a better class field dog than any of three or four which beat him on the heat system. At the fourth place, however, there were a half dozen

different opinions among those who might well be entitled to an opinion. Thus it was thought by some that Matane was better than Cambriana. This I myself do not think at all.

This is much a membership meeting, owners handling to-day exclusively, except the handlers Mathers and Hallam. Tom Hallam is an English boy, of whom we shall hear well in the States trials later. He is now employed by Mr. Davey, and only came over last August. In England he trained in the kennels of A. P. Heywood Lonsdale, Esq., and there trained Ightfield Upton, Rhwlas and others in the old country, and did the preliminary training of Ightfield Blithe before she was given to Cameron to finish. He won the 5 guineas purse for the best handler in the English field trials last year. Hallam is a very quiet, fair and pleasant handler. Indeed, this meeting has been an exceptionally pleasant one in every way, and to-day a fitting close to it. Very just is the remark of the "gentleman from Mumblepeg"—as Mr. Thos. Johnson is called here—"I shall remember this day of all days so long as I live."

The following are the runnings:

All-Ages Stake, First Series.

LADY SPOT—DAN O'CONNELL.

Dr. J. Kime, owner, handled the English setter Spot, A. Mathers handling the Irish setter Dan for Mr. L. Hilsendegen, of Detroit. The dogs blundered upon a bevy, Spot ahead, neither noticing much till the birds rose, both then steady. Spot pointed a single by a log, Dan, coming around the other end, drew up and pointed alongside, not backing. Both steady to Mathers' shot. Further on Dan nosed along a log, making game uncertainly, and put a bird off. From his nose, he having the wind in his favor. He was steady, but did not drop to wing. Spot was of fair range and intelligence, Dan being slowish and with the bad habit of a rather low nose. Down 30m.

All-Ages Stake, Second Series.

WESTMINSTER DRAKE—IGHTFIELD UPTON.

In the open these showed a fine slashing pair of big pointers. Upton's stride is the longer, he going faster than he looks, and he stayed out better and more independently. Drake often coming back to his handler. In a slashing a bevy was flushed, probably by, as the dogs were feathering along the bush, and their flight put up a second bevy. Upton later flushed a single out of a bevy, both pointed then and the bevy went up. Drake pointed a single, Upton running up not backing, and pointed alongside. Drake pointed on footscut, Upton backing unsteadily on order to stop. Drake pointed again, Upton acting very rank indeed about the back and putting himself out of it in comparison. Down 42m.

MATANE—AXTEL KING DON.

After a spinning out on the flat, these were brought up to a marked bevy. They did ill at a brush heap, Matane showing faint sign of game and Axtel walking into the bevy at the treetop. Both steady to wing. Axtel later pointed by a log, Matane backing to one side. The judges seemed to think Matane had the point, and ordered Mr. Wells to find his bird. This he could not do, and meantime Axtel moved on and pointed, probably the same bird, in a clump of briars. Matane came around and the bird flushed, Matane dropping to wing, Axtel steady. Axtel dropped to wing as a flushed bird passed close, but it is probable that he did not flush this bird himself, for Hallam was walking near by. Axtel ranged exceedingly well, and was industrious and obedient, in a fallen tree Matane pointed, Mr. Wells not seeing the bird, which went out behind him as he was tramping the brushy top for it. The dogs got then a spin on stubble. Down 25m.

LADY PATCH—JESTER.

These got down on a nice stubble field. Soon thereafter there transpired as pretty a field picture as ever was seen. Jester pointed on the hillside. Lady Patch, fully 50yds. away, whirled, saw him and fell into a beautiful back, facing him directly. Over 100yds. on the lower open ground came on several owners and spectators with the other dogs, Mr. Johnson leading Blithe and Upton. The point and back on the hill not being broken, Mr. Johnson cast off the collars from his birds. Blithe took a step or two forward, caught sight of Jester, and froze into an elegant back. Upton, a bit to her rear, backed Blithe steadily, and there the four stood, over a triangle 50x100yds. It was a beautiful sight. The unfortunate part was, however, that Jester could make out no bird when ordered on. On a cornfield later Jester made game and pointed a trifle the first, the bitch more uncertain and looking once or twice to him for confirmation of her nose. Jester worked up the roading faster and more direct, and located the bevy nicely. The latter started a second bevy when put up. Down 15m.

LADY GAY SPANKER—IGHTFIELD BLITHE.

The prettiest heat of the entire meeting, perhaps, unless we except the final between Jester and Blithe. Both these bitches showed merry, busy workers and elicited enthusiasm. Blithe ran a faultless heat. Her rapidity, brilliancy and absolute reliance on herself were perfect. After a spin on the corn the dogs were worked to a brushy fence, where the two former bevy had been marked. Mr. Darcy had not marked the birds down, and Mr. Johnson politely showed him just where they lay. The dogs crossed the fence, came back to order, and went racing up the knoll, Blithe ahead. Bang! she went into a whirling point, one foot up—simply lovely. Gay backed nicely. The bevy went out, and the dogs, ordered on, raced again to the top of the knoll, Gay a trifle ahead, and again smash! they went into a double point, Blithe a bit the quicker, and falling with her hind legs spread out like a frog. Any amount of style was in this work. Again the birds were put out, and again the dogs were ordered on, racing down the opposite side of the knoll, as merry a pair as ever went. Again they got the scent, and wheeled square into a noble point, Blithe ahead and with the honors, Gay very probably wheeling, at first instance, to Blithe's example, and then at once making her own point. Gay did not drop to order. They were taken back over the knoll, and Blithe nailed a single like a flash, making a simply ideal picture as she stood. Gay was not steady to back and moved up. Mr. Johnson, on going up toward Blithe, put his hand on Gay, his opponent's dog, and steadied her down, an act very characteristic of the man. "I didn't want her to do anything bad," said he. Mr. Johnson shot and missed, and both were perfectly steady. Gay evidently needed more work. Down 13m.

DART—ROSE RAPID II.

Rose false pointed, Dart would not back, but broke in. The brace might have come up then. Rose flushed and dropped to order, later on breaking in after a single which passed over her. Rose pointed a bevy, Dart quite indifferent, though directly down wind, and not dropping to wing. Down 6m.

CAMBRIANA—LADY SPOT.

Lady made game and worked understandingly to a bevy point, Cambriana backing handsomely, both steady to shot. Cambriana pointed, Lady not steady at back or wing. Cambriana pointed and dropped down. Lady brought up close and backing none too readily. Cambriana false pointed, Lady backing. Cambriana again made game, Mr. Wells claiming a point just as the birds rose. Down 30m.

All-Ages, Third Series.

The judges, after a rather confusing announcement, in which they called for Rose and Drake, Lady Spot and Axtel, Lady Gay Spanker and Cambriana, finally got out their

dogs as follows: Lady Patch and Drake, Rose and Axtel, Lady Gay Spanker and Cambriana.

LADY PATCH—WESTMINSTER DRAKE.

Drake pointed, but moved on, Patch following his example merely. At a log Patch made game, but was not sure of her nose, though three birds flew out beyond. She then flushed four birds under nose in a patch of briars. Drake pointed, Patch backing, but the latter passed by and flushed three birds. Patch pointed, roading. They feathered on, and Drake pointed, Patch backed, but left her back and drew by, but not rattling Drake. No birds were found to this point, but just beyond the fence Patch flushed a single, probably the runner. Down 15m.

AXTEL KING DON—ROSE RAPID II.

Don pointed but moved on. Meantime Rose, called to back, did not come up. Mr. Kine claimed a point for her, and flushed three birds, this, however, 30ft. across wind from her. Axtel still showed considerable hunting quality, ranging independently and with sense. Down 15m.

LADY GAY SPANKER—CAMBRIANA.

Cambriana made game. Both dogs climbed on the brush pile and a bird went out, another later. The hunt for a point by one or the other went on. Both dogs walked into a bevy, Cambriana ahead, she dropping only to order. No actual work of notice. Down 20m.

All-Ages Stake, Fourth Series.

IGHTFIELD BLITHE—CANADIAN JESTER.

A bevy was marked in the woods and both made game. Blithe pointed and a bird went out, Jester backed. Blithe pointed by a log, her tail moving faintly, Jester backing nicely, but the birds were running. Blithe climbed on a log and pointed, standing on her head, but moved on along the trail. Jester now moved off to the right and pointed, moving on. Blithe pointed, standing up with her head poked through a fence, and a bird was seen to run to cover just beyond. This gave Blithe the right to go on to her game, but instead of this Jester was allowed to come up. Both dogs crossed the fence, and Jester pointed hard and fast. Blithe, crouching hot on her trail, passed Jester and went out of sight around a log. This could not be called a failure to back. The birds went up. The judges now ordered the dogs up. Time 17m.

While the judges retired to consult, and while everybody was standing around talking, no one noticed where Blithe was. Mr. Johnson, passing around the log, saw her standing stretched at full length, her front feet just reaching the log, her eyes glistening. At first he thought she was merely backing Jester, which was lying down near his former point, but when he went up he flushed several birds from the treetop. Thus the poor little bitch had been left standing in a most uncomfortable position, for fully four and perhaps five minutes. Blithe had all the reputation in the world with the spectators after that. She showed herself good in or out of harness. Her rapid, snappy work, with her positiveness and staunchness, placed her a high and easy first.

All-Ages Stakes, Fifth Series.

WESTMINSTER DRAKE—CAMBRIANA.

Drake made game, pointing just before the bevy rose, he steady to wing. In a little draw on a smooth pasture Drake pointed staunch. Cambriana stopped a moment, and then on the open pasture, in full view of the other's point, deliberately went by and stole the point. This was glaring, and enough to disturb any dog. Drake, however, was steady. Cambriana had previously been backing well. Her work on this was exceedingly rank, as the ground was perfectly open. Down 7m.

The long series of heats now came to an end, and the judges after consultation announced their decision in the All-Ages:

Ightfield Blithe first.

(Canadian Jester second.

Westminster Drake third.

Cambriana and Lady Patch divide fourth.

The Absolute.

Mr. A. P. Heywood Lonsdale, of England, offered a purse of \$25 for the absolute winner, the first in the Derby and the first in the All-Aged stakes to run. The judges at once called for

IGHTFIELD BLITHE—RHWLAS.

Rhwlas drew carefully and pointed; Blithe came up, sniffed at it and went on. No birds were found. On the stubble Blithe made game, and with faultless style rapidly and decisively roaded up, pointing her bevy in the corn. Meantime Rhwlas had also made game in the corn, but put them up, dropping to order. The remaining birds were running very fast up the corn field, and Rhwlas roaded on, careful, but very slow compared to Blithe's nervous accuracy. He pointed weakly just as a bird went up, dropping to order. He then worked alone up the corn field, and here showed not too much idea of it, for he left the corn for the stubble and got no point, though eight birds got up from time to time in the corn as the party moved on. Rhwlas pointed on a single marked down, but nosed up too close, his bird going out. Blithe came around in front in the high grass, not brought around to back, and perhaps not to special fault. Rhwlas is careful and is admirably under control, but cannot be called a dashing or brilliant performer. The latter is quite what Blithe is. The dogs were down 43m.

Ightfield Blithe won the Absolute.

The description of the dogs and order in which they ran may be seen in the following

SUMMARY.

INTERNATIONAL DERBY.

First Series.

Mr. J. L. Campbell's black and tan Gordon setter dog Pendennis (Beaumont—Becky Sharp)

ran with

Mr. W. B. Wells's black and tan English setter bitch Daphne (Toledo Blade—Cambriana).

Mr. W. J. Bennett's black and white pointer dog Sam H. (Sport—Dodo)

ran with

Dr. Jos. Kime's black and white setter bitch Lou Dido (Mingo—Lou Moll).

Mr. W. B. Wells's black, white and tan setter dog Luke (Toledo Blade—Cambriana)

ran with

Mr. E. H. Gilman's black and white setter bitch May I. (Tip Gladstone—Queen of Counts).

Mr. T. G. Davey's blue belton setter dog Rhwlas (Down—Scouidh)

ran with

Mr. W. H. Tighe's black and white pointer dog R. K. (Sport—Dodo).

Mr. T. G. Davey's black pointer bitch Lucky Deal (Luck of the Goat—Midget)

ran with

Mr. B. Williamson's black and white setter bitch Carrie (Darkey—Spark).

Mr. Herbert W. Kipp's lemon and white pointer dog Roger (Bang F—Nellie)

ran with

Mr. W. B. Wells's blue belton setter dog Romney (Toledo Blade—Cambriana).

Mr. J. W. Shaw's lemon and white pointer dog Central Bang (Trinkets' Cash—Van Bang)

ran with

Mr. Thos. Johnson blue belton setter bitch Manitoba Patti (Dick Bondhu—Manitoba Belle).

Mr. Thos. Johnson's blue belton setter bitch Manitoba Pet (Dick Bondhu—Manitoba Belle)

ran with

Mr. W. B. Wells's black and tan setter bitch Ticky-Tack (Toledo Blade—Cambriana).

Second Series.

Sam H. and Roger.
Lou Dido and May I.
Rhwlas and Carrie.
Romney and Manitoba Patti.
Luke and Central Bang.

Third Series.

May I. and Rhwlas.
Lou Dido and Luke.
Carrie and Manitoba Patti.

Fourth Series.

May I. and Luke.

Fifth Series.

Luke and Manitoba Patti.
Rhwlas first. Weight, 50lbs. A handsome setter.
May I. second. Weight, 38lbs. A fair middle class.
Luke third. Weight, about 44lbs. A very useful-looking one.
Manitoba Patti. Weight, 41lbs. Fairly a show dog, barring head.
Moneys were: First, \$40; second \$20, third \$10, fourth \$5.

ALL-AGES STAKE.

Mr. T. G. Davey's liver and white pointer dog Westminster Drake (Lad of Bow—Kate VIII.)

ran with

Mr. W. B. Wells's black, white and tan setter dog Matane (Mark J.—Cambriana).

Dr. Joseph Kime's black and white setter bitch Lady Patch (Mingo—Lady Thunder)

ran with

Mr. T. G. Davey's liver and white pointer dog Axtel King Don (King Don—Meteor's Dell).

Mr. Thos. Johnson's blue belton setter bitch Manitoba Pet (Dick Bondhu—Manitoba Belle)

ran with

Mr. T. G. Davey's liver and white pointer bitch Lady Gay Spanker (Rumor—Lady Norrish).

Mr. T. G. Davey's blue belton setter dog Canadian Jester (Knight of Snowden—champion Leddersdale)

ran with

Mr. H. Milkins's liver and white pointer dog Count Graphic (Lord Graphic—Lassie Faust).

Mr. A. Mather's black and white setter bitch Dart (Durkie—Spark)

ran with

Mr. W. B. Wells's black, white and tan setter dog Luke (Toledo Blade—Cambriana).

Mr. W. B. Wells's black and white setter bitch Cambriana (Cambridge—Romp)

ran with

Mr. Thos. Johnson's liver and white pointer bitch Ightfield Blithe (Dancer—Bloom).

Mr. Thos. Johnson's liver and white pointer dog Ightfield Upton (Ightfield Dick—Polly Peacham)

ran with

Mr. Geo. Kime's lemon and white setter bitch Rose Rapid II. (Mingo—Rose Rapid).

Dr. Jos. Kime's black, white and chestnut setter bitch Lady Spot (Mingo—Lady Thunder)

ran with

Mr. L. Hilsendegen's red Irish setter dog Dan O'Connell (Sarsfield—Coe H.).

Second Series.

Westminster Drake and Ightfield Upton.
Matane and Axtel King Don.

Lady Patch and Canadian Jester.

Lady Gay Spanker and Ightfield Blithe.

Dart and Rose Rapid II.

Cambriana and Lady Spot.

Third Series.

Lady Patch and Westminster Drake.

Rose Rapid II. and Axtel King Don.

Lady Gay Spanker and Cambriana.

Fourth Series.

Ightfield Blithe and Canadian Jester.

Fifth Series.

Westminster Drake and Cambriana.
Ightfield Blithe first. Weight 39lbs. A compact, cobby-built pointer.

Canadian Jester second. Weight 50lbs. A well-framed and handsome setter.

Westminster Drake third. Weight 60lbs. A very decent big one, pointer.

Cambriana, 35lbs., and Lady Patch, 45lbs, dividers of fourth, are both of useful field type, the former of considerable quality.

Moneys were: First, \$75; second, \$40; third, \$20; fourth, \$10.

The Absolute.

Ightfield Blithe against Rhwlas.

Ightfield Blithe won.

E. Hough.

BEAUFORT'S HOME COMING.—Fair Haven, Vt.—*Editor Forest and Stream:* It might interest your many readers, more especially the mastiff breeders, to hear of Beaufort's safe arrival in England. I have just received a letter from Mr. W. K. Taunton, in which he says that Beaufort arrived there eighteen days after he left my kennels. He came in on the night of the first day of the Crystal Palace show; that he was in very fine shape indeed, notwithstanding the rough passage he had. He was taken directly from the steamer and benched at the show, and was the attraction the remaining days. It was an agreeable surprise to his many old admirers to find him in his usually fine condition and health, and still able to hold his own there with the best. There was a great desire to see what had happened to him while in America. I am happy to say that even after his long confinement and very long, rough passage, and without any special attendant, they found him as lively and as active as ever and in fine show shape.—J. L. WINCHELL.

MR. BURR'S EXPERIENCE.—Middletown, Conn., Nov. 10, 1891.—*Forest and Stream Pub. Co.:* Sirs—Please discontinue my ad. in the FOREST AND STREAM. Have sold Red River Glencho to go South, and disposed of all the dogs I have except two youngsters for my own private use. Am sorry to give up breeding Irish setters, but am now so situated that I cannot attend to it. I shall always speak in highest terms for the FOREST AND STREAM as an advertising medium to reach the best class of sportsmen. Having sold a great number of fine Irish setters, my orders have come nearly all from readers of the FOREST AND STREAM, and nearly every order from men who represent the best business enterprises in the country, showing the class of readers the FOREST AND STREAM reaches. Although I cannot keep so many dogs, I shall not lose interest in the Irish setters.—R. H. BURR.

EASTERN FIELD TRIALS. MEMBERS' STAKE.

HIGH POINT, N. C., Nov. 12.—It can hardly be said that the Eastern Field Trials proper have commenced yet, the regular meeting not starting till Monday next. Arriving at High Point late on Wednesday night, Nov. 11, we found Messrs. F. H. Hitchcock, H. B. Duryea, E. C. Kent, R. L. McCook, Bockes, Washington A. Coster, A. D. Shephard, Jr., Col. Purcell, S. C. Bradley, D. E. Rose, Col. Merriman and J. M. Avent already at the Hotel Bellevue. Next day, Nov. 12, a late start was made from the hotel in beautiful weather, the frost of the previous night tempering the rays of the early sun, whose promise of warm weather during the day was fulfilled. There were only four entries in this stake that filled, and so there was no need to hurry much. The dogs were drawn as follows: Mr. F. H. Hitchcock's Roi d'Or with Mr. H. B. Duryea's Bettye S.; Mr. F. H. Hitchcock's Tory Lieutenant with Col. Geo. T. Leach's Guy. The start was at the Blair farm, and owners had, as usual, to handle their own dogs, but each of these men are well versed in this special branch of field sport, so that the dogs did not suffer from inexperienced handling. The work done on the whole was very good. The judges who kindly and efficiently officiated were Messrs. Washington A. Coster, Bernard Walters and S. C. Bradley. Birds were quite plentiful enough. The first brace.

ROI D'OR—BETTYE S., were sent off at 9:30. Roi d'Or was handled by Mr. Hitchcock and Bettye S. by Mr. Duryea. Both dogs started out well, and after ranging several fields and rough land, Roi, near a fence, flushed a bevy. Moving on Roi roared and was drawing to a point when Mr. Hitchcock, thinking the dog was just pottering, ordered him on, when dog turning away, the birds flushed, and no error can be charged to the dog. About the same time Bettye made a point to one side, and Mr. Duryea fired at the raise, Bettye steady to shot and wing. Moving on, Bettye made a splendid point on a single in very heavy weeds. It may here be noted that the vegetation this year on the club's grounds is very rank, affording abundant cover for birds, and dogs will have to keep their noses in good order to get them. Nothing further happening, the brace was called up at 10:46. Bettye S. did snappier work on birds, and had better range, speed and style.

TORY LIEUTENANT—GUY.—Mr. F. R. Hitchcock handled his last year's Derby winner, and Col. Leach held the gun over Guy. Put down at 10:50. After working some time we came to a hollow in woods where Guy began roading, and while locating his birds Tory came at a gallop from a cast he had been making to one side and nailed them before Guy could get up. Mr. Hitchcock flushed them and dogs were steady to wing. Then on the scattered birds Guy did some good work, making two points, and Tory put one to his credit, too. Guy at once showed himself much more certain on his birds, going to them without hesitation. Moving out of woods to find another bevy, Guy found the game in corn. Tory backing nicely, when Mr. Leach put up a single, and then sent his dog on which pointed the remainder of the bevy a few yards further. Guy then pointed another bird and was steady to shot; Tory at the same time either backed or pointed.

Col. Leach here began to feel a thirsty pang and moved to adjourn to a spring near by, and taking his dog along, Guy on the way there pointed a bevy, and on returning repeated. This work was not accepted by the judges, the dogs being practically held up. Another time, for the sake of his dog, it would be well for the Colonel to carry his spring along with him. Resuming work, dogs were then taken to where a bevy had been flushed to look for single birds. Tory pointed, but Mr. Hitchcock's tramp, tramp, in front revealed nothing, and dog moving on a single was afterward flushed a yard or two to one side by spectators, so no false point was credited to Tory. Mr. Hitchcock afterward flushed a few birds, and Guy coming up pointed foot scent, roaded on, then pointed another bevy which was put up by Col. Leach; dog steady. Dogs then ordered up at 12:36. Guy was superior in nose and manner of picking out his birds, and quite held his own in speed, range and style. Down 11.46m. The company then moved on to the Model Farm for lunch.

Second Series.

BETTYE S.—GUY.—After lunch these two were sent off at 2:20 in grass field to decide first honors. After working through various fields and rough land Guy pointed a bevy in an open at edge of oaks, and Bettye backed, both making a pretty picture. Moving on into the woods after these birds, some very pretty and careful work was done, Guy pointing the balance of bevy, Bettye backing; birds flushed wild. Then in first to right Bettye pointed a single, which Mr. Duryea fired at and missed; dogs steady. In thick first Guy pointed, but Mr. Leach could find nothing. Then Bettye dropped to a point in another ditch, and a single got up to Mr. Duryea's tramping. Crossing the open fields, Guy at edge of first pointed a large bevy, which flushed wild as his owner came up; Bettye backed and both dogs were steady. Moving on into the thick first after these birds, Guy soon pointed, drew on, and pointing again Mr. Leach put up a single, Bettye S. seconding Guy's work very nicely. Then Bettye dropped to a single as it flushed wild. Birds were scattered all round here, and both dogs scored several points, Guy getting the most and doing more certain work. Going out of woods, Guy pointed another single nicely. Brought back to open ground, when, after going over a lot of fields, dogs were called up at 3:30 P. M. Guy showed signs of his previous long heat, and was not so fast or as wide a ranger as Bettye S., but had the nose of the bitch all the time, and in a quiet way getting right on to his birds without mistake. Judges after a short consultation decided that Guy won first, Bettye S. second and Tory Lieutenant third.

Summary, First Series.

F. R. Hitchcock's black, white and tan dog Roi d'Or (Rodrigero—Bo Peep) with H. B. Duryea's black, white and tan bitch Bettye S. (Rodrigero—Bo Peep).

F. R. Hitchcock's black, white and tan dog Tory Lieutenant (Jean Val Jean—Princess Helen) with Geo. T. Leach's black, white and tan dog Guy (Gladstone's Boy—Lady).

Second Series.

Guy with Bettye S.
Guy wins first money, \$100.
Bettye S. wins second money, \$75.
Tory Lieutenant wins third money, \$50.
Guy is a well made little dog with good forelegs and feet, but is hardly in shape for prolonged work. He has a good nose, and understanding the style of country, hunts with good judgment and goes right to his birds. Bettye S. is a handsome heavily marked bitch, stylish worker and tireless ranger. Tory Lieutenant is well known from his performances last year, when he proved a stylish, speedy and wide ranger and was good on his birds.

HIGH POINT, N. C., Monday, Nov. 16.—During the last two days handlers and owners have been coming in, till now most of the veterans in the game are on hand. But somehow entries were scarce, and the Derby did not fill up to expectations, only fifteen filling at Sunday night's draw. The divided stake seems the more popular. Among the visitors here are Pierre Lorillard, Jr., New York; J. O'H. Devany, Pittsburgh; F. J. O'Connell, Coal Grove, O., and L. E. Goodman. The handlers and owners present are Messrs. J. M. Avent, C. E. Buckle, Capt. McMurdo, John N. Lewis, S. C. Bradley, Prof. Schuyler, Joseph H. and John A. Hun-

ter, J. B. Stoddard, George Nesbitt, D. E. Rose, Charles Tucker, T. M. Aldrich and G. E. Gray. The drawing for the DERBY

took place last night and resulted as follows:
N. Wallace's Maud Noble with Pierre Lorillard, Jr.'s Lora.
Charlottesville Kennels' Exile with J. M. Avent & Bayard Thayer's Camille.
Charlottesville Kennels' Mainstay with Royal Phelps Carroll's Robespierre.
O. W. Donner's Wagtail with Col. Purcell's Tall Son of York.

Harry Northwood's Amy Robsart with Blue Ridge Kennels' Bob Cooper.
Royal Phelps Carroll's Iza with N. T. Harris's Wun Lung.

Blue Ridge Kennels' Hope's Mark a bye.
The judges were Messrs. H. B. Duryea, Arthur Merriman and R. L. McCook. The latter gentleman was some time since connected with Mr. Duryea in the proprietorship of the Highland Kennels, that owned the pointer Robert le Diable at one time, selling him to his present owners.

The start at 8:40, in cloudy, misty weather, was at the Blair farm, and the first brace down was

MAUD NOBLE—LORA.—Maud Noble, a black, white and tan English setter (Rowdy Rod—Pearl Noble), was handled by S. C. Bradley, and Lora, same color (Hailstone's Boy—Ruby D.), had the guidance of Chas. Tucker. Both started well, and Maud soon pointed a bevy in woods, but to the raise broke in and chased, stopping to order. Following the birds in woods, Maud pointed, but nothing came of it. Then we turned into sedge field, when Maud pointed a bevy which flushed wild. After these birds into woods, Maud stiffened out when a single flushed and she went after it again. Lora then began to get in her work, and pointing a single a few yards from where others flushed, was steady to shot and wing. Then she got another single in sedge, steady to wing. She then repeated this. Maud then pointed in same sedge and Lora honored it, but nothing found. Dogs were called up at 9:09. Both had fair speed, but neither ranged out very well. Lora was the best on birds.

EXILE—CAMILLE.—Put down in open corn stubble, the black and white ticked pointer Exile (King of Kent—Hops) was handled by Capt. McMurdo, and the black, white and tan setter bitch Camille (Jean Val Jean—Haidee), by J. M. Avent. In orchard and weeds Camille was first to nail a bevy which flushed wild as Exile was brought up to back, both steady to wing. After the scattered birds, Camille nailed a single and was steady to shot. Then in crossing some hedge a bevy flushed wild but too far away to see whether dogs pointed or not. Exile was then sent on to work alone, Camille being held up. Exile pointed foot scent several times, but bird running he could not just nail it till roading carefully out of woods he stopped as a single flushed. Then pointing another in edge of woods, he was called up at 9:59. Camille did the best work on birds and was the better ranger.

MAINSTAY—ROBESPIERRE.—Mainstay (Mainspring—Barmaid) is a black and white ticked pointer in Capt. McMurdo's lot, and Robespierre (Rodrigero—Ollie S.) is a black, white and tan English setter handled by J. M. Avent. Put down precisely at 10 o'clock, both started off well, and after working out several fields Robespierre pointed a bevy in ragweed; Mainstay brought up to back, but had not got there before Avent fired as birds flushed. On into woods after them, both dogs made game but failed to locate. Then in some briars Mainstay pointed twice on singles. Up further in first, Robespierre then dropped to a single, drew on, dropped again and bird flushed. Then he pointed again, when Mainstay, coming across, drew in ahead of him, nothing found. Further on Robespierre flushed birds, drew on and pointed several more which flushed wild, dog steady to wing. Up at 10:32. Robespierre did best work on birds and hunted with better judgment.

WAGTAIL—TALL SON OF YORK.—The black, white and tan setter Wagtail (Rodrigero—Belle of Piedmont) was handled by Capt. McMurdo, and Tall Son of York by owner, Col. Purcell. Down at 10:35 in sedge, neither started out well, though Wagtail much the best. Going down ragweed, Wagtail flushed several birds, stopping to wing. Going on, neither dog ranging out much, York content to watch his handler, Wagtail stopped as balance of bevy flushed wild, York backing. Then both pointed at same time edge of sedge, drew on and Wagtail stopped again, then roaded on carefully and a single rose, McMurdo fired, dog steady. Then in making a cast Wagtail stopped right on top of another single, drew on and pointing again a yard or two further, York coming across pointed too, and another single rose just after, then nailed another. Birds were thick all round and there was opportunity for pretty work. Called up at 11:04. Neither ranged out enough and York potted most of the time. Neither will do for the finals.

AMY ROBSART—BOB COOPER.—Something better here. Down at 11:12. The lemon and white bitch Amy Robsart (Dad Wilson—Bohemian Girl) was handled by H. M. Short, and the chestnut, tan and white Bob Cooper (Roi d'Or—Miss Nellie W.) by D. E. Rose. Both went off fast and ranged wide. After going some distance Bob pointed a bevy which Rose put up; dogs steady. Leaving these birds and striking to the right, nothing was done for some time; then Bob pointed in woods, nothing found. In ragweed outside of woods Amy pointed a bevy, Bob backing. After the birds in orchard, Amy dropped to an outlying bird, then pointed again, drew on and stopped as another single rose; Short fired; dogs a good deal steadier than some of the horses, who jumped at every shot. Nothing more was done and the dogs up at 12:20. Both ranged out well and fast, and work on birds was about equal. A move was then made for the Model Farm for lunch.

IZA—WUN LUNG.—The black, white and tan bitch Iza (Rodrigero—Ollie S.) was handled by J. M. Avent, and black, tan and white Wun Lung (Captain Bethel—Enid) by D. E. Rose. Put down in corn stubble at 1:30, Iza at the side of fence pointed, and birds flushing Avent fired, dogs steady; then both pointed in meadow lower down, but neither handler found anything. Into the open and passing through some scrub oaks, Wun Lung pointed prettily to a single, which Rose fired at, dog steady. Then Wun Lung made a beautiful long cast to the top of hill, and went right to a bevy, holding the point some minutes till handlers could come up, when Iza coming across field to order stopped to back, left it, and went right in and flushed birds, a bad piece of work on her part, Wun still steady to wing; then, a few yards further on Wun pointed an outlying bird of this bevy in sedge, Iza pottering behind. Wun roaded some distance, made another cast, but failed to locate birds, and dogs up at 2:08. Wun Lung showed himself superior in every particular—speed, range, style and decision on points.

HOPE'S MARK—JOE LEWIS.—It was intended to run Joe Lewis in the stake, but notwithstanding he had filled last night, it was found that he had not been entered in the Derby, only in All-Aged Stake. He, however, ran the bye with Hope's Mark. Hope's Mark, black, white and tan dog by Gath's Hope—Lady May, was handled by D. E. Rose, and Joe Lewis, same color, by Count Noble—Fannie, was looked after by Prof. Schuyler. Down in corn stubble at 2:20. Hope in woods roaded carefully to a large bevy which Rose flushed, birds going only about 75 yds. further on in sedge. Then Mark pointed same birds again, Joe also dropping to them in an unceremonious manner. Mark then in pines pointed, Joe backing; Mark also put another bird to his credit, the other dog acting puppyish. Out in open sedge Mark made a point with his flag and hindquarters high in the air, hind legs on a stone; Joe backed but Rose could find nothing,

though a single was afterward flushed by horsemen to the right. It then began to rain quite sharply. Dogs soon after called up at 2:52. Judges consulted some time, when they announced that in

Second Series.

ROBESPIERRE—BOB COOPER should run together. Put down at 3:25 both went off as if they meant business, Robespierre not quartering so wide as the other. Bob, some distance off, at edge of woods, either stopped on or flushed birds. Then into woods after them Robespierre pointed a bevy which flushed wild, steady to wing. Robespierre again pointed, footscent this time. On in the open Bob nailed a couple nicely, Robespierre backing, Bob a bit unsteady to flush, moved on a step and balance of bevy rose, Robespierre dropping to flush, too. Lower down Robespierre pointed, Bob backed, nothing found. Making a cast Bob pointed a single nicely, which flushed wild. Before Robespierre could come up, dog chased, when he got a taste of fir balsam, externally applied. Dogs up at 3:56. Bob best on birds and ranging out two to one of the other. He needs to be a little steadier to wing, however, being very excitable on birds.

WUN LUNG—LORA were also called out at 4:07. In first and oaks both dogs pointed, then both made game and roaded carefully but could not locate. Lora pointed down in a hollow, Wun dropped to back, but Tucker could find nothing. Then Wun made a good point and was held a long time for Lora, and just as she came up and dropped to back, birds flushed and Rose fired, dogs steady, but horses again the reverse. Wun Lung taken up at 4:24 and Lora went on alone and secured two points in woods. Wun showed much better range and speed, more bird sense and did stylish work. Has a good look in for the stake.

CAMILLE—HOPE'S MARK were then called up and put to work at 4:36. Soon after starting a bevy was flushed by horsemen. Going on, Camille flushed a bird of this bevy where they had settled. Then she got another bird, Avent firing, dog steady. Then Mark pointed, Camille honoring the stand. Some distance further and dogs up at 5 o'clock, with work about equal.

The All-Aged Stake to-night filled well and the draw is as follows:

J. M. Avent and Bayard Thayer's Rupert with B. M. Stephenson's Top Mark.

J. R. Purcell's Nicodemus of Ion with N. H. Wallace's Pansy Blossom.

A. L. Sanford's Frank W. with Geo. G. Harley's Joy H.

Dr. Hartman's Albert's Duchess with Wm. Mahone, Jr.'s Graphic VI.

Bert Crane's Natalie II. with Charlottesville Kennels' Maid of Kent.

Pierre Lorillard, Jr.'s Antevolo with J. H. and J. A. Hunter's Daisy Hunter.

Geo. P. Jones's Sam R. with J. M. Avent and Bayard Thayer's Orlando.

J. Shelly Hudson's Dolly Hill with W. W. Titus's Dick Bondhu.

C. C. M. Hunt's Grouse with E. O. Damon's The Corsair.

N. Wallace's Count W. with Hempstead Farm Kennels' Duke of Hessen.

Wm. McKennan, Jr.'s Flight with J. Shelly Hudson's Dad Wilson, Jr.

Greenfield Hill Kennels' Harry C. with Pierre Lorillard, Jr.'s Blade.

Charlottesville Kennels' Wild Damon with Edward Gray's Count Eric.

E. W. Durkee's Nahmke Philip a bye.

HIGH POINT, N. C., Nov. 17.—[Special to Forest and Stream.]—The concluding heats to determine the Derby winners were run this morning. We did not start till 10 o'clock, owing to rain and cloudy weather and high winds toward afternoon. Amy Robsart and Maud Noble ran together, when both did fair work, Amy the best on birds. Down 25m. Then Camille was tried alone and picked up two beves in short time, behaving nicely. Bob Cooper and Wun Lung then ran a heat of forty minutes, but neither located birds, though pointing often. Hope's Mark then ran alone, but did not go in his usual snappy style; found one bevy. Then Bob Cooper was put down after these birds, finding several singles and two beves.

After lunch Camille and Bob Cooper ran to decide second place. Bob found most birds and ranged better, a little unsteady at flushes. Judge decided N. T. Harris's Wun Lung first, Blue Ridge Kennels' Bob Cooper second, Avent & Thayer's Camille third. Rose handled the two first and Avent handled Camille.

The All-Aged Setter Stake then commenced with Rupert and Top Mark. Both did good work; Mark best on birds, Rupert more speed and range. Frank W. and Joyce did poorly, neither ranging out much, Joyce the best on birds. Albert's Duchess and Graphic VI. run about 30m. with the work done in favor of Albert's Duchess; but neither will be seen out again.

At this stage of the game wild turkeys were sighted and excitement caused broke up the heat and the day's work ended. The judges in All-Aged Stake are Messrs. Duryea, Merriman and Rowe.

HIGH POINT, N. C., Nov. 18.—At the meeting of the Eastern Field Trials Club last night officers were elected as follows: President, T. R. Hitchcock; Vice-Presidents, H. B. Duryea and Pierre Lorillard, Jr.; Sec'y-Treas., W. A. Coster. J. W. Lorillard offered three medals for dogs showing best bench show form.

COVINGTON, Ky., Nov. 10.—*Editor Forest and Stream:* I am this day in receipt of a letter from W. W. Titus, dated at High Point, N. C., Nov. 8, in which he says: "I am sorry indeed to inform you that Arline has just come in heat. She will be in full blast by field trial date, next Monday week. I know you will be disappointed, but it leaves me in a hole, as she was the only Derby I brought East with me. 'What can't be cured must be endured,' I suppose, but it mixes a fellow's plans pretty badly sometimes. Arline is in the pink of condition and was doing strong work for the dry weather, and I was hopeful of getting in the front row with her. However, 'We will see them later.' This is a sad disappointment to me, for I certainly had a very strong entry in Arline, not only on account of her royal breeding, she being by champion Dad Wilson out of champion Bohemian Girl, but she had all along, since puppyhood, showed remarkable high-class work."—J. SHELLEY HUDSON.

CASHIER'S WINS.—Cincinnati, Nov. 15.—*Editor Forest and Stream:* How kind (?) of "Mathew Henry" to correct a few printer's errors in the Cincinnati show catalogue as to Eberhart's Cashier's wins. People who know me do not take me for a fool, and such I would be if I intentionally had printed and sent out a claim for prize that my dog did not win. Eberhart's Cashier did win first (puppy) in an undivided class of about twenty at New York, 1890. He did win first, open (beating Sprake), at Detroit, 1890 (no show '91). He did win first, open, and special for best pug in open class (beating Penrice) at Cleveland, 1891, both times under Miss Anna H. Whitney, the best judge of pugs in America. I consider Mathew Henry not ignorant, but vicious in stating what he knew to be untrue when he says that "Cashier was not eligible to challenge class at Lexington." I've got seven dollars in my inside coat pocket and know a pawn broker of whom I can borrow a few hundred more by putting up Cashier as security, and I'll just risk the whole business that Cashier was eligible to challenge class there (where he won). Bonus (whom I showed for Mr. Pitts) won there in open class.—AL G. EBERHART.

THE PEARL OF PEKIN INCIDENT.

Editor Forest and Stream:

I must protest against the ground assumed by Mr. J. H. Le Moyné, and the tone of his letter in yours of the 13th. An iron-clad rule such as Mr. Le Moyné makes of the one he cites would be monstrous, involving the idea that a person shall be punished for an act that may have been utterly beyond his control. The intent of the rule is most praiseworthy, and it is evidently in that no owner of a dog shall imperil the chances of an opposing dog's winning.

It seems that Mr. Edmunds's riding over Pearl of Pekin was unintentional, and the only remaining point for determination is, could the accident have been prevented by the exercise of ordinary, reasonable care on Mr. Edmunds's part? For it is evident that in such a case as this, carelessness is no excuse for a transgression of the rule. I trust Mr. Le Moyné will excuse me for pointing out how objectionable his characterizing the decision in this case as "outrageous departure from honest judging," "most unrighteous decision," etc., is, and I would point out that such an assumption as that Mr. Edmunds's intent "cannot enter as a factor in giving the decision," is more deserving of harsh words than anything that appears on the face of the case. Surely Mr. Le Moyné cannot seriously mean to say that Mr. Edmunds must be punished irrespective of whether it was humanly possible for him to prevent the accident? Please remember that I am passing no opinion on the case itself; let that be decided on its own merits; let Mr. Edmunds be held to the strictest accountability to show that reasonable foresight would not have suggested precautions to him that would have prevented the accident, but the idea of holding a man down to a Draconian code such as this rule, without qualification, would be, is abhorrent to every sense of justice. I am no lawyer; but I know that the law always considers intent as a prime requisite to every act, and that this intent may properly be inferred from the circumstances. If the law did not consider intent, Mr. Bumble would be a thousand fold right in his dictum that the law is an ass.

W. WADE.

HULTON, Pa., Nov. 13.

BRUNSWICK FUR TRIALS.

THE cordial invitation extended to all fox hunters by the Brunswick Fur Club to attend their field trials at Princeton, Mass., drew me to that pleasant village on Nov. 9. The view of the country during the long stage ride from Oakdale showed that the club could not have chosen better grounds for the meeting. The high barren hills and great stony pastures, with only here and there a strip of woods or swampy thicket, make it possible to see the hounds during the greater part of the chase.

On arrival at Pratt's, the club headquarters, I found assembled some of the finest hounds in New England and a host of ardent sportsmen eager for the hunt to begin. Among them was the president of the club; L. O. Dennison, of Waltham, Mass., with his handsome Buckfield-Byron hounds, Ben Butler II. and Trimmer; E. J. Bates, of Oxford with Spotty, Lead All and Wild, the two latter of the Wild Goose strain; R. D. Perry with a couple of Avent hounds. Leggins and Clinker, Slip from the Wild Goose pack, and the native bitch Quiltie; the jolly party from Brunswick, Me., H. J. Given, H. A. Stetson, Med Snow, A. G. Hall and Sam Knight, Jr., with the handsome hounds Beauty, Rover and Golden Rod, the latter a Cook dog; President Kinney, of the Worcester Fur Co., with his fine natives, Major, Trim and Lancaster; H. L. Aldrich, of Diamond Hills, R.I., with Fannie D. and Hunter; O. F. Joslin, president of the Oxford Rod and Gun Club, with the English dog Rover; L. M. Conant and C. A. Shafer, of Waltham; Dr. Heffenger, of Portsmouth, N. H.; "Uncle Nathan" Harrington, the veteran fox hunter of Worcester county; F. G. Stewart, of Hoosac Falls, N. Y., and many others.

According to the programme the puppy class was to be run on the first day of the trials. On account of the late arrival of many of the club men and hounds, an early start was out of the question, and when the line left headquarters at 11 o'clock the heavy white frost of the morning had melted under the warm sun. To start a fox late in the day under these conditions was a difficult task for young dogs. It was 11:50 when R. D. Perry, M.F.H., gave the signal on Calamint Hill to cast off the four and a half couples entered in the puppy race. The dogs covered the stony pasture well, worked through the scattered wood on the crest of the hill and down into the valley on the north side, where a momentary excitement was caused by two of the pups driving a large yellow cat across a field and up a tree. The hounds were by this time well scattered, but Rover and Beauty hunting together worked a cold track slowly across the road and into the swamp, where Trimmer and Golden Rod joined them, but the scent was too old and the four had to give it up after doing some pretty work.

Meanwhile one or two of the pups put in their time hunting rabbits, and it looked as if a fox would not be started. But Dennison's Trimmer, a persistent hunter and fine trailer, went further into the swamp with Rover and jumped a fox at 2:15. As they drove him towards Calamint road, Spotty, Pynt, Beauty and Golden Rod joined the chase, and with a grand burst of music sent him across the road and through the woods into a stony pasture. Here the scent was very poor, and, with much difficulty and many checks, the fox was followed for a mile or more across the upland and into Calamint swamp, where the track was finally lost, though the pups proved themselves stayers by their persistent efforts to pick it up. About sunset the dogs were called off and the party returned to the hotel, where they did full justice to a smoking hot dinner. In the evening the judges made no awards, but decided to give the puppy class another trial under more favorable circumstances.

Tuesday morning the hunting horn awoke us at 5 o'clock and half an hour later the party were at breakfast. It was the first day of the All-Age race and at 6:30, after raising the handsome club flag over the hotel, the line of march was taken for Fay's hill with the seven couples entered. In addition to the hounds Jack, Mr. Kinney's fox-terrier, was on hand. He is the hero of many a battle royal with Reynard and evidently felt that the success of the hunt rested on him alone; he was the busiest dog in the field, now examining a burrow, then resenting a fancied insult from some big hound and always looking eagerly for his part in the fun to begin. At 7 o'clock the dogs were cast off in the pine woods on the crest of the hill and worked rapidly through the underbrush into Goodnow's pasture, while the hunters followed the center Hubbardston road. At the foot of the hill Perry's Clinker and Slip gave tongue, and the rest of the pack barking to them carried the trail up the hill to the road. Here for a moment they were at fault, but Joslin's Rover circling wide picked up the track in the thicket across the road, where he was followed by Trimmer, and the Wild Goose beauties Leads All and Wild. These four dogs, led by Rover and well in advance of the rest of the pack, trailed rapidly over the ledges of Little Wachusett and at 7:20 jumped the fox on the side of the mountain and in full cry ran east.

Meanwhile Kinney's Trim had been trailing on his own account, and he started a second fox which ran up the mountain side not long after the first one had carried the pack out of hearing. In twenty-five minutes the fox first started was driven around the mountain, and as the pack crossed the road Clinker, true to his record for speed made last year, was leading, with Slip a good second and the rest well bunched a little behind. Entering the woods the fox threw the pack off for some minutes, and succeeded in getting a long lead on the dogs, but could not escape them.

The track was again found, and after he had been driven around the mountain for the third time he started east toward Wachusett. Many of the party climbed Little Wachusett, and seated on the ledges at the summit watched the dogs as they drove the fox over the pastures, through the woods, up and down the hills, now near and then far away. The music was grand, and not often does one have the good fortune to see such a race. After a time the terrific pace set by the Wild Goose and Avent hounds began to tell on the young dogs, and some of them dropped out, but most of the pack hung together, though well strung out, and drove the fox out of hearing.

Those who were on foot lost the pack, but the judges taking teams followed the dogs many miles, having an excellent view of the chase and a good opportunity to judge the hounds. It was a great day's sport.

Tuesday evening the conversation turned on the ability of Southern hounds to catch foxes in New England. No one believed they could do it, but to settle the question once for all a number of gentlemen agreed to purchase from Mr. Garrett a July bitch in whelp to one of his best dogs—such a hound as finds an hour's amusement in running down a red fox. The entire litter will be raised and trained together, and at the trials next year will run in the puppy class; two years from now they will be hunted as a pack. These dogs will be watched with great interest. Shall we see them catch a fox on our New England hills?

The Brunswick Fur Club is composed of ardent sportsmen; enthusiasts in fox hunting; they are working hard and accomplishing much for the improvement of the foxhound; they deserve the support of every hunter and lover of dogs. May good luck and success attend them.

Wednesday morning my stay with the club ended, and I returned home delighted with the two days' sport.

BRADLEY.

MASSACHUSETTS SIBERIAN BLOODHOUNDS.

Editor Forest and Stream:

Concerning the Massachusetts law of 1886 about "bloodhounds," etc., Mr. Wade is partly right and partly wrong in his assumptions. The law grew out of the circumstance of the terrible mutilation of a couple of children by a so-called "Siberian bloodhound," and was introduced and pushed in the Legislature by an impetuous and not overwise member, who sought and obtained a little temporary notoriety by his crusade "agin" dogs, aided by the sentiment of sympathy for the children, and antipathy to dogs in general temporarily engendered by the occurrence.

I was a member of the Legislature at the time, and in connection with other gentlemen who do and did "know something about dogs," we endeavored to stay the passage of so useless and indefinite a statute, but one can readily imagine the stampede of a body of men, intelligent generally, but intent upon averting if possible the recurrence of another such accident by laying hold of the nearest apparent remedy at hand, viz., the making of a law, with little reflection upon the construction thereof and its applicability. It is characteristic of the modern legislator to endeavor to cure all evils of the body politics by a "law," and the result is the creation by statute of what may appropriately be called "artificial" offenses to the ultimate detriment of the enforcement of all laws and the respect of the people for the law-making authority. I have yet to know of a prosecution under this statute.

There are other statutes and many of them in the Commonwealth of like nature, and reflecting people are tending toward the desire to see a Legislature that would largely confine its duties to the repeal of unnecessary statutes.

E. H. LATHROP.

SPRINGFIELD, Mass., Nov. 13.

Editor Forest and Stream:

The law passed in Massachusetts in 1886, making the muzzling of so-called bloodhounds, great Danes, Ulmers, boarhounds, etc., had no reference to English bloodhounds like Mr. Glazier's. The member of the Legislature introducing the bill consulted myself as to the bill, and the only object was to make the law effective against the so-called bloodhounds, or great Danes. The occasion was the painful mangling of a little girl in a neighboring town by two of these dogs, and the determination to keep such large brutes from repeating such mangling. I am very positive that the law had no application to such bloodhounds as Mr. Glazier keeps, which are more noted for delicacy of nose and inborn tracking qualities than for savageness—although Hon. Grantly Berkely wrote of them that they were kind and quiet unless aroused, and his breed would take no whip. I should certainly consider them as harmless as any hound, setter or spaniel.

The great Dane I detest, to my mind he is a big unruly brute; too large to control without a muzzle, a terror to smaller dogs and treacherous. My reasons are that on two occasions when invited to see them, each time a pair, male and female, the female of one pair could not be let in to the room or store where strangers were, although her master and the man who fed her were present. In the other case the bitch actually attacked her master and was beaten off with a chain. Those instances, with the various accounts one sees of their ability and inclination to do mischief, makes the repeal of the law regarding great Danes very improbable. The intentions of the law does not affect Mr. Glazier's dogs in the least to my mind.

DRY LAND.

NOTES AND NOTIONS.

I REGRET to see the *Dog Fancier* has taken umbrage at my hope that the Columbian Fair Dog Show would not materialize. As no line has ever appeared in Notes and Notions inspired by any personal feeling, I may dismiss what may have been meant as an imputation on the writer's motives. The objections to a dog show at such a place as such a show are by no means dispelled by the promise that the show will become an accomplished fact. They still remain in the facts that in such an aggregation of objects of interest the dog show will exert no appreciable effect; visitors, as a rule, will not see it. It will call forth great effort on the part of dog owners and dog lovers to make it vie with the other features of the exhibition, and, necessarily, these will fail. One-half the effort expended on the proposed show devoted to fifty small shows at country fairs, where the dogs would be features of interest and note, would advance canine interests far more.

I note that FOREST AND STREAM, in common with some English kennel journals, falls into an error as to that party in England who hung a dog up by the legs to force it to vomit, in pursuit of evidence as to whether the dog had killed sheep. It appears this hanging up was a common practice in this offender's district, and while the act itself most certainly was brutal as well as foolish, it by no means follows that the actor was. Enforcing this deduction as a necessary one would work very queer results in many cases, the excellent old town of Salem, Mass., would savor very strongly of the regions below from the witch burnings, and one eminent pillar of theology would find Vienne a Golgotha.

THE ONLOOKER.

GOING TO CALIFORNIA.—A person can take a seat in a palace car at Dearborn Station any afternoon and go over the Atchison, Topeka and Santa Fé Railroad to San Francisco, Los Angeles or San Diego without changing cars. The fast express on this line makes at least twenty-four hours quicker time to Los Angeles than any other line, and in fact the Santa Fé is the only thoroughly comfortable route to take. The office is at No. 212 Clark street, Chicago.—*Adm.*

SOUTHERN FIELD TRIALS ALL-AGE ENTRIES.

Editor Forest and Stream:

Inclosed find list of the entries to the All-Age Stake of the Southern Field Trials Club's fourth annual trials. The list contains thirty-six setters and five pointers, a total of forty-one:

SETTERS.

BLUE MARK (W. T. Irwin's), b w t (Gath's Mark—Lufra).
FANNY M.* (Blue Ridge Kennels'), b w t (Gladstone's Boy—Flame).

TREMONT (Whyte Bedford's), b w t (Gladstone's Boy—Speckelgown).

NOBLE GLADSTONE (P. H. Bryson's), b w t (Count Noble—Girly Gladstone).

JUNE (C. M. Round's), b w t (The Corsair—Tchula).

TOP MARK (B. M. Stephenson's), b w t (Gath's Mark—Burd H.).

JEAN'S BOY (H. S. Bevan's), b w t (Jean Val Jean—Rowey B.).

ANDROMETER* (H. S. Bevan's), b w t (Count Noble—Moonstone).

LADDY (H. S. Bevan's), b w t (Roderigo—Bo-Peep).

COUNTRESS RUSH* (Blue Ridge Kennels'), b w t (Count Noble—Belle of Piedmont).

GLEN (R. B. Parker's), b w t (Captain Bethel—Enid).

DAN TUCKER (Chas. F. Loudon's), l w (Gladstone's Boy—Flame).

SAM R. (Geo. P. Jones's), b w (Dash Bryson—Daisy's Hope).

JOY (W. W. Titus's), b w (Paul Gladstone—Gipsy H.).

DONOVAN (W. W. Titus's), b w t (Bob Gates—Fannie Gladstone).

EUGENE T. (A. P. Gilliam's), b w t (Count Noble—Ruby's Girl).

BLADE (P. Lorillard, Jr.'s), b w t (Toledo Blade—Sulu C.).

ANTEVOLO (P. Lorillard, Jr.'s), b w t (Count Noble—Trinket II.).

NANNIE G.* (P. E. Gregory & Bro.'s), b w (Bryce—Dora Gladstone).

DAVE B. (F. I. Stone's), b w (Startle—Clío).

REVELER (W. B. Hill's), b w (Gath's Mark—Esther).

PAUL BO (Richard Merrill's), b w t (Paul Gladstone—Bohemian Girl).

DAD WILSON (J. Shelly Hudson's), b w (Ben Hill—Dolly S.).

FINGAL (E. H. Osthaus's), b w t (Toledo Blade—Lady G.).

MARK'S MACK (W. L. Taylor's), b w t (Gath's Mark—Georgia Bell).

NATILE II.* (Bert Crane's), b w t (King Noble—Natile).

COMO SEE MADRE* (Bert Crane's), b w t (Roderigo—Maud).

LIGERO* (Bert Crane's), b w t (Roderigo—Maud).

FIRENZI* (H. J. Smith's), b w t (Gath's Mark—Flame Gladstone).

TORY LIEUTENANT (F. R. Hitchcock's), b w (Jean Val Jean—Princess Helen).

ROBESPERIE (Avent & Carroll's), b w t (Roderigo—Ollie S.).

RUPER (Avent & Bayard Thayer Kennels'), b w t (Roderigo—Bo-Peep).

ORLANDO (Avent & Bayard Thayer Kennels'), b w t (Roderigo—Bo-Peep).

ZULU M.* (Whyte Bedford's), l w (Toledo Blade—Rhet).

WHYTE B. (P. H. Bryson's), b w t (Count Noble—Girly Gladstone).

POINTERS.

HOPS II.* (P. T. Madison's), l w (King of Kent—Hops).

BOUNCE (G. W. Amory's), l w (Bob—Sal).

HENRIEN (J. R. Purcell's), l w (Flockfinder—Ion).

DON-FISH-HEL (W. R. Fishell's), b (Devonshire Sam—Nelly Bang).

MARQUIS (W. W. Titus's), l w. T. M. BRUMBY, Sec'y.

MARIETTA, Ga., Nov. 14.

* Bitches. The others dogs.

DOG CHAT.

WE have just learned that Mr. A. Clinton Wilmerding has within a few days terminated a deal that has been the occasion of much correspondence between him and Mr. J. P. Willey, of Salmon Falls, New Hampshire, and which has ended in the latter gentleman parting with one of his best dogs—we refer to champion Black Pete. Since the loss of champion Doc, Mr. Wilmerding has been on the keen lookout for something wherewith to replace him in the stud, and finally settled on Black Pete, Mr. Willey's good dog, and now has him in his kennels. Pete is by imported Obo, Jr., out of Phonsie. Obo, Jr., by Farrow's champion Obo (E. 10452) ex Farrow's Nelhie (E. 12736). Phonsie, by champion Obo II. (A.K.C.S.B. 4911) ex Blackie III. (A.K.C.S.B. 4912). This is the best of American and English breeding, and now that the dog is centrally located, we expect to hear of his increased use. He has won many prizes and his get have done remarkably well upon the bench. We congratulate, etc.

Mr. E. E. Bishop has at last been able to move West, and is now at Hutchinson, Kan., where Mr. W. T. Irwin and the Irish setters of the Glenmore Kennels have been located some time, preparing for the trials. Coleraine and Fingal will, however, not start this year, as Mr. Bishop writes us that, owing to the still weak condition of his leg, he cannot spare Mr. Irwin from the kennel. This will be a disappointment to field trial men, for the presence of these two noted field dogs and their presumably good work would have gone far to encourage the Irish setter men to make good their claims.

The St. Bernard His Majesty is, we hear, now in Philadelphia, having been purchased recently in England.

Mr. John H. Naylor will attend the Rockford, Ill., and Jackson, Mich., shows, and will be pleased to take charge of any dogs that may be consigned to his care for exhibitors not able to attend personally, and the latter may rest assured their dogs would be well taken care of.

Mr. Mercer should long remember the year 1891, as his series of accidents have confined him to the house a good part of the time. He has now sustained injuries that compel him to keep to his bed, and his numerous correspondents are advised that this is the reason he has not been able to fulfill his postal duties.

Mr. A. E. Pitts, of Columbus, O., sold a half interest in his imported fox-terrier, Ruby Signal, to Mr. Frank Tallmadge, of Columbus, and he will be found at that gentleman's kennel.

It looks very much as if, at the present time of writing, the Blue Ridge Kennel and D. E. Rose would repeat their Bicknell victories, though possibly not in the same order exactly. The work on Monday was hardly so good, on the whole, as that at the latter trials, notwithstanding the better condition of weather and ground.

On our way to High Point, N. C., from Bicknell we were surprised to find Mr. L. L. Boggs and Joe Lewis in the train at Lynchburg, Va. They were on their way to Lincolnton, N. C., for several weeks shooting. They had about eight dogs with them, including their late English purchases and Tony Gladstone. Birds are reported plentiful there and we trust they will have good sport.

The Maryland Kennel Club litigations have been compromised and settled out of court. Messrs. Malcolm, Mallory

and others having been reinstated, have resigned. Now that factional embarrassments have been sloughed we trust that the club may walk in paths of progress and peace, and in due time give a show.

The National Greyhound Club has sent out to all its members a ballot to determine by vote whether or not the club shall have an official list of judges for dog shows, and if there shall be judges who the judges shall be, and whether or not the members should show under other than the designated judges.

At the meeting of the A. K. C. advisory committee last week charges were prepared against the New Jersey Kennel Club, and will be presented at the December club meeting. The charges are found "upon the ground that the action of the said New Jersey Kennel Club in electing one Charles J. Peshall as its president and appointing him as its delegate to the American Kennel Club subsequently, to the disqualification of said Peshall by the American Kennel Club, is action prejudicial to the welfare of the American Kennel Club."

Among the new kennel advertisements are the following offers for sale: Jno. Cox, Llewellyn setter pups; Hansome Brook Kennels, field spaniel; P. O. Box 310, Chesapeake Bay pups; Lawrence Timpon, Skye terrier; Geo. Collingwood, English setter; 12 Manning Arcade, fox-terrier pups; Sam Bury, pointer; Frank F. Dole, cockers; C. D. Bernheimer, fox terrier; L. N. Edwards, foxhounds. E. Jackman offers field spaniels and the Stretor Kennels offer pointers at stud.

Kennel Notes are unavoidably held over.

WILLIAM CHAILLE PERCY, well known to the many readers of the *FOREST AND STREAM* over the *nom. de plume* of "Kit Killbird," passed away from this earth on Sept. 30, at his plantation residence near Bayou Sara, Louisiana. He was born Dec. 18, 1840, in West Feliciana Parish, La. At the age of 21 he entered the Confederate service at Port Hudson, La., joining Boone's Battery, in Mile's Legion, where he characterized himself for daring and reckless bravery that he was afterward noted for. Inheriting from his family a love for hunting, he founded the Killbird Kennel, and afterward made it one of the finest in the South-west until forced to give up the business on account of health failure. He leaves a wife and six children to mourn his loss.

THE BALTIMORE SUITS SETTLED.

MALLORY ET AL. } In the Circuit Court No. 2, of Baltimore City.
vs. }
MASSAMORE ET AL.

This case being submitted, it is, by consent of all parties, this 13th day of November, 1891, adjudged, ordered and decreed as follows:

1. That the notice issued for the meeting of the Board of Governors of the Maryland Kennel Club, called for November 15, 1891, and the notice issued for the meeting of the Maryland Kennel Club for the same date were insufficient, but not null and void, and therefore the proceedings at each of said meetings which purported to repeal the resolution of censure theretofore passed upon the American Kennel Club and to apologize to the American Kennel Club for the passage thereof, were and are hereby declared to be illegal and void; all other proceedings of said meetings and each of them being hereby declared void by consent.
2. That the plaintiffs, Jeremiah D. Mallory, R. B. Glanville, Orlinton Mallory, Harry R. Vonderhorst and Harry Mallory, be and they are hereby reinstated as members of the Maryland Kennel Club, with all dues and assessments canceled to this date, and without any liability for assessment for any expense heretofore incurred by said club for any cause, or hereafter to be incurred in connection with this proceeding or that of Harry Mallory vs. the same defendants in this court.
3. No suit or suits shall be brought or prosecuted by any of the parties to this cause against any other party or parties hereto for or on account of any cause of action whatever up to this date.
4. That the costs of these proceedings, to be taken by the Clerk, shall be paid by the Maryland Kennel Club.

CHARLES E. PHELPS, Judge.
This case is submitted for decree, and it is agreed that the foregoing decree shall be passed.

(Signed) **WILLIAM A. HAMMOND, SEBASTIAN BROWN,**
Solicitors for Plaintiffs.
ISIDOR RAYNER, E. J. FARBER,
Solicitors for Defendants.

HARRY MALCOLM } In the
vs. } Circuit Court No. 2
GEO. W. MASSAMORE, ET AL. } of Baltimore City.

This case being submitted, it is, by consent of all parties, this 13th day of November, 1891, adjudged, ordered and decreed as follows:

1. The resolution of the board of governors of the Maryland Kennel Club, purporting to have been passed on the first day of January, A.D. 1891, removing the plaintiff, Harry Malcolm, from the position of president of said club and suspending him from membership therein, be and the same is hereby declared illegal and void, and said Malcolm is declared to have been the legal president of said club up until its annual meeting in March, 1891, and to be still a member thereof; but all the acts of the said vice-president, or the *de facto* president, or any one acting in lieu of the president during said period, are hereby declared to be void.
2. That the following allegation contained in the third paragraph of the answer of the defendants, viz: "That Harry Malcolm, the plaintiff, has been guilty of dishonorable action in connection with dogs, and his resignation for that particular reason has been actually requested by the Gordon Setter Club of America," shall be eliminated by interlineation.
3. That the costs of these proceedings, to be taken by the clerk, shall be paid by the Maryland Kennel Club.

CHAS. E. PHELPS, Judge.
This case is submitted for decree, and it is agreed that the foregoing decree shall be passed.

(Signed) **WILLIAM A. HAMMOND, SEBASTIAN BROWN,**

Attorneys for Defendants.

LORD CLOVER'S PEDIGREE.

DEORIA, Ill., Nov. 7.—*Editor Forest and Stream:* Dr. Cryer says that several conflicting pedigrees of Lord Clover are bottled up in the sanctum of the author of "Prize Pugs." As Dr. Cryer on page 14 of his book gives one pedigree for the well-known pug Sings Smiles, and endows him with a different one on page 130 of the same volume, and as he does the same thing in even a more glaring form in mentioning George Bell's imported bitch What's That, it is singular that Lord Clover's pedigree should stick so obstinately in his gullet. It is noticeable that the Doctor cautiously refrains from enumerating the alleged points of difference in the Lord Clover pedigrees he speaks of. He also forgets to advance any evidence in support of his course in differing from them all. The fact is that the only point of divergence is the name of the breeder. Mr. Gillivan and the American Stud Book erroneously names Mr. Chatterton in place of Mr. Goulding. As Dr. Cryer incorporates this blunder into his book, it is wisdom on his part to suppress the point of difference. In all actual essentials, Mr. Gillivan, the American Stud Book and myself agree with the English Stud Book. Dr. Cryer alone and individually is responsible for whatever confusion exists.

One would naturally infer that with his own confessed ignorance of two important factors staring him in the face, the Doctor would refrain from originating a Cryer pedigree long enough at least to convince the English breeders who he does, and then with guileless simplicity he wheels around and naively requests me to give him the facts. This course is novel and somewhat peculiar. Dr. Cryer was notified six months ago that Mr. Proctor, of Leeds, England, bred Nellie, the dam of Lord Clover. I did not suppose

it would be necessary to add that the same gentleman owned Little Dorrit, his maternal granddam. The Doctor is respectfully referred to Mr. Proctor. Mr. Houliker, of Acerrington is secretary of the Pug Club, of England. He is also owner of Lord Clover's sire together with the paternal granddam and other blood relatives of the dog. Mr. Houliker is excellent authority on the subject.

If additional testimony is required, it gives me genuine satisfaction to refer the Doctor to the "Prize Pugs of America and England." In this work is a biographical sketch of the well-known American bitch Rustic Queen. The author mutilates her pedigree exactly as he does that of Lord Clover. It is given as by Rustic out of What's That. But that's What's Stingy Smiles out of Little Dot. Little Dot seems to be an unknown quantity to the author, and well she may, as no such animal ever existed. Now the fact is that this bitch What's That was full sister to Goulding's Nellie, dam of Lord Clover, both bred by Mr. Proctor. She was not out of Little Dot but out of Little Dorrit. Dr. Cryer cannot consistently challenge this statement, for the author of "Prize Pugs" confirms it on page 109, where he names Mr. Proctor as owner of Little Dorrit, and flatly contradicts his own letter in last week's *FOREST AND STREAM*. If Dr. Cryer will compare the English stud book pedigree of Lord Clover with those of his litter brother Lindon, Lothair, Lola, Haughty Nellie and others of the same strain; if he will write any member of the English Pug Club or all of them, this discussion may finally prove to him a blessing in disguise. It is more than likely that the Doctor knows, as he says, nothing whatever of Little Dot, and that he is not the first to attempt to commence an editorial career with the scissors and the knife himself up in a hangman's knot in an effort to reconcile contradictory clippings. As the matter stands and Dr. Cryer's ignorance is publicly confessed over his own signature, it concerns me very little whether or not he perpetrates his blunders in as many "pugs" as he does, or pugs as an over-indulgent Providence permits him to publish. If his faith in the doctrine of the infallibility can stand any more such trials by fire, he is perfectly free to put it in the crucible. The initiatory test seems to have robbed it of its sting so far as the breeding of my dogs is involved.

THOS. I. BALLANTINE.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

W. M. P., Steelton, Pa.—An epileptic fit probably due to worms or over-excitement. Treat for worms and then give the following mixture: Lq. arsenicalis and tr. nucis vom. of each 1 drachm; water, 8 ounces; give one dessertspoonful twice a day. Give very little exercise at first, then gradually increase.

T. W. C., McAlester, Ind. Ter.—Will you please state, through your valuable paper, the best method of feeding "Spratts" dog biscuits? Ans. Feed Spratts biscuits dry. Once a week mix with well boiled vegetables and feed cold. Encourage dog to eat the biscuits not broken, to give him benefits derived from gnawing as at home.

G. W. H., Rochester, N. Y.—What can I give my Irish setter pup he seems to have been all right until this A. M., when I found he would not eat and seemed to have something the matter with his hindquarters. He walks as though it gave him pain to use his hindlegs. His age is 11 weeks. I gave him some milk with a little sulphur and a pinch of quinine this noon, which he drank slowly, taking a rest after sipping may be a dozen times. Ans. Give a dose of castor oil and try the following mixture: Pot. Bromide, 1 drachm; compound tincture of gentian, 2 drs.; water, 6 oz. Give one tablespoonful three times a day.

E. L. P., Ansonia.—A pointer puppy of 7 months has had fits since he was 3 months old. These fits come on after exercise, last about an hour. When taken he suddenly rears on his hind feet and falls, striking on his side and head. I keep him in a pen 7x13 ft. When in a fit he kicks violently and foams at the mouth a little. They last about 3 or 5 m., after which he is apparently as well as ever. His diet has been chiefly boiled corn meal and milk, with very little meat. He has given him sulphur, castor oil and one bottle each of Humphrey's specific, C. C. H. and J. K., alternately, as directed in book. The pup does not improve under this treatment. Ans. Treat for worms and then give the following mixture: Pot. bromide, 2 drs.; liquor arsenicalis, 1 dr.; add 3 oz. of water. Give one dessertspoonful three times a day. Do not exercise for the present. Feed on bread and gravy, meat and milk.

J. R. P., Philadelphia.—An Irish setter, three and one-half years old, during the summer and fall, was bothered with fleas, and scratched a great deal. I used one bottle of ointment on him, and afterward there appeared a dry, scaly substance like dandruff. This seems to itch him, as he bites himself until he makes sores. This is only perceptible on the back to the tail. He also passes short white worms in quantities. He is also losing his hair around the root of tail. His appetite is good, and he is lively enough, though some mornings I notice large pieces of gelatinous looking stuff in the corners of his eyes. Any of the following dressing all over the dog every other day for a fortnight, then wash off and repeat if necessary: Kerosene, cotton seed oil and sperm oil—of each equal parts. Treat for worms, and then give this mixture: Ferri vercholi one drachm and a half; liquor arsenicalis one drachm, glycerine half an ounce, water and six ounces. Give one tablespoonful twice a day. Feed well.

E. W. Q., Newport, R. I.—An English setter 16 mos. old has something the matter with his left eye. The lower lid seems to hang partly over the under side of the pupil and the lower lid looks as though it were drawn down, as it shows red. This is more noticeable when the dog is looking up than at any other time. Sometimes both eyes run a great deal; at other times with the exception of the hair nothing seems the matter with the eyes. When I bought the dog four months ago he was in very poor condition. He was as thin as a rail, had a little eczema and his eye was very bad. 2. An English setter about 18 mos. old has a lump the size of an English walnut on his hip 2 in. from the root of his tail. It is soft, but not inflamed and doesn't seem sore or tender. It looks a great deal like a windgall. It has been on the dog about a month. The dog is in pretty fair condition, although rather thin. Ans. 1. Without a personal examination, it is difficult to say exactly what his ailment with the eye. From your description the hair must be enlarged, in which case it will have to be removed. Why not show the eye to your family doctor? 2. Probably a serious abscess, the result of an injury, or a swell growth. In the former case it will have to be lanced; in the latter first try iodine liniment; apply with a brush twice a week for a few weeks, if no improvement then have it removed.

W. S. B., Philadelphia.—I have a cocker puppy, 7 mos. old, that had eczema, which I cured by treating as advised in Dr. Sewell's article published in the *FOREST AND STREAM*. His hair is very rough and without any gloss. He also passes a jelly substance streaked with blood. Have tried for worms, but no success. 2. I also have a cocker bitch, 4 yrs. old, that failed to whelp (owing to rear presentation). Had to have them taken away. This was in April last, and while in good health and fair appetite, she has never been in season since, and she is as thin as a rail. Ans. 1. Another dressing or two would probably make the coat look better. Give the following pills: Pulverized kino, 2 scruples; pulverized ipecac, 4 grs.; pulverized opium, 6 grs.; to make 12 pills. Give one three times a day. 2. It is often the case when there is any difficulty at whelping that the following beads do not come on at the usual time. Have you treated for worms? Give the following mixture: Lq. arsenicalis and tr. nucis vom. of each 1 dr.; diazolyed iron, 6 grs.; water, 6 oz. Give one tablespoonful twice a day. Give plenty of meat and try cod liver oil cakes.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE REVOLVER CHAMPIONSHIP.

The opening shoot for the Amateur Revolver Championship of the United States and the possession of the Winans trophy will be held at the gallery of the New York Pistol Club, Eighth street, near Third avenue, this city, on Saturday evening next, Nov. 21. The gallery is specially adapted to pistol and revolver work, being an open and lighted one, while in the matter of safety it has every possible precaution. The shooting will open at 8 o'clock, and as far as time will permit all contestants presenting themselves will be given opportunity of making a record. In case it is

found impossible to give ample time for all who may wish to shoot, other evenings will be agreed upon and designated until all who may desire have had opportunity of shooting. The record shoots, of course, will be open to the public as spectators to the capacity of the gallery. A representative of *FOREST AND STREAM* will be present and conduct the match under the conditions as given below, and which have been before the public since July last.

The target selected for the final record is a cardboard circular disk of 5 in. diameter. It is white, with a black bulls-eye of from 1 to 3 in. in diameter. Each shooter may select the bulls-eye best adapted to his eye sight, and as the measuring is by scale from the center of the disk to the center of the shot hole the size of the bulls-eye fired at does not affect the scoring record.

Possibly other galleries will be designated for other contestants in this city and these dates can be fixed at once if those desiring to compete will send to this office their names and addresses. The same will apply to those who wish to compete in other cities. If they will at once communicate by mail with *FOREST AND STREAM* arrangements will be made to have dates fixed and galleries selected. No time should be lost. No scores will be published until after the measuring up and this will not take place until after the competition has closed. The measuring of the disks will be placed in the hands of a competent expert at this line, acting under direction of *FOREST AND STREAM*, and the total list of scores will be published in *FOREST AND STREAM* as soon as possible after the conclusion of the record shooting. The conditions of the match are:

CONDITIONS.

Open to any citizen or permanent resident of the United States. Any revolver, maximum length of bore, including cylinder, ten inches.

Any trigger pull.

Any sight, both sights to be on the barrel or forward of the grip of the pistol hand.

Any fixed ammunition.

Cleaning allowed only between scores of six shots.

Distance, 20 yds.

Position standing, free from any artificial support, the revolver held in one hand only with the arm free from the body and unsupported in any way. The rear sight shall not be nearer to the eye than twelve inches.

Target—Ready measurement disks, one shot on each disk and the measurement to be taken by mechanical Vernier scale from center of disk to the center of the shot hole.

Scores—Aggregate of best three in five scores, each score to consist of six consecutive rounds. The five scores to be fired consecutively.

Amateur Standing—The standing of a contestant as amateur and professional to be determined in each individual case by *FOREST AND STREAM* rules.

Where not in conflict with conditions herein, the rules of the Massachusetts Rifle Association for revolver competitions to hold. The decision of *FOREST AND STREAM* to be final on all points.

Any winner of the trophy shall hold it subject to challenge for a term of two years, after which it shall become his personal property. Upon receiving a challenge the holder shall agree with the challenger upon a place and date for their meeting not later than six weeks from the receipt of the challenge, of which meeting at least two weeks' notice shall be given through *FOREST AND STREAM*, and the shooting at said meeting shall be under the same conditions as the original competitions for the championship trophy. In case of a failure to agree upon a time and place of meeting they shall be fixed by *FOREST AND STREAM*.

The trophy shall be deposited in the custody of *FOREST AND STREAM* at least one day prior to any challenge meet, and if required, holders must give bonds to *FOREST AND STREAM* for its safe return.

The holder shall not be required to accept a challenge pending the determination of a challenge shoot already under date. In case of any dispute about the right of priority in shooting challenges, *FOREST AND STREAM* shall determine the order of shooting. All expenses of targets and gallery will be borne by *FOREST AND STREAM*. Contestants will defray all other expenses.

NEW JERSEY RIFLE SHOOTING.

[Specially Reported for Forest and Stream.]

EQUITABLE RIFLE CLUB, Tuesday, Nov. 10. Headquarters, 223 E. 12th street, Hoboken. Ten shots, off-hand, 25-ring American target, 100 ft., possible 250:

A. Meyns.....	25	25	25	24	24	24	23	23	22	238
F. Brandt.....	25	25	25	24	24	23	23	22	237

J Campbell..... 25 23 23 23 22 22 21 20 20 19-218

The average scores of the Friday Night Club rank among those of the leading clubs of Hudson county, and on Tuesday, Nov. 17, will award prizes to their members who have made the highest scores throughout the year. In connection with this the guests of the club will be entertained by some first class talent and the many friends of this organization will find this another token of hospitality for which this club is famous.

Quite a number of rifle clubs of Hoboken, Jersey City, Marion, Jersey City Heights, Newark and New Jersey were invited to send delegates for the purpose of forming an inter-state tournament for riflemen for this winter. The meeting was to be held at the Excelsior Rifle Club's rooms, on Montgomery street, Jersey City, last Wednesday. No quorum was present, as only the Puritan Rifle Club, of Newark, was represented, therefore no meeting was held. Another effort will be made to hold a meeting, as the idea is a good one and would furnish lots of entertainment for New Jersey and New York riflemen this winter. J. H. Kruse.

BOSTON, Nov. 14.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day, with a large attendance. The shooting conditions were unfavorable for high scores. Mr. Hickey won the bronze military medal. Following are the scores made to-day, 200 yds., standard American targets, at the regular matches:

Bronze military medal, 10 scores, 10 shots each:	
J P Hickey.....	41 41 37 37 43 41 40 42 39 42

MANHATTAN CLUB.—Dr. W. R. Pryor, director of shooting at the Manhattan Athletic Club, announces that the revolver match for club championship will begin November 25. Conditions: Thirty consecutive shots, off-hand, at 20 yards; 8-pound trigger pull; 7/8 inch barrel. Ammunition furnished free by club; 3 prizes, 2 gold, 1 silver. Entrance fee, \$2. Trap shooting for members at Manhattan Field every Friday thereafter.

LONDON, Oct. 12.—The annual matches of the Western Ontario Rifle Association were held at the Cove ranges to-day. The attendance was large despite the weather, and the scores made were creditable.

SING a song of shooting, the birds begin to fly,
I'll put my gun in order and then I'll have a try.
If I do not kill some, they surely can be found,
Either killed honestly, or snared upon the ground.

FULFORD VS. BREWER.

DURING the week past Eastern sportsmen have been treated to an exhibition of shooting skill that is unparalleled in the history of pigeon shooting. To say that the spectators, who were fortunate enough to witness the events, were astonished, would be putting it mildly, for they were completely carried away with the wonderful performances. When the matches between John L. Brewer and E. D. Fulford were announced but little notice was taken of them, and the only comments heard were those of sympathy for the comparatively unknown shooter who had the nerve to run up against the acknowledged champion of the world. All that was known of the ability of Ed. Fulford as a pigeon shot was based on his two public performances, in matches shot last spring, when he defeated C. M. Hedden and Frank Class, both of New Jersey; as both wins were on very ordinary scores, no one placed him in the same class with Brewer. It would have been a hard matter to have found one man in the audience on the day of the first con-

E. D. FULFORD.

test that believed he had a ghost of a chance of being in the game at the finish. As the match progressed and it dawned upon the spectators that he was a shooter, and at the finish when by magnificent work he had surpassed all records, the question was asked, Who is he? Mr. Fulford tells us he was born at Long Hill, Connecticut, 7 miles from Bridgeport, and is 23 years old. He took up shooting at an early age, shooting both in the field and at the traps ever since he could hold a gun. He is a constructor of telegraph and telephone lines, and for the past 4 years has been chief constructing agent for the Bell Telephone Company, and has built lines from Portland, Maine, to the Rio Grande. He claims no particular place as his home, as he is continually on the move, but for the past year and a half has been in the East. He joined the Newark Gun Club last year and shot in one of the Inter-State League matches, making only an ordinary score. He has no desire to shoot matches, but felt that he could shoot a bit and wished to try himself once and so made for the biggest game. He certainly has done magnificent work and has leaped with one bound from almost obscurity to the very front rank of the world's trap shots.

First Match, Thursday, Nov. 13.

As early as 11 A. M. there was a large number of spectators assembled at the Jersey City Heights Gun Club Grounds at Marion, N. J. Sweepstake shooting was indulged in until the hour announced for the beginning of what proved to be the greatest record-breaking contest that has ever been known in the history of pigeon shooting, 199 birds scored out of a possible 200, and that one dead out of bounds. Fulford arrived at the grounds about 11:30, and was quickly followed by Brewer. As soon as their guns were put together, they stepped to the score for practice, each man shot at 10 birds, and each killed straight. At 1:20 P. M., when Referee Wm. H. Wolstencroft, of Philadelphia, called the match on, there were 300 spectators upon the ground. Among them were noticed: Milt F. Lindsley, Miles Johnson, C. M. Hedden, Fred Quimby, Gustave L. Freche, Robt. Schrott, W. H. Green, Dr. Ziegler, Frank Class, Tom Taylor, Sam Castle, James E. Wheaton, Eddie Collins, Justus Von Lengerke, Hugh Liddy, Chas. H. Townsend, Geo. B. Eaton, Lewis Cokerfay, Wm. Hughes, Asa Whitehead and Fred Van Dyke, all of New Jersey. Ben West and Adford Eddy, of Brooklyn; Walter Cady, of New London, Conn.; Dr. Hudson, president of the Emerald Gun Club, of New York; Thos. Duffly and Harry C. Squires, New York city; Wm. H. Wolstencroft, Isaac Wolstencroft and Harry Thurman, of Philadelphia; A. C. Krueger, of Wrightsville, Pa.; Wm. H. Fieles, of Christiansburg, Pa.; James Beebe, Trenton, N. J.; and John Fulford, of Altoona, Pa. Brewer was first to the score, and he easily stopped a right-quarterer, Fulford doing likewise on a quarterer to the left. The birds furnished were far from being of a high order, and, as there was no wind to speak of, a good fast one was an exception. A detailed description is not necessary, as a careful perusal of the scores will tell the story, each bird, trap, and direction of flight being given in detail.

The conditions of the three matches as follows: 100 birds each man, for \$200 a side, Hurlingham rules, fence boundary, each man paying his own expenses. Gate money divided. W. H. Wolstencroft, referee; Jacob Pentz, scorer; Neaf Appgar, trap puller. Score:

Called birds 12. No bird 1. Time of match 2h. 45m.
Brewer used a Westly-Richards weighing 7lbs. 14 z. His load was 3/4 lbs. Schultz powder and 1/4 oz. No. 7 chilled shot in Squires Tournament shells, loaded by himself.
Fulford shot a 7lbs. 7oz. Greener, ejector, hammerless. His load was 4 lbs. Schultz powder and 1/4 oz. No. 7 chilled shot, Squires Tournament shells, loaded by himself.

Second Match, Friday, Nov. 13.

The second match saw fully 500 enthusiastic sportsmen assembled on the grounds at Marion. Every lover of the sport for miles around was on hand to see the man who had lowered the colors of the redoubtable Jack Brewer and who had established a new world's record. In addition to the old regulars who were on hand for the first match were noticed Edgar G. Murphy, Rmt. Lawrence, J. Jolite, Louis Gehring, R. Sundermann, Louis Schortemer, Dr. Leveridge, W. H. Skinner and Mr. Whitney, of the Whitney Arms Co.; H. A. Penrose, Ed. Spath, E. Carrington, E. Smith, W. R. Hobart, of Von Lengerke & Detmold; Lee Helgans, J. Short, W. M. Ward, Abe Greenleaf, John Mix, H. Burt, W. A. Baxter, P. Dobbins, J. Flynn, and John M. Ward and Captain Adrian Amos, the stars of the base ball profession. The day was clear and bright, and a good stiff wind blew across the traps. The birds were a much superior lot to those furnished on the first day, and up to the 80th round were a really good lot. Brewer made a strong protest about the quality of the birds and threatened to stop shooting, declaring that the articles called for first-class birds; but his complaint was not justifiable, as they were above the average. Called birds 3; no birds 1; time of match, 2h. 25m.
The men used the same guns and loads as in the first match, and the same gentlemen officiated.
The kills that are most worthy of mention were the 9th, 13th, 28th, 28th, 51st, 55th and 80th made by Fulford, and the 2d, 25th, 28th, 55th and 80th by Brewer. The only question raised during the contest occurred on Fulford's 64th round; the bird had risen and quickly settled near the trap and refused to take flight; Fulford killed the bird on the ground and Brewer claimed a lost bird. Referee Wolstencroft allowed another bird, quoting the rule "That a bird shot on the ground with the first barrel is no bird," and he was unquestionably correct in his decision.

Third Match, Saturday, Nov. 14.

The final match of the series was witnessed by probably 1,000 persons, a third of whom viewed the contest from the surrounding hills. Among those that have not been mentioned as being at the previous contests were noticed J. G. Knowlton, of Utica; E. D.

Miller, of Springfield, N. J.; Wm. and Henry Sigler, of Montclair, N. J.; Wolstenholme, Sr., and Albert Worrell, of Philadelphia; Abel Crook, of Has. Wingert, of Wm. Lee Helgans and Chas. Seddons, of Brooklyn; W. Alex. Bass, Richard Schaeffer and E. Edwards, of New York city; C. E. H. Brelsford, President of the Pennsylvania State Sportsmen's Association; Leander B. Campbell, J. and E. Van Dyke, of Long Branch, N. J.; E. Yeomans, Lon Hedden, S. P. T. Wilbur, Al Phillips, John Riggett, Geo. Voehel, J. Pierson, G. McCall, W. B. Gladway and the veteran Henry Abbott, of New Brunswick, N. J.

The day was raw and cold, with a strong wind blowing that gave the birds a decided advantage. The birds for this match had been furnished by Wm. Fieles, of Christiana, Pa., and handled by "Old South Paw" Heritage, they proved a magnificent lot. Fulford labored under a great disadvantage, and was badly handicapped early in the race by the breaking down of his gun. In the previous matches the first barrel frequently misfired, and on the thirty-first round it refused to work. On examination the left hammer was found to be broken, and he was compelled to use a gun that he never before handled. The gun was a Greener that was formerly used by Brewer, and had a trigger pull of less than four pounds. Fulford's old gun, it is claimed, had a trigger pull of ten pounds, so shooting men can readily see the great disadvantage he was laboring under. He shot a plucky up-hill race, and when Brewer missed his eighty-first and eighty-second bird in succession, it looked as though he was going to give back the same dose that he had given Elliot. The fates were against him, however, for he lost his ninety-eighth, and Brewer killing out, a tie was the best he could make it. During the afternoon Fulford received a telegram from J. A. R. Elliott, worded as follows: "Accept congratulations of the Kansas City sportsmen and myself on your remarkable scores, and wish that you may shoot again add new laurels to those already won." Fulford used the same loads throughout all the matches, Brewer changing in this match to Squire's tournament shells loaded by Neaf Apgar, containing 3/4 trs. of Schulze powder, 1/400 No. 7 chilled shot. Score:

Called birds 12. No birds 2. Time of match 2h, 21m.
When Fulford scored his last bird there was a scene of wild excitement, and it was some minutes before the tie shoot could be proceeded with, the articles of agreement in case of a tie calling for a shoot at 25 birds. The men immediately got to work and the result was Brewer scored a win as follows:

J. L. Brewer.						E. D. Fulford.

Although chilled to the bone Brewer shot the tie as he always does—in great form, using his second barrel but twice.
The record of the three matches is as follows:

Fulford.						Brewer.					
First match.....	100					First match.....	99				
Second match.....	99					Second match.....	98				
Third match.....	94					Third match.....	94				
Tie shoot.....	24-317					Tie shoot.....	25-316				

At the conclusion of the tie Brewer stepped up to his opponent and said: "Mr. Fulford, I have shot against the best men in the world, and you are the toughest man I have met in a match; you have beaten me twice, and I have lost won from you. I don't feel satisfied. You have had everything your way in these matches. Now, I would like to name a race. I will shoot you a match at 250 first-class birds for \$1,000 a side, I to furnish the birds, the match to take place on a recognized club ground. If you beat me I won't kick, but I'll throw up the sponge to you." Mr. Fulford at once accepted the offer and placed \$250 in the hands of Mr. H. C. Squires as a forfeit, Brewer agreeing to do the same. At the suggestion of members of the Fountain Gun Club, the grounds at Woodlawn Park, L. I., were selected, and December 12 decided on as the date. Special trains will be run to the grounds, and should the weather prove pleasant, the largest audience ever seen at a similar contest will be assembled there. TER KAY.

CLAREMONT, N. J., Nov. 14.—There were eight interesting prize matches at bluecock breaking decided this afternoon on the range at Claremont by the gunners of the New Jersey Shooting Club. The ninth shoot of a series for a Marlin rifle at 20 targets each, Keystone system, C. W. Vincent took first honors for the second time, scoring 17 breaks. The other scorers were: Geo. S. Virden 10, A. Amsterhout 15, Frederick G. Moore 13, A. Grief 9, W. Nelson 8.

AUBURN DEFEATS LYONS.

AUBURN, N. Y., Nov. 14.—On Thursday, Nov. 12, the second match between the Spencer Sportsman's Club of Lyons, N. Y., and the Auburn Gun Club was shot at Auburn. The day opened with a drizzling rain, which developed into a good strong one before eight o'clock, but the visiting team appeared on time with twelve men. Sweepstake shooting filled the earlier part of the day until the main race was called, at two o'clock, when the clouds broke away, giving a very pleasant afternoon. The conditions of the race were made by the Lyons team, and were announced on the grounds. The race, as given, was 25 single kingbirds, 5 traps, expert rules, rapid firing system, with the indicator turned for each man. The score was as follows:

Auburn won by 19 to the good, if any other club in the State wishes to meet with three to twenty men, we shall be glad to hear from them. AUBURN.

CLASSIFICATION.

NEW LONDON, Conn., Nov. 16.—Editor Forest and Stream: For the information of the readers of the FOREST AND STREAM we send you the following announcement. After a careful study and much deliberation upon the ever prominent question of classification and division of surplus money, we beg to state that the management of the Inter-State Manufacturers' and Dealers' Association have decided to make three classes, viz.:

Semi-professional class.
Amateur class.
This classification shall be recognized at all future tournaments of the association.
The surplus money will be divided as follows: 55 per cent. added to interest, 10 per cent. to first and 5 per cent. to second for the best average in expert class; 10 per cent. to first and 5 per cent. to second for best average in semi-professional class; and 10 per cent. to first and 5 per cent. to second for best average in amateur class. For further information regarding the rules and regulations for 1892 address manager Inter-State Manufacturers' and Dealers' Association, New London, Conn. H. A. PENROSE, Manager.

UTICA, N. Y., Nov. 10.—Following is the record made by members of the Onondaga County Sportsmen's Club at the regular weekly shoots of the association on its grounds at Riverside Park for the season of 1891:

No. of Shots.	Broke.	Per Cent.	No. of Shots.	Broke.	Per Cent.		
Booth.....	350	305	87 1-7	Wheeler.....	350	258	73 5-7
Kallies.....	350	249	71 1-7	Horton.....	375	304	81 1-3
Gilmore.....	375	242	64 2-5	Williams.....	350	211	60 2-7
Harris.....	150	115	76 2-3	Elliott.....	25	19	76
Knowlton.....	350	307	87 5-7	Smyth.....	25	17	68
Scott.....	50	35	70	Klages.....	50	18	36
Smith.....	375	257	68 4-5	Wilcox.....	125	54	43 1-5
Pfeiffer.....	275	143	51 3-5	Cummings.....	25	11	44
Gates.....	350	249	71 1-7	Lockwood.....	125	64	51 1-5
Dexter.....	50	113	72 2-3	Hennings.....	25	9	36
Mizer.....	150	98	65 1-3	Parker.....	50	24	48

The club prize offered was \$120 to be divided. Each contestant to be entitled to compete for the prize was obliged to shoot at 350 clay pigeons. The prizes were awarded as follows: Knowlton, first, \$20; Booth, second, \$18; Horton, third, \$16; Wheeler, fourth, \$14; Gates, fifth, \$12; Kallies, sixth, \$10; Smith, seventh, \$8; Gilmore, eighth, \$6; Williams, ninth, \$4; tenth prize not won. The diamond badge was won during the season as follows: Booth, 6; Harris, 2; Knowlton, 1; Dexter, 1; Kallies, 5; Horton, 5; Smith, 1; Kallies and Horton tied Oct. 2 and have not yet settled it. Whoever wins on shoot-off will be tied with Booth, and a great struggle for the championship will result. The conditions of the badge contest are that the one winning it the greatest number of times during the season shall hold the badge until next year. The badge is valued at \$200. The semi-annual meeting of the association was held Friday evening, Nov. 13.

BROOKLYN, Nov. 11.—Though the list of contestants in the regular monthly shoot of the Parkway Rod and Gun Club at Dexter Park to-day was a short one, the contest was animated. Seven men entered. The shoot was at 7 live birds each, modified Hurlingham rules. The score: A. Andrews 21, A. Botty 20, E. Helgans 15, H. Brannan 12, A. C. Hunt 9, T. Edgerton 6, M. Bonden 6. Referee—Wm. Mills. Scorer—F. W. Weber.

A good race for the diamond badge of the Coney Island Rod and Gun Club was made at Woodlawn Park, Long Island, yesterday. I. Hyde, J. B. Voorhees, D. Monsees and C. E. Morris tied for it with 7 straight. In the shoot-off Hyde killed 6 straight, and won. The second prize was won by W. Schulze, the third divided by V. Nair and M. Monsees, and J. C. DeFrance won the fourth. In the sweeps that followed J. Schlemmer and L. Eppig divided the took the third.

Louis Miller, the proprietor of Dexter Park, Long Island, proposes to give two purses for competition on Thanksgiving Day—one for bluecock shooting and one for live birds. This is in addition to the entrance fee. The competition will be open to any member of a recognized gun club on Long Island.
W. Schulze and J. F. Schmaderke have made another match at 50 live birds each, for \$50 a side, 25yds. rise, Long Island rules, gun below the elbow, use of one barrel only. It will be shot at Woodlawn Park, Long Island, on the day of the next shoot of the Erie Gun Club, of which both are members.

INTER-STATE LEAGUE.—Nov.

NORTHERN DIVISION.—The report of the Northern Division for 1891 is most gratifying, as it shows that the Division has recovered from the mistakes and accidents of the previous year. A very successful Division meet was held; the representatives of the Division took a fair share of the racing honors at the A. C. A. meet; the debt of 1890 has been wiped out, leaving a small balance in hand; and a large number of members have been added. The gain in this latter detail is far greater than the figures show, the new men being gathered from many different parts of the Division, showing a general growth, while those dropped were mainly members who joined from some special considerations, and with no intention of remaining permanently. The Division is now in a very satisfactory condition, and with every promise of a good Division meet in '92 and a large general meet in '93.

REPORTS OF OFFICERS.—We wish to acknowledge the assistance which we have this year received from the various officers, the secretary-treasurer in particular, and which has enabled us to publish the very complete reports of the Association and the Divisions.

FIXTURES FOR 1892—MARINE AND FIELD CLUB.—The Marine and Field Club is the first to make arrangements for the season of 1892, having selected June 11 as the date of its fourth annual canoe regatta. Dates from other clubs are now in order.

THE EXECUTIVE COMMITTEE MEETING, 1891.

THE 11th annual meeting of the executive committee of the American Canoe Association, the fourth meeting held in Albany, was called to order on Nov. 14 at 10:45 A. M. by Commodore Winne in the parlors of the Delavan House. The members present were as follows: Com. C. V. Winne, Sec'y-Treas. W. B. Wackerhausen, both of whom took office on Oct. 1, and the following Division officers, whose terms began with this meeting: Central Division, Vice-Com. E. L. French, Buffalo, N. Y.; Rear Com. T. H. Stryker, Rome, N. Y. (by W. H. Huntington, proxy); C. G. Belman, Amsterdam, N. Y. Eastern Division, Vice-Com. J. W. Cartwright, Boston; Rear Com. E. C. Knapp, Springfield; Purser R. Appollonio (by Sidney Bishop, proxy); Paul Butler, Lowell; W. U. Lawson, Newton; T. H. Metcalf, Hoke.

Northern Division—Purser W. H. P. Weston, Toronto (by C. E. I. Porteous, proxy). Atlantic Division, Vice-Com. L. W. Seavey, New York; Rear Com. Richard Hobart, Newark, N. J. (by L. B. Palmer, proxy); Purser J. K. Hand, New York; W. S. Elliott, New York; J. R. Lake, New York (by Wm. Whitlock, proxy); C. V. Schuyler, Arlington, N. J.

Four of the new regatta committee, Messrs. Gibson, Oliver, Barney and Quick; Mr. Stephens, the librarian, Messrs. Buddington, Dannel, Lawrence, Vaux, Wilkin and others were present. Out of the 26 members of the executive committee, 16 were present. The minutes of the meeting of Aug. 20 in camp were read and on motion of Mr. Palmer amended to include the names of Miss Fredericks and Mr. Hunt, elected to honorary membership, after which the minutes were approved. The following report of the Sec'y-Treas. was read and on motion of Mr. Butler received after an explanation by Mr. Lawson of some of the items:

RALPH F. BRAZER, Sec'y-Treas.

Audited and found correct,
F. T. WALSH,
RODNEY E. HEMENWAY.

The following report of the Librarian was read and received:

LIBRARIAN'S REPORT.

As one of the principal objects of the American Canoe Association, as set forth in Article II. of the constitution, is the collection of "logs of voyages, records of waterways and routes, * * * and collections of maps, charts and books," your Librarian, in making this, his second annual report, takes great pleasure in calling the attention of the commodore, the executive committee and the members in general to the high percentage of increase over previous years in the addition to the various departments of the A. C. A. Library. In order to keep this report within reasonable length, your Librarian has deemed it advisable merely to summarize these additions, and at the same time to include the full lists of additions in separate documents, which accompany this report.

The first of these, marked "Exhibit A," contains the complete list of cruises received during the year. It may not be out of place to remark in passing, that every cruise received has been duly acknowledged, and also posted in the official record book of "Cruises, Routes and References." The second list, marked "Exhibit B," contains the additions of books to the A. C. A. Library during the year.

While pointing with pride to the favorable showing, compared with former years, your Librarian confesses to a feeling of disappointment at the absence of contributions from certain quarters where a vast amount of zeal and enthusiasm for the Library was at one time manifested in the shape of criticism and suggestion. The condensed summaries of exhibits A and B are as follows:

Exhibit A.—List of Cruises added to A. C. A. Library, 1891:
Received during current year.....1
Enumerated in 1890 report.....5
Old cruises, not previously enumerated.....2

Total.....8

Exhibit B.—List of Books added to A. C. A. Library, 1891:
Received during current year.....1
On hand at date of last report.....0

Total.....1

Respectfully submitted,

W. P. STEPHENS, Librarian, A. C. A.

Exhibit A.—List of Cruises added to A. C. A. Library, 1891: Wallkill River, Orange and Ulster Counties, N. Y. Smith, N. S. Newburgh, N. Y.

Exhibit B.—List of Books added to A. C. A. Library, 1891: Glazier.—Captain Willard. "Down The Great River."

A motion to dispense with the reading of the reports of the Division pursers, already published, was carried. The following report of the camp site committee was then read:

Approved, CHARLES DANA PALMER,
Chairman Regatta Com., A. C. A., 1891.

A discussion of the question of making a complete inventory of all property, such as camp floors, etc., now stored at Willsborough Point, and also of the ownership of the camp floors followed; after that the report of the regatta committee, Messrs. Hand and Schuyler as an auditing committee for the report. The report of the special committee on lady honorary membership, Messrs. Wilkin, Palmer and Stephens, was then read and accepted. The report, which will be published in full, recommended that the word honorary be changed to associate, and that a regular system of proposal and election be adopted, with certain regulations to govern the ladies' camp. Mr. Lawson suggested that the lady associate in place of associate. As an amendment to the constitution, which must be published for two weeks before being voted upon, will be necessary to carry into effect these changes, the report was merely read and received, and the proposals will be voted on later. The report included a full list of all lady members from the organization of the A. C. A. in the order of election.

The following report of the regatta committee was then read and received. That portion of the report relating to proposed changes was published in the FOREST AND STREAM of Oct. 29:

REGATTA COMMITTEE'S REPORT.

The duty of preparing and publishing an order of races not later than June 1 was duly attended to by the regatta committee through the efforts of Mr. A. G. Gare, of Lowell. Later Dr. Gare resigned from the committee, and Charles D. Palmer, of Lowell, was appointed to fill his place. Mr. Palmer received early in August the official notification of his appointment as chairman of the regatta committee for the meet of the American Canoe Association at Willsborough Point, N. Y., vice J. A. Gare, resigned.

The committee held their first meeting at headquarters, at Willsborough Point, Wednesday, Aug. 12, at 9 o'clock A. M. There were present the chairman and Mr. L. B. Palmer, of Newark, N. J. The vacancy caused by the absence of the third member, Mr. W. G. MacKendrick, of Toronto, Ont., was filled by the election of Mr. J. Wilkin, of Brooklyn, N. Y. After officiating in two of the events of Saturday, Aug. 15, Mr. L. B. Palmer resigned. His place was filled by Mr. J. S. MacKendrick, of Galt, Ont., who officiated thereafter throughout the meet.

Three sailing courses were laid out by the committee, namely: An outer triangular course north of Willsborough Point, an inner triangular course in Willsborough Bay, opposite headquarters, and an inner L course, opposite headquarters.

The paddling courses were laid out in Willsborough Bay with finish line opposite headquarters.

Events 1, 5, 6, 8 and 10 were sailed over the outside course. All the other regular events and the race for the Jabbawock Cup were held on the inner courses.

The official summary of these events, signed by R. H. MacMillan, clerk of the course, also the original entry forms with this report, also the list of protests.

By unanimous vote of the regatta committee, in event 3, G. P. Douglas was disqualified for using paddle; in event 8 Paul Butler and H. M. Scott were disqualified for fouling buoy; in event 10 W. L. Martin was disqualified for not following the rules of measurement of cockpit, as prescribed in Rule 1 of Racing Regulations.

Three protests were entered during the meet. The protest of G. P. Douglas vs. C. E. Archibald in event 2, Aug. 17, was disallowed by a majority of the committee. While contact was admitted by both parties it was impossible to decide where the blame should rest, as the interference was so slight that it was not seen by any member of the committee, one of whom was following in a steamer, the second patrolling the course, and the third stationed on the stakeboat at the finish line.

The protest of Paul Butler vs. Palmer, event 8, was not acted upon as the chairman found it impossible to convene the committee, owing to an executive meeting at headquarters. The third protest was withdrawn.

As the American Canoe Association is the head and front of canoeing in this country its record of performance should be in every way "standard." That this may be assured it is recommended that the courses—especially the paddling—be accurately surveyed and the surveying attested.

In concluding this report I desire to express my sincere thanks to the Commodore for his support in my various duties and for his many courtesies. I must also return many thanks to Mr. Thomas G. Buddington for the use of his steam launch, and to my associates on the committee for their cordial cooperation.

Respectfully submitted,
CHAS. DANA PALMER,
Chairman Regatta Committee,
A. C. A. Meet, Willsborough Point, 1891.

LOWELL, Mass., Oct. 20.

The next matter taken up was that of an inventory, and after discussion it was moved by Mr. Lawson and seconded by Vice-Com. Seavey that a schedule of the assets of each committee be published in the Year Book, which was carried. In connection with the matter the librarian expressed his willingness to accept the custody of such small articles as the official flags, regatta committee blanks, records and appliances, etc., which can be

better stored in one place than shipped about from year to year. Mr. Wilkin spoke at considerable length to the effect that the Association should own no property at all, but should hire everything needed from year to year. A motion by Mr. Porteous, seconded by Vice-Com. French, to add the term "custodian" after the word "librarian" in the constitution, was finally withdrawn, as no change could be made without publication. The librarian asked for instruction as to the insurance of the records in his care, but no action was taken. The new regatta committee now presented a report recommending several of the changes contained in the report of the outgoing committee, which was, after discussion, laid on the table. A letter from Mr. Sidney Bishop, enclosing \$25 and regretting his inability to be present at the meet was read, also a letter from Mr. Hook in behalf of the Lake Champlain Y. C. presenting the Cannon cup. On motion of Mr. Lawson, amended by Mr. Whitlock, it was resolved that the secretary-treasurer should draft a letter of thanks in answer to each letter. The meeting now adjourned from 1:15 to 2:30.

After the adjournment Mr. Porteous offered an amendment to the constitution, Art. V., Sec. 1, to add the words "and custodian" after "librarian" in the second sentence, and to add an amendment approved by the committee. The reports of the old and new regatta committees were then taken up, and the clauses of the former were acted on in connection with the similar portions of the latter report. The amendment prohibiting the use of the ruder was lost, only Mr. Porteous, representing the wishes of some of the paddlers of the Northern Division, voting for it. The proposed amendment to Rule XII, section 1, prohibiting fanning with the sails and sculling with the rudder, and making a time limit for sailing races, were carried. The amendment to Rule XXII, allowing amendments to be made to the racing rules at any time by a mail vote, was carried. The proposed omission of the latter part of Rule XVI, was rejected.

The amendments to Rules X. and VI., relating to the starting and paddling and sailing races, were discussed and rejected. The amendment to Rule VII., relating to the original propositions, made by him, the following: To add to Rule VI. the words, "The start and finish in all races shall be by the bow." The amendment was seconded, but Mr. Palmer raised the objection that the last amendment was different from that published, and so could not be voted upon. The objection was sustained by the chair, but on motion of Purser Hand, seconded by Mr. Archibald, the amendment was carried. A vote was taken which resulted in favor of the amendment for a standing vote was made with the same result. Mr. Palmer offered the following resolution: "It is the sense of the meeting that changes shall only be made as published." The amendment was lost, after which a vote was taken on Mr. Lawson's amendment, which was adopted.

The minor amendments to Rules V. and XIII., three in all, were carried as published. The amendment relating to the weight of paddling canoes was fully discussed, the general opinion being in favor of its removal, and the clause was dropped, leaving the paddling class without limit in regard to weight.

As it was then late in the afternoon the revision of Rule I. proposed was not considered, but three proposals indorsed by the new committee were taken up and carried. They were: To change the word "General purpose" to "General purpose" make all centerboards in this class house within the canoe not project below the keel nor above the adjoining portions of the deck and coaming when housed, and to strike out entirely the limit of drop of centerboard.

Purser Hand then presented a letter from Mr. Geo. P. Douglas, appealing from the decision of the regatta committee in the case of the protest made by him against C. E. Archibald. A suggestion was then made by Mr. Gibson that the committee and by-laws be carefully engrossed in a book with spaces for amendments. Mr. Lawson stated that the constitution and by-laws as printed in the Year Book for 1891 were correct with the exception of one slight error, and on his motion the book was accepted as the present standard. A motion that the commodore should appoint a committee of three to engross them in a book which should contain all future amendments was carried. A motion by Mr. Whitlock to reconsider the motion relative to the limit of drop of the centerboard was seconded by Mr. Butler, but laid on the table during the absence of the regatta committee from the room. The appeal of Mr. Douglas was then taken from the table, letters and evidence relating to the foul being considered. Purser Hand moved, seconded by Vice-Com. French, that the appeal be referred to a subcommittee, which was agreed to. A motion was then made by Mr. Archibald to lay it on the table as no notice had been given to Mr. Archibald, consequently he had no opportunity to offer a defense. The matter was laid on the table.

Mr. Huntington, chairman of the new site committee, reported that he had visited the old camp site on Grindstone Island but two days before, and that the Delanys were willing to make any satisfactory arrangement for a suitable launch could readily be arranged. Mr. Whitlock, seconded by Mr. Schuyler, moved that the next meet be held at Willsborough Point. Mr. Porteous, seconded by Vice-Com. French, moved to amend by substituting Grindstone Island for Willsborough Point. A long discussion followed, Mr. Lawson and Com. Winne stating that most promising arrangements were under way for reaching camp, the D. & H. R. R. offering to build a platform and stop trains immediately opposite the camp, while the Lake Champlain Transportation Co. had promised to make two trips each way per day between the camp, Port Kent and Burlington, carrying camp equipment and charging one fare for round trips to members; also carrying baggage from Ticonderoga. A vote on the amendment was first taken and lost, the original motion being then voted on and carried. A motion was then made that the certificate recently issued to the protest members should be withdrawn and a new publication of the name made, as his name had been incorrectly printed in the notice of publication, which was carried.

A meeting of the officers of the Atlantic Division was held during the day, as a result of which the announcement was made that the division would loan the sum of \$200 to the general treasury on demand. The Central Division also offered to advance the same amount of the sum of \$200 for 1892, as the officers considered that they could not legally have the money for a division for a period beyond their term of office. Both of these offers were accepted. The following lady honorary members were elected: Miss Edith Farley, Miss Minnie Scott, Mrs. H. G. Winsor, Mrs. Theo. G. Palmer, Mrs. J. R. Bornann, Miss Agnes Scott, Mrs. J. G. Edwards, Miss Panny Archibald, Miss Ellen Douglas, Mrs. J. N. MacKendrick. After some discussion the date of the annual meet was fixed for August 4 to 25 inclusive. The question of two or three weeks duration was argued at length, the best being opinions on each side, but the final vote was for three weeks. Mr. Lawson moved that the races should commence on Saturday, August 13, or the following Monday, at the option of the regatta committee, which was carried. The resignation of Purser-elect C. D. Mead, of the Central Division, was read and accepted, and Mr. C. B. Singer, of Boston, was elected to fill his place. On motion of Vice-Com. French, Mr. C. B. Singer, of Pittsburgh, was nominated to fill Mr. Belman's place on the regatta committee. A discussion showed clearly that at no time during the year had the division membership been large enough to entitle it to a third member of the committee, but Mr. Singer was finally elected.

Mr. Whitlock's motion relating to the limit of drop of centerboard was taken from the table and carried, after which it was moved by Mr. Whitlock, seconded by Mr. Schuyler, that the portion of the amendment relating to the drop of the centerboard, be rescinded, which was also carried. Mr. Lawson gave notice of an amendment to Art. VI., Sec. 1, to allow one member at large on the executive committee for each 100 members on the rolls.

Mr. Palmer read a letter of resignation from Rear Com.-elect Hobson, which was accepted. Purser Hand nominated Mr. Palmer to fill the vacancy, which was accepted. In seconding the nomination moved that the polls be closed, Mr. Palmer was elected Rear Commodore of the Atlantic Division.

The following resolution was then offered and warmly advocated by several. "Resolved, That it be the sense of this meeting that the official organs be prohibited from publishing in the reports of the meet any meeting, anything which shall reflect discredit upon this Association." As the motion was not made in writing and was amended by several of its friends before being put to vote, we can only give the general wording. The discussion which resulted brought out some very plain remarks against the motion from one of the older members, after which a vote was taken and the motion was lost.

Mr. Lawson proposed a scheme of life membership which he advocated as likely to bring a desirable class of members, but though the matter was discussed no action was taken. The meeting finally adjourned at about 6 p. m.

The executive committee and visiting canoeists were invited by the Mohican C. C. to a dinner in the evening, and at 7:30 a party of sixty assembled in the large dining hall of the hotel. A table was laid nearly the whole length of the room, with seats for Com. Winne and other officers at the center, and the further end of the room a canoe filled with flowers and palms made a very good orchestra, while the tables were beautifully decorated with flowers. Starting off with the gay and lively strains of Offenbach's ever youthful and delightful "Grande Duchesse," the music continued all the evening, now and then dropping into some popular song, the words being at once taken up by the whole assembly,

There were present a number of old officers, among the ex-commodore being Nickerson, '84; Oliver, '85; Wilkin, '87; Gibson, '88, and Lawson, '90; also ex-Secretaries Neide, Mix and Dunnell.

No speeches were made, but when all rose from the table at 10 P.M. they gathered at the head of the room, around the piano, and with the aid of Vice-Com. Cartwright, Messrs. Nickerson, Moffatt and others held a very jolly service of song, the party breaking up at a comparatively early hour. Taken altogether, the dinner and evening's meeting was one of the pleasantest and best conducted that the Association has ever enjoyed. Next day the visitors, as the guests of Com. Winne and the Mohican C. C., made a trip down the river in a steam launch to the club house, paying a very pleasant visit to the home of Mr. and Miss Stata, a stone house some 250 years old, where a number of curious relics were inspected through the courtesy of the hospitable owners. On the return to Albany the party lunched with Com. Winne, most of them after leaving for their homes. During the meeting of Saturday the regatta committee held a meeting and discussed a programme for next season, which will include some new features and is likely to be specially good.

A PERTINENT QUESTION.—In his telegram, quoted elsewhere, Mr. Hearst puts very pointedly a question that has been in the minds of yachtsmen for the past three months: "If everybody is ready, why the devil can't the race come off?" An answer to this conundrum is now in order.

YACHT RACING IN 1891.

IV.—THE 46FT. AND 40FT. CLASSES.

ON July 16 the racing was resumed in Eastern waters, but the Gloria was at Newport, and was at the yard for general repairs. Alborak was undergoing alterations, and only Beatrix, Barbara, Oweene and Gossoon started. Oweene beat Beatrix very handsomely, and Barbara, in this her first race, was beaten by Gossoon. Alborak sailed with the racers, though not timed, making but a poor showing. The special regatta of the Eastern Y. C. followed on July 23, Sayonara and Alborak being ready by the time, and making up a fleet of six starters. Sayonara parried her bobstay and was soon out of the race. Beatrix was first, with Oweene second. Next day was sailed the special race of the Corinthian Y. C., all but Alborak starting. Beatrix again beat Oweene, with Sayonara third.

The Cherry Diamond Y. C., a new organization constituting the yachting department of the Manhattan Athletic Club, of New York, came into the field, and sailed a handsome gold cup for the 46ft. class, to be won three times, and the first race was set in connection with the regatta of the club on July 25. Minola, Nautilus and Jessica started, but unfortunately the regatta committee of the club had neglected all arrangements and failed to appear on the day of the race, leaving the entire management to the Commodore. As a consequence, when Minola, with a good crew, reached the start, she found that the race was no mark-hat to be turned. The judges' tug came up in time for Nautilus and Jessica to round, but Minola very properly declined to continue, and entered a protest on the ground that the mark-boat was absent when she reached the place where it should have been. Jessica and Nautilus continued and sailed a very pretty race, in which the Fife boat won, but the club finally decided to declare the race off, and the contest was abandoned. In addition to a leg for the cup and a prize of \$5 for the winner of each race, there was a sweepstake of \$30 each on this first race.

Yachtsmen had looked forward to the New York Y. C. cruise to see the entire 46ft. fleet brought together, but they were destined to disappointment, as at no time more than six yachts started; in fact, through the season only one race of the class has had as many as seven starters. The reason for this was, of course, that there was no form for racing; Beatrix and Barbara were late in getting around the Cape, and only joined the fleet at Newport, and even then Beatrix, not being owned by a club member, could not start in the races of the cruise. Gloria did not accompany the fleet, merely sailing in two races at Newport; Uvira and Jessica started but twice; so that most of the racing was done by Oweene, Sayonara, Nautilus and Alborak. In the first race, Oweene won on the first and second runs, but came to grief in the Goele cup race, losing her topsail halliard and pulling her stem apart near the bobstay plate, throwing her out of the race.

The meeting between Gloria and the rest of the class in this race was expected to settle some disputed points, but it was finally announced that Beatrix would not be allowed to start, not being enrolled in the fleet. While this was a matter of general disappointment, it could not be avoided by the regatta committee, the rules being quite clear on the subject, and the fault, if any, lying with her owners, who had neglected to apply for membership in due season. Some misunderstanding resulted, as this decision shut out Beatrix for several other races; but the matter was finally explained satisfactorily, though to the disappointment of yachtsmen.

Only four of the class started for the Goele cup—Gloria, Oweene, Barbara and Sayonara, with the 70ft. Gracie. Gloria had an undoubted advantage from the fact that she had been idle since June; being sailed about Newport, but missing the hard work on the crews and the strain of hulls and gear that the others had met with on the cruise. From the start she led easily, never being threatened by any of her opponents. She was sailing well when she came to grief, first through the scarp of her stem drawing at the bobstay plate, making a bad leak, and later through the drawing of the wire splice of her topsail halliard, compelling her to withdraw after some eight miles of the windward work, the first leg, was completed. Barbara did very well all day, losing some time through the drawing of the splice in her bobstay, but finally finishing in second place. Oweene was ahead of Sayonara. In the 12½-mile heat, in a light but steady breeze, Gloria beat Gracie nearly 8m. On the 18-mile run down wind Barbara picked up 2m. on Gloria.

The third run of the cruise, to Vineyard Haven, a very fluky race, was won by Minola, with Nautilus second. The special race at Vineyard Haven, however, was a very fine one, with a strong breeze and a good deal of sea. In this race only Minola, Sayonara and Oweene started for the club prize, but a special sweepstake was arranged, as in 1889, in which Beatrix was included. Just as in 1889 the outside boats, Puppoo and Alice won, so this year Beatrix scored an easy victory, beating Sayonara by about 9m. Minola being third and Oweene last. This gave the club prize to Sayonara and the sweepstakes to Beatrix. The two remaining runs of the cruise were unimportant, but not without incident; on the run to New Bedford both Minola and Oweene took the ground, but got off safely after some risk and difficulty. Beatrix sailed with the fleet and was timed as second boat, Gossoon, sailing in the 46ft. class for the want of a competitor, being first. As Beatrix was not in the class and competed for no prize, her place in this race is not counted in our table. Sayonara won the final run of the cruise, and the honor of Gloria had not accompanied the fleet to the Vineyard, and after a week of rather ignominious ease she was ready for the special race on Aug. 13. Captain Watson, of Sayonara, was one of the first of the Eastern yachtsmen to proclaim the invincibility of Gloria after seeing her in the early regattas, and when they met hereafter he gave up all chance of outlasting her, and contented himself with looking for lucky flukes. This day he found one, thanks to a local shift of wind which is not uncommon between Newport and Block Island, and came within but 28s. of beating the Herreshoff flyer. Uvira started in this race and turned up in third place, beating both Minola and Jessica.

This ended the racing of the New York cruise, the honors of which must be divided between Oweene and Sayonara, as though beaten at times by Gloria, but never by her. The cruise through from Glen Cove to Vineyard Haven and back to Newport. Minola too made the whole cruise, though not scoring so well as the others.

Closely following the breaking up of the cruise came the great race of the season, the Corinthian Y. C. sweepstakes, over the regular 25 mile triangle off Brenton's Reef. For two years the race has been in the 46ft. class, being won by Minola, but this year it was, as a matter of course, changed to the 40ft. class, the entries being ten in all. Gloria, Minola, Uvira, Sayonara, Nautilus, Beatrix, Jessica, Oweene, Barbara and Alborak. Of these Alborak, Nautilus and Uvira did not start. Gloria won, as usual, but Oweene was only a minute astern of her, while Beatrix from whom so much had been expected, was a poor third, Minola was fourth, Barbara fifth, Sayonara sixth and

Jessica seventh. Next day was re-sailed the race of the Cherry Diamond Y. C., only Minola and Jessica starting, the two at the same time deciding a private match which had been long pending. Minola won very easily, the wind being light. This race was open only to the original starters, but the following day a second leg was sailed open to the whole class. As Gloria would not start, Beatrix also declined, and Jessica and Minola had it out alone, Jessica turning the tables and beating Minola very fairly by 3m., the wind being much stronger than on the previous day.

The fleet now turned its attention from Newport to Marblehead, where the Corinthian Y. C. was preparing for its regular mid-summer series, this time three races on successive days, with a prize of \$100 to the winner of each race and a \$300 cup to the winner of the greatest number. Although the Eastern boats had shown no hesitation in coming to New York, Sayonara coming on twice, while Oweene made the entire cruise and Beatrix and Barbara were at Newport, the New York yachts did not show a similar spirit in the matter of going to the other end of the bay, nor Jessica had a sufficient chance of winning to justify the long trip, but with Gloria the case was different, and the feeling was quite general, in the East at least, that she should have sailed out the season. Admitting freely her superiority to the whole fleet, including Beatrix, it is at the same time a fact that she won her first races when in much better condition than any of her rivals, and in the three last races she was in much better condition, making no pretensions at cruising but kept in the best possible shape at home. While Oweene, Sayonara, Minola and the rest were racing day after day with the same crews, their owners living on board. Under the circumstances, and considering too the general desire to see a conclusive trial between her and Beatrix, it would have been no more than an every-day exertion for her to have sailed out the season, and to have accomplished, through the absence of Gloria, the concluding races were robbed of much of their interest, while the results are of far less value than they might have been. Though many believe as we do that Gloria can win the great majority of races from Beatrix, there are many others of the contrary opinion, and as the two represent the highest achievements up to this time in the keel and centerboard class, it is most important that the issue between them should be definitely settled.

As it was, but five of the fleet took part in the three races, Sayonara having gone on the cruise of the Eastern Y. C. with Gossoon. All had been put in shape after the New York cruise. Oweene and Beatrix in particular needing the shipwright's care. Alborak had been undergoing alterations ever since her first trial, in the effort to improve her steering and speed in general. The first race was won by Barbara, the second by Beatrix, Minola and Barbara losing bobstays and withdrawing, and the third by Beatrix again, with Alborak second. In the second race Beatrix was protested by Oweene for making two starts, crossing the line twice, but the protest was not sustained. This same race was, for some unknown reason, counted as a leg for the Cherry Diamond cup.

The races of the Eastern Y. C. cruise have been mentioned in connection with the other classes. Sayonara, sailing against Cinderella, won one race and was second in two others, taking second prize. The final race of the class, the fall regatta of the Eastern Y. C., was a very fluky and inconclusive one, Beatrix winning, with Oweene second. Alborak and Barbara were left entirely, by a fluke of the wind, early in the race, and finally withdrew. On the 23rd of September was sailed the regatta of Oweene and Alborak, being won by Oweene, which closed the season. Neither the New York nor Seawanhaka clubs attempted a fall regatta, as yachtsmen evidently were not anxious to sail any longer, and the regatta of the Larchmont Y. C. was a failure, none of the 46ft. class being present.

The racing in the 40ft. class, was of the most meagre description, the entire record not showing more than one race. Soon has been practically in the 46ft. class, Minola has been tied up all the season, and Liris was fitted out for cruising, with no intention of racing. Ventura's new owner started in to race her, but the attempt was a failure. Liris was started several times to make up a class, in the first instance because Jessica had no competitor. In the New York regatta Gorilla was entered in cruising, but she was not sailed, and the committee, after she had agreed to start her at the request of the committee. Next morning when Liris came to the line Gorilla was invisible, so the former sailed alone. Ventura started in the same race, but declined to sail with the cruising trim class, and went up with the 46ft. class. The sequel was a sad one, as Liris, starting at the same time, led Ventura all day and finished far ahead, the latter again being left sailing alone. In the 40ft. class, the only race timed. In the strong wind and sea Liris, in cruising trim, sailed a very good race with the 46-footers, they being in a hot race while she was merely sailing alone, with working canvas. Liris also sailed over in the Seawanhaka Corinthian regatta, her class failing to fill on the morning of the race. In the Corinthian regatta she was classed by corrected length, bringing her again to the starting line, and she sailed a very good race, being first. In the strong wind and sea Liris, in cruising trim, sailed a very good race with the 46-footers, they being in a hot race while she was merely sailing alone, with working canvas. Liris also sailed over in the Seawanhaka Corinthian regatta, her class failing to fill on the morning of the race. In the Corinthian regatta she was classed by corrected length, bringing her again to the starting line, and she sailed a very good race, being first. In the strong wind and sea Liris, in cruising trim, sailed a very good race with the 46-footers, they being in a hot race while she was merely sailing

SEAWANHAKA CORINTHIAN Y. C.—The regular November meeting of the Seawanhaka Corinthian Y. C. was held on Nov. 10, with Com. Hill in the chair. An amendment to the constitution raising the dues of life members from \$250 to \$500 was adopted. Several changes in the racing rules were recommended by the race committee, the object being to allow more liberty to the committee in laying down the conditions of the various races, so as to secure the largest possible entry. Resolutions of confidence from the club to Mrs. Edward Burgess and also to Mrs. Alfred Roosevelt were read. The committee on the new club house at Oyster Bay made a report of the progress of the work. Bonds to the amount of \$50,000 were readily disposed of among the members. A tract of over eighty acres has been purchased and laid out in villa plots, several of which have been sold to members who will build on them immediately. A large plot has been reserved for the club, on which a four-story club house, 119 by 53, is already partly erected. Two docks have been built on the club property, and arrangements have been made for a landing at the railroad wharf at Oyster Bay. There is ample depth off the club anchorage, and the largest yachts will be able to obtain fresh water, while a store at Oyster Bay will supply the best provisions at current New York prices. The club courses are located on the Sound just off the mouth of Oyster Bay, with courses inside for the smaller yachts. During the winter the club will hold exhibitions of identical design, by the members. The Oyster Bay Y. C. will shortly be consolidated with the Seawanhaka C. Y. C.

HAMILTON Y. C.—The annual meeting of the Royal Hamilton Y. C. was held Nov. 7. Com. Sanford occupied the chair. The reports of the officers were most satisfactory. Secretary Ambrose reported that the year had been a most prosperous one. During the season 29 races had been sailed, 84 yachts competing. On April 1 the club had 145 members; since that date 439 new members had been elected, making a total membership of 584. The financial statement showed the receipts were \$13,302.47 and the disbursements \$10,885.88, leaving a balance on hand of \$2,416.59. The following officers were elected: Hon. W. E. Sanford, Com.; J. F. Monck, Vice-Com.; W. G. Townsend, Rear-Com.; E. H. Ambrose, Capt.; F. R. Wadden, Sec'y-Treas.; J. B. Young, Meas.; G. R. Judd, Asst. Meas.; H. S. Griffin, M.D., Fleet Surgeon. Committee of Management: S. O. Greening, John Stewart, G. E. Hamilton, Thos. W. Lester, Q.C., Geo. Vallance and W. J. Grant.

NOTUS, sloop, formerly Mabel T. Swift, has been sold by Com. W. H. Rowe to J. B. Kraft, of Jersey City. Under her late name and ownership the yacht has made a very good reputation this season.

A NEW FISHERMAN.—Mr. Waterhouse is at work on an 80ft. l.w.l. fishing schooner, to be built by Story, of Essex.

LAKE Y. R. A.—We are obliged to defer until next week a report of the annual meeting of Nov. 14 at Oswego.

A FAST RUN IN A CAPE CAT.—On Oct. 16 at 2:15 P. M. the 20ft. Cape cat Kiowa left Swampscott, near Marblehead, for Monument Beach, on Buzzard's Bay, to lay. The sea was very heavy in Boston Bay, as a N.E. gale had prevailed for four days, the wind at the start being fresh N. W. The run around the Cape was made with a strong breeze N.W. to N., and at 11 A. M. on Oct. 17 Woods Hole was reached, a distance of 120 nautical miles in 20 1/2 hours. In Buzzard's Bay the wind fell light, but Monument Beach was reached at 3:15 P. M., making about 133 nautical miles in 25 hours. Kiowa is 24ft. 2in. over all, 19ft. 11in. l.w.l., 9ft. 10in. beam, and 2ft. 2in. draft, a modern Cape catboat built 3 years since by Duun.

NEW FIVE YACHTS.—Mr. Norman B. Dick, of the Royal Canadian Y. C. of Toronto, has ordered from Mr. Will Fife, Jr., the designs and entire frame for a racing cutter in Yama's class, about 36ft. l.w.l., 40ft. corrected length. The frame will be set up at Fairlie and taken apart for shipment to Toronto, where the yacht will be planked and otherwise completed. Mr. F. M. Gray, also of the R. C. Y. C., has ordered the frame of a yacht for the 30ft. c. l. class, to be completed in Toronto.

C. L. SEABURY & CO.—This firm has met with remarkable success since its establishment, and is rapidly taking a foremost position among yacht builders. Its specialties are launches, engines and boilers, the large shops at Nyack, fitted with the latest machinery, offering every facility for the execution of the highest grade of work in all branches.

NEW WORK.—Lawleys are busy with the moulds for the Gardner schooner, and have also two 70ft. steam launches of their own design under way. The first will probably build a steam yacht 110ft. long. The Herreshoffs have nearly finished a steam yacht 80ft. over all, 63ft. l.w.l., 11ft. 6in. beam, 5ft. draft. The interior arrangements are specially good.

AMERICAN MODEL Y. C.—A misprint occurred in the report of the American Model Y. C. last week, the sign 4 being omitted. The formula is the well-known Seawanhaka rule, L+VSA

KATHLEEN, cutter, has been sold by Mr. Wm. Whitlock to Schuyler Merritt, of Stamford, Conn.

SPERANZA, schr., has been sold by G. H. Ketcham, of Toledo, to O. D. Wilkinson, of Philadelphia.

GANNET, cat-yawl, has been sold to A. D. Emmons, of Providence.

Model Yachts and Boats. Their design, making and sailing, with designs and working drawings. Postpaid, \$2.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

MR. RICHARD CARLETON will please send address that papers ordered may be sent to him.

L. M. I., West Troy.—We have a white woodchuck. It is pure white with pink eyes. Did you ever hear of one, and what do you think he is worth? He is very tame now. I have him about three months. Ans. A case of albinism, which occurs now and then in all animal species, including mankind. It is worth whatever you can persuade any one to pay for it.

S. S., South Duxbury, Mass.—Will some one describe the black bass and the white perch for me, and not use too many Latin terms so I could tell the difference? Does the white perch ever grow to 2 1/2 and 3lbs. weight, and does a small bass have the same shape as the larger one? How many years after stocking a pond with bass before there would be good fishing? Hope some one will tell me all about white perch fishing, and what flies are the most taking; I can't seem to please their fancy. I have tried them in all kinds of weather and can get no run out of them; they all seem to "pass by on the other side." I think there are bass in the same pond, hence these inquiries. Ans. Along the side of the fish you will notice a series of scales in which short tubes are developed. The perch has about 80 and the black bass about 68 of these. In the fin behind the vent the three spines are long and stout in the perch, short and slender in the bass. The spines of the back fin of the perch are nearly twice as large as in the bass. Young black bass resemble the adult in shape, but have a broad dark band on the side, and the tail fin pale or yellowish at the base and tip and dusky in the middle portion. In your locality, if suitable food be at hand for the bass, they should furnish good fishing in three or four years after stocking, unless you introduce large fish and hasten the result. For white perch fishing use any of the gaudy trout flies, as red-bis, white and bis, professor and grizzly-king on Sprout hooks, Nos. 8 to 10. There should be no difficulty, however, in catching these fish with earth worms, shrimp and minnows. It may be that the waters fished are too well stocked with minnows—a common complaint in Massachusetts ponds. We should be glad to hear from you on this subject.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1858, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, NOVEMBER 26, 1891.

VOL. XXXVII.—No. 19.
[No. 318 BROADWAY, NEW YORK.]

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

NOVEMBER VOICES.

WITH flowers and leaves, the bird songs have faded out, and the hum and chirp of insect life, the low and bleat of herds and flocks afield and the busy sounds of husbandry have grown infrequent.

There are lapses of such silence that the ear aches for some audible signal of life; and then to appease it there comes with the rising breeze the solemn murmur of the pines like the song of the sea on distant shores; the sibilant whisper of the dead herbage, the clatter of dry pods and the fitful stir of fallen leaves, like a scurry of ghostly feet fleeing in affright at the sound of their own passage.

The breeze puffs itself into a fury of wind and the writhing branches shriek and moan and clash as if the lances of phantom armies were crossed in wild *mélée*.

The woods are full of unlippled voices speaking one with another in pleading, in anger, in soft tones of endearment; and one hears his name called so distinctly, that he answers and calls again, but no answer is vouchsafed him, only moans and shrieks and mocking laughter, till one has enough of wild voices and longs for a relapse of silence.

More softly it is broken when through the still air comes the cheery note of the chickadee and the little trumpet of his comrade the nuthatch, and far away the muffled beat of the grouse's drum, or from a distance the mellow baying of a hound and its answering echoes, swelling and dying on hilltop or glen, or mingling in melodious confusion.

From skyward comes the clangor of clarions, wild and musical, proclaiming the march of gray cohorts of geese advancing southward through the hills and dales of cloudland.

There come too, the quick whistling beat of wild

ducks' pinions, the cry of a belated plover and the creaking voice of a snipe.

Then the bawling of a plowman in a far-off field, and further away the rumble and shriek of a railroad train brings the listening ear to earth again and its plodding, busy life.

POINTS ABOUT FISHWAYS

1. There are numberless streams capable of furnishing valuable supplies of food fish, but now barren.

2. It is foolishness to stock such streams with anadromous fishes, if by reason of insurmountable obstructions the fish cannot return from the sea to their spawning beds.

3. Individuals and corporations have no right to maintain dams which thus ruin the food fish supply or prevent its restoration.

4. Fishways, properly constructed, will remedy the evil by providing a passage for the fish over the dams.

5. Fishways will not injure the dams, nor detract from the efficiency of the water supply.

6. Though certain costly fishways, like that at Holyoke, Mass., are failures, it does not follow that all are worthless.

7. On the contrary, there are fishways which have proved effective, and are now admirably serving the purpose for which they were designed.

8. It is not unreasonable to compel the owners of obstructive dams to provide fishways for the benefit of the public, whose rights have been infringed in this respect chiefly because of ignorance.

9. Efficient fishways are not of necessity expensive. Compared with the capital employed by the manufacturers who maintain the dams, and with the volume of business done by them, the cost and maintenance of a suitable fishway are insignificant.

10. When these principles shall be more clearly understood, there will be such an opening of dams and restocking of now barren streams that the prices of fresh-water fish will be lower than they are to-day.

11. This is not all there is to say about fishways. It is a live subject; and we mean to keep it before the people.

A PHASE OF IMAGINATION.

IMAGINATION is a great thing. The big bullfrog in the swamp does not bellow *jug o' rum, jug o' rum*, though a ready imagination may help the hearer so to understand him. A shooting trip or fishing excursion does not involve a bout with a *jug o' rum*, though the fermented imagination of newspaper reporters often so construes it. This might be amusing if it were not disgusting. Indeed it is an affront to the ever-growing fraternity of sportsmen and a gross injustice because it misrepresents them before the public. These bottle-guzzling yarns of shooting and fishing parties are confined to the columns of the lower-grade papers of the lay press; they are not to be found in a journal like the FOREST AND STREAM, which aims intelligently, truthfully and sympathetically to represent and speak for sportsmen.

SNAP SHOTS.

THE Tolleston Club, of Chicago, is just now engaged in a curious suit to protect the shooting on its marsh this fall. It appears that the Indiana Natural Gas and Oil Company obtained permission to lay a pipe line across the club's marsh, under an agreement that from September to Dec. 15, during the ducking season, the company would only make repairs upon pipes already laid. Under this agreement, having completed the laying of the line, the company has now insisted upon its right to change all the connections at the pipe-joints, a work which would necessitate taking up the entire line and relaying it again. As this would effectually keep the ducks away, the club asked the court to interfere, claiming that the substitution of joint caps was not "repairs" within the meaning of the contract. The court, however, has decided against the club.

When one is recording personal experience or observation or opinion, it is always better to use the pronoun I than the term "the writer," or "ye scribe," or "yours truly," or "your humble servant." Just plain everyday I is best.

The November number of their *Register*, sent to us by the Messrs. Lumleys, a London firm of land agents, con-

tains descriptions of about 270 Scottish deer forests, grouse moors, lowland shootings and fishings, which are for rent; and we have been prompted by curiosity to reckon up the rental value of these properties as here listed. The rents, for the season, run from \$250 to \$35,000, and the total is something over \$670,000. While there are mansions and castles with romantic scenery and other attractions, the shooting and fishing resources of the several estates are put forward as the factors which give the greatest value; and it is evidently upon the strength of these that the agents lease their properties. This gives some indication of the substantial place the sports of gun and rod hold in Great Britain.

The fact that Mr. N. G. Herreshoff has received an order for a racer for one of the most active classes in British waters will be hailed with pleasure by yachtsmen. The new boat will be a 2½-rater, about 25ft. l.w.l., for the Clyde, whereshe will meet some of the cracks of the class, including a number of Fife and Watson boats. She will be of the loaded fin type, like Dilemma. The competition of an American yacht in British waters will be quite a novelty after the many visits of British vessels to this side, and suggests the propriety of a similar experiment on a larger scale. It would be no more than a return of courtesies if one of our New York or Boston yachtsmen were to build a Herreshoff cutter for the 20 or 40-rating class and pay a visit to England next summer.

Presidential proclamation may set apart a day for Thanksgiving, but is powerless to make him thankful in whose soul thankfulness has no place. We bid our friends be merry at the Christmas time, and happy in the New Year; why should we not bespeak for them gratitude at Thanksgiving? Here, at least, is the wish that every reader, "to whom these presents may come" before his going afield on Thanksgiving Thursday, may return at nightfall with game pockets well laden and memory stored with the pleasures of his outing, for abundant thanksgiving through the year until the feast day shall come around again.

An Englishman dwelling on the mosquito-plagued Riviera has discovered a new use for carp. The water supply of the famous Mediterranean resort is scanty, and it is the custom there to store water in tanks and reservoirs for use as needed. These reservoirs of fresh water furnish homes for the mosquito larva. The carp are fond of the larva, and by introducing a brigade of the fish the Englishman has effectually stamped out the mosquito pest from his dominions. (Florida papers please copy.)

The first record match for the Winans Trophy Amateur Revolver Championship was held in this city last Saturday, and as recorded in our shooting columns was a most successful affair. To the Trophy have been added by Messrs. Smith & Wesson a selected model of their revolver to the winner, if his arm shall have been of their make, and by the FOREST AND STREAM three cash prizes of \$50, \$30 and \$20 to the second, third and fourth record makers.

Some weeks ago among these "Snap Shots" we noted briefly that a futurespecial number would be devoted to boyhood reminiscences. In response to that suggestion we have received from several contributors a store of charming relations of those youthful experiences that in later life men find it pleasant to look back upon. These we have put aside and hold in store for Christmas week.

Prof. R. L. Garner, whose success in learning the language of monkeys was noted by us some months ago, has been extending his studies further in that line, and now reports in the *New Review* that he plans to visit the interior of Africa, equipped with phonographs and other appliances, to interview and study the troglodytes in their native wilds.

The year will be well remembered by many gunners as one of disappointment because the long-continued and widespread drought has ruined the game grounds, and resorts which usually furnish a supply of birds have this season been barren.

We require copies of the index of Vol. II., also of III., V., VI. and VII. Ten cents each will be paid for them, if sent to us in good condition.

The Sportsman Tourist.

A QUAIL SHOOT IN HAPPY VALLEY.

BY GEORGE KENNEDY.

WHEN it was over, and, indeed, while it was in progress, I determined to tell the readers of *FOREST AND STREAM* all about it. Not that the results were so extraordinary as to challenge attention, but it was a typical quail shoot in "Old Missouri," and many an Eastern man may like to know just what that implies.

In the first place, it implies a certain letter saying to me, "Come Friday night and bring me something for my cough, and don't forget Miss Fancy," which last is a little spotted pointer descended from the Guelphs. Friday evening Fancy and I and the cough medicine and a quail gun and a lot of E. C. shells got off the train at the home of the writer of the letter, whose cough entitles him to be spoken of in these pages as the Invalid. The next morning we drove six miles to a farmhouse on the edge of the woods at the top of the hill bounding Happy Valley on the north, where we put up the horse, and where the Invalid coughed and was given something to quiet him.

With our pockets full of shells and fried chickens and cigars and things we strode down into the valley and into a cornfield, wherein was a patch of ragweed, and wherein Fancy cautiously but firmly proceeded until taken with an attack of ice cream, *i. e.*, frozen sweetness. Then the Invalid and I tramped in ahead of her, and whirr! whirr! away they went; that is, all but two, for I caught one in my match box, and the Invalid killed another with a whiff of cough medicine. Now, we intended to follow up that covey, but when we started after it Fancy speedily drew up on and pointed a brand new one of about thirty souls, and apparently four wings to the soul. We fired three barrels at them and a whiff of the Invalid's breath and never got a feather. They pitched down in the edge of the corn, and after counting noses they sat down and leaned back against the stalks and went to laughing at certain peculiarities of my appearance that I cannot be held responsible for and that are never mentioned even by my own family when I am near. Even while Fancy crouched down to her point I heard a white bellied infidel ortyx or a white-bellied orfidel syntax—I disremember his name, as we say in Missouri—say something about some one being so cross-eyed he had to walk cross-legged. And just then he saw me and started off with his ribald crew through the interlaced cornstalks. I kept my gaze riveted on a wart on a dead tree off to one side, and after that, whenever any of his survivors saw me looking at a knot on a log they broke straight for the knot, which probably accounts for the awful time I had finding a quail, hereinafter mentioned, and which accounts for the further fact that this is the only quail shoot I ever told about or heard anybody else tell about where I didn't take out twenty-seven shells and bring in twenty-six birds, the shells counted by a justice of the peace and the birds by a notary public. And in this connection I would say that while we had two hundred and ten shells with us, it has been thought best to say nothing about the birds we missed, but simply to say that in such and such a flock were certain individual members with a permit from the mayor to shoot up a dark alley, which they shot.

The second and choked barrel of my gun was fired at the flock as they flashed into view across the corn-row out in the open, and after picking up the remains of the insulting remark above mentioned, Fancy went out there and picked up one of those personages who make it possible to slander innocent young men by listening to the slanderer; and close beside him lay a second cousin of his wife's, a victim to evil associations. The rest of them went down in a little gully and organized into a parliamentary body, and began making speeches about the unsportsmanlike way I had of shooting—aiming at Dan and killing Beersheba, so to speak; and just as Fancy stiffened out, a couple of them tried to get the floor at the same time, and, with a blood-curdling glance at Alpha, I pulled my gun around in the other direction and knocked Omaha across on the bluffs. The Invalid made a neat double on Alpha and another one with his gun, and missed the chairman with his cough medicine, but hit the dog, who fell in her tracks. She recovered by the time our guns were reloaded, and almost immediately the committee on ways and means started to find a way out of the gully (and right here let me remark that this was the first committee of like name I have ever known to trouble itself about anything but the means). The one I shot at to the right went around the bend with his hand pressed against the seat of his pants in an attitude indicative of pain, and a few minutes later Fancy casually picked him up in the edge of the corn. The one to the left pitched headlong into the blackness of death, the kind of a shot that is sportsmanlike and humane, and the only kind the Invalid need ever make if he would only put away his gun and use that .45-caliber cough-medicine breath of his exclusively.

And this brings me to the truly humiliating episode above alluded to. While the Invalid was polishing off one of the few remaining ribalds, the very last one we saw started off down the gully, and at the crack of my gun a veritable cloud of feathers remained in view, and upon taking Fancy to the spot she disdainfully sniffed at the feathers and was for hurrying off toward the cornfield we came from. After repeated commands to her to fetch that dead bird, and repeated refusals, I hereby state with sorrow that my superior human intelligence led me to the conclusion that here was a case of palpable canine insurrection calling for extreme measures, and I whipped my brave little pointer with an air of virtuous righteousness that now makes me feel so contemptible that I would not tell it, save in the hope it will be a lesson to the owner of some other good dog. For, when we proceeded a hundred yards down the gully Fancy suddenly appeared at the top of the bank, having jumped up on a log, and for a brief instant she stood there outlined against the sky, looking perhaps for me, but I rather imagined at me, with the dead quail in her mouth.

The Invalid said, "If I owned that dog I would die happy and so would she, for I would never whip her again if we both lived a hundred years."

Do you know, fellow son of a gun, that the nicest part of a quail shoot in Happy Valley is the humorous attitude of your dog? Talk about the presiding elder at a

camp meeting! Why, he's nowhere. You might think he was full of business until you saw Fancy or another of her ilk. These dogs of ours do certainly teach men a lesson in the absolute enthusiasm with which they do their work. They are so dead in earnest that you can't help looking at them and laughing; and the next moment you suddenly cease to smile, for there comes a sense of your human inferiority in this respect. I believe that only a few men in every large community possess the quality of intensity that all our dogs display. They are only careful when in the immediate presence of its necessity; and at other times they throw themselves bodily and spiritually at the duty in hand.

Once the dog drew across a piece of stubble to a bushy fence, jumped on the fence with her tiptoes and landed on the ground on her very belly, pointing in her tracks.

Another time I was on top of a gully and some scattered birds flew to the Invalid, who was below me, one of which he shot. Fancy went down there, and in a moment I heard a cry, "Here! What do you mean stealing my bird? Give it to me, sir." And then up in the open hurried Miss Fancy, and as she came trotting along with the bird, which she proudly thought she had secured for the Kennedy family, she quickly slowed up to a walk, a step more and she stopped in a dreamy, forgetful manner, and then she was pointing with the dead bird of the Invalid in her mouth. I swear it is the sight of a man's life! In a second, and by the time I had called the Invalid to see it, her lower jaw seemed to drop slightly, because of her having passed quickly from the consciousness of the stolen bird to the wrapt and absorbing influence of the live one in the briars, and the dead bird fell unheeded to the ground.

It was evening, and we found we had shot sixty-five quail, and we were well content to go home.

BASS FISHING IN THE GUADALUPE.

THE great Sanatorium of the Continent is southwest Texas. Forty miles from the historic and unique city of San Antonio with its Alamo, and Missions, and Mexican plaza, are the Guadalupe Mountains, through which flows the river of that name gurgling, leaping and frolicking like a rivulet, until it settles down into a calm, majestic river of the plains and placidly pours its waters into the Gulf.

These mountains, as they are called, although they are really only hills, are 1,600ft. above the ocean, and the temperature in summer is from twelve to fifteen degrees lower than in San Antonio. The air is dry and absolutely pure, without a suspicion of malaria. There is a tradition in the neighborhood that a nomadic physician once settled in Waring, a station on the Arkansas Pass Railroad, which runs through the mountains, and built him an office, but after six months without a patient he left in disgust. As a resort for persons afflicted with throat or lung disease it is unequalled. Deer, turkeys, quail and squirrel can be found everywhere. The valleys are very fertile and produce large crops of corn, cotton, oats and wheat, while the mountains afford fine grazing, and are covered with live oak, pecan, and post oak trees. Water pure and sweet is abundant.

We caught our minnows near the ranch house in Syster Creek, a tributary of the Guadalupe River, and after a five-mile ride reached the mouth of Cypress Creek, where we proposed to fish. It was an ideal spot for the fisherman, and we hurriedly jointed our rods, and adjusted reels and lines for the sport.

The side of the river on which we stood was level, with thick weeds and undergrowth on the banks, except in one place where an open, gravelly beach sloped to a clear pool, at the foot of which the water dashed over a cascade as beautiful and romantic as the falls of Minnehaha. On the opposite side of the river rose a wall of rock several hundred feet high with miniature caves and pinnacles jutting from the face, and evergreens holding a precarious footing in the clefts and rifts. It was a wild scene, seldom visited by man; one of those nooks yet left, where the crash and roar of civilization cannot be heard.

What interested us for the time, however, far more than the scenery, was the sight of bass, some of them quite large, floating lazily in the pool, and utterly indifferent to our presence. It was evident that they had not seen enough of our predatory race to be apprehensive of danger. My friend, Mr. J. M. George of San Antonio made the first cast, and immediately hooked a large-mouthed black bass weighing a pound or perhaps a quarter more, which he landed without ceremony.

General Russ of San Antonio, an experienced and energetic sportsman, had instinctively sought the place where the little waterfall promised a congenial home for bass, and in a few moments had caught quite a string, but none of large size.

Your correspondent, after catching a few small fish, wandered up the stream and soon found deep water in a long pool with lilies and other aquatic plants dotting the surface. My tried and reliable split bamboo rod had been left in Missouri, for I had not expected to use it on the trip, and I had borrowed a showy jointed cane from Gen. Russ, which was fair to look upon, but as deceitful and uncertain as some other objects of alluring appearance well known to all of us in our youth. After making one or two casts with a large chub for bait, the objective point being an eddy below a rock, the exact spot was reached, and with the rush of a great bass he was hooked and fighting for life.

I have caught many large fish and game ones, but never did I feel one that proved himself of royal blood more distinctly than this Monarch of the Guadalupe. With nerves strung and blood tingling I watched every point in the fight and was confident of victory, but in trying to prevent the fish from reaching some roots and brush I was forced to give him the butt of the rod, when the treacherous joint next to the tip snapped, and the prize escaped. It is useless to dwell upon the disgusting memory, or to spend time conjecturing what the fish weighed. He is gone, thanks to that gaudy cheat of a rod, and if I have any wish to express on the subject now, it is that I could hook and play for a few moments the fellow who made the rod.

We had brought with us from the ranch the necessary cooking utensils, and our colored driver, Ike, than whom a better outdoor cook, or more worthy man does not live, soon had ready a dinner of fried fish fresh from ice-cold water, with bread, butter and strong coffee, which "would have put an appetite in the jaws of death."

My rod was past mending, but after dinner I wandered

again up the river, and near some water lilies hooked a three-pounder which I landed after a hard fight with one joint of the rod gone. Altogether we caught thirty bass, and as the last rays of the sun kissed the tree tops in the valley, started for the ranch.

There is nothing startling or picturesque in our day's experience, but I cannot resist contributing the simple, uneventful story. Every true fisherman will appreciate my motive.

I have no quarrel with those who enjoy deep sea fishing or the slaughter of the Lakes with the tug and strain of the line, and the soggy weight of the victim; *de gustibus non est disputandum*, but for myself, I would not exchange one day on the banks of a clear, cool river with an occasional strike, for all the deep sea fishing since the whale swallowed Jonah.

G. G. VEST.

WASHINGTON.

A TRANS-CONTINENTAL RUN.—I.

FEELING the need of a tonic last spring, instead of buying a bottle of quinine and iron or Virginia bitters, I packed my comb and brush and hied me away westward. Chartering a part of a Northern Pacific train from Chicago, and viewing as much of northern Wisconsin and the States to the westward as possible from the car window; calling at St. Paul, sliding across the vast flat of Dakota, gazing upon the farmer as he plowed the sultry globe and obliterated the tenantless buffalo wallow, winding among the buttes and bad lands of Montana, renewing our acquaintance with the ever lovable Rockies, enjoying fleeting visions of peak, cataract and cañon, pausing a brief moment at Spokane Falls, rising from her ashes in beauty and solidity; slipping along down through eastern Washington to the crossing of the famed Columbia at Pasco ("keep your eye on Pasco"), where the fond hopes and disappeared dollars of so many enthusiastic and confiding tenderfeet lie buried in the sand; on through as desolate a section of the State as the engineers could discover, so as not to waste any grazing or agricultural land; passing through Yakima; and following the beautiful bending of the same named river; getting our first view of majestic Rainier and Adams, throwing a great big hush over most everything in the Northwest as they gazed in cold contemplation from the vasty solitudes where there are no summer hotels nor invalid matutinal coffee; on through the Sierras via Stampede Pass, down the Green, up the Stuck; and so in due time, and just on time, we rolled into phenomenal Seattle; Seattle that, rising from her misfortunes and desolation by the aid of all the insurance money and everything she was able to beg or borrow from the East, now "sits upon her seven (or seventeen) hills, and from her throne of beauty rules the world" (*vide* any Seattle paper). Her streets are all up and down. I got so tired using traces and breeching that I had to go away. But there are blocks of magnificent buildings there, that would adorn any city on earth (or in the planets, as far as I am aware), and filled with stocks of goods adequate for a city of half a million people, and doing business, when I was there, on a basis of twenty thousand. Since the great fire Seattle has just "stirred her stumps," or at least a few of them, though there are some left yet, a matter of, say, a couple of thousand per acre, in the resident portion. They have blasted out most of them on the business streets. She has steamship lines running to the ends of the earth, and cable and electric cars ditto to the ends of the city. The view from any one of the elevations of the city, of harbor shipping, sound, and snow-clad Olympic Mountains, is calculated to arouse enthusiasm.

I jumped aboard the Oregon and traveled down the Sound. I disembarked at Fairhaven, and wandered round and round, and heard the real estate boomers, and saw the devastation they had wrought among the timber in order that they might sell lots to tenderfeet. It was a sad spectacle. I think they call this the "Pivotal City," Seattle is the "City of Destiny," Tacoma the "Focal City," and so on. Fairhaven is all hill and hollow, as usual, and has lots for sale away out on the mountains, where the wolves howl, the tigers roar and the bears picnic the year round. She has a monster hotel, while the city is in its swaddling clothes, but kicking vigorously to get out. Electric lights and water works, of course. "Keep your eye on Fairhaven."

Whatcom is two or three miles north. It was lately married to Seshome, a little hamlet between the other two. Whatcom is considerably larger than Fairhaven. It cuts me to the heart to say it, but I must. The topography of Whatcom would seem to suggest a better location for a large town than that of the other place. It grieves me to say this also, for I would further harmony, but not at the expense of veracity.

But one of the things I started out to say is this: Flowing from Lake Whatcom, about three miles from the city, is Whatcom Creek, and what would a creek be doing away out there if it had no trout in it? I would try it, and I did. It was too early for fly-fishing. I took a piece of beef and cut an alder pole. I had a line and hook fortunately among my impedimenta, and I went up the creek as far as I could well go without ruining all my clothes, for the traveling was exhaustive. I fished a while with beef, and then put on a fly, which I found concealed on my person, and thrashed around with that a while without encouragement. In my rambling I spied a cabin in the middle of a twenty-acre swamp, and I cornered it. The swamp was cleared and dotted with pools of water. I approached. No cheerful wreath of smoke curled from the chimney, no fowls cackled a welcome, no honest watch dog bayed a protest. An axe stuck in a log. Near the door was an assortment of household goods promiscuous, and quite a collection of soiled garments for washing. Silence and a foreboding of trouble brooded over the scene. I knocked. No reply, no movement. I repeated. There was a slight rustling inside, and presently, slowly, steps approached, the door opened, and there stood a woman holding her infant on one arm, motionless, its head lying on her shoulder. She trembled as she stood with one hand against the door post to steady herself, and apologized for her appearance and delay in responding to my knock; and I felt like a culprit as I apologized in turn. She wearily passed her hand over her forehead, saying she was quite weak from an attack of fever, that the baby was suffering also, and another child on the bed was ill, but some better than yesterday. There were household articles in that one room sufficient to furnish two or three. Her husband had gone to town for some needed articles. They had come from Nebraska, where, she said with a regretful

smile, they had a good home, to try their fortunes in this Eldorado, and her husband had rented this water-logged piece of ground to try trucking in want of something better. When the rainy season was past the ground would be drier. It would have to dry by evaporation; I saw no way to drain it. It was a pitiful sight and most gloomy outlook. The mate to my alder pole leaned against the cabin. I asked if her husband fished, she said no, that some of the boys had left the pole and some worms there the day before on their way home. With her permission I took a few wrigglers; and wishing her a hearty godspeed in her return to health, I left, feeling in very truth there was "no place like (that) home." On the way to town I caught my first black-spotted trout. It was this experience I wanted, and having caught ten of fair size, I wound up my line and fishing and sauntered to the hotel. The stream was quite large, swift, clear as possible and evidently fished considerably. I was told that the fishing in Lake Whatcom was very good, though I did not try it.

Before I finally left Fairhaven I boarded the little steamer Dispatch (which belied her name most ridiculously) one lovely morning, and in company with other explorers sailed the seas over to East Sound, a long, narrow arm that nearly splits in twain the island of Orcas, one of a dozen forming the county of San Juan, and lying in the northern end of Puget Sound. These islands are noted for lovely climate and fruit production, and the scenery en route is as charming as any one could desire, as the boat rounds promontories and islands, threads tortuous straits where the tide runs like a river, or skims broad bays, touching here and there to deliver goods or passengers at little hamlets or at ranches, so lonesome that life, it would seem to me, would be a burden after a decade or two. The deer are so numerous on Orcas that all gardens and orchards must be fenced with palings for protection, at least that is the tradition among the elders. The fences are built anyway. There are no bears nor panthers. California quail have been introduced. While I am on the subject of clams, I will say that they grow so large there that one good, robust, full-grown clam will afford a meal for a family, if they eat him. That's another tradition there, quite prevalent. I was puzzled to know whether to try to swallow the tradition or the clam. The stories they tell of the fecundity of fruit trees and small fruits are quite difficult to digest. One man had a quarter of an acre in blackberries from which he sold 2,400lbs. at a net price of 9 cents a pound, and when the price fell to 7 cents he thought it wouldn't pay to pick; so he called in his neighbors and gave them *carte blanche*, and after all had a pull there were bushels left to rot. Another picked 550 boxes of apples (three pecks to the box) from one acre of trees, of which 500 were prime, that sold for \$1.10 a box at the wharf. Vines and trees right there to prove it. Another one had—but I don't know as such stories have a proper place in a sportsman's journal, unless they were making game of me, in which case there is a fitness in things. Fruit trees certainly bear at a very tender age and with a prolificacy that is marvelous. I have seen orchards of apple trees whose trunks were not over six inches in diameter, with limbs misshapen and in chronic droop, like willows, from overbearing. That favored land is the chosen home of the prune, and wondrous are the tales told thereof. The trip to the islands was a sweet boon, a jewel that will scintillate in memory's casket, as the sweet girl graduate says.

On my way up the Sound (south) from Fairhaven, I stopped at Anacortes, another "city of" something or other, and saw halibut in plenty, which had been caught from the dock. One of 40 odd pounds was being carried off as the boat landed, and one of 85 had been caught in the forenoon. I spent an hour or two at low tide on the rocks east of town, finding sea-urchins, anemones, shells, starfish and other interesting marine growth. I saw starfish in a greater variety of colors than ever before, and one rayfish (for want of a better name) was a gorgeous bouquet. It was of the starfish order, but jelly-like instead of hard, and with eighteen rays or arms, two feet from tip to tip, and in color purple, crimson, blue, red, pink, and a combination, it seemed to me, of all when not clearly defined. Anacortes is a city of 1,500, may be, and has an electric railway eleven miles in length from one end of Fidalgo Island to the other. That's the way they do things out there. It has a good location, where one does not have to climb or hold back all the time.

Traveling to Tacoma on the City of Seattle, I fell in with a traveler who had been to Shelton, a little burg, and county seat of Mason county, northwest of Olympia, and had had some fair trout fishing. He gave me the name of a gentleman there who could put me in the way of sport; so, after looking Tacoma over to my satisfaction (she has selected a big hill to sit on, too), I purchased an all lancewood rod, a cheapish affair, and second, a deck chair on the little steamer Clara Brown for Shelton, and we sailed away down one of the numerous arms of the Sound, due at our destination at about five o'clock. Passed Steilacoom, the oldest town in the State, without stopping, and at three tied up at the Olympian dock just at dead low tide, and gracefully sat upon the mud until 9 p. m., when we rose again and paddled away to Shelton, which we reached at 11 amid Cimmerian darkness at the end of the long wharf, but the little town of a few hundred people was lighted with electricity. Oh, yes, to be sure. No town so poor as to be without that. With much patient knocking I roused the landlord of the Dipman House and sank to rest. Next day I made the acquaintance of Mr. M. F. Knight, to whom I had been directed, who very kindly gave me needed information and dug some worms, which I proceeded at once to put to good use, as there was no opportunity to use a fly in the brushy creek there. Flies were of no use, as I ascertained afterward, in the upper creek where I fished, but near the mouth, I was told, a fly was effective.

I was there a week, five days of which rain fell, either part or all day, but that is not unusual. Frequently it rains eight days in the week in Washington. The normal condition of weather is rain. If it don't rain about so much people feel badly. Ordinarily when a man says he is "under the weather," he means that his health is below the average, but out there when people are under a great deal of weather they feel the best. However, I managed to have a trip or two up the creek that I enjoyed fully, catching a string or two of spotted trout, getting wet, tearing my clothes, slipping off logs into the nice cold water, watching the Douglas squirrel and jays. (If I have tacked on the wrong name

to the brassy little rodent, will some one rise and correct.) The little fellows amused me frequently. Once when I had crawled out on a log jam to fish a pool, a lively little fellow ran from the bank on to a log directly toward me. When within 3ft. or so I moved my hand. He stopped, cocked up and endeavored to study out the situation for a minute. Then he resumed his feet and inch by inch slid toward me. I made a motion as if to seize him, but instead of turning tail he darted directly under the log I was leaning on, lying across the one he was on. I remained motionless, and presently he popped his head out just below mine and within 2ft. of it, and attempted to size up things again. There being no motion he cautiously crept sideways back on his log, keeping his eyes on me, until he had put 6ft. or so between us, and then the way he scattered was funny enough, but he stopped on the bank long enough to stir up a flea. The jays there are larger than at the East and of solid indigo blue, if I was not color blind. I stirred up a grouse occasionally, the booming variety, and was satisfied not to do the same by a stray bear or panther, though I did want to stay a little longer and go out with a party after bear, when I could carry a gun instead of a rod. Large game is by no means uncommon in those parts. While I was there a ranchman brought in a "lion" skin of 9ft., the unfortunate wearer of which, together with three bears, had been killed three or four miles from town the day previous, and it was only a moderate bear day.

One day during a let up of the rain, Mr. Knight and I walked three miles out to Lake Isabel, a pretty sheet of water where trout fishing was usually good. We found boats and tried worms, flies, pork and spoons, but two or three chubs and a couple of 11in. trout caught by Mr. K. were all our catch. There were some ducks on the lake and three large flocks of geese circled afar overhead, in turn honking loudly. The walk out and back through the forest, viewing the magnificent trees, even though we were caught in the rain, was very enjoyable. The gigantic trunks of that country have often been written about, and I was prepared to see monsters, but though perhaps I did not get into the thick of the business, I saw enough to enthuse me. The lumbering interest makes Shelton, there being two railways reaching out into the back country and timber camps, bringing down several train loads of huge logs a day and dumping them into the boom in the bay. One log was brought down 105ft. long, 100ft. to the first limb, measuring 45x47in. at the small (?) end. While pottering around the edge of town one misty day, I stepped up on to a log (climbed up), walked thirty-five steps, good long steps, for my underpinning is quite lengthy, and where the limbs began to impede navigation the diameter was within a fraction of 3ft. On our trip to Lake Isabel I counted in a space about 30yds. square, 13 monsters, from 2 to 5ft. in diameter some distance from the ground, 150 to 200ft. high, with a half-dozen smaller trees in the same space, and 99 out of 100 of these trees are straight as an arrow. At Whatcom I saw a man engaged in the hopeless task of grubbing out the remains of a hoary old stump somewhere from 3 to 15ft. across, which a big dose of dynamite had split a little. He had dug two days on it and had got two roots as big as his body partly uncovered and hacked a little bit and was resting that day. There were probably eight or ten more roots aching to be tackled. Another man told me he had spent twenty-five dollars in time and money getting out one stump. I believed him, and my credulity is not abnormally elastic. Timber out there to be good, has to cut at least 25,000,000ft. to the acre. O. O. S.

IN MAINE WOODS.—I.

WARRENSBURG, Mo.—July.—For many weeks I have been without sight of FOREST AND STREAM. There is a file of them waiting for me in Boston, and some time—perhaps in camp in the Maine woods next fall—I promise myself the delight of reading them. During the winter and part of the spring copies were forwarded to me while I was journeying down through the Atlantic and Gulf States, and often in Texas I received and read them, but finally in Mexico and New Mexico they failed me, and just at the point when I could least afford to go without them, for I was reading with deepest interest the series of papers by Miss Fanny Hardy on the game laws in Maine.

Nothing could exceed my delight in her previous papers, "In the Region Round Nicasotwis." I could not well overstate my enjoyment of them. The Maine woods have been for many a year my "stamping ground," my vacation refuge, my medicine and my delight. I know them at first hand. I am a "charter member." Much has been written about them. Thoreau and Lowell have put them into abiding literature in their own way, and newspaper and magazine writers of all grades have described trips to them, but all were aliens and strangers, casual visitors and curious strangers at best. But in Miss Hardy the Maine woods for the first time find their voice, their real interpreter, their own familiar friend.

Riding over the flowery acres of middle Texas or sitting on the beach at Galveston I read those chapters, and in very truth seemed transported to the heart of the dark spruce forests, the caribou bogs, and to the shores of the crystal lakes of Maine. I could see the shadows come and go on Katahdin. I could hear the loon's lone cry on Sebosis Lake, or paddle in hand, feel the spring of the canoe beneath me as we shot down "quick water" on Jo Mary stream. To be sure she wrote of "Gasobeis," and I thought of "West Branch waters," but it was the Maine woods in their very essence and inner spirit and I rejoiced. How I chuckled when she told about trying to go around a certain place, "getting loganed" and having to turn back. Getting loganed! I was sure there was no man in Texas but myself who knew what that meant. If there were such a man, and an exile for any length of time from the North, and his eyes caught those chapters of Miss Hardy's, I will answer for it his eyes grew moist now and then with exquisite memories as he read. Who but a Maine woodsman knows anything of a "tote road," or a "wongan box," or a "spunkhungan?" Time and again I exclaimed, "The Maine woods have found their poet at last!" Miss Hardy writes with complete and adequate knowledge of her subject, with entirely adequate power of expression. It is a rare enough combination as we all know, and I found my delight in her work increased by the thought that it was a woman who had done this. Year after year, with mind and heart attuned to them, she has, with her father—a lovely companionship—camped in the woods and traversed the lakes and

thoroughfares of Maine, not as an outsider, but as one there by a birthright as good as they own, and the best culture of school and college has but given her that power of expression which has enabled so many others to share her enjoyment. For my share in it I want now and emphatically to thank her and FOREST AND STREAM.

Then came the papers on the game laws in Maine, with their astonishing revelations of the strange interpretations of those laws at Bangor and elsewhere, and their truthful setting forth of the whole matter. And here again there can be no doubt of the adequacy of Miss Hardy's preparation for her work. I know too much of the field and the subject not to perceive that. But my papers ceased to reach me just after I read the one on Piscataquis county. That paper did me a great deal of good, for it told a truth which needed to be told, and which, till that paper appeared, I felt ought to be said, and I feared Miss Hardy might not altogether know. My fear was groundless, and she freely admits that in Piscataquis county better things should be said in behalf of the people who have come from outside the State to hunt and fish. What papers have followed and what rejoinders have been made or discussions held I do not know, but Piscataquis county having been a particular haunt of mine—I think I have made some sixteen trips to it—and knowing much that would corroborate Miss Hardy's testimony in that respect, I have wanted to add my word before the whole matter passed out of the minds of those now most interested in the subject.

I have before now said something in FOREST AND STREAM of the change in me from boyhood's zest and fierce passion for killing, to the desire to preserve alive every living thing not harmful and not needed for legitimate use. This change began long ago, and I can truly say that not since one of my very first trips to Maine have I passed the bounds of my present conscience in this matter.

Once, thoughtlessly, and for no purpose but the desire to try a new small-caliber rifle on a living target, I aimed at a red squirrel which innocently and confidently perched on a limb within 20ft. of me. My bullet tore away his fore shoulder, and as his quivering body clung for a moment suspended from the limb, the trembling flesh, the dripping blood, and above all, the reproachful, pitiful eye of the little creature in its death agony, thrilled me with a misery which to this day makes me wretched when I think of it. It was in the depth of the forest, his home, into which I had come, and without necessity or excuse had wantonly destroyed the life which I could not restore. Not since that time have I done such a thing, nor have I seen it done without shame and pain, and amazing enough it now seems that I could ever have done it. Yet I have hunted many a day since then and killed my share of game. My share is smaller than I used to think it need be. It is just what I can make real and legitimate use of and no more.

In Texas I first came into the land of the forked-tailed fly-catcher. Three specimens I shot and skinned for mounting for "my den" at home and to serve as beautiful souvenirs of my Southern stay. Long I hunted for the chapparral cock, the "road runner," for a similar purpose, but, though I was in his region and knew he was all about me, I never saw him but twice. Once he was briefly seen from the window of my car—making good his name as he sped along a country road. Once at Albuquerque, New Mexico, I saw him—but he was in a cage.

Many and many a time, in the last named Territory, did the beautiful plumed quail run before me—always in pairs, for it was their mating season, and though often urged, I would not shoot. The law of the land and the higher law protected them.

But to return to Maine, and to Piscataquis county in particular. I am bound to say that in this region I think the violations of the law have been fully as much the fault of the natives as of those from outside the State.

I know the people well. I know them in their homes and families—their corn-huskings and merry-makings as well as their lumber camps and in the forest. Many of them are my personal friends. In many a long and confidential talk around the camp-fire or on the trail or in their homes, I have learned the truth of the history of the game question in Piscataquis county, and how it is regarded by the people of the county.

The same wasteful and illegal slaughter which has prevailed in other parts of the State has prevailed in Piscataquis county, and does so still, but those competent to judge and candid in judgment will agree with me, that by far the greater part of the illegal killing has been done by natives of the county and State, and not by persons from outside of the State. Offenders from the outside I doubt not there are. It is an actual fact that I have known of very few. The greater part of the destruction is due to crust-hunting, though I have known of many and many a case of summer shooting and much dogging of deer by the same men. It is all foolish and short-sighted to the last degree, but the truth is that despite State laws and preachments of every sort the ethics of this matter are judged on a distinctly different basis from other questions. A man who would not steal from his neighbor will unhesitatingly violate the game law if he thinks he can escape the attentions of the warden. This is, of course, not true of all who hunt, but it is, I verily believe, true of the great majority. It is done in numberless instances, and is going on summer and winter. It is even done by men who are by no means devoid of principle, who are in most respects good citizens and whom one can respect and like.

While I entirely reprobate it, I can yet understand and in a sense sympathize with the way in which some of these people look at the game question. There is another class of whom I will soon speak—reprobates with whom I have no sympathy whatever, to whom the worst of the killing is due. But the men of whom I have spoken are in a rude way loyal to a code of their own which is not without merit. They usually waste nothing. They kill for food and use and needed profit. They often dog their deer into the water, but their defense of the method has its undeniably strong points, legal considerations aside, on the score of humanity as well as its (to them) certainty and convenience.

But of the other class—representatives of which, unfortunately, are to be found in every township—what shall I say? They are the "poor whites" of the State—the conscienceless creatures who kill for any reason but a justifiable one, for the love of killing, for spite, for the hides, for a few pounds of flesh where they know hundreds will waste, for no discoverable motive save that the

power and opportunity were theirs. These creatures all decent people despise, though few will aid in their detection and punishment. Horrible stories of their destructive and wasteful work are current every winter and can be verified if any one will take the trouble.

But to return to the class of men of whom I first spoke. Many and many a time I have labored with them and tried my utmost to get them to be willing to take the initiative in the matter of better protection of the great game of the State, to be willing to make some personal sacrifice toward it, but I have about given it up as hopeless. They know little of the disappearance of game from other parts of the country, and your stories of the swift extermination of the bison, the elk, the antelope, the wild turkey and the prairie chicken are necessarily not very vivid to them or very cogent reasons why they individually should stay their hand from taking what is before them and in their grasp, and what they personally want. To them it is the regular and unbroken order of nature that the woods should abound in deer, and they cannot easily be made to see that it will not always be so. They are obliged to admit the scarcity of the moose, but the scarcer they are the more coveted the prize and harder to forego an opportunity to kill.

I am writing these last lines in October and in camp in the heart of the wilderness I loved so well. I have been reading, as I hoped to do, the pile of back number *FOREST AND STREAMS*, and in the delicious quiet and rest of the woods and within sound of the waves of one of the loveliest and wildest of the lakes of Maine. What I have seen and learned on this trip thus far only increases my pain and my wish to stop the slaughter of game, and, I am forced to add, my despair of every seeing it accomplished. Year before last there was the cruellest crust for years. It came late—the last of March or the first of April—and at that late time twenty moose were killed within ten miles of where I write. It is true that the greater part of the meat was used, but think what that slaughter meant whenever men could take advantage of the conditions. The animals were absolutely helpless.

The same spring a man was fishing on a stream not two miles from here and saw a cow moose and a yearling. Of course he shot them. In three weeks more the cow moose would have given birth to two young. In October of that year I came to the borders of a certain lake and discovered a guide well known to me. He was in the act of taking a big buck from his canoe. Another was hung up close by. Beside him was the hound through whose agency he had secured both. Caught in the act, and not sure but my companion might be a warden, he tried to engage us in another hunt. I steadily refused, but he sent his nephew into the woods with the hound. While we were preparing our lunch we heard the hound give tongue, and in a few moments a fine spike buck took water not far from us. It was a sight which I had in all my hunting never seen before. I took my canoe and paddled round and round the deer for a few minutes, watching its play of muscle as it swam, but of course with no idea of shooting it. On the shore stood my guide and the other party, two men and a boy. Fearing that I was waiting too long and that the deer would escape, they shouted to me to shoot. I told them they could shoot if they wanted to, but that I certainly should not. They begged and implored me to shoot, shouting that I would not have another chance; that I might still hunt the whole season and not get a shot. They began to swear, and the boy, who had been permitted to shoot the two bucks they had secured and whose spirit was hot for slaughter, vowed that a man who wouldn't shoot a deer when it was there before his eyes, didn't deserve to have a deer and had no business to come into the woods.

Steadily I drove the deer to shore and "beached" him within six rods of the frantic party on shore, and had the satisfaction of seeing him bound away unhurt into the forest. The only anxiety had been to make me *particeps criminis*, and so to shield their own misdoing. I am happy to say that in two days I still-hunted a fine caribou and shot him dead in his tracks.

One other story of my own experience I must tell. Some years ago, with another gentleman, I was encamped on one of the finest trout waters in Piscataquis county. It was four days before the close of the trout season and the opening of the free season for big game. We had one guide. Not one of the party had a rifle. We had deliberately "gone in for trout," taking only fishing rig and shotguns, leaving our rifles at the settlement and intending to come back for them and go in for a hunt when the fishing season closed. We had secured all the trout we could use, and were lying on the bank under some big trees, reading. Our guide was out on the lake a rod or two, when he suddenly called to us to know what kind of a creature was moving along the opposite shore and far up the lake. My telescope was hung by a swivel to the tree, and in an instant was turned on the new comer, when, behold! a lordly moose with big antlers! There was no mistaking him. The guide was incredulous, but one look through the telescope convinced him. Excitedly we watched him, taking our turns at the telescope. The guide asked: "Shall we try to shoot him?" What could be a greater temptation? To both my friend and myself it was our first opportunity of the kind. There was the moose, a huge and splendid prize, and browsing slowly along, drawing nearer and nearer to us, though on the opposite side of the lake, and all unconscious of our presence. The wind was right. The moose would probably pass within easy shot of one who should hide in the grass and bushes of the outlet just below us. It lacked just four days of "open time." It was a chance of a lifetime. O, what a sight he was as he waded along knee-deep in the water, taking now and then a nip at a lily pad or a swimming arm of the lake and coming out and shaking his giant shoulders till the water flew in a shower around him! We could see him with the utmost distinctness and even watch the gleam of his eye.

To the guide's repeated question we simply replied that we should not lift a finger in the matter. He said if we would not he should, and hastily replacing shot by bullet in three of his cartridges he took his shotgun and crept away. The moose stopped directly opposite us on the other side of the lake, where we could without the glass see every motion. Some faint noise made him cautious. He was slowly turning back, when a shot rang out and the ball splashed the water under him; a second and a third shot followed, and we saw the great beast was hit. He started to trot, but reeled, and the blood

flowed from his muzzle. That meant "shot through the lungs." He reeled, he fell. The guide took the whole responsibility, and therefore to him, so far as we were concerned, belonged the moose. I am glad to say the meat was all saved, though the head was spoiled. I afterward bought the horns of the guide.

For two seasons I have been led by certain considerations to take my short autumn outing in western Maine, where were trout and some deer, but not in plenty, and no moose or caribou. I did it with regret, longing for my old haunts in Penobscot waters. Last winter I received a letter from an old and favorite guide saying that he was in the woods again and urging me to come for a winter hunt. He said he had built an "old ripper" of a camp on one of our favorite lakes, and that if I would come he thought he could promise me a moose, adding that "others did it" and he didn't see why we should not.

Of my present trip I will write another time, *i. e.*, if the length of this letter does not scare the editor. I shall have much more to say of the ways of outsiders and natives in regard to game in Piscataquis county, and something, perhaps, by way of suggestion.

"THE FATE OF THE FUR SEAL."

Editor *Forest and Stream*:

I am not to be drawn into a controversy with Mr. H. W. Elliott. Before his feverish activity and brilliant imagination I am content to rest in awestruck silence. Those who are curious as to the area seals occupy may inspect the group in the National Museum, mounted under Mr. Elliott's supervision, and form their own conclusions.

There will be plenty of evidence from independent observers recorded before long, and the truth of the matter cannot fail to come out; and for this I am perfectly willing to wait. It has, however, been suggested that as a fact of historical value I might add a few words of explanation about the price of fur seal skins in Alaska in 1866 (not 1866-7 as Mr. Elliott puts it).

The furs purchased by the "Russian-American Company" before the sale of the territory to the United States were classed under two categories. One comprised such furs as the sable, sea otter, beaver and young black bear. These were not permitted to be sold on any consideration by the chief traders at the different posts. Severe pun-

NEST OF RUBY-CROWNED KINGLET.

ishment was prescribed for a violation of this rule, though doubtless it was occasionally violated.

The second category comprised furs regarded as of comparatively little value, which the chief traders were allowed to sell at a fixed price, either to employees of the company for fur clothing or to others who desired them. This list in 1866 comprised among others, muskrat skins and those of the white fox, fur seal, Parry's marmot, the siffleur or hoary marmot and American ermine or weasel skins. The two lists were revised from time to time as the prices of furs fluctuated. Mink, for instance, was at different times put in one category or transferred to the other. In 1866, and for some years previous, fur seal skins paid the company barely if at all for the trouble of taking them. The price fixed on them in 1866 was 12½ cents apiece, and at that price I bought 100 or more skins from the chief trader at St. Michaels, in the month of September. The following year the price rose considerably I believe, but not until after the purchase of the territory had already become practically certain.

SHARK NOTES.

IN the summer and winter of 1888 I was connected with a wholesale fish firm doing business at Pensacola, Fla. In the many hunting and fishing trips made in Pensacola Bay and Santa Rosa Sound the shark often came under my notice.

One morning in May, while standing waist deep in the warm waters of Santa Rosa Sound casting for sea trout, I was somewhat startled to see a shark's dark form about 15ft. away and between myself and the shore. Some lively thrashing of the water with the rod succeeded in driving the intruder off, and the remainder of the morning's fishing was done from the boat.

Sharks are very abundant in the harbor during the summer months; and on clear moonlight evenings shark fishing parties were quite the rage. A dozen or more young people of both sexes would gather on one of the piers, equipped with the usual shark outfit, *viz.*, 200ft. of ¼ in. manilla and a dozen feet of chain connecting the

manilla with a hook, the size of which would astonish a landsman. The bait commonly used was a red snapper's head; and the sharks were so plenty and ravenous that this bait was generally successful in bringing them to the surface.

I remember one occasion when the young man who was acting as fisherman failed to keep the line taut while listening to an especially vivid yarn, and the shark took bait, hook and then came forward and severed the ¼ in. rope 5ft. above where it was fastened to the chain. It cost the party \$3 to procure a new outfit.

One October morning as I was about to enter my office, which was located on a pier, I noticed three sharks swimming about 20ft. from the pier. The shark outfit had been loaned to a friend and was a half mile away. It was, however, but the work of an instant to rush to the telephone and order the outfit to be sent down post haste. Then procuring a number of skipjacks from a refrigerator, I began feeding the sharks to hold their attention until the arrival of hook and line. For the next twenty minutes it was great sport watching the lightning-like dashes of "these wolves of the sea." As the skipjacks struck the water the brine would be lashed into a yeasty smother as all three would rush for the same fish. Several times they came within 6ft., and as the water was clear, I could see every motion they made. In not a single instance did they turn on the side or back to take the food.

The skipjacks were about 18in. in length and averaged 2lbs. in weight. The largest shark was fully 8ft. in length. Two of them were attended by remoras—a fish about 18in. long that has a disk-like sucker on its head with which it attaches itself to the shark. It is an odd sight to see these small fishes carried about on the backs of sharks. I am inclined to think that sharks in feeding on large fishes would turn slightly on the side to tear away portions, but experience leads me to believe that in taking objects not too large to gulp entire, they never turn.

After the food supply had given out the shark outfit came, but the sharks had returned to deep water. However, the hook was baited and dropped about 20ft. from the dock. After thirty minutes fishing a shark bit, but the hook failed to hold.

NEST OF RUBY-CROWNED KINGLET.

Editor *Forest and Stream*:

I send you a nest of the ruby-crowned kinglet, one of several discovered and taken by me near Dartmouth, Nova Scotia. The nest was found June 14, 1891. It contained young. It was up 30ft. from ground in the top of a black spruce tree. The nest was built underneath the main limb, and clinging on, fastened by the sides, to the smaller branches or twigs that shot out from the main limb and was suspended.

On July 2 the young had flown, when the tree was cut down, and this limb I now send to *FOREST AND STREAM* with the nest attached.

The nest is made with moss, lined with feathers, and with feathers woven into the sides and bottom. Nest measurements are as follows: 3in. across the top on outside, 1½ in. across on inside, 1½ in. deep on inside and 4in. deep outside.

The female when building will go from 100 to 300yds. after material, being invariably followed by the male, who, however, does not assist in any other way than by singing.

H. AUSTEN.

DARTMOUTH, N. S.

ORNITHOLOGISTS' ASSOCIATION OF WASHINGTON.—Last spring there was organized in Washington, D. C., an Ornithologists' Association, which has greatly prospered, and now has a considerable membership, both active and corresponding, the latter covering a large part of this continent. The present officers are: President, Rev. J. H. Langille; Vice-President, W. H. Aspinwall; Secretary and Treasurer, A. B. Farnham. The object of this organization is to make general and popular the study of bird life, hoping thereby to promote the knowledge of this attractive branch of natural history and to secure a considerable protection of our native birds. The growing interest in ornithology all over the country is indeed wonderful, and it is hoped to bring to pass a universal co-operation in the good work referred to. Persons desiring membership will please address A. B. Farnham, Benning, D. C.

THE MOJAVE DESERT IN WINTER.

AT the meeting of the Biological Society of Washington, Nov. 14, Mr. T. S. Palmer delivered a very interesting address on the "Winter Aspects of the Mojave Desert Region," based upon his personal experiences during the recent memorable explorations made for the Department of Agriculture under the direction of Dr. Merriam, and forming the first public announcement of the discoveries of the expedition. Time and space forbid detailed mention of the physical features of the region, which could not at any rate well be explained without reference to the map and profile used by the speaker to illustrate his remarks. The wonderful extremes of temperature, involving intense heat (136° in July), excessive dryness and a minimum temperature of 8 to 12°, with an occasional fall of an inch or two of snow in winter, produce hard conditions for the animals and plants of the desert, and are endured with the help of such habits as involve the least risk to life and thrift. The range of temperature is about 125°. Some of the plants are leafless, others drop their leaves in June before the summer heat is established. Tree yucca is characteristic and grows to a height of 25 to 30ft., sometimes forming groves or forests. Cottonwoods, mezquit ash, and willows in small numbers are included among the trees. A few shrubs and, in some localities, marsh grass belong to the flora. In winter only a few reptiles and batrachians are to be seen; one or two species of lizards and now and then a snake are present. Birds are chiefly absent on their migrations; a sparrow, a raven, a shore lark and a thrasher constitute about the sum of the winter residents. Although about 20 genera of the mammals are in the region, the species are mostly nocturnal in their habits and are rarely observed while passing over the country. These include rats and mice (so called), the mountain

sheep rarely on the heights, coyotes occasionally in the vicinity of the springs, and a few jack rabbits and cottontails. The number of diurnal mammals is never large. For the most part the birds are absent, the reptiles and batrachians hibernating, the mammals nocturnal and the plants in a state of rest.

KAGU AND FILLALOO BIRD.—On page 119 of the "Standard Natural History, Birds," Vol. IV., is to be found the following interesting account of some of the antics of the Kagu from New Caledonia. The bird is related to the sun biter, and from its actions one would associate it with the story of the wonderful fillaloo bird. The observations here recorded were made by Mr. Bartlett, superintendent of the London Zoological Garden, from a captive specimen: "With its crest erect and wings spread out the Kagu runs or skips about, sometimes pursuing and driving before him all the birds that are confined with him in the same aviary, and evidently enjoying the fun of seeing them frightened. At other times he will seize the end of his wing or tail and run around, holding it in his bill. From a piece of paper or dry leaf he derives much amusement by tossing it around and

again to the farm, and then home again after the hunt, took more than ordinary zeal. But then Split Rock was a really good hunting ground. About 10 o'clock on the night of Nov. 15 we were awaiting his arrival, seated about the kitchen stove. We heard a shot outside. "There's Guy, boys," and we all were on our feet in a moment. (Everybody under forty years is a "boy" here.) We were not at all daunted by the fact that the night was as "dark as a pocket" and that it threatened rain. Each of us carried a lantern. There were two dogs, Hunter, Guy's dog, who had run more than one good race after deer some five weeks previously under "Old Dix" back on the Adirondacks, and my own hound, wholly unacquainted with the ways of coon. After following the Whalon's Bay road for a half mile, we struck off for the cornfields under Split Rock Mt. Almost immediately after reaching the first cornfield, the little hound struck a fresh track. Off to our right in the darkness we heard him "straightening it out," as Guy said. Presently he got it straightened out, and away they went, little hound and big hound, the latter barking at he knew not what, but wild with excitement. Sometimes we heard the big dog ahead barking the track, but he would over-run and have to come back to take it again

stood between me and a 30ft. precipice and I might hug it as my best friend. I scanned every limb as I passed, to the best of my ability. Seeing nothing I concluded he must be in the very top of this giant pine; so on I went until the trunk was no larger than my wrist, but no coon. Then to make perfectly sure, I parted with the fingers of one hand the very top so I could see the sky, a shade lighter than the tree. Surely there is no coon in this tree. I jarred every limb on my way down and strained my eyes for the second time to be doubly sure. "What do you say now?" I said to Guy on reaching the ground. "I say there's a coon in that tree, and mind what I say, and I'll bet any one in the crowd a fiver against a quarter. Hunter never lied to me yet, and if it's only to find out whether he's lying or not I'm going to wait till it's light enough to see for myself. Here Hunter, talk to that coon." Hunter got up from his warm nest by the fire in answer to his master's command. Standing on his hindlegs, and reaching up the tree as far as possible, he gave two prolonged barks and then, as if that ought to satisfy any one, he curled up by the fire again. For further proof as to there being a coon up the tree, Guy found a cobweb, or something, which he said was a

BROADBILLS AND CANVASBACKS. ALL QUIET ON THE POTOMAC.

running after it. During his frolic he will thrust his bill into the ground and spread out his wings, kick his legs into the air and then tumble about as if in a fit."

"HOW TO COLLECT BIRDS."—Editor *Forest and Stream*: In yours of Oct. 1 the writer of the article on "How to Collect Birds" recommends corn meal as the best thing to use as an absorbent, and names clean sand and plaster of Paris as possible substitutes in its absence. Having tried all three, also several others, I find that none can at all compare with fine hard-wood sawdust, such as one gets at a last factory. Any one who has once tried it will never use any other, it combines the advantages of all the others named above without their disadvantages.—E. E. T.

THE BIG COON OF SPLIT ROCK.

FOR several weeks I had heard some whistling after sundown in the cornfields under the mountain, and even down on the shore of the lake. Hunting instinct is so strong in me that it was hard to curb my impatience. On the evening of Nov. 14 last I extorted a promise from Guy Ferguson that he would be on hand on the following night with his dog Hunter, of undisputed reputation in his line. Now Guy is an old hunter and fond of his calling, but to walk home two and a half miles and back

from the small dog. This coon had employed old coon tactics. Following up a small water-way, often crossing, sometimes wading, he hoped to throw off the dog. If he had known what dog was after him, he would have saved himself the trouble.

At the intersection of a rail fence the track left the hollow and now it was fun to see that little hound walk the rails. The coon could not have done it better himself. For at least a half a mile the coon had kept the fence and the dog kept the track leading directly for the mountain. At a sudden turn in the fence the dog made a break for the timber in full cry. Guy forged ahead, for we were unable to keep up, and yet we seemed to be doing our very best. We could hear Guy talking to his dog and calling to us out of the darkness, "He's got him up, boys." We stumbled along as fast as we could in the direction of his lantern. "He's up here, boys; up in this big pine." "But how do you know that?" we asked. "Where's your dog gone, and why don't you follow him?" For by this time we could hear Hunter away down the mountain, barking like all possessed. "There's more than one of 'em, and one's up this pine; perhaps we'll get them both."

We kept our doubts to ourselves, skeptical as we were, for Guy must know his dog better than we. So we scattered in all direction in search of fir wood and soon were warming ourselves by a good fire, for we had become chilled standing in the night air after such a chase. The fire lighted up the side of the pine tree next to us very well, but the further side was as black as the night; so the coon might be concealed away out on the end of one of those heavily plumed branches reaching over the precipice. "Well, who's going up? Don't all speak at once." Now if we had suspected there was a coon up the tree, if we could only have seen something that looked like a coon, we all would have volunteered at once. Finding I would be disappointing no one and skeptic that I was, I volunteered my services. With the lantern strapped between my shoulder blades and beginning the ascent from Guy's shoulders I began to climb that father pine. A lantern tied on to one in this way is never in the way and does not dazzle me.

For the first 20ft. there were no branches and I had to do a good deal of hugging. At that moment the tree

hair from the coon's belly, rubbed off in the scramble up the rough bark.

Seeing that we were in for it for the rest of the night, we hunted up more fire wood and made ourselves as comfortable as possible. Smoking and story telling passed away the time not unpleasantly. With the first streaks of dawn we were straining our eyes, going systematically over the whole tree, as we thought. Soon it was so light that it seemed absurd to look further, so most of us gathered again about the fire, making mental notes. But Guy was intent on something, and Hunter was setting up and glancing first at his master and then at the tree. "Boys, come here," said Guy, "what do you call that?" Sure enough, way out over the precipice, on a long limb about mid-way up the tree, was a bunch, which even now, in nearly broad daylight, at first sight seemed only a bunch, but on close examination resolved itself into a coon, and a very large one, too. Now, old fellow, lie low, for there's a bead being drawn on you. Each of us four took our turn at him with a 22-cal. long, but only succeeded in making the bunch move. I volunteered the second time to shake him down, provided they would stop popping away with that small gun. As I approached the coon, he began growling and threatened to run by me, but his courage failed him and he retreated again to the very end. Then I shook until I was weak, but his strength gave out about the same time and down he went over the precipice, but struck fairly on his feet. What a Babel two dogs and three men can make. There followed barking, yelling, growling, fighting.

We got four other coons last fall, but none out-weighed this one. He weighed 25lbs. The smallest weighed 18lbs.

We all were glad it was Sunday morning so we could go to bed with an easy conscience. KIN.

ESSEX, N. J.

MICHIGAN'S TRACKING SNOW.—Central Lake, Nov. 16.—The first good "tracking snow" came on the 14th, and some hunters were out for deer. One man reports one track, but I hear of no carcasses.—KELPIE.

NEW JERSEY COAST DUCK SHOOTING is reported from Bay Head, Forked River, Tuckerton and Brigantine.

BEARS IN NORTH CAROLINA SWAMPS.

NORTH CAROLINA is a pretty big State, as every one knows. There are big mountains, and streams filled with fine speckled trout, and vast forests of yellow pine timber, and along the coast rivers and swamps. The latter are so out of the way, and so inaccessible, and so filled with malaria in the summer season that there are vast sections of that country which are "howling wildernesses."

Now, I am one of those individuals who are rather given to "howling wildernesses." I don't think I ever feel so thoroughly contented as when I know I am far, far away from the haunts of man. No matter if I am surrounded by the blackest of swamps or the dark waters of unnavigated rivers, or whether I am far away in the valleys of the mountains of northern Canada, there is something about solitude that fascinates me. So, one day a year or so ago, I made up my mind that I would take my little yacht, the Madelon, and go down and explore the creeks which empty into the Alligator River, in Dare county, N. C. I had been at the mouth of the river the year before, and had made the acquaintance of Captain Basnight, who lives at a little hamlet directly at the mouth of the river, called East Lake. Basnight is a good fellow and a famous bear hunter. I had got there early in December, and he took me out and showed me—nailed on to the sides of his barn—the skins of nine bears, all of which he had killed during the full moon some two weeks previously. He has a reputation as a bear hunter, and many is the close call he has had in a scrimmage with a lively bear, the marks of whose claws he still carries on his person.

Basnight told me that we were then too late for the bear hunting that season, for it seems that they can only be successfully hunted during the full moon in November, at which time they come down to the edge of the swamps and feed upon the berries of the gum trees. This tree bears a small black berry, and grows only on the extreme edges of the swamps. Therefore, all the hunter has to do is, on some quiet, moonlight night, to steal along in his canoe close to the edge of the swamp, and if bruin is regaling himself he makes such a noise and crashing and smashing as he tears down the limbs that bear the berries that he is to be heard some distance off and can be easily located. As soon as the berries are ripe, both bruin and robins and other birds feed upon them and make such short work of them that it is only for about a couple of weeks that there is any chance for sport.

Capt. Basnight urged me to put in an appearance early the next year, and promised that if I would do so he would certainly guarantee me a bear, to say nothing of the excellent deer shooting and plenty of woodcock. The country abounds in both of these, and the natives have a singular way of bagging the woodcock, which to me seemed shamefully unsportsmanlike.

Now, the open fields or clearings are very scarce in parts of that country, and as the birds are all seeking them by night, as soon as it comes dark the natives load their muzzleloading guns with a good pinch of powder and about a half teaspoonful of No. 10 shot, and providing themselves with a torchlight, proceed to travel across the fields slowly and carefully, searching for the birds. They are found crouched down, as if hugging the ground, which is nearly bare of grass. Mr. Native then puts his gun about three or four feet away from the birds and bangs away. In this way they frequently bag two or three dozen per night. They do not call them woodcock; they call them "pake." I presume in imitation of the noise the birds make while flying.

About the 10th of November in the following year I found myself on board my yacht, lying alongside of the little dock at East Lake, and soon met with a hearty welcome from Capt. Basnight, who informed me that he already had several bear located, and felt sure that we would have a successful hunt. We passed most of the day knocking around, whittling, chips and spinning yarns, and when night came the moon rose over the forest clear and round and bright as silver. The wind dropped to a dead calm, and, to use Basnight's expression, "If we had prayed for it, we could not have had a better night." About 9 o'clock he brought his canoe alongside and assigned me to a seat in the bow. He had with him his son, Joe, a fine youth of sixteen years of age, who had killed his bear.

Capt. Basnight was armed with a No. 10 bore, double-barreled breachloading shotgun, and I was armed with the same sort of weapon. Our cartridges were each charged with 4½ drs. of powder and twelve good-sized buckshot.

Entering the canoe, we pushed off from the dock, and after about an hour's row up the river entered the mouth of what is known as Whipping Creek. This stream is some fifteen or sixteen miles long, and the water is almost stagnant, having a slight rise and fall with the tide; but it is perfectly fresh water, and the trees of the swamp come right down to the water's edge. The creek is so narrow in some places that the trees meet together arched over one's head. Then again it widens out. The water is very deep, some places being as much as 60 or 70 ft. The banks of the creek are mostly swamp, almost on a level with the waters of the stream, and occasionally there is a bluff of say 6 or 8 ft. high.

As soon as we entered the creek Basnight and his son discarded the oars and supplied themselves with paddles. The canoe commenced to move along in utter silence.

I must say that in all my life I never saw such a still and silent night. There was not a breath of air stirring, and even the owls had stopped hooting. Silently we move along, so silently that I almost wonder if we are moving at all. We sweep up the creek about a mile without hearing even a rustle in the grass.

The canoe swings around a bend in the creek, when suddenly, directly ahead of us, I hear a crash. It seems to be up in the air, and I scarcely need to be told by Basnight in a whisper, "Look out! Keep your eyes skinned! Give your gun ready!" All of which I proceed to do with a beating heart, for it is my first bear, and if we don't kill him dead there may soon be more fun for the bear than there will be for us. Close to the bank, as close as he can possibly get, Basnight steers the canoe slowly and silently.

Suddenly there is another swish and another crack. That peculiar *crick, crack* that is heard from broken branches. This time it is perceptibly nearer, and I strain

my eyes into the treetops, but can see nothing. In a moment or two we round another bend in the creek, and directly ahead of us is a bank of about 6 ft. high.

I notice that the canoe has stopped and Basnight leans forward and whispers to me, "There he is; don't you see him?" I look forward and strain my eyes in every direction clear up to the tops of the trees, but can see nothing. Basnight whispers, "You are looking too high up; he is about half way up that tree."

I bring my eyes down, and I see a dark object that looks just like a big black man standing up on one of the limbs. He seems busily at work and has not discovered us. Basnight lays his gun across his lap and again he and his son proceed to paddle. Gracious me! Is he going to put us directly under the tree for it was so close to the bank that its branches overhung the water. In about half a minute Basnight whispers, "Get ready to shoot." I hear him softly lay down his paddle and cock his gun. I do the same, and he then whispers, "Aim at the middle of him, count three in a whisper and we will both fire at him at once."

I raise my gun and glance along the barrel. Unluckily, we are in a deep shadow, and one has to shoot without using any sights. I bring my aim slowly down till I think I have the gun on the main bulk or body of the bear. I count one; two; three; and both guns roar. Instead of tumbling out of the tree, we see the bear making for the main trunk and come scrambling down. We don't know whether we have hit him or not. I insert another shell quickly, and stand ready with it by the time bruin strikes the ground. With many grunts and growls he is evidently coming for us, and I hear Basnight yell, "Look out! he is coming over the bank! give it to him!" In another second the bear appears, standing on the bank, slapping his paws on his breast, and evidently "tearing mad."

Again Basnight and I cover him with our guns, there is a flash, and another roar, he leaps forward, and slides headforemost into the water. Half of his body is in the water and the other half rests on the bank. We are not more than 20 ft. away, and for a moment I think the bear is going to swim out and capsize the canoe. But no, there is a kicking and splashing, and in a moment or two all is still. We replace our cartridges and, with cocked guns, carefully and slowly paddle near. The bear is ours, and a 300-pounder, if he weighs an ounce. Of course we soon have him out of the water and deposited in the boat.

Basnight says that as it is early he thinks we had better keep on up the creek and see if we can see another. We pass bend after bend in the river for more than an hour in the same sepulchral silence. There is not a quiver of a leaf, and even our friend the night-owl does not resume his song. It is getting chilly and we are seriously thinking of returning home, when the familiar crash is again heard, and Basnight whispers, "We have another one!"

We make our way up the creek silently as before, until finally going around a bend we see, high up in a tree, a bear. Not so large a one this time, and he is away up on the top of a gum tree. He is standing up, man like, and drawing the branches toward him in a most human fashion.

We were just commencing to get within shooting distance when suddenly we hear a tremendous cracking and snapping, crashing and smashing, and down comes the bear from the top of the tree to the ground. He strikes the ground with an awful thump and I feel sure that he has broken every bone in his body. Before we have time to think with a big grunt he has made himself scarce in the bushes. We had a hearty laugh at his expense, for he must have fallen at least 100 ft. No one was more surprised than he was himself.

We then put our canoe about and softly proceeded down the stream in hopes of seeing another bear, but were not so fortunate, and were startled only by the sharp snort and whistle of a fat buck, whose departing footsteps we distinctly heard. We saw nothing more, and wrapping ourselves in our heavier coats Capt. Basnight and his son resumed their oars and we found ourselves at the yacht at about half-past one in the morning.

It was a proud night for me, and as the skin of the bear was black and handsome I expect soon to rejoice in the possession of a nice rug for household uses.

We remained in that vicinity for about two weeks and spent our time in quail shooting in the surrounding country. The birds are extremely plentiful, especially in the rice fields, for there are a great many rice fields cultivated there.

Before I close I will (as usual) tell a story. On the following Sunday afternoon, my cousin Fred, who was with me, suggested that we take a little walk up the road for a mile or two, just to see what sort of a country there was up there. We started out, and as soon as we had gotten clear of the swamp we found ourselves surrounded by corn and rice fields and we observed in the distance a white building which looked like a school house or a church. We thought we would stroll up that way and soon found ourselves in front of the door. We discovered that it was a Sunday school, quite largely attended. We softly entered the door and seated ourselves on one of the rear benches. The preacher was a small, dark complexioned, dapper little man, in appearance entirely different from the general run of those whose services are in demand in that section. He had not made more than one or two remarks, when to our astonishment it became evident that he was a Frenchman. The school was nearly over, and it seems that he was just about dismissing them and was going to tell them a story. It was so silly and ridiculous that I must recount it. It ran thus: "Now, little boys and little girls, I want you to keep vera quiete an I will tell you wan leetle story before I deemees you. One time zere wass two leetle boys, an zey play around in ze road in front of zeur fazzer's house, and enjoy zeurself. An ze fazzer [father] of zose leetle boys he stan in ze window of hees house and like to see hees sons enjoy zeurselfes. Well, while zose boys wass playing zere, zere came along some cheekangs [chickens], an wan of zose boys he peek up a stone, he shrow ze stone, he heet wan of zose cheekangs an ze pore cheekang he fell over; he keek, he die. When ze fazzer see zat cruel zing zat hees son hass done, he call hees sons to heem, an he explain to zem wat a weekid zing eet wass to kill ze pore cheekang, an he say to zem, 'Now, my sons, zat I have explain to you wat a bad, wat a cruel, wat a weekid zing it wass to keel ze pore cheekang, do you think you would do it again?' Ze boy who have *not* ze stone, he say, 'no, my fazzer, I would not do soch a bad, soch a bad soch a cruel thing,' but ze boy who haf thrown ze

stone, he say, 'My fazzer, eef I wass play again in ze road in front of ze house, an some more cheekangs wass came along an I haf a good stone, an wan of zem wass near to me, I think I would try to keel him.' Now, which wass ze good boy, and wheech wass ze bad boy?"

Nov. 2.

ROBT. C. LOWRY.

A WEEK ON THE WICOMICO.

WE have just returned from a very successful hunting and fishing trip to Charles county, Md., where we found small game to be unusually abundant this fall. Catfish and pickerel were found at low tide in holes made by drumfish. In proper seasons the fishing in the Wicomico is first-class. The principal fishes to be caught there are white perch, yellow perch, pickerel, catfish, and early in the season striped bass (rockfish) and tailors (bluefish). The two last are captured in large quantities in late summer and early autumn. I have often taken two dozen "rocks" and "tailors" in an hour's fishing at sundown. In my experience the hour including sundown is the best time to fish for these species, at least it is so in the Wicomico.

This week's outing was taken especially for sport with the gun, and our success was most gratifying. During these few days I alone bagged nineteen woodcock. Most of these were shot as they were coming down from the forest to feed in the marshy places, my position being at the mill-run cross roads and time just before sundown. Partridges (quail) were plentiful enough, and I succeeded in making a bag of thirty-seven of these one afternoon. We were surprised to find jack snipe here so late, seven of which were made to kick their toes to the music of my 12-gauge. Two pheasants were shot. These birds were feeding on prickly ash berries, and were very fine ones. Robins were very plentiful, and they too were feeding on the ash berry.

One wild pigeon was killed, also a booby owl. Turkeys are very scarce in these parts, in fact seldom seen. "Raccoons and opossums are common enough, especially the latter. One moonlight night in coming around the shore we captured four opossums, two of which were on one persimmon tree. Rabbits are very plentiful, and I placed forty to my credit during the week. "Coons and possums" are just common enough to make the country interesting to sportsmen. In coming across a field one day our dog found a coon in a deep cover; he was a fine one, and gave the dog one of the hardest fights we have ever seen. The dog was so badly crippled that we could not use him for a day or two.

It was a little too early for ducks, and few were seen. I shot two black mallards at a single shot one evening. A little later we can expect some ducking, and I hope to enjoy it.

The laws in Charles county prohibit non-residents from gunning without written permission from the property holders, and this is doubtless one of the factors making it a good country for small game.

E. R. TODD.

WASHINGTON, D. C., Nov. 20.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 17.—Some interest is manifest in the outcome of the suits brought by Dr. Norris and Mr. Dale, two Chicago shooters, against the Tolleston Shooting Club. The plea is assault, and the damages are laid at \$10,000. The facts, so nearly as obtainable, seem to indicate that plaintiffs were shooting on the Tolleston preserved grounds, knowing them to be such and knowing the strictness of the club in trespass matters. They were ordered to leave by the club patrol. What reply they made is not known, but the result was that they received a severe beating with a club at the hands of the patrol; young Dale being left for dead by his companion, as the story goes. Now they want \$10,000. The Tollestons are hard fighters, as well as strict preservers.

Mr. Wolfred N. Low is still absent in Mexico. He took his gun with him, and should have had some sport.

The entire membership of the firm of Von Lengerke & Antoine went out shooting two days ago and killed 25 quail in the rain. The quail season continues to be good. The former bag was made at North Judson, Ind. Mr. Frank Place and friends have again made a heavy bag near Warsaw. Indeed, the birds have been unusually abundant below here, both in Illinois and Indiana.

No ducks to amount to much on the Kankakee, but some good bags in the lower Illinois country.

Over in Canada, near Chatham, Ont., where I spent last week, the members of the clubs owning marshes along Lake Erie were having magnificent duck shooting. Sheriff Mercer, of Chatham, bagged 132 one afternoon, and a bag of forty big ducks in a couple of hours was made not only once but often. Quail, too, were plentiful all through the country over which the field trials were run, and the shooting there, if permitted, would have been extraordinary. Canada is the home of a high grade of sportsmanship in every sense of the word. They run to lighter guns, with no pistol grip, over there, and have the right idea about the open shooting gun for cover work. The Chatham men are pleasant people to meet, but a stranger can't jump right in and go to shooting anywhere over in Canada as he can in "America," as the Canadians call the States. Another thing about Canada as a field is the drawback of the Customs House. When you come out of Canada they make you open your trunk, and your valise, and your pocketbook. I told the officer I was a newspaper man. He made me open my umbrella then. Maybe he remembered the time, two years ago, when I tried to get a "\$1,000 dog" over the line, and we finally compromised on \$15. I have always "had it in" for the Government since then.

Mr. R. B. Organ tells an interesting story as to the influence of the imagination upon the palate. This happened lately in Minnesota, on the same trip when Mr. Organ came so near losing his life. Col. W. H. Jacoby, one of the party, killed a canvasback. This he took to the cook and told him to skin it and fry it for his, Col. Jacoby's, supper that night. The rest of the party protested against so barbarous a way of treating a canvasback, but the Colonel said that was the way he took his'n. In the meantime before supper Mr. Organ and two of the party got a sheldrake—or great merganser—and took it to the cook.

"Here, Sam," they said, "you just skin this fish duck and fry it for Col. Jacoby's supper, and don't say a word. We'll be just one canvasback ahead."

The sheldrake appeared duly fried.

"Now, boys," said Col. Jacoby, as he ate some of the fish duck, "that's what I call good. A fellow who hasn't eaten fried canvasback has missed a great deal."

The rest of the party could not altogether agree with him, especially Mr. Jewell Joslyn, who was not in the secret, and said the bird tasted fishy. The next day Mr. Organ and his friends tried the reverse of the experiment. They got Col. Jacoby's canvasback and had Sam skin and fry it for supper.

"Here, Colonel," said Mr. Organ, "I'll show you that one fried duck is just as good as another. Here's some fried sheldrake, and it's just as good as your canvasback."

"Not by a long shot!" said Colonel Jacoby, after tasting of the fowl. "You can't fool me about ducks. This bird is no good, it's fishy. What on earth do you want to fry a sheldrake for?"

Mr. Jewell Joslyn again was more accurate, and thought the canvasback good eating, though he supposed it was sheldrake. Col. Jacoby, however, was entirely deceived in his own taste. I think the moral should be: Never fry a canvasback.

The feed of ducks has most to do with their flavor. Kill a canvasback and a mallard upon one of the rice lakes of the West, and cook both, and I doubt whether any epicure could tell the difference. There's many a canvasback in the restaurants that never had auburn hair.

E. HOUGH.

ONTARIO MOOSE.

TWO New York gentlemen were so impressed with Mr. Rolph's account in October *Harper's* of a moose hunt near Mattawa, on the Ottawa River, that they went on a similar hunt, had great success, and gave a lively account of their trip in the last issue of *FOREST AND STREAM*. The sportsmen reached their destination by way of Brockville, penetrating to a point beyond Mattawa, bagged a couple of moose and returned home via Brockville. They report that others had still greater success, and that Mr. P., a New York lawyer, had shot a magnificent moose from the steamboat going up the river a day or two before.

What we wish to point out is that the shooting of moose is illegal in Ontario until Oct. 15, 1895. An amendment to the act respecting game and fur-bearing animals, contained in 51 Victoria, 1888, fixes the date for deer shooting and enacts as follows:

Deer, elk, moose, reindeer or caribou between the twentieth day of November and the fifteenth day of October; but the period herebefore limited shall not, as to moose, elk or caribou, apply before or until the fifteenth day of October, 1895, and no moose, elk, reindeer or caribou shall be hunted, taken or killed between the first day of April, 1888, and the fifteenth day of October, 1893.

This seven years of a close period was thought necessary to prevent the total extermination of the varieties of deer mentioned, and Canadian sportsmen submitted to it with more or less grace. If New York hunters come in and evade the inspectors one would think that a reputable sporting journal like *FOREST AND STREAM* should not lend itself to their cause and incite others to such unsportsmanlike lawlessness. Judging by the account given in *FOREST AND STREAM* moose are being shot down every day along the Ottawa River in defiance of the game law, and the provincial inspectors should make a determined crusade against those hunters.—*Toronto World*.

[There is nothing in the account referred to which would indicate that the New Yorkers intentionally or otherwise evaded the inspectors, or knew that they were breaking the Ontario moose law; and the article was published by us without thought of the law. While we hold that it is a sportsman's duty to acquaint himself with the game laws of the country he hunts in, we recognize a decided difference between defying a law and unwittingly violating it. If our esteemed contemporary is in earnest in this cause, let it fit out every visiting sportsman with a copy of the *Book of the Game Laws*.]

POSSUMS UP A TREE.

Editor *Forest and Stream*:

"The Possum Hunt," appearing in your issue of Nov. 12, was very much enjoyed by me, taking me, as it did, back to my boyhood days in old Virginia; and I most cordially agree with every sentiment of the writer's with one slight exception, this the statement that the possum can "climb no tree whose circumference he cannot grasp more than half way round." I regret to differ with one who treats his subject so well, but the facts in my experience will not bear out this assertion of the writer, "P." I have caught many, many possums and coons, and many a night have I helped to cut some monarch of the forest, measuring sometimes from 2 to 3 ft. "across the stump," thinking at least one or more coons would be our reward, to find when the din and crash of falling trees and limbs had subsided only a very small specimen of the genus possum in the jaws of the badly disappointed dogs. In fact, it has often been observed by me that, generally speaking, the smaller the possum the bigger the tree he would select, and likewise as to the coon.

Our game prospect is only fair. Squirrels have been plenty. Quail, I think, are fairly abundant. Bears are "too numerous to mention." One party killed five last week in three days' hunting, and all were killed on less than a mile square. I haven't hunted any this fall thus far, but am hoping to take a hand soon.

A. F. R.

HERTFORD, North Carolina.

WILL THERE BE TOO MANY PHEASANTS?—Although the stocking of woods with game and the waters with fish has in many instances proven successful and beneficial it is always a risky thing to interfere with the doing of nature. The admirable balance of nature once disturbed is likely to create trouble. There is now no longer any doubt that the introduction of the English sparrow has grown into a nuisance, and that the introduction of German carp in the rivers has been detrimental, for nobody has as yet found a means of limiting the increase of the sparrows or preparing carp so that they can be eaten by persons having a respectably-educated palate. The sparrows have driven the American song birds away, and the carp have induced bass, pickerel and many other kinds of fish to seek other waters. Only a few years ago the Passaic afforded admirable fishing; now there is little to be had but carp. Naturalists are well aware of the danger attending the disturbing of the balance of nature, and when the European pheasants were first introduced in this country there were some speculations as to what effect these birds would have on the American birds. But

persons who wanted to go to work carefully in this matter were laughed down, and Legislatures promptly passed laws affording more protection for these birds than is accorded to American birds, the idea being to give the immigrants a chance to multiply. It is now claimed that the laws of this State in regard to this matter are altogether too severe, and that American game is injured thereby. It has been found that unrestricted breeding has resulted in the production of a disproportionate number of cocks, and that these cocks are now not only killing the young of their own kind but also American grouse and quail. It is said that this invariably happens when there are too many cocks. The birds have multiplied wonderfully, and promise to do as well here as did the sparrow and carp. It has been found absolutely necessary to get rid of some of the cocks; but this killing is contrary to law, as a statute of this State prohibits their killing until November of next year. Mr. Rutherford, who owns large tracts of good game grounds in Morris County, has authorized the killing of cocks in order to protect the rest of his game, but the persons who do the killing may be punished therefor. The birds have spread themselves over large tracts of land in this county, coming hither from Morris County and from Tuxedo Park. There is no doubt that after one open season for these birds there will be no complaint about their being too numerous.—*Chas. A. Shriner in Paterson (N. J.) Press*.

Camp-Fire Flickerings.

"That reminds me."

BEING in communication with a trio of "shooting men" a few days since, I overheard one of the most remarkable stories, which, if true, certainly "takes the cake." We were speaking of the relative merits of two well known dogs, and rehearsing some instances of fine work done by them, when a darky standing near by remarked to a bystander, "Dat's nothin'; my old dog t'other day sot a covey of birds in a hole, dug out near the woods by some lumbermen fer er well, and I crept up ter see what 'twas, and throwed my coat over the hole, and blamed ef I didn't ketch thirteen partridge [quail] and take 'em out alive." This was told for truth and we had no reason to doubt it, but a thick coating of silence fell on the crowd, and we changed the subject. A dog that could drive birds in a hole was undoubtedly ahead.

HERTFORD, N. C., Nov. 11.

A. F. R.

TRULY ODD IF ODDLY TRUE.

Mr. Samuel Hickman, of Leesburg, Va., while hunting on the banks of the Potomac, shot a squirrel, which fell into the water, and was seized by a black bass. Hickman waded in and lifted both squirrel and fish clear of the water before the bass let go and made its escape.—*New York Evening Post*.

Carl Weldeck, of this city, and formerly of Paterson, killed thirteen quail and nine rabbits at Mountain View on Tuesday. His Gordon setter was disabled during the day by getting its foot caught in a crack in a rock. The limb was broken and dislocated at the shoulder, so that he shot the dog to put it out of misery.—*Newark Call*.

Two Oldtown hunters down in Maine had an odd experience. They were after partridge. Very suddenly, however, as they were walking in the woods, a startled deer sprang from the bushes and made a tremendous bound, going over one hunter's head. He had no time to take another leap before he fell a victim.—*Springfield Republican*.

The other day a Boston publishing house, which had recently bought out an edition of "The Complete Angler," received a letter addressed to Izaak Walton, Esq. It was from a clipping bureau, informing that gentleman that his book was attracting considerable attention, and requesting to be allowed to send notices from all papers in the United States and Canada.—*Boston Herald*.

Levi Reber, of Shoemakersville, Berks County, has a hunting dog which is blind, but that don't make any difference. It is claimed that he smells powder, and as soon as his master is ready for a hunt the canine is also. He is there at the word "go" every time, and when he takes a start there is your rabbit, sure. On Monday Mr. Reber and party, with this dog, secured thirty-seven rabbits.—*Philadelphia Times*.

W. C. Green was coming across the country near Hereford, accompanied by others, when he came up with a large buck deer tangled up in the barbed wire of a neighboring fence. His horns were so completely tied up in the wire that it was with difficulty that they were extracted after a bullet had ended his life. He had evidently struggled for many hours to regain his liberty.—*Tomlinstone (Ark.) Prospector*.

A curious circumstance once happened to me at Pulney Loch. One of my sons threw a live mouse into it, when a large trout took it down immediately. The boy told me what had happened, so I took my fishing rod, which was leaning against my house close to the loch, and put a fly on. At the very first throw I hooked a large trout, landed it, and laid it on the bank. In two seconds the mouse ran out of his mouth and got into a hole in the wall before I could catch it.—*The Penny Magazine (1843)*.

The fish in the neighborhood of Sierra Leone, West Africa, are credited with some extraordinary behavior. It is only a short time since that one of these marine wonders ran off with a small boat which was moored in Freelem Harbor, and a correspondent writing from Sierra Leone, reports the drowning of a man by a huge fish. Stephen Pratt was fishing from a canoe at Cline Town Wharf. A fish of immense size leaped into the boat, striking Pratt severely in the face and body and rendering him unconscious. In this state he fell over the side of the boat into the water. His lines were tied to his feet and partly to the canoe, and being thus entangled he ultimately sank. In the meantime the fish had wriggled and jumped about until it had got out of the boat again and soon disappeared in the water. The young man who was with Pratt at once gave the alarm, and several persons were attracted to the spot. The fishing lines were hauled up and at the end was found Pratt quite dead.—*London Daily Chronicle*.

Some forty years ago I lived near the Boston & Albany Railroad, where it passes over the mountain range in western Massachusetts. One warm day late in the fall one of the oldest passenger locomotive engineers on the road was climbing the steep grade in the township of Chester, running his train at about twenty-five miles an hour. While passing through the thick forest region which skirted the road at that point he saw a large fox emerge from the underbrush directly in the path of the locomotive, and taking the ditch he ran directly alongside the locomotive for more than 100 yds. His tongue protruded, showing great fatigue. A moment later the cause of the singular act appeared in the shape of a large and fleet foxhound close in the rear, and he rapidly gained upon the fox. When the hound had approached within about 100 yds of the fox the latter sprang across the track, barely missing the cow-catcher of the locomotive. The hound followed and was killed by the locomotive. The fox sprang upon the bank just above the railroad ditch, stopped and looked back with a grin of satisfaction, and was still standing there as the train passed around a bend, cutting off the view.—*Ohio State Journal*.

The murder case of the State against Avery, recently tried in Henry county, Tenn., is one of the most remarkable in the annals of criminal jurisprudence, and proved the phenomenal genius of the attorney for the accused, a prominent criminal lawyer from Cincinnati, named Wallis. In June, 1887, Charles Ensley, a cousin of Avery, was killed in his room, while lying on a lounge, about 3 o'clock in the afternoon. The weapon used was a small rifle, sending a .32cal. ball through Ensley's brain. No one was in the house at the time but Ensley. An empty rifle was found lying in its rack on the side of the wall and the bullet fitted the tube. Avery was arrested for the crime, as he was the only living close relation to Ensley, and would have profited by his death to an extent of nearly \$100,000. Avery was tried, pleaded

not guilty, but was convicted of murder in the first degree and sentenced to be hanged. He appealed to the Supreme Court and engaged Mr. Wallis to defend him. The Supreme Court remanded it back to the Circuit Court on account of technical errors. Two mistrials have been brought about. Now comes the strangest part of the story. The brilliant Wallis struck the keynote to the mystery. In August last he had the rifle loaded and hung on the wall, a white sheet with the form of a man marked on it and a heavy cut glass pitcher of water placed on the shelf above. The temperature was 90° in the shade, one of the hottest days of the year. The pitcher of water acted as a sun glass and the hot rays of the sun shining through the water were refracted directly on the cartridge chamber of the rifle. Eight witnesses were in the room, and a few minutes after 3 o'clock a puff and a report, and the ball struck the outlined form back of the ear, and the theory of circumstantial evidence was exploded. The incident, being seen and sworn to, readily explained itself to the jury. As the sleeping man was lying on the lounge the direct rays of the sun glass heated the cartridge, causing it to explode.—*Mercantile Advertiser*.

DERRYFIELD BEEF.

CENTRAL LAKE, Mich., Nov. 16.—*Editor Forest and Stream*: Perhaps your correspondent "Von W." will thank me for sending you the whole of the poem from which he quoted in your last issue. It was a squib aimed at the town of Manchester, Mass. (originally called Derryfield), and I think deserves the honor of being embodied in the columns of *FOREST AND STREAM* where so much of modern history has been preserved:

"From the eels they formed their food in chief,
And eels were called the 'Derryfield Beef,'
And the marks of eels were so plain to trace
That the children looked like eels in the face.
Such a mighty power did the squirmers wield
O'er the goodly men of Derryfield,
That 'twas often said that their only care,
And their only wish, and their only prayer,
For the present world or the world to come,
Was a string of eels and a jug of rum." KELPTE.

BLACK BASS IN SANDUSKY RIVER.

AMONG the many towns along the Lake Shore Railway there is none more widely known for its beauty of location, invigorating climate and genial inhabitants than the pretty village of Port Clinton, with the lapping blue waters of Lake Erie rolling on the long stretch of sandy beach at its very doors. The surroundings are unusually picturesque. The famous islands to the north and east: the rock-bound Catawba Island, with its sharp lines of high wooded cliffs gently receding to a level plateau rich in the production of fruit; in fact, it is rapidly becoming the most noted fruit land in the country. Port Clinton is the Gloucester of the West. A visit through the fisheries will well pay the time spent, particularly where fishermen are so anxious to please and entertain. I had the pleasure of meeting, among the noted pound net fishermen, Hon. William E. Bense, and I was surprised at the welcome reception of these busy men, and was vain enough to believe it was on account of there being a truthful angler in town, but I soon learned it was their nature. Mr. Bense stated that the fishing was fairly good, but not equal to the demand. He said the principal fish eaters were in Pittsburgh, and that some of the most patient and agreeable anglers came from that city.

"Just step in here," he said, after prying open an immense pine door which led into the company's freezing vaults. There was a noticeable difference in temperature of some fifty degrees. Hon. Frank B. Losee, who accompanied us, declared he lost ten pounds in as many minutes. He afterward regained it by a bet on the weight of a ten-pound whitefish with Mr. Bense.

"We have here four tons of frogs," said the fisherman, "frozen solid. They are for Pittsburgh's Christmas." Cake after cake of frogs, of all sizes and shapes, were piled above each other, like so many bricks. "Will frogs return to life when thawed?" we innocently asked a hardy fisherman, after backing out of this touch of the north pole. "If frogs, like fish, are not killed or injured when captured, and permitted to freeze slowly, in a natural way, they will undoubtedly return to life. You can form your conclusions from the following incident. Some time ago the fish buildings were partially destroyed by fire. In a freezing house we had stored blocks of frogs. One side of this building was on fire. The heat and water thawed out the frogs, and when an opening was made in the roof hundreds of active frogs leaped out in all directions, making a strange sight through the flames and smoke."

With this we left the good-natured people and completed our arrangements to go to "the greatest large-mouthed black bass fishing grounds in the world," of which I promised to tell the readers of the *FOREST AND STREAM* in a recent number.

The experiences mentioned about the white bass fishing in my last article being so uncommon to anglers at large, and notwithstanding our close adherence to the truthful presentation of facts, anglers who seek the retreats of the great Northwest thought the statements were not made from an enthusiastic standpoint, but inclined to exaggeration. So I found it necessary to have a reliable witness to substantiate what I could do if let loose among "schools of black bass sporting around the bends of the river undisturbed by the artful devices of man." Accordingly Capt. Henry T. Marshall, the great sauger angler of the Maumee Valley, kindly volunteered to accompany me. W. M. Montgomery and R. M. Hollingshead are Port Clinton's crack spoon fishermen, and this is saying a good deal, for from the editors and lawyers, down to dock worm-fishermen, all have records not easily beaten. I soon discovered why these gentlemen were the recognized anglers of Portage Valley. They fish by rules as laid down in books. The open pages are ever before them on a seat in the boat. Each cast is a studied one, and they never exaggerate the true number of bass upon their stringers; this is a fault that many fishermen have. They believe, as suggested by Dr. J. A. Henshall, that

the necessary qualities of a successful bass angler are, "patience, perseverance, endurance, skill and strength." They have learned by long experience the true knowledge of the movements of fish in all kinds of weather. These are the men who kindly proposed to take us to the great bass grounds.

A large boat was placed on a dory in which we found comfortable seats, and with splendid roads and a careful driver, we were safely landed on the shore of Sandusky Bay, two and a half miles due south of Port Clinton, where there awaited our arrival another boat. The country bordering the bay is rich in fruit and grain. I learned that farming life was comparatively easy, and judging from the great number of modern buildings the farmers are well to do. When the fields are weary with their giving of their strength to so many harvests they can rest for a season. The heavy land is for general farming purposes, the light is planted in peach, pear and other fruit, which of recent years has made this section one of the wealthiest in the State. It was very early in the day when we arrived on the bay shore. Large flocks of blackbirds covered the marsh; thousands of wild ducks were sporting in the open water of the bay, while among the reeds and rushes leisurely walked many species of rail perfectly unconcerned at the approach of any one. Sandusky Bay is a magnificent sheet of water, and on its fretted bosom the eye could snatch, in the distance, brilliant glimpses of the snow-white sails that sparkled in the shadows of Sandusky city as they fell under the beams of an autumn sun. The landscape surrounding this bay is beautiful in itself, but still rendered more so by the delicate aerial tints which lay on every object and touched the whole with a mellow expression.

At this point the bay is six miles wide, and after rowing about three miles southwest, over a stretch of shallow water with marsh grasses just peeping above the surface, we came to a deep channel, the margins of which are bordered with pond lilies, wild rice and other aquatic plants. This is the Sandusky River channel, and is navigable for very large vessels. The moment we entered this channel Montgomery and his spoon companion, Mr. John Robison, who had joined us at Port Clinton, began at once to manipulate the spoon, closely hugging the grass. As Captain Marshall and myself were not expected to use the spoon, we lingered behind, expecting to drop anchor at the first bend which looked as if black bass fed. The spooners were soon out of sight around the many bends. Before hooking on our first minnow let me attempt to describe this comparatively new black bass fishing ground, for it is evident that if we were compelled to take a boat several miles over land and then row the same distance, all for want of nearer accommodations, it must be a new field.

Sandusky River from Fremont to where it empties proper into the bay is one of the most romantic rivers of our land. I once took a boat at Fremont and rowed down stream until tired; calling upon a farmer, I was informed that I had rowed seven miles, while, "as the crow flies," two miles away could be seen the steeples of the little city. From Fremont in a straight line to the bridge where the Lake Shore crosses the bay it is seventeen miles, while to follow the river and the channel it is estimated to be thirty-one miles. Every mile has its special attraction. A hundred objects of interest continually present themselves at each turn of the broad, deep river. The lofty woods, cultivated farms, clean-kept orchards, and green meadow lands hem the very shore. All these naturally invite the attention and awaken an interest for the wonders of creation. The river has an even flow, subject to wind and tide of the lake. It is navigable to within a few miles of Fremont. In all this long stretch of territory no one has been permitted to fish with any kind of nets for twenty years. Bass, pickerel, masacaronie, carp, eels, perch, sunfish and saugers live in comparatively undisturbed freedom. In the bends along the gravelly bars and sandy leads the farmers have no trouble, with native bait, "to catch before breakfast a mess of bass," and "occasionally get hold of some darned big fish we can't land."

Nature can furnish no fairer scene than that unrolled to the eye after turning the last bend in the river. There reposing in magnificent silence is the deep, winding channel creeping through thousands of acres of marsh grasses until lost in the broad expanse of the bay. To the rear is the dark forest, the high bluffs which reveal the river's course. The cooing of doves, the plover's whistle over the upland space, the whirl of wild ducks, the flutter of birds, the sharp notes of sea gulls, and the occasional shadows of eagles as they swoop over the country within rifle shot, all tend to show how wild and secluded is the spot. This is the river, the home *par excellence* of the large-mouthed black bass, and around the bends and at the mouths of the few streams which empty into the river he has revealed for ages in undisturbed freedom.

Half an hour after we had entered the channel and were leisurely rowing around the sharp bends, more particularly admiring the ever-changing scenery than looking for a favorable place to fish, I carelessly called Capt. Marshall's attention to a terrible commotion in the water at a bend, where it looked as if there might have existed at one time another channel. The disturbance very much resembled ducks sporting. All about the point the water was as smooth as glass, the fresh southeasterly wind having no effect. He ceased rowing, stood erect and for a moment was perfectly speechless. No one can imagine the happy expression which played upon his countenance, except those who have seen him make a 21 run with his "registered cue," when he declared they were bass feeding. We quietly approached nearer, to a distance where we could not only see the fins of bass weighing 3 and 4 lbs. but hundreds of them, and of all sizes, darting hither and thither among a school of minnows which they had evidently surrounded. A dozen ducks could not have agitated the water more. Now you gentle anglers who have dozed beneath the shadows of umbrageous trees, occasionally glancing through dreamy eyes at your motionless cork, or you "lone fishermen" who have worked and waited for hours at a time begging "for only one strike," or you energetic, persevering anglers who have been searching for years and would give any reasonable sum to witness such a scene as this; imagine yourself anchored upon the opposite side of the stream, where your movements could not be observed by the fish, and within easy casting distance, with light, strong tackle. Several hundred choice active minnows and a companion who is quiet, cool and knows how to act under such circumstances. Now watch

the first movement, the moment your lightly casted minnow touches the desired spot, a 2 lbs. bass strikes it with such force and business that a tremor creeps through your whole system. A dozen beauties are quickly added to your string. Then to see your friend fasten the hook into the jaws of a four-pounder; to watch him play him, subdue him, and land him successfully and artistically is a sight worth rowing many miles to see. And finally to have the pleasure "of catching as many as you want" is indeed an uncommon treat. A cool hundred of these broad-shouldered large-mouthed bass humiliated upon a stringer alongside of your boat, after several hours' fishing, is a picture rarely seen in other quarters. I admit it is not a rule to catch bass "as long as they will bite," among book-reading anglers, but not like Dr. Henshall in his Okauchee Lake catch of 153, be contented with an even 100, although twice that number could have been taken if desired. We are satisfied that this river contains more black bass to the square mile than any stream in the world. When we left to go in search of our companions the bass were still making the water foam, and at no time would they take the spoon.

After rowing several miles up the river we discovered our companions seriously casting the spoon, and with strings of bass that would make a Pelee angler smile. At the bend where they were fishing the afternoon before, Montgomery caught with spoon 45 lbs. of bass in one hour. I was informed by several resident farmers that for twelve miles up the river "one could catch bass at any bend, and that it was no trick at all to haul in 50 to 100 in an afternoon." We rowed a few miles up the river, the bends became more frequent, the channel narrower, the pond lilies thicker, the wild rice higher, and Mr. Hollingshead found it no trouble to pick out a bass, with his spoon, at every bend. There is no question but what this is really the "finest large-mouthed black bass fishing grounds in the world;" as evidence of this fact the reader can form some idea as to the supposed quantity of bass in the river from what a bay shore pound-net fisherman told us upon our return to the land. He said he procured permission to set one net in the river over night. The next day he filled "twelve barrels with solid black bass."

J. E. GUNCKEL.

TOLEDO, OHIO.

TROUTING IN COLORADO.

WAGON WHEEL GAP, Col.—I wonder if any of the readers of the FOREST AND STREAM have had an outing this summer in this far-away Eldorado valley, or if any of them have cast a fly on the swift, clear waters of the Rio Grande and taken the lusty trout that make their homes among the boulders of that stream. I have no doubt some of them have, for your readers are not confined to the eastern slope of the continental divide; but if they have, I have failed to see any account of their fishing or climbing.

At the hotel at Wagon Wheel Gap there is a board hung on the log wall, with a rude outline of a fish upon it, discolored on its lower half with red chalk, and underneath it this legend written:—"G—P—, champion fisherman, 74 lbs., March —, 1889." I didn't see that one caught, but I did see one caught, or, rather, after he was caught, which weighed 43 lbs. on Fairbanks' standard scales, measured 22 in. in length, and in proportion and coloring was the most beautiful fish I ever saw. This fish was laid on a large sheet of drawing paper, outlined and painted in oil. It had a dark grayish brown body to the middle, where a sort of water color line of parting extends from gills to tail. This parting line, by the way, is found also in the flesh beneath the skin. Over this grayish brown body, which darkens toward the top of the back, are scattered specks in spots of a darker brown, almost black. From this line toward the belly and along the sides the color is a bright vermilion, and the belly is white; dorsal and tail fins a dark straw color, thickly dotted with dark brown spots; large eye, and proportions as nearly perfect as it is possible to imagine.

The shining eyes of friend John as he came in to the ranch before breakfast one morning with that fish was a thing to be seen once and to be ever after remembered; especially when it is remarked in passing that John is a most enthusiastic sportsman, a most ardent and industrious fisherman, who spent his whole two weeks vacation in the Rio Grande, wading its swift and icy waters from early morn till frosty eve, without waterproofs of any sort, intent upon taking the speckled beauties; that he had been a fisherman all his life and had never before secured such a prize, and that he was a confirmed old bachelor and had never felt his heart beat and his pulses quicken under the flashing eye of woman.

At the ranch where we were domiciled there were drawings of one of two catches by the owner, Mr. P., showing larger fish than this one of John's, but it was conceded that a lovelier fish had never been caught out of the Rio Grande. It was a labor of love to transfer this fish to canvas; speckled fins, flashing eye, vermilion red, caledonian brown, and all that the bachelor fisherman might frame and hang in his apartments in Puebla, this counterfeited the trophy of his skill with rod and reel. Long may you live John, and many times may you indulge yourself in the exquisite delights of wading that swift and chilly stream, *sans* waders, with your nine flies (so that the fish may have a choice), your dim-colored broadbrim shading your ruddy and ruddily-whiskered countenance; and may you often bring to basket doublets and triplets, and I shall not very much envy you if you have a triumphant tussle with old Whiskers himself. (Note.—Old Whiskers is the champion fish of the stream; weighs 10 lbs. by estimate. Has oft been hooked, but never landed.)

Truly, the fishing on the Rio Grande is the very perfection of sport. Though the writer took no 4-pounders, he did take several of less weight, and though the water is swift and an occasional header into the cold water may reward the incautious step and slip upon the slippery stones on its bottom, still there is to a lover of sport rich reward, in the striking, playing, and landing of these gamiest of all fish. There is nothing worth having to be gained without effort, as one of our party, a Denver banker, sagely remarked as he came home one evening with a nearly empty basket, and though wading down mid-stream (or still worse, wading up), with water well up to the top of your wading boots, for hours over slippery stones, is not a lazy man's ideal of happiness, still that mountain air is so pure and fresh, and those rocky mountains, with their far-off snow-clad peaks, and their nearer, ever shifting tints of purple and brown are

so delightful to tired city eyes, weary with book and pen, and those resinous odors of the ever green pines and firs and cedars, so grateful after the smell of city traffic and city sewers, that tired limbs and luckless headers, and even empty baskets are almost forgotten.

And then the glad return after the fishing is over, that broiled grouse, that browned trout; that cream, ah, that cream! so thick that a spoon would stand upright in it, and so sweet and rich, and those red mountain-gathered raspberries that greeted us, the tired and hungry waders: with what words, O Boniface, shall I describe them.

Why, John, I believe, made a vow when he came to that hospitable board (not that if flesh maketh my brother to err I will taste no flesh while the world stand), that while in this land of fish and game and mountain berries and superlative butter and milk and cream, he would taste no other meat, so help him Epicurus; a vow, by the way, he religiously or otherwise kept. Methinks if all sins could be atoned for by such penance, the way to heaven were easy. Every day was Friday with us all the time we were there.

The fishing was the chief thing, and all indulged in it more or less. Further up the river the ladies donned the waders and took a hand, and enjoyed the sport, too, greatly. Now, it is not to be concluded from this that we had no ladies at our ranch. Yea, verily, we did have lady boarders, and young lady neighbors, who looked on with interest while fathers and brothers, not to say sweethearts, caught the fish; but came in for their innings when evening and croquet, lawn tennis, music, or the puppies were on hand; and did not disdain to play a good second to the aforesaid brothers, etc., when it came to putting away the trout from the dinner table.

That word puppies must not be misunderstood. I hasten to explain that at the P. ranch there were about six half-grown water spaniel puppies, the shaggiest, playfulest, loveliest, teasingest puppies that ever tore a lady's skirts or played fox and goose with the kittens; and there they were all day; and like puppies of veritable good taste they fell in love with the young ladies of course; and a romp whenever they met was the inevitable result.

Yes, the fishing was fine, the climate delightful, the eating all that could be desired, the children the healthiest, heartiest of squallers, the sky blue, the sun bright, the showers wet, the white tents like far off sails at sea, suggestive of humanity and companionship, but running through it all, ever present, never forgotten, like the solemn monotone of the throbbing sea beat upon a lonely shore, was the thought born of the silence, the solidity, the majesty, the eternity of those pine-clad, snow-capped mountains; of our own transiency and littleness after all. That grand diapason in stone, that mighty mysterious, unread and unreadable volume, the everlasting hills,

TEXAS.

ANGLING NOTES.

A WELL-KNOWN New York sportsman, now residing at Beloxi, Miss., writes us that for fishing that place is unsurpassed. Weakfish, bluefish, sheepshead, and redfish (channel bass), can be caught in numbers sufficient to satisfy the most exacting angler, and in the fresh-water ponds and streams the big-mouth bass take the fly all through the year. Good quarters can be found at the Montrose Hotel.

Were it not for the long sea voyage and the insect pests what a paradise for anglers Newfoundland would be. In the northern part of the island there are hundreds of lakes and ponds, streams and rivers that are absolutely virgin waters and teeming with speckled trout. Otter and eagle are the only creatures that disturb the fish in that great wilderness. While hunting there this fall we could see the trout darting in every direction when we forded the brooks; but when one is hunting big game he has no time to stop and fish, besides which most of the ponds were covered with ice and the trout were spawning. We caught a few with our hands in the smaller brooks to see if they were the same old favorites, and we found they were the true speckled trout.

Our men told wonderful tales of 5 and 6 lbs. sea trout that frequented the head of Hall's Bay during June and July, together with many a sly allusion to the salmon and grise they had netted. Of course the poor settlers have no other way of getting them and it is not likely that these poverty-stricken and half-starved whites and Indians are going to deny themselves either trout or salmon when their herring nets are so handy, and the pools are filled with fish.

We had the pleasure of meeting Mr. Maurice Thorburn in St. John, Newfoundland. This gentleman is the crack angler of that island, and a thorough sportsman in every way. While we were enjoying a little game supper at his cosy bachelor apartments, he showed us two fine specimens of speckled trout preserved in alcohol, one of which weighed, when caught, a little over 4 lbs., and the other 3 lbs. They were taken in Lake George only a few miles from St. Johns. Mr. Thorburn related with much pride, as well he might, how he killed eight of these superb trout during some two or three visits to this lake, using the brown-hen dressed on a No. 8 hook. He said very many people had fished for them unsuccessfully, as they required the lightest of tackle and only would rise to a fly late in the evening.

SCARLET-IBIS.

FEEDING HABIT OF TROUT.—Mr. Orestes Pierce, who supplies the city of Portland, Cal., with water, has splendid facilities for rearing fish and devotes a portion of his leisure to their introduction and propagation. When catfish were fashionable Mr. Pierce obtained some of the Eastern stock and placed them in a reservoir. Now he has catfish enough and to spare, but, although their number is legion, they do not grow large, and because of a prejudice against their whiskers the Chinese can not be induced to eat them. Michigan whitefish have been successfully acclimated by Mr. Pierce also and their growth is very satisfactory—but, to return to the trout. The cherished pets of the establishment were a lot of sleek and handsome trout, some of which, for convenience of display, were kept in a large crate moored in one of the lakes near the office. The trout were regularly fed and were always on hand to be admired by the numerous visitors. On one occasion the crate was hauled up above the surface of the water for some purpose when it was discovered that the bottom had fallen out long before and the trout were merely coming into the inclosure about feeding time from force of habit,

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 17.—Scientists will please come to the front now and wonder what the "landlocked salmon," "deep-water trout," or "salmon trout," of Trout Lake, Wis., is. This fish is taken nowhere else in Wisconsin so far as known, and is taken there only late in the fall or early in the spring, just as the ice goes out. It usually takes the phantom minnow, trolled very deep, in the spring. About Nov. 1 Mr. W. H. Haskell, of this city, brought down one of these "landlocked salmon," which he took in Trout Lake on a spoon. The fish weighed 18 lbs., and was eaten by a party of nine Chicago friends of Mr. Haskell. I did not see this fish, but it is described as a beautiful one. Elsewhere I have heard these fish described as similar to the lake trout of the Great Lakes, and I have also heard mention of their "silvery scales." This is all I can learn about them, and I should be very glad to see a specimen.

Another oddity in fish life in the West. Do bass spawn twice a year, or do they ever spawn in the fall? It would be supposed that the spawning of bass, even in the northern lakes, would be done by July or August at furthest; yet three weeks ago last Monday Mr. W. H. Lees brought to Chicago three magnificent bass, total weight 16 lbs., which he had caught in Fourth Lake, Madison, Wis., all of which were females full of spawn, as was proved incontestably. The roe seemed fully developed and the appearance of the fish would have indicated that they were about to spawn soon. I do not remember to have heard of a similar instance of late spawners.

Mr. J. Jeff Smith, of Channel Lake, one of the Fox Lake waters infested by ice fishers, presents a strong petition for appointment as resident warden for that district, and is endorsed by the leading men of Antioch, who wish to see that abuse stopped for the sake of their summer customers. Mr. Smith thinks that a mere warning will stop George Clark and the other more persistent ones, and says that if appointed will prosecute at once where warning fails. He says that Clark's summer business was hurt last summer by the showing up he got in FOREST AND STREAM last winter. This is just as it ought to be. If people up Antioch way want us to come up there in the summer and hire their boats, and eat their ham and eggs, and buy their souvenir spoons, it behooves them to stop this winter fishing, so that we can have a show for our money in the summer. This is pure equity. Moreover, thanks to FOREST AND STREAM, it's an Illinois law.

As was predicted would be the case, high water has come in the Kankakee River, and found the Momenie fishway not yet in, nor is it likely to go in now before next summer. Mr. H. Worcester, agent for the dam owners, explains that it would be necessary now to open the dam, which would incur expense. The dam being under the injunction of the railway, they do not like to move until the property right is settled, but promise to open a section of the dam during the spring run next year.

In regard to the delay on this and other fishways, Mr. F. L. Buck, the warden who had this in charge, explains that he did all he could under the law, the statute, amended by practical agreement in 1889 (Sec. 3) providing in favor of the dam owners that the fishway shall not "impair the usefulness" of the dam. He also points out that the fishway at Kankakee town was put in its present out of the way location by consent of Dr. Bartlett of the Fish Commission, and that other fishways also rest their responsibility on Dr. Bartlett's broad shoulders. Mr. Cole and I also were told that Dr. Bartlett directed the building of the way at Kankakee, but we were told this by the dam owners, and not by Dr. Bartlett himself. To the contrary, Dr. Bartlett has just informed Mr. Cole to the direct opposite of this. The fact seems to be that the dam owners promised Mr. Buck they would do several things which they never did do, which latter fact was developed by the trip of inspection made by Mr. Cole and myself, when we found the ways far from being in condition to warrant the issuance of certificates. Between us all, however, I don't doubt that these fishways will be built, and not only in a legal but in an effective manner.

Fish are dying by thousands in Vermilion River, probably from sulphureous water from the Streator coal mines turned into that stream. The stench from the dead fish has been very bad near Lowell. This mortality is not uncommon in the Vermilion, and that stream has the reputation of being very poor fishing water.

Dr. J. A. Henshall, of the World's Fair Fish Exhibit, called at my office when I was out of town. I wish I could get Dr. Henshall in one hand and one of our small-mouth—big-mouth, half-way bass in the other, so we could settle a thing or two. But when the World's Fair comes we shall have all these things on exhibition.

Nov. 18.—I notice the remarks of Mr. E. S. Waters, of Holyoke, Mass., upon the Kankakee fishways, and am very willing to agree with him that he knows a great deal more about the Wilmington dams, and the Kankakee River, and a great many other things, than I do. I thank him also for his correction of my statement that the "Wilmington dams have no mills upon them," for it is true, as I believe, that the lower and smaller dam is used. The great upper dam stands apparently quite idle. The canal service of the Kankakee is now in disuse. By different parties about Wilmington I was told that the upper dam is kept in repair in the hope of selling it, and because the title, more or less imperfect, of a certain amount of adjacent land was in some way wrapped up in the maintenance of this dam. These parties also said that it was desired to sell these lands. This was what I meant by "speculative purposes," and although it is not an essential point, I am very glad to be corrected upon it. Should the sale be made, however, and should the "employment be given to thousands," I can see no reason why the State of Illinois should not receive this benefit, and still have left the right to say, without serious discussion with Mr. Waters over it, whether or not it cared to have fishways put in for the benefit of the fish, and for the benefit of possible anglers, be they few or many. This is really the essential point. It is not for dam owners to pronounce upon or to weigh benefits, or to divide classes. It is not for Mr. Waters or me to say whether or not this fishway law is right. It is there on the statutes, and it is in force. Those fishways are required by law to go in. The Kankakee Association was organized, in part, to see that they do go in. They will go in.

We did not measure the big dam at Wilmington, and

I am glad to have the advice that it is 15 and not 17 ft. in height. From a dozen different sources we had heard the height stated as 17 ft. It appeared simply a gigantic wall across the river at the very low stage of water at which we saw it. I should not like to contradict a gentleman, especially in so public a place, and Mr. Waters' statement that fish go over the big Wilmington dam must be left unchallenged except of other readers' experience and observation. I simply say that that must have been during a very high and very unusual stage of water. At the highest water of last spring, for instance, I stood below an 8 ft. dam over which the most active fish could not go, let alone those heavy with spawn. As I understand it, a fishway is no obstruction to the running of fish, even in high water. As to their being a help in the average stage of water, there is, provided the way is put in properly, no question whatever among the men who ought to know and who do know about that. For the Massachusetts bass I can not speak, but these are Illinois bass, and they are progressive enough to go over a fishway, fast and plenty, and we all know that too well to talk about it.

The question of the "spring run" and the fall dropping-back is something which I know little about, nor does anybody I ever met. I do know that the main breeding grounds of this waterway are far below Wilmington and below Marseilles, on what are known as the "Meredosia flats." That is where the United States Government gets its young fish for distribution. We think fish hatched there go up the river, indeed spread all through it. That there is in the spring a general up-stream movement of the fish, if possible far beyond the "first reach above the pool where they wintered," all anglers know and Mr. Waters ought to know. If blocked by a dam they can't go up. But (V. Waters, ¶ 2, FOREST AND STREAM 313), authorities hold that a 15 ft. dam cannot block them. Then I should ask Mr. Waters why they go to the trouble of ascending the boiling flood which pours over such a dam at such a time?

If Mr. Waters will pardon me, I believe he is in error as to the hook and line fishing below a dam in Illinois, as he says, "If no Illinois angler can fish within half a mile of these dams, when will the Illinois man get his innings?" The statute prohibits the catching of fish, "except minnows for bait, with any device or means other than a hook and line, within one-half mile of any dam," etc., etc. Therefore it is precisely the angler who may lawfully fish under a dam. Our best Chicago anglers, however, do not fish directly under a dam, especially during the spring run. It is legal, but not sportsmanlike.

As to the general conclusion which Mr. Waters reaches, namely, that the more dams the more fish, there need be small concern that it will receive serious attention anywhere but here, nor would it here were it not for the fact that sometimes wrong impressions are taken up by those who are ready for them, and there are wrong impressions enough out now among the opposers of this good fishway work. The Kankakee and Fox River associations are already familiar with the statements of those owning or interested in dams, though it is only fair to say that these have been usually arranged in a more accurate and logical way than that adopted by Mr. Waters. I don't claim to know the ultimate facts about fish life, and I never made but one continuous trip down the Kankakee River, and though I tried to see both sides of the river and both sides of the case, I can only thank Mr. Waters for helping us out on all that.

Nov. 19.—The fish fight in Illinois goes bravely on, in season and out of season. Two letters to President Cole:

ILLINOIS STATE FISH COMMISSION.—Quincy, Ill., Nov. 16, 1891.—Mr. Geo. E. Cole, Chicago, Ill.: My attorneys in the matter of trespass suit tried at Rushville, in which a verdict of \$62.00 was found against me, have obtained a new trial, the Judge reversing himself, so to speak. This looks more encouraging.—S. P. BARTLETT.

ILLINOIS VALLEY FISH AND GAME PROTECTIVE ASSOCIATION.—La Salle, Ill.—Geo. E. Cole, Chicago: I have much pleasure in informing you that we have last week made the initial arrest under the law against seining above Copperas Creek dam. The arrest was of two men who own and use a small steamboat for fishing. We tried them in Putnam county. They were defended by counsel, had a jury trial and resulted in a verdict in our favor with a fine of \$40 and costs. We have the steamboat levied upon, and I think members of our association will purchase it, so in the spring you can look for an invasion of Chicago from the canal by the members of our association. We expect to move on the Senawine Lake people very soon.—H. L. WATLINGTON, Sec'y.

From all sides come reports that "FOREST AND STREAM is the only paper for fishing news." Or any other field sport news.

Nov. 20.—I want to jerk the sombre robe of prophesy around me for a few moments, and say something which seems to have occurred to no other paper. It is about a State league of all our different protective associations. This I have mentioned before in a general way, some time ago. I believe this union into one working body of all our active organizations is a possible and a practical thing. Let us go further, and even call it a probable thing. The annual meetings of the Fox River and Kankakee River associations draw on apace (Jan. 14). That opportunity ought not to be allowed to go by of taking formal steps toward a State league. It is time now that means should be discussed toward that end. The Kankakee Association was prophesied in these columns. Why should not the Illinois State League be prophesied also?

The Fox River Protective Association has practically accomplished its work. The Illinois Valley Protective is doing its work well, as per the record in these columns. We have also the Rock River Protective, and I believe also the Vermilion River Protective, and the Astoria Protective, and the Beardstown Rod and Gun Club, and perhaps yet other strong societies devoted to the enforcement of the fish laws. For mutual interest and joint benefit these societies ought to unite. Good work has been done already. It is not a drop in the bucket compared to what the State League could do.

The method of this is easy. There should be a call issued at the meetings of the Fox and Kankakee associations Jan. 14 for delegates to meet at Springfield for organization. These delegates should elect a president and also a secretary. The latter ought to be a paid officer, and he ought to be an attorney, so that he could prosecute game law cases at call. The State Fish Commission ought to be willing to devote a part of its fund to the salary of such a man. This is business. No man could take that work except for pay, for it would absorb most of his time.

With such an officer ready, and with such a fund as could be gotten together, it would be possible to prose-

cute promptly any violation reported by the local men from any given point. The local associations would remain in full force and activity, and the larger union give them all a greater power. A very pronounced benefit arising from such a society would be its political significance and influence upon legislation. It would give the sportsman a dignity which he has never yet held at Springfield, and put us all in far better position to ask for changes and additions in our game laws.

These things are easy to talk about. In other States they may have been talked about. But these younger protective societies out here in Illinois have of late had such a way of getting there that it is safe to say that a movement of this sort would not end in talk.

E. HUGH.

A WEEK ON DEAD LAKE, MINN.

"COME, get up. Do you know what time it is? John has been waiting an hour for you." This was the greeting I received from my friend Colehour one October morning as the light was breaking into my window, and the John he mentioned was a mutual friend, John Foster, from Chicago, who had written that he would be along that morning for a week's outing with me at any place that I might choose. Colehour could not go, as he was to meet a party of friends later in the week and go into camp with them. I was soon up, dressed and getting my breakfast, and in a short time Foster and I were on our way to Dead Lake, this being the place I had decided on for our outing. Our camp outfit and a boat was loaded on a wagon, and we made seats for ourselves in the boat on top of all. Leaving the village of Battle Lake, we went around the west end of the lake of the same name, on past Silver Lake, over the Red River where it leaves the famous Otter Tail Lake, on our right being the lake, on the left a high bluff surmounted by many mounds, remains of the mound builders; on over the Amor prairie and finally into the rough wooded country which surrounds Dead Lake. Three miles of rough road, boulders, hills, sink holes, jolting and tossing, Foster grimly asking now and then, "How much more there was of that?" At last we came out into the little valley through which runs Dead River, and in a short time were on the shore of the lake and our fifteen-mile ride at an end. After unloading we started the driver back with the team, instructing him to return for us Saturday. Where should we make our camp? On the shore or out on the island?

"Let's get as far away from every one as we can," said Foster. So we loaded all our dunnage into the boat and went for Isle au McIlvaine, about two miles off. Here we found a beautiful camping place and established ourselves for the week. How we did enjoy it. The point of the island where we were camped was a famous duck pass. Here we generally had some shooting each evening, not great shooting as the weather turned warm. Just off the peninsula opposite us was a famous place for large-mouth black bass, and there any evening between 4 and 6 o'clock we could get all the fish we wanted, fine fellows, too, running from 2 to 4 lbs.

The best fishing we had was one morning when we went to an island about a mile above us, after woodduck, large numbers of which were always to be found there. Our success after the ducks was not great that morning, so we went back to the boat, rigged up our rods, and tried for bass off a rocky point on the north side of the island. Were they there? Well, yes, rather. The first cast Foster made brought to the net a 4 lbs. small-mouth, and directly I had the mate to it. Soon we were each fighting with a fish; then I had one, then Foster, and thus we kept on until thirteen of the gamy beauties lay in the boat, the smallest weighing a trifle over 3 lbs. and the largest slightly over five. 'Twas rare sport. "What will we do with the fish?" I asked when the thirteenth one was landed. "Blessed if I know," said Foster, "guess we'd better stop." "Let's take them over to Carpenter's." "All right." We strung the fish, and rowing to the mainland we started for Carpenter's, about half a mile away through the woods. The fish made a good load for us. When we reached the house we found no one at home, so we went into the kitchen and laid the fish in a row on the table, and a fine sight they were, wrote "Compliments of the season" on a piece of paper, signed our names, pinned it on the largest fish, went back to the boat and to camp. How we did enjoy that week. One day the wind blew so hard we could not leave the island. Another day it was so summer-like that we took a bath and did not find the water disagreeably chilly. Wednesday morning as we looked across the lake we saw tents up on the shore, and knew that a party of friends from Chicago and Kansas City were there, and that evening some of them came over to call and urge us to move over to their camp. But we preferred to stay on our island. All too soon came Saturday morning, when we must go. Reluctantly we took down the tent, packed up, loaded the boat, and bid adieu to the island. We ate dinner with our friends and then started for Battle Lake, which we reached in time for Foster to take the evening train for Chicago.

MYRON COOLEY.

DETROIT CITY, Minn.

CENTRAL LAKE HERRINGS.—Central Lake, Mich., Nov. 16.—The advance guard of the herrings appeared on the afternoon of the 14th in our river. They were reported as seen in the river at Bellaire at least sixteen days before that. From Bellaire to the head of the Intermediate River and foot of Central Lake is nearly or quite two miles, and the lake is about seven miles long. I think it quite likely that the home of these fishes is in Torch Lake, and it would seem that they move quite slowly on their annual migration if it takes them more than two weeks to advance nine miles.—KELPIE.

MR. R. B. MARSTON, editor of the London *Fishing Gazette*, is also president of the Society for Promoting the Reading of Papers among Angling Clubs.

THIS MAY BE READ TWO WAYS, BUT ONLY ONE RIGHT WAY.—As the fellow said about the buggy he particularly liked, that it was the last one he expected to own; so I say the FOREST AND STREAM is the last paper I expect to subscribe for.—G. W. S. (Mississippi).

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—ADD.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points.—ADD.

THE FLORIDA WEST COAST.

Editor Forest and Stream:

I have this day mailed you Fort Myers Press marked, calling your attention to an angling excursion of J. J. Tooke and self week before last. I am, I think, conservative in my statements as to this locality, since I am not a boomer. The Press editor made a mistake as to the number, we caught 143 instead of 144 in two hours' time on live bait, the fish were small, only averaging about 1½ to 2 lbs. Mr. Tooke hooked a jewfish that was undoubtedly 5 to 6 ft. in length, and would probably weigh 250 to 300 lbs. The tackle parted, hence we failed to weigh him. I have rigged up some heavy tackle and will try them again next week.

Mr. G. S. Loyd took my Gordon Betsy Bobbet one day last week and after dinner killed 30 quail. Of course in the immediate vicinity of the town deer and turkey are not plentiful, but by going 12 to 20 miles one can find the finest shooting in the United States, I believe, on turkey and deer. Our deer are small, very much smaller than in the North, but they are the same wild deer, and can jump, dodge, buck and caper the same as the bucks of the North Woods. Once the Northern sportsman learns this country (I used to be one of them, but old age, I reckon, more than anything else, holds me close to my office) they will come here during the winter months where they can hunt in a temperature very like that of New York in May and June; and that a world of game is here there can be no question.

I have several friends coming down this winter to investigate my "big lies," as they call them. Tell the boys to come, and they will see more deer and turkey in a given length of time than they can find elsewhere, outside of Florida. We have parties here who can be engaged to guide any one through the cypress, and will guarantee sport. There are no regular guides, as the Northern sportsman is unknown here. WALTER F. MICKLE.

FORT MYERS, Florida.

The Press item reads: One day last week, we think it was Saturday, Messrs. W. F. Mickle and J. J. Tooke caught 144 jack fish, weakfish and channel bass in two hours' time. We acknowledge the present of one of the jack fish, which was highly relished for one meal.

TENCH FOR AMERICAN WATERS.

MR. E. G. BLACKFORD, president of the New York Fish Commission, has given these interesting facts about a new fish for American waters:

These tench are an entirely new variety of fish to American waters. The original parent fish were brought over from England and placed in breeding ponds in Washington, D. C., of the United States Fish Commission's station at Neosho, Me. Two years ago twenty-three fish in number were taken from the ponds at Washington, D. C., to the above station. This year there will be distributed 36,000 young fish, the product of the original twenty-three of two years ago. These fish will grow to weigh 2 to 3 lbs. each, and are said to be a good table fish as well as affording sport to the angler.

The tench prefers still waters to running streams, more especially thriving in reservoirs, ponds full of water weeds and pits from which clay has been excavated for brick making. It seems also to do better in foul and weedy than in clean water, and in broad and sluggish rivers rather than those which flow with considerable velocity.

It is generally seen in small companies, and appears to frequently keep near the bottom, except during the summer, when, more especially during the spawning time, it lies near the surface among the weeds. Although possessing a very thick skin, covered with a large amount of slimy mucus, it seems to be very susceptible to cold, and has been credited with passing a considerable portion of the winter months in a semi-lethargic condition, buried in semi-aquatic mud. It will dive down into the mud in order to escape from nets. It is very tenacious of life, in which respect it is little inferior to the eel. Examples have been known of the tench living for an entire day out of water. It feeds on insects, larvae, worms and vegetable substances.

The largest tench on record in England weighed 11 lbs. 9 oz. In angling for them the best bait is worms. They spawn during the months of June and July. The eggs are small and are deposited in the weeds. Over 300,000 eggs have been found in one single specimen. According to an English authority, it is esteemed as a fair table fish. These fish are found in nearly all the fresh waters of Europe as well as those of Asia.

Fishculture.

CASTALIA TROUT AGAIN.

Editor Forest and Stream:

I notice that Mr. Hough comes at me again in your issue of Nov. 12 concerning the matter of the origin of the trout in Castalia stream. I have not at hand the articles written upon the subject by Mr. Hough and myself some months ago, but my recollection upon the matter is that I did not question his statements but did question the reliability of his sources of information. As yet I see no reason to change my views upon the subject, notwithstanding the fact that Mr. Potter never caught or saw any trout there before the artificial stocking. Scores of people were born and raised contiguous to that stream who never dropped a hook into those waters or any other, and who had not the slightest knowledge of the subject in question. Hundreds of people have fished in known trout streams without getting a bite. Others again have had success and their testimony is worth a cloud of witnesses who never caught anything. I have heretofore named two well-known gentlemen who did take trout there 40 years ago and I saw the trout in at least one instance.

Mr. Potter says he never saw or heard of me until within the last year or two. Just what that has to do with the origin of trout in the Castalia stream I leave it for Mr. Hough to explain. Mr. Potter thinks it very strange that as many years as he knew Dr. Garlick, he never heard him mention the name of Castalia or Milton P. Peirce. Well, I lived several years at Cleveland (Dr. Garlick's residence), and probably saw the Doctor five times where Mr. Potter did once; took my first lessons in fishculture from him and Dr. Garlick, and in all those years did not hear either of them mention the name of Mr. Potter nor Castalia; but as before stated, they did several times speak of taking trout from Cold Creek, which is identical with the Castalia stream. Mr. Potter's argument reminds one of the "old chestnut" story of the chap who was being tried for a crime, and several witnesses were introduced who saw him commit the crime. He sought to offset this testimony by introducing double the number of persons who did not see the crime committed. At the very outset of Mr. Potter's remarks he says he is averse to entering into any controversy with me, yet he opens one with such uncomplimentary as-

sertions as I have quoted. The very fact that he claims to have never heard of me until within a year or two will cause a smile to come over the features of the readers of FOREST AND STREAM for the past twenty years, and they will smile to think what an attentive reader he has been of the current fishcultural literature which has appeared in all these years.

I will say that I am quite familiar with the history of the fish preserves of the Castalia Stream, and have the highest admiration for those connected with them and besides have only sentiments of commendation for the enterprise, yet "all the same," trout inhabited most of the headwaters of streams discharging into Lake Erie at the time the region was settled by white people.

Old Clevelanders acquainted with Dr. Garlick will be amused at the assertion that the Doctor would for an instant attempt to buy a friend, particularly one who entered fully into his fishcultural views, which were ridiculed by some of the "smart Alecks" of that day. That class would have been liable to have been grieved by Dr. Ackley, who was a grim wag indeed, as well as a more enthusiastic and expert sportsman than his co-laborer and friend Garlick.

Several Ohio anglers besides Mr. Potter have disputed my assertions concerning native trout being in northern Ohio waters, say fifty years ago, declaring that the domestic trout of Castalia were the first ever seen in Ohio waters. As I believe I have already stated in your columns, I repeatedly saw wild trout in Ashtabula county waters fifty years ago, and now Mr. Potter remembers having caught many a good string of native trout in the Chagrin River in company with Dr. Garlick. He locates that stream in Granger county. There is no such county in Ohio. Chagrin River discharges into the lake from Lake county, which adjoins Ashtabula county.

FIELD TRIALS.

Nov. 30.—Central Field Trials, Lexington, N. C.
Dec. 14.—Philadelphia Kennel Club, Deatonville, Va.
1892.
Jan. 10.—Bexar Field Trials, San Antonio, Texas.
Jan. 18.—Pacific Field Trials, Bakersfield, Cal.
—Southern Field Trials, New Albany, Miss.

EASTERN FIELD TRIALS.

I HAVE already given particulars in last week's issue about the opening of these trials, and there is little more to add. The trials did not seem to awaken so much interest among owners, and visitors were few compared to former years. Among the visitors not already mentioned, and who came after the trials commenced, were Messrs. Bayard Thayer, A. D. Lewis, C. C. M. Hunt, L. N. Cox, W. B. Meares, J. Mahone, Angus Cameron from England, and one or two others whose names I did not catch. Birds were plentiful enough, affording ample opportunity for varied work. The vegetation is quite rank this year, and wide-ranging dogs were hard to keep track of. The judges did their work carefully and gave every dog ample opportunity to show his merit. Excepting in the Champion Stake, there was little or no comment made on the awards, and in this stake the foregoing remarks do not apply.

The spotting system was in vogue and much less time was consumed in the running off of the various series. At the meeting of the club held on Thursday last, Mr. F. R. Hitchcock was elected president; Pierre Lorillard, Jr. and H. B. Duryea, vice-presidents, and Washington A. Coster, secretary and treasurer.

TUESDAY.

When we drew up our blinds this morning it was found to be raining hard, and it seemed as if the day was to be a holiday. The weather cleared, however, about 9:30, and a start was made at 10 o'clock, the rendezvous being the Glass House, about two miles from town. The sun peeped out of the heavy clouds as the first brace in the continuation of the

Second Series of the Derby.

AMY ROBSART—MAUD NOBLE, was called at 10:54. The heat was notable from the fact that the two handlers, H. M. Short for Amy Robsart and S. C. Bradley for Maud Noble, are the tallest handlers present, both being about 6 ft. 6 in. high and proportionately broad. Starting in sedge, it was not long before Maud pointed at the edge of pines, Amy honoring, when Bradley put up the bevy, fired, and dogs showed that their training had not been neglected. In pines Maud pointed false, Amy dropping to back. Directly after she pointed again and a single sought the open, dogs were steady to Bradley's shot. In open Amy stiffened out and Maud honored her, but nothing came of it. Then the horsemen flushed a bevy as Amy came up with them, and she was not steady to wing. Lower down Amy scored a single on these birds, and was steady to Short's fire. Nothing more being done, dogs were ordered up at 11:19, with Amy having the best of the heat.

CAMILLE.—This bitch was now put down alone in sedge at 11:23. The heat was short, but showed that Camille's nose was in the right place. After a gallop round in bottoms she pointed a nice bevy very stylish. Twenty yards further on she pointed again and another bevy rose. This was nice quiet work. Nothing more needed and dog ordered up at 11:34.

BOB COOPER—WUN LUNG.—Starting off at 11:39 they passed some birds which were afterward flushed by horsemen. Points without result from both followed, and though they made game several times they failed to locate anything and were called up at 12:21. Both ranged in their usual snappy style.

HOPE'S MARK was put down alone at 12:28 to work toward the old schoolhouse. Some time after the start at edge of pines on hillside he stiffened on a bevy, and waiting till judges came up Rose flushed birds and fired, dog dropping to wing. He hardly went in his usual clever style and did not show such good work as at Bicknell, where the ground seemed to suit him better. Called up at 12:44.

BOB COOPER was now put down for a turn by himself at 12:46. In pines, he soon nailed a single and was steady to shot; roading on he did some nice work in cover, and working carefully into open and again into woods he came to a stylish point on a bevy, which Rose flushed and fired at, dog very steady this time. A little more training on birds and this dog will make a name; at present he fancies himself a little too much when the birds get up. Judges had a little talk and then we trotted off to lunch, after which

CAMILLE—BOB COOPER were tried to settle their final places in the stake. Down in stubble at 1:47 almost immediately Camille pointed a bevy which Aven flushed and fired at, dogs steady. Points on footscout followed. Then Bob roaded to a point on two birds and was not steady to flush, putting another bird to his credit, while Camille, to right, pointed but failed to raise anything. Going on to some fields, Bob did a good piece of work on a bevy, Camille honoring the point; Rose flushed the birds and fired, Camille steady, but Bob, as usual, moved a little. Dogs then called up and judges after a little consultation decided Wun Lung first, Bob Cooper second and Camille third.

Summary—The Derby.

N. Wallace's black, white and tan setter bitch Maude Noble (Rowdy Rod—Pearl Noble)

Pierre Lorillard's black, white and tan setter bitch Lora (Gladstone's Boy—Ruby D.).

Charlottesville Kennels' liver and white dog Exile (King of Kent—Hops).

J. M. Aven and Bayard Thayer's black, white and tan setter bitch Camille (Jean Val Jean—Haydee).

Charlottesville Kennels' black and white ticked pointer dog Mainstay (King of Kent—Hops).

Royal Phelps Carroll's black, white and tan setter dog Robespierre (Roderigo—Ollie S.).

O. W. Donner's black, white and tan setter dog Wag-tail (Roderigo—Belle of Piedmont).

Col. J. R. Parcell's pointer dog Tail Son of York.

Harry Northwood's lemon and white setter bitch Amy Robsart (Dad Wilson—Bohemian Girl).

Blue Ridge Kennels' chestnut, tan and white setter dog Bob Cooper (Roi d'Or—Nellie Y.).

Royal Phelps Carroll's black, white and tan setter bitch Iza (Roderigo—Ollie S.).

N. T. Harris's black, white and tan setter dog Wun Lung (Captain Bethel—End).

Blue Ridge Kennels' black, white and tan dog Hope's Mark, a bye.

Second Series.

Robespierre with Bob Cooper.
Wun Lung with Lora.
Camille with Hope's Mark.
Maud Noble with Amy Robsart.
Camille alone.
Bob Cooper with Wun Lung.
Hope's Mark alone.
Bob Cooper with Camille.
N. T. Harris's Wun Lung first money, \$500.
Blue Ridge Kennels' Bob Cooper second money, \$250.
J. M. Aven and Bayard Thayer's Camille third money, \$150.

F. F. Miles wins the breeder's cup, value \$100, to breeder of winner of the Derby.

Wun Lung and Bob Cooper are very fast, merry workers, small-sized, but full of go. Camille, though not so fast and wide a ranger, has lots of bird sense and uses it to good purpose.

ALL-AGED STAKE.

After the conclusion of the Derby little time was wasted before the first brace in the All-Aged Stake was put down.

The drawing for this stake has been already published in FOREST AND STREAM. It is said that the All-Aged this year in point of numbers beats the record since both pointers and setters ran together, and after the rather poor filling in the Derby it was as surprising as complimentary to the club. Mr. R. L. McCook leaving for home Tuesday night, Messrs. Duryea, Merriman and Rowe judged the All-Aged.

RUPERT—TOP MARK were started in grass field at 3:30. Names of owners are given in summary, so that it is needless to repeat them in each heat. Rupert (Roderigo—Bo Peep) was handled by his part owner, J. M. Aven, and Top Mark (Gath's Mark—Burd Helen) by H. M. Short. Both started off freely and not long after Mark pointed in sedge, Rupert backing in fine style; nothing found, but after we had passed several birds flushed wild. Top Mark's next work was the nailing of a good bevy, Rupert doing his duty gallantly; Short put up birds and dogs were steady to shot. Rupert, after going over a good deal of ground, pointed, backed by Mark, but nothing found; several quasi points followed until Rupert, on the side of a hill in thick cover pointed two birds, Mark honoring. A pretty point by Rupert in a road, Mark backing, result nil. Then Rupert scored a bevy in briars and was steady to flush. Then Mark thought it time to interfere, and getting out of woods Mark pointed, honored by Rupert. Short put up the birds and dogs were steady. On in sedge, where Rupert casting back, secured an outlying bird in same place. Aven fired, dog steady. They were then called up at 3:56. Both had good range and speed, quartering their ground well, Mark having a little advantage on birds.

FRANK W.—JOYE H.—These were put down in same place at 3:57. John N. Lewis handled Frank W. (Duke of Vernon—Royal Cute), a liver and white pointer, and W. W. Titus looked after Joye H. (Paul Gladstone—Gypsy), a black and white setter. Neither dog ranged out with the style or speed of the first brace. Little work of any merit was done, although considerable ground was covered. In some sedge by pines Frank pointed, Joye brought up to back, but Lewis could find nothing. Going down in hollow, then on hillside Joye found birds, Titus shot, dog steady. Another point to Joye without result and the dogs were ordered up at 3:45. Neither showed the necessary class of work to entitle them to further consideration in the stake.

ALBERT'S DUCHESS—GRAPHIC VI.—Albert's Duchess (Warwick Albert—Princess Belton) was handled by Prof. Schuyler and Graphic VI. by J. B. Taylor. Down at 3:55 in open field on hillside, both ranged out fairly well. Both soon pointed, drew on, the pointer pointed where Duchess had the birds, but broke point, and when birds flushed started to chase, but stopped to order. After the birds in woods Albert pointed and Graphic did his duty, but nothing was found. Higher up Graphic pointed a single which Taylor shot at; dogs steady. Then in open down the hill four wild turkeys were sighted trotting along leisurely. This caused excitement, and Judge Duryea and J. M. Aven galloped down to head them off before they got to brook. Aven fired two shots from horseback, and it is more than likely he shot a bird as only three flew into the pines. It could not be found, however, Aven only getting some feathers to show, stream very likely carried it down. Just after the turkeys were sighted, and Mr. Duryea was off duty for the time being, Albert's Duchess nailed a bevy nicely down the field, birds flushing wild. Dogs were called up at 4:40 and we galloped home.

WEDNESDAY.

A very hard frost during the night make the ground like a brick, so the start this morning was later than usual to allow the ground to soften a bit, the rendezvous being near the Model Farm. The day was sunny and clear but very cold. A nice morning for a rousing gallop, but not to go for hours on horseback no faster than a walk.

NATALIE II.—MAID OF KENT.—Natalie II., English setter (King Noble—Natalie), was handled by N. B. Nesbitt, and Maid of Kent, a good-looking pointer bitch (King of Keat—Hops), was under the care of C. E. Buckle. No work of any special merit was done in the heat. Down at 9:21 in open weeds, Natalie very soon found and pointed a bevy in thick plum thicket and Nesbitt went in and flushed, Maid backed and both were steady to Nesbitt's shot. Following these birds along edge of woods, dogs did not locate. Then on some distance where birds flushed from a thicket, dogs out of sight, but Nesbitt claimed his dog pointed them. Following scattered birds none were found, though Maid pointed and Natalie backed. Going through a long piece of woods the dogs repeatedly made game, but could not locate anything. Then Maid pointed in the open, Latonia backing nicely, but nothing put up; this was repeated across a brook and dogs ordered up at 10:17. Natalie did all the work on birds, but to Maid's credit must be given pace, range and style.

ANTEVOLO.—DAISY HUNTER.—At 10:25 these two were cast off at edge of woods. Antevolo (Count Noble—Trinket II.) was handled by Chas. Tucker and Daisy Hunter (Gath's Hope—Daisy F.) by her owner, J. A. Hunter. Both got out from their handlers in good style. It was not long before Daisy Hunter got down to work, and in a clump of pines stifled out to a bevy, Antevolo called up to back, but birds flushed before he could get there, Daisy steady to shot and wing. Then she nailed a single lower down. A no-point from Daisy, and then in woods Antevolo pointed a bird, Tucker firing, dog steady. Daisy pointed foot scent, but not steadily, and then they were called up at 10:57. Both showed good range and judgment, Daisy the best, and also had the advantage on birds, though hardly a heat in which Daisy did as well as usual, getting out a little too far at times.

SAM R.—ORLANDO.—Sam R. is well known to readers of FOREST AND STREAM, he is by Dash Bryson—Daisy's Hope. The latter bitch won the All-Aged here last year. W. W. Titus handled Sam R. Orlando, a good-looking, heavily marked black, white and tan setter (Rodrigero—Bo-Peep), was handled by his part owner, J. M. Avent. Starting in weeds at 11:04, they galloped off in fine style. After a while in ragweeds, side of woods, at the end of a field, Orlando made a stylish point, Sam doing his duty nicely; birds flushed wild and Avent fired, dogs of course were steady to shot and wing. After these birds in weeds, then in woods, Orlando pointed and Sam backed, but nothing found. To the right, Sam, roading nicely, brought up stiff before a single which Titus flushed, and Orlando coming up pointed where birds had been. Then followed some roading and Sam making a cast into open, then in woods, pointed, but did not hold it when Titus came up, Orlando honored it, however. Then Orlando pointed false, Sam backing, but higher up Orlando redeemed himself by nailing a bevy, Sam backing; Avent flushed the birds, dogs steady to wing. Following these birds Sam pointed, but Titus failed to put up, but a single afterward rose behind the dog as spectators came up. Further on in brush Sam nailed a single in good shape, which Orlando honored; both steady to Titus's shot. Both dogs ranged well and speedily, Orlando best on birds, though Sam did well in cover on singles. Up at 11:50. It was now time for lunch and an acceptable lounge after, when

DOLLY HILL.—DICK BONDHU were put down at 1:12. Dolly Hill (Ben Hill—Dolly S.) is a heavily marked setter and H. M. Short handled her. Dick Bondhu, handled by W. W. Titus, is by Dashing Bondhu—Dashing Primrose. Starting in corn stubble both went off at speed. Soon Dick, going off to the right, was lost some time. Meanwhile Dolly hunted through some woods and several of us tried to find Dick. Dick coming in sight eventually, he pointed on hill, Dolly backing, but he was mistaken. Dolly in pines scored a point and stood the birds till they flushed wild. Going into woods Dick, after we had all passed, commenced roading behind and pointed where birds had flushed; dogs were called up at 2:12 without any further result. Dolly Hill had the best of the heat in every way; Dick not being under control and running a very green dog, Mr. Titus telling me he had never been trained on birds, though five years old, and therefore the reason for running him is hardly apparent.

GROUSE.—THE COBSAIR.—The pointer Grouse, by Main-spring—Swain's Fly, had by S. C. Bradley for his handler, and The Corsair, by Dan Gladstone—Haidee, was, as usual, looked after by D. E. Rose. Moving to other ground, dogs were put down at 2:29. After going some time, both hunting wide and with judgment, Grouse wheeled to a stylish point by briar thicket and held it some minutes till Corsair could be brought up to back, affording plenty of opportunity for the "Kameretists" to hand his work down to posterity; Corsair backed stylishly and Bradley flushed the birds. A good piece of work for the pointer; both dogs steady to wing. Grouse improved his opportunity by nailing a single lower down. Corsair honored it and Bradley flushed, fired and killed, Grouse retrieving in good style, showing excellent training. Another of these singles fell to Corsair's share, and he pointed again, moved back, pointed, when Rose put up two birds and Corsair steady to shot. A hundred yards further Grouse pointed, but Bradley could not raise anything, and dog drew on and a single flushed as he stopped, Corsair backing, dogs steady to shot and wing. Covering some varied ground, Grouse pointed hen and chickens, and made a couple of points unsteadily to the left, but casting out to locate more closely, by a house on hill, he wheeled to a point in scrub oak and held it till Bradley came up and flushed the bevy, a good piece of work, clinching it by his steadiness to shot and wing. Dogs were then ordered up at 3:03. Grouse showed what the pointer is capable of, for he did in this heat genuine long-headed work, going to his birds with a vim, ranging out freely, but always with good judgment. Range and speed were about equal, style being in favor of Corsair, who did not by any means do himself justice, as he is capable of just as good work as the other did, but this was an off day for him. Dogs, like men or horses, have their good days and those that are otherwise.

COUNT W.—DUKE OF HESSEN.—Another pointer and setter heat. Count W., the setter, by Count Noble—Jennie III., was handled by S. C. Bradley, and the well-known pointer Duke of Hessen, the hope and pride of Hempstead, is by Luck of Hessen—Blarney, and John White was his handler. Put down in a big grass field at 3:11, both ranged out well—to well, for Count W. was lost at once near woods. Duke was found higher up the hill; but thinking that Count was in large wood below, several of us hunted high and low for him, but no one went up the hill where Duke had been found. It was 3:50 when a shout went up that he was on top of the hill in woods, just as the next brace was called. It was said Count was found on a bevy which he must have held for a long time. Starting together again at 3:56 in sedge, on hill soon after, Count nailed a bevy in woods, Bradley told the judges, and opening a gate let them in, Count still steady, Bradley put up the birds, fired and dog behaved well. Just before this Duke thought he would create a little excitement and was lost down hill for a short time; brought up to follow the flushed birds Count got two of them and was steady as they flushed wild. Duke higher up pointed false. Crossing road into

woods, Bradley claimed a point and a single was flushed by horsemen. Taken out of woods dogs ran back again and at other end Duke pointed in sedge, Count backing, Duke went on, pointed, and was honored again, when it was found he had the bevy at last, and dogs were steady to flush. On, in ragweed, Count pointed below a bevy, meanwhile judges flushed birds about 75yds. above him. After these Duke nailed two of them and was steady to shot and wing. Held up for Duke. Coming together Count dropped to a single just above Duke, when Bradley flushed, dog steady. This ended a long heat at 4:29, characterized by much whistling and many interruptions. Count W. had the advantage on birds, is a merry, stylish worker, with plenty of pace but rather heedless. Duke hardly ran the dog he did last year, though full of snap and go.

FLIGHT.—DAD WILSON, JR. were put down immediately after at 4:31. Flight (Paul Gladstone—Belle Ward), handled by N. B. Nesbitt and Dad Wilson, Jr. (Dad Wilson—Lit), and a well known dog on the bench, was handled by F. M. Short. Soon after starting across a ditch Flight dropped to a point, Dad backing, but no result. Then near pines Dad did the same, false points followed by Flight, neither dog working out as they should do. Lower down Dad pointed again, dogs seeming to be playing at the game. Going over varied ground Dad near a fence nailed a single, Short fired, dog steady. Then Dad got down to good work and stood to a bevy in fine style in standing corn, Flight backing, Short flushed, fired, dogs steady. Going over a brook Dad nailed a single, Flight seconding him, dogs steady to Short's fire. Dad did good work here. Flight, not to be outdone, in pines pointed and dropped to two birds, which Nesbitt shot at, dog steady. A no-result point from Flight followed out of the woods, and dogs ordered up at 5:03. Dad Wilson, Jr., did nice work on birds and had most style, neither ranged far out from the gun. This ended the day's work some distance from town.

THURSDAY.

A very pleasant day, cool, but sunny and clear, getting warm toward afternoon; just a day to make one feel that life is at times worth living. The first brace down was

COUNT GLADSTONE.—DON FIS HEL.—Count Gladstone, a good-looking blue belton by Count Noble—Ruby's Girl, was handled by John White. Don Fis Hel, a black pointer that ran at Bicknell, Ind., by Devonshire Sam—Nellie Bang, was handled again by Geo. McClintock. They were put down in sedge near Blair Farm at 9:20. Count started off well, but Don Fis Hel ran his usual gait, very near to the gun. Much to his surprise evidently, immediately after starting he trotted right up to a bevy that flushed from under him, steady to wing. After this when we had got on terms with Count he was seen to point by a fence, moved a little as White came up, but was steady to wing, as they flushed wild. Going after these birds Count pointed false. Crossing a brook in bottom, edge of pines, Count nailed a single in good style. Count pointing again, soon after Don drew right past him, paying no attention to the point, which, however, resulted blank. Then in sedge Don pointed bunny, and as it passed chased a bit. Heat ended soon after at 9:09. There was only one in it, and his name was Count Gladstone, Don pottering round most of the time.

HARRY C.—BLADE.—A good brace these, though little actual work was done beyond showing some good style and range. Harry C. (Rodrigero—Countess House) was handled by owner, S. C. Bradley, and Blade (Toledo Blade—Lula C.) was looked after by Chas. Tucker. Starting in open near pine woods at 10 o'clock, both went off at a slashing gait. Soon after start they were held up to get on to other ground, and then put down in clover field. Going to pines both pointed birds and were steady to wing. In pines Blade pointed and birds flushed wild in thick cover; then one of the dogs pointed, birds getting up wild just as they came out of pines. Blade nailed afterwards one of these nicely, Tucker fired and dog steady. Up at 10:49. Little game was found that could be properly seen, both dogs ranged well and stylishly. Blade had the best of it on birds. They will be given another chance no doubt.

WILD DAMON.—COUNT ERIC.—This was a pointer and setter heat. The pointer Wild Damon (Damon—Flora) was handled by C. E. Buckle and the setter Count Eric (Count Noble—Fannie W.) by N. B. Nesbitt. They were started high up on hill, and both showed good speed and range. Count Eric soon got beyond control. Meanwhile Wild Damon pointed a bevy, which Buckle flushed, dog steady. Count coming to form again pointed in bottom, Damon dropped to back, and Nesbitt fired at flush, dogs steady. Then Count did well on a large bevy by a fence, Damon also honoring stylishly, and both were steady to Nesbitt's shot. Following these birds, Damon soon pointed a single and Buckle firing, dog behaved well. Dogs up at 11:44. Damon had much best range and style but Count had a little the nose of him.

NICODEMUS.—NAHMKÉ PHILIP.—Nicodemus (Dick Swiveller—Ion) was handled by owner, Col. J. R. Purcell and Nahmké Philip (Roy Monarch—Saddlebags) by T. M. Aldrich. Nicodemus was drawn to run against Pansy Blossom, but the latter not turning up in time for first series, and as Nahmké Philip was the bye dog, they ran together to close the first series. Put down at 11:48 in sedge, neither ranged out much, Nicodemus trotting around his owner most of the time. Nahmké Philip was the first to get wind of birds and drew on in an uncertain way, finally freezing to them, Nicodemus backing, dogs steady to flush. In bottoms Nahmké pointed, Nicodemus honored, then both roaded but failed to locate. Then in ditch Nicodemus flushed several birds and Nahmké pointed where they had raised. A false point by Nahmké and dogs called up at 12:20, a poor dawdling heat, dogs pottering round their handlers most of the time, Nahmké Philip the best, however.

Time for lunch now and then the judges held a long consultation and decided that the following dogs should run in second series: Top Mark with Natalie II., Rupert with Antevolo, Orlando with Daisy Hunter, Maid of Kent with Grouse, Corsair with Count W., Duke of Hessen with Harry C., Dad Wilson, Jr. with Count Gladstone, Blade with Count Eric.

Second Series.

TOP MARK.—NATALIE II.—Neither started off at 1:55 with much speed or range. The work, however, was sharp while it lasted. In a corn patch Top Mark was first to score, dropping to a bevy, Natalie honored his work in good style, Short put up the birds and dogs were steady. Then Natalie thought she had them sure, but was mistaken. Top humored her, however. Top Mark, in pines, nailed a single, Nat doing her duty well, too; the dog followed this up with another bird, and dogs were steady to both shots. Up at 2:08. Down 13m. The work was all in favor of Top Mark.

RUPERT.—ANTEVOLO.—This was a good heat between dogs of good class. Down at 2:11. Antevolo was first to wind game and pointed a bevy side of oak woods; Rupert honored and Tucker had no difficulty in flushing the birds, fired, and both behaved as they should do. Then in high weeds by a fence Antevolo clinched his good work by getting another bevy, and higher up Rupert nailed one of the singles and Ante followed suit at the bottom of a fir tree. Tucker put bird up and dog made an excusable jump. Both dogs were working at speed and in a snappy style. A false point to Rupert after careful roading, then he came up with a brace. Rupert followed this with two more singles, Antevolo backing nicely, and dogs were steady to Avent's shot. Called up at 2:32, down 31m. Antevolo had the advantage on birds.

ORLANDO.—DAISY HUNTER.—We were getting down to the Stake dogs now. In a grass field they started at 2:39, and both soon put lots of country behind them. Soon after

starting, Daisy going in her usual knowing manner, far in front, pointed a bevy which flushed wild, and coming up Orlando pointed where bevy had flushed. Over the hill, by the side of a pine tree, Orlando pointed a brace of birds which were flushed by horsemen behind him. Pointing again he did not hold it and a single rose. A false point on hill and a single in pines for Orlando closed the heat, Avent firing at the single, dog steady. Ordered up at 3:34. Neither had any advantage in speed and range, but Orlando had the best of it in finding birds.

MAID OF KENT.—GROUSE.—Two pointers these. Down at 3:33, both struck out at a clipping gait. Grouse started his score with a false point, Maid backing. Maid then pointed where Judge Duryea had flushed some birds, but nothing more found. She cancelled this, however, by pointing a bevy in the open, and was held for Grouse to back, who paid little attention, coming in from the side and only backed to order. Buckle flushed, Maid little unsteady to shot. Following these birds, Maid gathered in a single, and Grouse's back completed a pretty posture. Crossing a brook Grouse pointed birds of this bevy, Bradley putting them up and firing, dogs steady. Then Maid pointed foot scent, and dogs ordered up at 4:04. Neither had much advantage in birds, both speedy, wide rangers, but Grouse did not seem to have his clearest nose to-day.

CORSAIR.—COUNT W.—Put down at 4:12, Count, true to his record, got lost at once, but instead of being behind, where last seen, he was well ahead and must have held the point he was found on some 10m.; a single rose to Bradley's flush, fired, dog a little unsteady. Meanwhile Corsair had been held up, but was sent to back. Then in pines Count pointed a single, Corsair backing. Count on hill then pointed several times; drew on but nothing found, Corsair pointing too. After much preliminary work Count at last roaded to the birds and Bradley flushed and shot, dog steady. Into corn patch after singles Corsair flushed two birds down wind and should have nailed one that judge flushed. A false point to Corsair and dogs up at 4:50. Work hardly good enough for winning form. Down 88m.

DUKE OF HESSEN.—HARRY C.—S. C. Bradley was getting a tiring race of it, three heats in succession. Down in the same place at 4:55, it was getting dark and difficult to see in the covers. Harry C. was the first to score, pointing a bevy, being backed by Duke; but before handler came up broke back, then stopped, when both were steady to shot and wing. Several no-result points followed in woods across the brook; following it up, however, Duke nailed the bird stylishly and was steady to flush as White came up in front across the brook, undecided whether to humor the dog or not. Higher up, just as the dogs were called in, Harry C. nailed a single in good shape, which Bradley flushed. This I don't think was seen by judges, who were much lower down and turned for home. Harry C. proved the surest on birds, both ranged well.

FRIDAY.

There were still two more heats in the second series and at a late start near Blair Farm, the morning being cloudy and dull.

DAD WILSON, JR.—COUNT GLADSTONE were sent off at 9:22. Both set a good pace and quartered their ground well, but were only seen occasionally, as the fields near the Model Farm were covered with high sedge and ragweeds, and such free ranging dogs were soon lost to view. Count was lost for some time near the farmhouse. When they came together again Count pointed near pines, Dad backing; nothing came of it, however. Through woods into ragweed after both had made game in cover, Dad pointed, but moved as Short came up and flushed. Then Count pointed, nothing found; both roading, Dad at last located the running birds, held them to a good point, and Short flushed and fired; dogs steady. To the left Dad smelled something, wagged his flag and soon steadied to a point on several birds which flushed wild. After these birds in thick cover, Dad nailed a single nicely, and was steady to shot and wing, then after a drawing point he stopped as bird flushed under his nose, then he roaded to another and showed some pretty, careful work. Count was off lower down in woods. Up at 10:15. Down 53m. Dad Wilson, Jr., did good work on birds and was under better control than Count.

BLADE.—THE COBSAIR.—At 10:24 they were sent off in open, worked into pines when Blade dropped to a single, flushed by Tucker, and Blade caught another single over the hill in bottoms. Points on birds by each ensued, each honoring the other. Then in pines Blade made game and moved back to where birds had been, and stopped just as a single rose wild near him, spectators standing all round. A point by Blade in pines and oaks, backed by Count, followed but nothing found then, bevy flushed after. Dogs up at 11 o'clock. Blade did the work on birds, but hardly went snappily enough to his birds. Both ranged out well and quartered their ground with judgment. This concluded second series. The judges then consulted and finally announced at 11:30 that in

Third Series

Orlando should run with Antevolo and Daisy Hunter with Harry C. There was no hurry and we had plenty of time for lunch at the Model farmhouse. About a mile from this place, after lunch and a discussion as to the probable winner,

ORLANDO.—ANTEVOLO were started in a stubble field. Up in pines Antevolo was the first to score, nailing a single. Some time after Orlando pointed to one side of woods and Avent flushed birds, fired, dog steady. Antevolo pointed again, roaded on, and in sedge birds flushed as judges came up. No other work was done, and dogs ordered up at 1:59. Antevolo showed better work than Orlando, is a further ranger and equally as good on his birds.

DAISY HUNTER.—HARRY C.—Put down in grass field at 2:06, where the other two were taken up. Going over a hill Harry made a very stylish point on a bevy, which Bradley flushed, dog moving a little as birds rose and the shot rang out. Daisy some distance off working out her ground in her usual knowing style. Following the flushed birds into oaks. Here was Daisy's chance; she just feels at home in a cover with a lot of singles to handle. She nailed two, Harry backing nicely each time. At 2:21 Daisy was held up and Harry went it alone. Down in sedge and briars he roaded to a single, which Bradley flushed and fired at, dog steady. Then he got another, which flushed wild. Dog held up. By this time the weather was very warm. At 2:27 Daisy was set to work again to the left in pines and oaks, where she soon pointed, moved on, made a cast and came round in front and nailed two birds, another flushing wild. Lower down she pointed foot scent, and wagging her flag roaded on with a stop or two till she held the birds in pines, Hunter flushed. Then she was ordered up out of woods and taken up at 2:35. Down 8m.

ORLANDO then had a trial by himself. Put down at 2:40 in sedge outside of woods, it was getting uncomfortably warm. Across the bottoms to hillside, he roaded to a nice point and held it steady till Avent came up and flushed the bevy 20yds. off. Up at 2:52, down 12m.

ANTEVOLO was called out and sent off in another direction at 2:56, but though he ranged well out, he found nothing and was called up at 3:01, when he might have had a little more time.

Judges then consulted and at 3:15 announced Orlando first, Daisy Hunter second, Antevolo third.

Orlando is a stylish looking, heavily marked dog, ranges well out and has fair judgment on birds, the decision that put him first place was questioned, as he showed no superiority whatever to Daisy Hunter, who is a well made bitch,

with orange ears and ticks. She is a favorite with every one in the field, goes so systematically to her work, hunts for herself, but always with an eye to her handler and is exceptionally good on singles. Antevolo ran a good dog in his latter heats when he showed equal merit with the winner. He is a racy looking chestnut and white and goes with good speed and snap to his work.

Summary, All-Aged Stake.

J. M. Avent and Bayard Thayer's Rupert with B. M. Stephenson's Top Mark.
A. L. Sanford's Frank W. with Geo. G. Harley's Joye.
Dr. Hartman's Albert's Duchess with Wm. Mahone, Jr.'s Graphic VI.
Bert Crane's Natalie II. with Charlottesville Kennels' Maid of Kent.
Pierre Lorillard, Jr.'s Antevolo with J. H. and J. A. Hunter's Daisy Hunter.
Geo. P. Jones's Sam R. with J. M. Avent and Bayard Thayer's Orlando.
J. Shelley Hudson's Dolly Hill with W. W. Titus's Dick Boudhu.
C. C. M. Hunt's Grouse with E. O. Damon's The Corsair.
N. Wallace's Count W. with Hempstead Farm Kennels' Duke of Hessen.
Wm. McKennan, Jr.'s Flight with J. Shelley Hudson's Dad Wilson, Jr.
Greenfield Hill Kennels' Harry C. with Pierre Lorillard, Jr.'s Blade.
Charlottesville Kennels' Wild Damon with Edward Grey's Count Eric.
Col. J. R. Purcell's Nicodemus of Ion with E. W. Durkee's Nahmke Philip.

Second Series.

Top Mark with Natalie II.
Rupert with Antevolo.
Orlando with Daisy Hunter.
Maid of Kent with Grouse.
The Corsair with Count W.
Duke of Hessen with Harry C.
Dad Wilson, Jr., with Count Gladstone.
Blade with Count Eric.

Third Series.

Orlando with Antevolo.
Daisy Hunter with Harry C.
J. M. Avent and Bayard Thayer's Orlando, first money, \$500.
J. A. & J. H. Hunter's Daisy Hunter, second money, \$250.
Pierre Lorillard, Jr.'s, Antevolo, third money, \$150.

CHAMPION STAKE.

The draw for this stake took place on Friday night and resulted in five entries filling, all of them representative dogs to which no quarter was given and none expected, and visitors and all anticipated seeing some good work; nor were they disappointed. All the dogs are well known and several have won honors on the bench as well as in the field. The judges for this stake were Messrs. Duryea, Merriman and Hitchcock. The draw resulted in J. M. Avent and Bayard Thayer's Chance running with J. A. & J. H. Hunter's Daisy Hunter; B. M. Stephenson's Tribulation with Charlottesville Kennels' Rip Rap; J. M. Avent and N. T. Harris's Antonio, a bye. The start was at the Blair farm, about two miles from town. The weather cloudy and showing signs of rain, which fell as the stake closed. It was 9:28 when the first race.

CHANCE—DAISY HUNTER, was started in corn stubble and sedge. Chance (Rodrigo—Bo-Peep) was handled by J. M. Avent, and Daisy Hunter (Gath's Hope—Daisy) by J. A. Hunter. Both dogs went off at their usual dashing gait, and were soon lost to view. After ranging out several fields Daisy made game in an orchard, and in ragweed pointed twice, but not steadily, roared carefully on birds which were running, and just as she stopped again Hunter ran ahead and put them up, the bitch dropping to shot. This was very pretty work. Chance was off somewhere on his own account, and Daisy was held up till found. In sedge Chance pointed false. Daisy in cover then pointed one of the singles the bitch had stood to, and then picked up two more. There is no dog in the trials that can excel her in cover work on birds, going up to them in good style, with the utmost confidence and with a glance back at her owner as much as to say, "Here you are, old man; I've got another!" Then she pointed footscent below, and going out of woods both ranged for a quarter of an hour when Chance in hollow pointed a bevy, Daisy making casts in pines. Chance was then held up till Daisy coming up at speed took a five-barred fence in her gait. Then into pines, where Chance was pointing in the middle of a scattered bevy. Daisy cast round, went on in front, and stopped on an outlying bird, not seeing Chance at all. Dogs were called up at 10:25. Daisy showed conclusively that she was superior both on birds and in the good judgment she displayed in her casts and attention to handler; Avent's whistle going continually, his dog ranging so far out and paying little attention to the gun. Chance of course acted in good style on his birds.

RIP RAP—TRIBULATION.—These are two noted pointers, and I dare say there is more sentiment attached to Rip Rap than any other dog in the stake, as his name always conjures up reminiscences of his sensational running as a youngster and his interesting point last year while running in the Champion Stake. Rip Rap (King of Kent—Hops) was handled by Capt. McMurdo and Tribulation (Beppo III.—Lass of Bow) by H. M. Short. They were put down higher up from where the other two were taken up and started at 10:31 in sedge and ragweed. Their style of going was slashing, and both ranged their ground out thoroughly at good speed. Tribulation five minutes after starting pointed, drew on, roared carefully, when Rip Rap made a cast at speed and picked up the birds, dropping as they flushed wild. Following the birds in high pines Rip Rap pointed, and McMurdo put up the birds, fired and dog steady. At the same time Tribulation higher up nailed one of the singles, Short firing. Going through the cover, near the edge, Rip Rap made a stylish point by a fallen tree and McMurdo flushed another single. Working out these pines Tribulation was the first to score and stiffened on another single, Rip Rap honoring the point and dogs were steady at flush. Not to be outdone Rip Rap hunted out another single before leaving the cover, which McMurdo had no difficulty in raising. Dogs then held up and taken back to open. While dogs were ranging through two sides of a large field it was left for horsemen to flush a bevy in the middle of it. Going into oak woods Tribulation secured a point and Short fired dog steady. Then further on Rip Rap equalized matters by pointing bird which flushed wild. A point by Tribulation and a move-on and two birds flushed after dogs were ordered up at 11:22. Rip dropping to a bevy before being chained. On the work done Rip Rap had the best of it, but both did well and showed good range, pace and nose, style about equal.

ANTONIO A BYE.—Not much time was wasted in sending Antonio (Rodrigo—Bo-Peep) off alone to run his bye. He was handled by J. M. Avent. Put down in a ragweed at 11:28 he started off fast toward woods. Going in he soon found birds. Avent flushed and shot; dog steady. Further on in cover he pointed, but Avent could not raise anything. Then he passed a single that judges afterward flushed. Going on down woods he pointed another single, Avent getting in a shot. Ranging in and coming back from cast he wheeled to a point where birds had been put up before, then moved on. Another no-result point when going at speed out of woods and he was ordered up at 11:55. He put

up a good heat and ranged out well and fast, covering a wide range of country and hunting with fair judgment. Judges then consulted and decided that Daisy Hunter and Antonio should run off after lunch. This was bringing things to a focus quickly. After lunch, in the open.
